This is the kind of a harvesting machine that you want—the only kind that you can be *sure* is *right*.

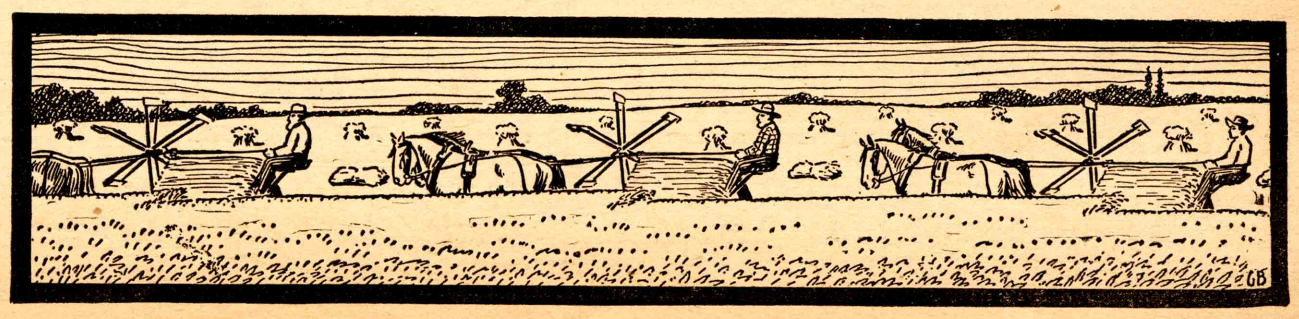
Call on your International dealer and get a catalog.

If you do not know an International dealer, write us, and we will be glad to give you the address of the one nearest to you.

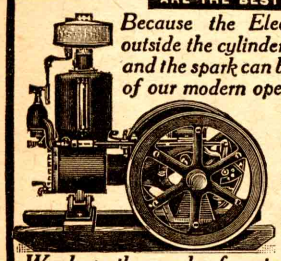
Equal in importance with a perfect machine is perfect twine. The most perfect twine made may be had in Champion, McCormick, Osborne, Deering, Milwaukee, Plano and International Sisal, Standard, Manila and Pure Manila brands.

INTERNATIONAL HARVESTER COMPANY OF AMERICA
(INCORPORATED)
Chicago, U. S. A.

International Line:—Binders, Reapers, Headers, Header-Binders, Corn Binders, Corn Shockers, Corn Pickers, Huskers and Shredders, Corn Shellers, Mowers, Hay Tedders, Hay Rakes, Sweep Rakes, Hay Loaders, Hay Stackers, Hay Balers, Feed Grinders, Knife Grinders, Tillage Implements, Cream Separators, Gasoline Engines, Pumping Jacks, Manure Spreaders, Weber Wagons, Columbus Wagons, New Bettendorf Wagons, International Auto Buggies and Binder Twine.



Stickney Gasoline Engines
ARE THE BEST



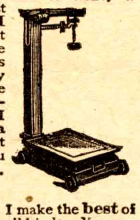
Because the Electric Igniter is outside the cylinder where it is cool and the spark can be seen, because of our modern open tank cooling system and because of 57 reasons told in—Stickney's Free Catechism

1½ to 16 H. P. Stationary and Portable

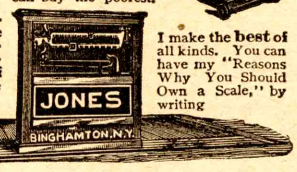
We have thousands of engines in successful operation because of our years of experience in making engines of the best material and most accurate workmanship. **Send for Catalog.**

Charles A. Stickney Company
Main Office and Factory, St. Paul, Minn.
Branch, 55 Batterymarch St., Boston, Mass.
AGENTS EVERYWHERE SELL STICKNEY ENGINES

The Name of JONES on a scale guarantees **quality** second to none, a **fair price**, and just treatment from me. I am the man who first **dared** to fight the **scale trust.** I was the **first** to sell my scales **on trial** to the farmer, and **I am today selling** (as I have for 43 years) a **first class** scale at a lower price than you can buy the poorest.



I don't ask a penny unless my scale proves to be **exactly as represented. Because** of these things, give me a chance to sell you.



I make the best of all kinds. You can have my "Reasons Why You Should Own a Scale," by writing

"JONES, HE PAYS THE FREIGHT"
Box 884 Binghamton, N. Y.

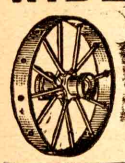
Hand-Made Harness
made in the good, **old-fashioned way,** takes longer, but lasts longer. A-grade, oak tanned leather used in every strap. Sold direct to the consumer at manufacturers prices. Why pay more? Thirty-three years selling direct to the user. **We pay the freight. Catalog free**
SCHAFER SADDLERY CO, Box 106 Decatur, Ind.

SAW MILLS
All sizes. Most work with least power and smallest crews. All latest improvements. Also Edgers, Trimmers, Planers, Shingle and Lath Mills, Cut-off and Rip Saws, Feed Mills, etc. Send for fine free catalogue.
American Saw Mill Mach'y Co.,
136 Hope Street, Hackettstown, N. J.
637 Engineering Bldg., New York City.

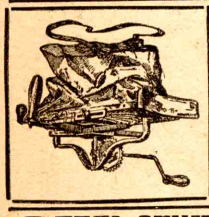
Use HAHN FERTILIZER DISTRIBUTOR

for applying Commercial Fertilizer to growing crops. Can be attached to any riding or walking wheeled cultivator. Makes a top dressing of the fertilizer while cultivating and you get it well worked into the moist ground. Send for circular.
E. L. HAHN & CO., Muscatine, Iowa

WIDE TIRES BEST



Carry sixty per cent more load than narrow tires under same conditions. Save money because never need repairs. We furnish steel wheels any size to fit any axle—get a set for your wagon. Our free Catalogue tells the farmer how to save money—write for it.
EMPIRE MANUFACTURING CO.,
Box 68-Z, Quincy, Ill.



NEW IDEA SEEDER
Is the best broadcast seeder made. Small, compact, strong, durable, light. It does the work better than any other. Saves seed, increases crops. Sows all seeds, plaster, fertilizer, salt, ashes, etc. Quantity adjustable instantly. SPECIAL PRICE $1.25 each. Packed one in a box. Send your order today.
O.K. Seed Store, Indianapolis

None are so blind as those who will not see; none are so weak as those who will not exert their power. Farmers have the greatest power if they would use it.

Spring

"Spring is here and the time for planting;
Prepare the mind as well as the soil,
And plant such seed as bloom in heaven
As well as such as reward your toil."

MORE ABOUT CLOVER SEED

In a recent issue of UP-TO-DATE FARMING we mentioned the growing of clover for the seed rather than for the hay. Incidents constantly confirm what we said then. A Southern Illinois farmer only a few days ago took to market three ordinary two-bushel bags of clover seed, the product of only a few acres of ground, and received therefor more than sixty dollars cash. Besides this seed crop of clover, he had cut from the same land a good crop of clover hay, and had added several dollars' worth of nitrogen gathered from the air by the roots of the clover, to every acre of his land.

That is the Neighbor Thrifty way of doing things. And we are right now in as good a time as there is to sow red clover seed in the great middle agricultural belt of the United States. There is not a more costly seed planted by the farmers of the region mentioned, and there is scarcely one that is given to the ground more carelessly. The usual way is to scatter the seed with little care on land that in the fall had been seeded to some other crop. Nature's freezing and thawing is depended upon to plant the seed. Such sowing is sought to be done before freezing and thawing is over for the season, and yet late enough that there may be no freezing after the seed has sprouted. In this are two contingencies it is impossible to positively guard against, and farmers seldom so jeopardize anything that represents so much money as does clover seed.

Where it is desired to grow red clover by itself, we would rather prepare the ground thoroughly in the fall, making an extra fine seed bed, and sow the seed then, harrowing sufficiently afterward to cover every seed well. We like to do this seeding when the ground is in good tilth, but too near the winter for it to sprout before the warm weather of the following spring. Fairly deep covering is the best safeguard in this kind of seeding. Or, we would sow early enough for the seed to germinate, and for the plant to make three or four leaves before growth is stopped by the freezing cold of winter.

There are contingencies in fall seeding as well as in spring seeding. If the late-sown seeds sprout, the plants are almost sure to be killed, and the early sown must take the chance of being pulled out of the ground by the freezing and thawing, and thus perish.

Perhaps the safest way is to wait until a good seed bed may be prepared in the spring, and sow after all danger from frost is over, lightly covering the seed. The contingency in this case is the danger of an early drought, but on rich land well prepared this danger is minimized.

UP-TO-DATE FARMING would like to have, briefly given, the experiences of its readers with this important crop.

THE DISC HARROW

Here are some suggestions regarding the use of the disc harrow which may be helpful to you:

Of course everyone knows that there is no machine so perfectly adapted for fitting sod ground after plowing as a disc harrow. It cuts the sods, chops them up in fine pieces and forces them down into the bottom of the furrow, instead of pulling them out on the surface as other styles of harrows are likely to do. It frees the soil from the roots, fills in the spaces between the sods and makes a fine mulch of the surface soil, which not only makes the very best seed bed, but the moisture drawn from the subsoil by the capillary attraction is held by this mulch and kept ready for use by the growing plants instead of dissipating in the air.

The disc harrow is equally good for cutting up and pulverizing hard lumps of clay soil. As a matter of fact, it is about the only tool that will thoroughly pulverize these hard lumps. It is so perfectly adapted for this work that in many localities it goes by the name of pulverizer instead of disc harrow.

In a dry season the land will be greatly benefited and the fall plowing will be done much more easily if you disc your wheat and oat stubble as soon as possible after removing the grain. It fills up the cracks, makes the mulch which attracts the moisture and, therefore, puts the ground in better condition and makes the plowing easier.

The disc is coming into quite general use in the place of the plow under certain circumstances. Of course it cannot entirely replace the plow, but if you have a field that, for example, was a meadow last year, which you are plowing for corn this year, you can after removing the corn fit the ground with the disc harrow without plowing, for fall wheat, or for oats the following spring. Of course this saves a great deal of time, because the disc gets over the ground so much faster than the plow. The only danger is that you will save too much time, by which we mean that you will not go over the ground enough times.

We believe that farmers are deriving a great deal of benefit from the use of the disc harrow for preparing a seed bed for oats or corn stubble, not only keeping the ground more moist, thus putting it in excellent condition for the seed, but because it may in this way be fitted in much less time than would be required to plow first, thus making it possible to get the oats in quite a little earlier. Even when the corn stalks are on the ground, a good sharp disc would do splendid work, not only fitting the soil, but chopping the stalks into pieces so that they improve the mechanical condition of the soil and turn more quickly into valuable fertilizer.

There are not many months during the time that the frost is out of the ground when the disc harrow cannot be used with splendid results. It helps wonderfully in the spring, particularly if you leave the ground in good condition the previous fall, to get your seed in early and in a good seed bed.

It will help to fit your sod ground after plowing and pulverize the hard lumps better than any other machine. It will keep your soil from drying out and baking if you go over your ground as soon as possible after removing your grain and that will also make the fall plowing a great deal easier. If you disc your ground thoroughly after the fall plowing, it will not only enable you to fit it in less time in the spring following, but it will enable your soil to retain more of the water from the rain and snow during the winter, thus storing it up for the dry time during the following season, and saving it for the use of the growing crops.

If you use a disc harrow, you ought if possible to use the latest design, which is the tongueless, and if you contemplate purchasing a disc, you ought at any rate to inquire into the merits of the Detroit, which is the original tongueless disc, and which has, therefore, been more thoroughly tested than any other tongueless disc on the market. The catalog of the Detroit, which has just been brought to our attention, is profusely illustrated and gives thorough and pains-taking description of the machine. It certainly is worth your while to obtain one of these catalogs. The American Harrow Co., 539 Hastings street, will be glad to send one to you just for the asking. Simply drop them a postal card and ask for their catalog and prices.

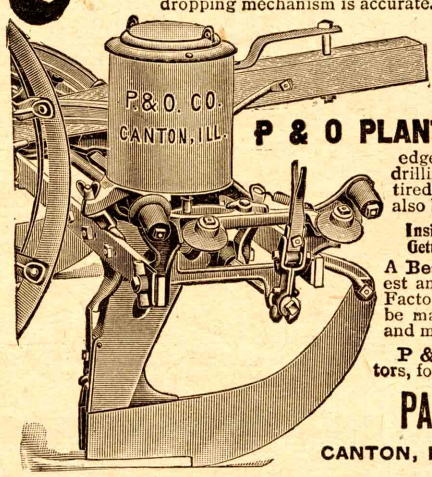
We believe the many advantages of the disc harrow are being recognized more and more, for bettering the condition of the soil and increasing the crop yield, as well as for the primary purpose of preparing the seed bed immediately preceding the sowing or planting of the seed.

P&O CORN PLANTERS

Many Corn Planters are sold on the strength of some one feature on which so much stress is laid that all else is forgotten. The **P & O Planters** combine **all** the qualities of **accuracy, strength, simplicity and ease of operation.** The frames are the most rigid and strongest ever made for corn planters. They will stand the wear.

An increased yield of corn is always assured when using a **P & O Planter,** as the dropping mechanism is accurate. All P & O Planters have

TILTING HOPPERS
and the plates can be changed without emptying the hoppers This is one of the features on the P & O Planter that has made it a general favorite.



P & O PLANTERS are made in a variety of styles—light and heavy weight, flat or edge drop, with runners or discs, for hilling or drilling, with side or center reels, open or solid tired wheels, and in all standard widths. Can also be furnished with **Fertilizer Attachments.**

Insist on Getting **P & O IMPLEMENTS** From Your Dealer

BROILERS AND ROASTERS

It is very important to carefully grade stock intended for the open market.

Each grade of carcasses will sell better separate from the rest.

A few scrawny or badly torn birds in a package will not only spoil the appearance of the shipment, but will hurt the price.

Before packing, make a careful inspection of each bird, washing the feet, removing clotted blood from the mouth, and also washing the head. All breaks in the skin should be sewed up, using fine white thread for this purpose. A curved needle is more convenient for this work than a straight one.

The weight of fowls can be increased by feeding heavily of such foods as corn, but it is not always satisfactory to the English epicure, as the oily, yellow fat produced by feeding corn is objectionable in appearance. It is best not to add fat to the system beyond a certain degree.

For fattening, ground oats is excellent. It contains six per cent of fat and plenty of phosphates or limey matter, which go far towards whitening the flesh, a condition which our English cousins demand.

Capons should always be dry-picked as they look much better and as some of the feathers should be left on. The feathers of the neck and head, the tail feathers, those a short way up the back, the feathers of the last two joints of the wing, and those of the leg, about one-third of the way from the knee to hip joint, should be left on. These feathers, together with the head of the capon, serve to distinguish it from other classes of poultry on the market, and therefore should not be removed.

Before placing fowls in the fattening pen, see that they are thoroughly clean of lice. Use a good insect powder.

Dr. Charles Harrington of the Massachusetts State Board of Health, has filed with the legislature a report on the relative merits of drawn and undrawn poultry. The report is in compliance with a resolve passed by the legislature last year in which the board was directed to make the investigation and determine what unwholesome change, if any, takes place in the flesh of poultry shipped or stored without the removal of the head, crop and other entrails, as compared with the flesh of poultry from which these have been removed, and thus settle the question which has been brought up annually for many years past by the advocates of one or the other method. For the purpose of their investigation the board raised a quantity of poultry and after keeping it for a reasonable time killed it, drawing one portion and leaving the remaining portion undrawn. The report shows that when poultry is kept in ordinary temperature the undrawn is preferable.

DISEASES — THEIR REMEDY AND PREVENTION

Catarrh in poultry is similar to the common cold of man.

Catarrh is accompanied by sneezing, difficult breathing, and watery discharge from the nostrils.

Catarrh is the result of poor ventilation, draughts, dampness, exposure and improper care.

The symptoms of roup are puffed or swollen eyelids, watery discharge from the eyes and nose, eyes swollen and closed, thick and offensive discharge from the eyes and nose.

In the early stages of roup, the fowls can be greatly benefited by bathing the eyes and face with a mixture of equal parts of whisky and sweet oil. Remove the sick bird to separate quarters and feed on soft food.

For an ordinary cold in fowls, there is nothing better than a one-grain quinine pill each night for about a week. Further treatment is to make a mixture of half listerine and half water and swab out the throat, using a feather for this purpose.

A recommended treatment for scaly legs is to simply apply kerosene on a woolen cloth, covering all of the affected parts daily for four days; then wash the leg with soap and water, dry and then cover with carbolized vaseline.

An excellent remedy for gapes in chickens is to chop garlic up fine and mix with soft food. Repeat this for several days.

Dr. B. Bennent says that one ounce carbolic acid and nine ounces of water makes a ten per cent solution. Four drops of this to a pint of water for the little chicks keeps many wings from hanging down.

He also says that when chicks are two weeks old, he puts two drops of turpentine in each pint of drinking water every morning for two weeks. Intestinal worms are not so likely to carry off the chicks. A larger proportion of turpentine would do no harm, only if too much the chicks will refuse to drink.

Here is another gape remedy: Take a small piece of butter, about one-half an inch square, cover it with pepper and force down the fowl's windpipe.

FOOD AND FEEDING

At the Canadian Poultry Institute, Mr. Graham said that much depends on the man who is feeding. The assertion was made in a debate on loose vs. crate feeding for fattening. Mr. Graham said that a man who is inclined to be the least bit careless would do better work crate feeding than loose feeding.

The relative value of fresh meat scraps, cut green bone, commercial meat meal and milk albumen (a by-product of milk-sugar factories) has been tested at the Utah experiment station. The lot fed commercial meat meal averaged 133 eggs per fowl per year, as compared with 201.5 eggs in the case of a similar lot fed fresh meat scraps or cut green bone, and the lot fed milk albumen averaged 101 eggs, as compared with 143.5 in the case of a similar lot fed scraps.

In the second test, the average number of eggs per hen per year on meat meal was 119, as compared with 154 on meat scraps, and 139 on cut green bone.

In the experimenter's opinion the data presented are not sufficient to warrant the definite conclusion that the better egg yield with the fresh meat scrap was due to its higher percentage of fat and ash, but "they appear to indicate that in feeding for eggs the poultryman will be able to accomplish with cheap fat, or cheap foods rich in fat, what he has been vainly striving to accomplish with expensive protein."

Homer W. Jackson does not think very highly of sunflower seed as a poultry food. He says: "It is one of the humbugs of poultrydom which everybody recommends because everybody else does, but I wonder if any one has ever fed it freely more than one season. In the ordinary market it is too expensive to be a practical feed even if it accomplished the purpose for which it is recommended—which it doesn't. It carries too much crude fiber to be a desirable feed even if the hens would eat it readily. As for growing it extensively for feed, as is so generally recommended, I would like to hear from the man who has ever grown two crops."

Congo on Barn at Lincoln, N.H.

CONGO NEVER LEAK ROOFING

When looking for a roof one naturally wants something that is durable and that will stand the test of time.

Congo Roofing has stood this test, and has proven its worth as a protection against all kinds of climate and weather.

Many buildings the country over are covered with Congo, which have already given many years of service, and are good for many years more.

Heat and cold, rain and snow, have no appreciable effect upon Congo. Even fire itself is stubbornly resisted by these roofs.

Not the least attractive feature of Congo is the price. It is the cheapest of the high-grade rubber roofings.

Send for Booklet and Free Sample, and you'll surely buy no other kind.

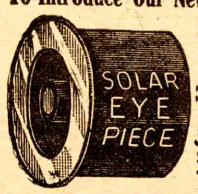
$1.00 Special 60-day Offer
To Introduce Our New Excelsior Solar Telescope



Pat. Applied for.
THIS is a large powerful Achromatic Telescope for Terrestrial and Celestial use. This telescope is provided with an adjustable Solar Eye-piece. With this wonderful eye-piece you look the Sun square in the face, on the brightest and hottest day, and study its face as you do the moon by night. Every student needs one. This eye-piece alone is worth more than we charge for the entire telescope. Remove the Solar Eye-piece lense and you have a perfect telescope for land observations. Read what this customer says:
Never before sold on any telescope for less than $8.00 or $10.00.
Stevensville, Ont., Dec. 18, 1906.
R. C. Irving & Co., Indianapolis.
Dear Sirs.—I received your telescope last Saturday. It is a dandy and I am well pleased with it.
Yours very truly, Enos. Winger.
Positively such a good telescope was never sold for this price before. These telescopes are made by one of the largest manufacturers of Europe. Measure closed 12 inches and open 3½ feet in five sections. They are BRASS BOUND, BRASS SAFETY CAP on each end to exclude dust, etc., with POWERFUL LENSES, scientifically ground and adjusted. GUARANTEED BY THE MAKER. Heretofore telescopes of this size have been sold for from $8 to $10. Objects miles away are brought to view with astonishing clearness. Sent by mail
Postpaid for $1.10.
This is a grand opportunity and you should not miss it. We WARRANT each telescope just as represented or MONEY REFUNDED. Remit by Registered letter, Postoffice Money Order or Bank Draft, payable to our order.

INDIANAPOLIS, INDIANA

$1.00 Special Sale 60 cts
High Grade Fountain Pens

We have purchased a large quantity of high-grade Fountain Pens from the largest manufacturer in the country. We got a very attractive price and will give our customers advantage of it. These pens will move quickly so do not delay, but order promptly.
These pens have handsomely engraved barrels. Points are 14k gold plated. Feed is excellent insuring perfect flow of ink. Larger than standard size and they do not require frequent filling. Not a toy in any respect but a perfect Fountain Pen. Each pen nicely packed in a box with glass filler. Full directions with each, insuring perfect work and results.
Our $1.00 "safety clip" pen is the latest improved. It is fully guaranteed. Every pen fitted with new patent safety clip insuring its staying in the pocket. Will not roll off the desk. Price post-paid $1.00. High-grade in every respect. Sells in stores at $2 to $4.
This pen is first-class in every way. Two half-inch gold plated bands on it as shown in illustration. It sells in stores at from $1.50 to $2.50. Our special price post-paid only 60 cents. *Money back if not satisfactory.*
COONER & FORTUNE CO
Indianapolis, Ind.

DE LAVAL CREAM SEPARATORS

ALWAYS IN THE LEAD

From the invention by DE LAVAL of the first practical cream Separator in 1878 the DE LAVAL machines have always been in the lead.

The first "hollow" bowl cream separator; the first factory cream separator; all of the several first styles of hand separators; the first steam turbine separator; the first "disc" bowl separator, and the first "split-wing" or distributing tubular shaft separator—were each and all DE LAVAL inventions, each marking periods of advancing evolution in the usefulness of the cream separator.

So too were the first "tubular" shaped bowl separator; the first bottom feed sepapator; the first vertical "blade" bowl separator; the first interior cone construction bowl separator, and numberless other types of construction, each and all DE LAVAL inventions, though found so impractical or comparatively inferior, from one reason or another, that they were never put into commercial use in the DE LAVAL machines.

Every would-be competing cream separator on the market today merely utilizes some patent expired or abandoned DE LAVAL construction, and if any of them should make pretense of denying it the patent evidence may be easily produced showing the falsity or evasion of such denial.

The new 1908 DE LAVAL cream separators mark another great evolution in cream separator construction, being new and remodeled in practically every detail, and place a still wider margin of superiority between the DE LAVAL and even the best of imitating separators.

The DE LAVAL main factories in the United States and Sweden are the largest and finest of their kind and have ranked for ten years among the model shops of the world; their equipment is the best that mechanical science and money can make it; the twenty smaller DE LAVAL factories, assembling, and repair shops, in as many different countries, are relatively as superior; the DE LAVAL inventors and experimental engineers are the best of the men who have showed practical separator genius in every country, and a large staff of them is kept constantly at the betterment of the DE LAVAL machines, while the shop employes generally are the most competent and best paid in their various classes.

THE GREAT OBJECT EVER KEPT BEFORE EVERY MEMBER OF THE DE LAVAL PRODUCTIVE ORGANIZATION IS THE MAKING OF THE BEST CREAM SEPARATOR POSSIBLE AND EVER THE MAKING OF IT BETTER THIS YEAR THAN LAST YEAR.

These are the reasons why DE LAVAL machines began in the lead and have kept it from 1878 to 1908, excelling all attempted imitation and competition in even greater degree today than at any past time.

The new 1908 DE LAVAL catalogue—affording an education in separator knowledge—is to be had for the asking.

MUTUAL HELP

Without the farmer's grass and grain,
The stock would suffer on the plain,
And 'thout the stock the farmer's life
Would be a drear, one-sided strife.

COWS AND MILK

There is a general impression among farmers (the dairymen have learned differently) that the richer and more abundant the cow's feed the richer will be her milk. Increasing the richness and quantity of the feed may increase the quantity of the milk, but it has little effect upon the quality. The quality depends upon the cow. If the cow is not giving milk that is satisfactory, the remedy is to get a better cow.

It is very important, though, to allow milch cows to have none but clean, sound feed, and clean, pure water to drink, for, while the butter fat in the milk may not be affected by the feed, its sanitary condition, no doubt, is. There are three principal elements in feed, which, if we could always know, would enable us to feed more to a purpose. These are protein, the leading muscle and milk producing element; carbohydrates, the heat and fat producing elements, and starch, which is principally fat. If the feed is deficient in protein, the flow of milk will diminish; if deficient in carbohydrates, the animals will lose flesh and cannot stand exposure to cold. Winter requires more of the carbohydrates than summer. Milch cows do not much need starchy feeds; such are more suitable for animals that are being fattened.

Clover and pea hay and alfalfa are the best protein rough feeds, and in them the carbohydrates are also well represented, hence these feeds are very suitable for milch cows. Wheat bran is also a well-proportioned feed for like purpose. Corn has protein, but it is too rich in the carbohydrates and starch to be used as a single feed. So is wheat, or middlings, or shorts. Corn bran if well cleaned is not very rich in any of the feed elements. Unthrashed soy beans or field peas are liable to be too rich in protein. It is well to study the feeds that quality, quantity and purpose may be better judged.

BE SAVING OF FEED

Farmers no longer use a wasteful machine. The old flail and fanning mill were discarded because they did their work too imperfectly, and so of the entire line of old-time farming tools.

In a line equally important, however, from an economic point of view, the old machines are retained. Every living animal is a machine. Domestic animals are machines to perform certain services for their owners. The work of some is to take their food as raw material and manufacture flesh from it—build up their own bodies. Others are expected to convert their food into milk. Those which perform this work most economically and with least waste are the most valuable machines.

Scrub stock are like the old machines that have long since been discarded as too slow and wasteful. Why do farmers retain the scrubs when so much better animals may be as easily obtained? Improved stock, like improved machinery, do their work much better—make better use of their feed. Feed is higher priced than it used to be and is much more an object in farm economy. It will not pay to feed animals that do not make good use of it.

And in the matter of milch cows, quantity is not the only standard, quality must be considered also. This is a time when values are inquired into. Nothing is taken for granted any more. Milk must stand upon what it is worth, and butter fat is its measure. It pays to keep only the cow that brings good calves and thus turns her feed to the best possible account. The latter proposition is the standard by which to measure all the live stock. The work animal should make out of his feed the greatest possible amount of power and endurance, the meat animal the greatest possible weight of meat, and the dairy cow the most and richest milk. Measure the stock by the same standard you measure the machinery by.

PASTURE FOR HOGS

The cheapest hog growth, of course, is that made from pasture. In fact, unless one has pasture for the pigs, raising hogs at usual prices is a very close business. And the earlier pastures can be made available the better. Perhaps the best early pasture is red clover, but hogs are liable to eat clover too close early in the spring. Freezing in winter is almost sure to lift the crown a little above the ground, and the hog then takes crown and all, which destroys the plant. An entire field may soon be ruined in that way.

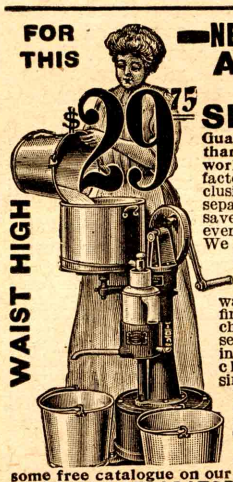
Blue grass makes the most durable early pasture for hogs, and it is rich and well relished by them. But to pasture on blue grass sod, the hogs must be ringed, else they will turn the sod and destroy the pasture. In most old fields in the corn belt, blue grass comes naturally, especially when run several years to pasture. Such fields make good hog pasture.

As a crop to plant for hog pasture the field pea ranks high. Sow as early as the ground can be got in good condition and there is no longer danger from frost. Sow quite thick, and the hogs may be turned in when the plants are four to six inches high. But if it is desired that the hogs shall fatten as well as grow, it is better not to turn in until the earliest pods begin to ripen. Peas make a rich but not a very lasting pasture; hogs eat it out more rapidly than an inexperienced person would expect.

Many recommend rape as a good plant for hog pasture, but with the writer it has never proven very profitable or satisfactory. Sorghum sowed broadcast and the hogs turned in when the plants are from three to six inches high, makes a good pasture, and one which recovers readily. Fall sown rye is good, as is also a mixture of oats and wheat (spring wheat preferred) sown in the spring. Unless pastured too heavily, hogs may run on these grains all the time, and yet some grain will mature, making a fattening feed in midsummer.

But the best hog pasture is yet un-

FOR THIS



WAIST HIGH

NEW LOW DOWN AMERICAN CREAM SEPARATOR

$29.75

Guaranteed to skim closer than any separator in the world. Sold direct from the factory. We are the oldest exclusive manufacturers of hand separators in America. You save all agents', dealers' and even mail order house profits. We have the most liberal 30 DAYS' TRIAL, freight prepaid offer. Write for it today. Our new low down, waist high separator is the finest, highest quality machine on the market; no other separator compares with it in close skimming, ease of cleaning, easy running, simplicity, strength or quality. Our own (the manufacturer's) guarantee protects you on every AMERICAN machine. We can ship immediately. Write for our great offer and handsome free catalogue on our new waist high model. Address,

Box 1105,
AMERICAN SEPARATOR CO. BAINBRIDGE, N. Y.

mentioned, and is too little considered because so common. It is white clover, which is considered almost a pest over a wide area of the United States. Few more valuable plants grow spontaneously in this country, and it should never be looked upon as a pest. For almost any stock we would rather have a pasture field set thickly to white clover than to red top or blue grass, except that its season is shorter than that of the grasses.

Old uncultivated orchards are good hog pasture. Both white clover and blue grass are generally found in them, as well as many weeds that hogs relish.

BUSINESS MENTION

If you want to get an interesting book on incubator construction, write to the Belle City Incubator Co., Box 79, Racine, Wis., and ask for their book, entitled "Hatching Facts." It is entirely free, and a postal brings it by return mail.

"The Autobiography of a Hen" will tickle your funny bone. At the same time it will give the reader some mighty good ideas on Incubators and raising chicks. Any reader who mentions UP-TO-DATE FARMING in writing the Geo. Ertel Co., Quincy, Ill., will be sent a copy free. Also ask for their big new catalog describing Victor Incubators and Brooders.

Whitman's Bailing Presses are guaranteed the best in America. And well they may be! Whitman's presses have taken highest awards in this and foreign countries at the principal expositions. When yo uwant a bailer for hay, straw or wool, write for the Whitamn catalog. It will pay most farmers to have a bailer—ask Whitman to prove it to you. Mention UP-TO-DATE FARMING in writing Whitman Agricultural Co., St. Louis, Mo.

The Schafer Saddlery Co., Box 106, Decatur, Ind., whose advertisement appears in this issue, is one of the best known and oldest saddlery manufacturers who are selling direct to the consumers (factory to consumer — one-profit plan). They have established an enviable reputation for high-grade hand-made harness, and they are perhaps as well or better equipped for the manufacture of same in their new and up-to-date plant, which is located at Decatur, Ind., than any other harness company in the country. Their catalogs are free and contain many points of interest to prospective purchasers of harness. Send for it.

The Improved De Laval

From the very general satisfaction derived from the use of the better class cream separators for some years it has seemed that the seperator had reached the point of practical perfection. Hence it is a little surprising to note the many and novel changes found in the new 1908 De Laval machines. Their makers have spared no effort or expense to maintain their position in the separator trade. The changes begin with the supply can at the top and extend to the very leg screws in the base of the machine, and include the supply can, the bowl, supporting spindle and its top bearing, and the drip shelf, swinging and detachable shelves for cream and milk. Indeed, it is very interesting to read of the progress made by this company. You ought to read it all in detail. Write for their new catalog, which is free if you mention this paper. Address the De Laval Separator Co., 74 Cortlandt street, New York City.

The Cow a Machine

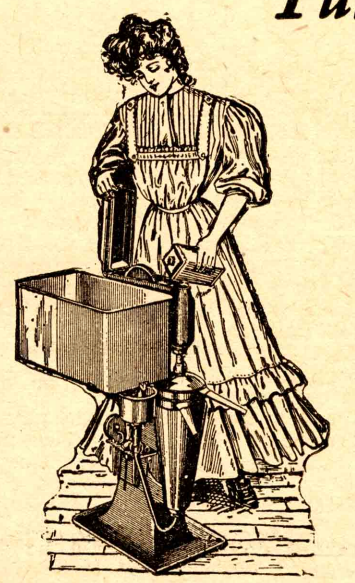
The patient cow is being reduced to the category of a "grass machine." From the first preparation of the fodderfuel which much feed her mechanical revolutions to the last turning out of the cream and butter which they agree is her most golden product, the use of the cog-wheel and crank, in every practical form, is strongly advocated. With this all important "grass machine" the experts class the "skimming machine" as the greatest essential to insuring to the formerly improvident user of crocks and pans the golden profit to which every manufacturer of cream and butter is entitled. It was not until the recent St. Louis Exposition that the milking interests became convinced of the superior results, cleanliness, simplicity and durability which one separator machine could show. At the four famous butter-scoring contests held at this exposition, the highest award on dairy butter, as well as the highest daily score in all contests, was made on butter from cream skimmed by the United States separator. At the Lewis and Clark Exposition this remarkable machine won another gold medal by the high quality of the butter it produced.

The manufacturers of these machines have just issued a new catalog, and any reader can obtain a copy free by addressing the Vermont Farm Machine Co., Bellows Falls, Vt., and asking for Book 187.

Always Proud of It
Always Glad to Tell It
Want Others to Know It

That's the truth about a man or woman who buys a **Tubular Cream Separator.** When people have the best there is they don't hesitate to say what they have, and you'll always find that when asked how he runs his dairy every Tubular owner says: "Why I have a TUBULAR Separator." He doesn't simply say: "I use a separator." Oh no! He knows the Tubular is the best and he wants you to know he had the good sense to buy the best. It's a pardonable pride. We all have it. Why shouldn't we?

The Tubular



Built Better

Runs Better

Looks Better

Skims Better

Wears Better

Is Better

than any other cream separator. Ask the man who owns one.

We have been building cream separators for twenty-eight years right on the same spot; we know more about building cream separators than anyone else in the business, and we know the TUBULAR is the best that ever was built. Why shouldn't we be proud of it? Why shouldn't the farmer who owns one be proud of it? It's like a diamond ring; there's nothing better.

How about the fellow who has a "mail order," "catalog house" separator, or one of the back number "bucket bowl" machines so loudly advertised in the papers? What does he say about his cream separator? Does he speak up promptly and give the name of it? Not much; he just says: "I have a separator." He doesn't like to tell the name of it. He does not talk about it when he can avoid it. Twice a day when he tries to run it he says things about it that wouldn't look well in print, but he isn't anxious for his neighbors to know how badly he was soaked. **He** isn't proud. No indeed, he knows there isn't much for him to say.

Which Will You Be

One of the proud, sensible ones or one of the other kind?

You have a chance to be either but you can't afford to be in the second class. You cannot make a mistake in buying a TUBULAR. It's built and guaranteed by the largest cream separator factory in the world and the oldest in America. Wouldn't you like our new catalog No. 136 ? Write for it please.

THE SHARPLES SEPARATOR COMPANY,

West Chester, Penna.

Chicago, Ill. **San Francisco, Cal.** **Toronto, Can.**

Have You Seen It?

There has just recently been issued a most interesting book entitled "Business Dairying." It contains a grist of very useful information for the farmer and withal is a book every farmer should have. This is especially true since it is issued free. It is published by the Sharples Separator Co., West Chester, Pa., the well-known manufacturers of "Tubular" cream separators. Write for Book No. 136 today, and in addition you will receive a very beautiful catalog of cream separators. All free.

SEPARATORS OF QUALITY

Take Your Choice From The EMPIRE LINE

Different Styles—Different Prices

All Sizes in Each Style

Come to headquarters for your cream separator, Mr. Dairyman, where you will find the **best** machines of **all** good styles—

Where you can **choose** the separator that meets **your** requirements, suits **your** ideas and fits **your** pocketbook.

No matter which **style** you choose from the Empire Line, no matter what price you pay for an Empire, you cannot miss it on quality.

For in the whole Empire Line you will find that Empire inventive ingenuity, Empire constructive ability, Empire quality of materials, and Empire "know-how" which has made the name EMPIRE stand for all that's **best** in cream separator construction.

That is why **every** Empire, regardless of **style**, is better than any other cream separator made.

Better because the Empire motto is to produce the best possible, regardless of cost—

Better because the Empire experts are backed by the Empire factory, the best equipped and best manned factory in the world for the production of cream separators—

Better because these experts and this factory organization are given the best materials in the world with which to build the best separators.

As an intelligent, progressive owner of cows, you will not want to be "talked into" buying some special type until you have looked into the Empire Line.

Other manufacturers try to force their **one** "hobby" upon you—The Empire Cream Separator Company offers you your choice of all good cream separator hobbies—each developed to the highest point of perfection.

Isn't that the most sensible, businesslike way?

THE GARDEN

In Eden man had first his home;
In Eden Nature's beauty shone;
And in a garden yet is found
Where use and beauty most abound.

CALM REFLECTIONS

Much may be lost by planting old seeds, or seeds of doubtful origin. New seeds with a responsible house behind them are too cheap to justify the use of doubtful seeds.

Don't waste the wood ashes. They are useful in any part of the garden, and they are useful around the orchard trees. We may have said that before.

There is no better fertilizer for the garden than hen manure and wood ashes mixed. If the hen manure is too trashy, pulverize and sift it; then mix with it about a third in bulk of wood ashes. The market affords no fertilizer that is worth more.

Succession is the word most to consider in making the garden. It applies both to vegetables and flowers. Few varieties remain in business all summer, but there are varieties that so succeed each other as to keep the whole summer supplied. A little study, and study is always wholesome, will keep the entire season furnished.

Cabbage plants should be provided for very early. In the absence of a cold frame, boxes that may be set in a south window on sunny days may produce a supply. The same is true of tomato plants. Both these plants should be got into the ground as early as fear of frosts will allow. Greater risks may be taken with cabbage than with tomato plants. The more tomatoes used in the home the better. They are said to be a healthy liver stimulant, and assist nature to dispose of poisons that make trouble with the system if permitted to accumulate.

We have often said too many farmers neglect the garden. The more fruits and vegetables on the table the less meat is required, and the less meat the better health — the smaller doctor bills.

It is not best to make a garden or plant an orchard in virgin soil. Garden vegetables and orchard trees have become thoroughly domesticated, and do best on land that has been tamed. But for best results with either fruits or vegetables the soil must be rich, made so with well-rotted manures, which may be supplemented with specially prepared commercial fertilizer.

It may not belong entirely to this department, but we like to urge farmers to plant and grow trees. It is an old story to say that the forests are disappearing, but every year emphasizes it. And the need of posts is constantly increasing. Farmers will have to grow them or do without. Hardy catalpa (Catalpa Speciosa) is about the best tree to plant.

Those who grow tame blackberries generally find it no small job to clean out the old stalks or canes. But it ought to be done every spring, and it ought to be done early. A very short brush hook with a long handle is about the best implement to use. Always wear gloves while doing that kind of work, for the briers though dead are merciless.

Currants may be grown from cuttings, and will come into bearing the second year. Many people are very fond of them, but personally we have never found great difficulty in filling their place with something we liked better.

But nothing can take the place of pie plant or rhubarb. It is easily grown, and makes the best pies that reach the table. Besides, cut in half-inch blocks and cooked through but not boiled to pieces, it makes a splendid sauce to eat with sugar and cream like peaches. And rhubarb is a medicinal plant and helps to keep the liver active and the system in order.

Those who wish an abundance of cut flowers should plant sweet peas. Some find the sweet pea rather difficult to grow. Still, it is a hardy plant —needs a little humoring at the start, perhaps, and it must have a rich, mellow soil and constant moisture, but not too wet. These simple conditions complied with, it will repay every care.

In foreign lands,
On ocean strands,
I study ways of State;
Where'er I go,
I find it so,
Wise men read Up-to-Date.

APRIL AND ITS BEAUTIES

It is difficult to write in the same article so as to fit every locality in which Up-to-Date Farming is read. What we say in this article applies more certainly to the Central Mississippi Valley than to other places.

When a boy the writer thought there were no greater beauties than the natural flowers that appeared in April — the shrub and tree flowers. But, alas! the reckless hand of man, in cutting away the forests, destroyed these forest beauties also, and most of them now bloom only in the memory of the older people. We cannot say other flowering shrubs have taken their place, for the stunted, ragged growths of lawn and garden bushes cannot do it. It would be wise if farmers could bring these old trees and bushes into cultivation, and restore some of the beauties undisturbed nature gave to April.

First was the redbud or burning bush, literally covered with brilliant pink-purple flowers. I have often wondered that Riley never wrote about the redbud, for its appearance in the woods was the boys' sure signal that it was time to go fishing, and we are quite sure it blazed on the banks of the "old swimmin' hole."

Then the dogwood, with its great, waxy white flowers, showing upon the distant ridges like the week's washing hung out to dry. Next the wild plum orchard! But the boys did not like that so well in bloom as they did later when the ground beneath the trees was deeply covered with what then seemed to us the most delicious fruit. And we believe yet it was; nothing in the orchard can quite match its flavor, and the aroma literally burdened the air for rods around. But the wild plum is gone. The ax did its part and the wicked curculio did the rest.

The wild crab apple tree was another of spring's early beauties. Beautiful in shape, the tree when in bloom looked like a huge bouquet set among the surrounding trees of brown and green, and its fragrance was unsurpassed. But the crab orchard is gone, too, and nothing has been found to take its place.

Thank You, Stark Bros.!

It is seldom indeed that we receive such a nice present as the one that just arrived from Stark Bros., of Louisiana, Mo. It consisted of three of the largest, juciest and finest apples we have seen in a long, long time. The largest one, Black Ben, measures over twelve inches around, and weighs nearly half a pound.

Stark Bros. are proprietors of a large nursery. They sell trees that raise this kind of apples, and we would advise our readers to write to them asking for catalog, etc. It will pay you. Mention Up-to-Date Farming.

PUBLIC LAND OPENING

Under the Carey Law. Irrigation ditch now finished, Land with perpetual water right $12.50 per acre on long time and small payments. Also irrigable homesteads. Free timber for fuel and improvements. Fine fishing and hunting. Ready for entry April 25th and 27th. Husband and wife are entitled to a section of irrigable public land. For further information write, **The North-Western Land Co., or L. Own a Farm in West Texas

West Texas is "The Land of Opportunities"—a Land of Promise and Fulfillment.

Its soil is rich—easy to till. The climate is even. Rain is plentiful—but never too much. Droughts are unheard of. Crops are sure and abundant. You can raise grain—hay—cotton—sugar—tobacco—fruit or vegetables with little effort. Profits are sure because markets are handy, transportation good and the demand for Texas products constantly on the increase.

Here you find magnificent schools—churches of all denominations.

Good neighbors are plentiful—the fine old American sort.

Health, wealth and happiness are sure.

West Texas is a land of peace, prosperity and plenty. Communities are law abiding. Taxes are low.

Right now you can secure fertile land in splendid locations at reasonable prices. But many people are moving in—so farm lands are getting more valuable every day.

Come, see this magnificent country. It is reached by "The Iron Mountain Route" in connection with the T. & P. Ry., and is so near and railroad fares so low you can afford to see it—before you make up your mind where to locate. Write today for information of lands, time tables and—

Low Railroad Fares

up-to-Date HOME ON THE FARM

An hour spent in the garden these sunny mornings will do more good than a gallon of doctor's medicine.

THE YELLOW VIOLET

When beechen buds begin to swell,
And woods the bluebird's warble know,
The yellow violet's modest bell
Peeps from the last year's leaves below.

Ere russet fields their green resume,
Sweet flower, I love, in forest bare,
To meet thee when thy faint perfume
Alone is in the virgin air.

Of all her train, the hands of Spring
First plant thee in the watery mould,
And I have seen thee blossoming
Beside the snow-bank edges cold.

Thy parent sun who made thee view
Pale skies and chilling moisture sip,
Has bathed thee in his own bright hue,
And streaked with jet thy glowing lip.

Yet slight thy form and low thy seat,
And earthward bent thy gentle eye,
Unapt the passing view to meet,
When loftier flowers are flaunting nigh.

Oft, in the sunless April day,
Thy early smile has stayed my walk;
But midst the gorgeous blooms of May,
I passed thee on thy humble stalk.

WM. CULLEN BRYANT.

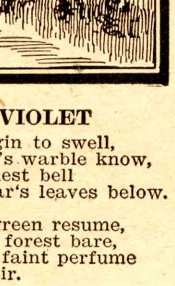
OUR BIRDS

O blackbird, sing me something well!
While all the neighbors shoot thee round,
I keep smooth plats of fruitful ground
Where thou may'st warble, eat and dwell.

TENNYSON.

Cervantes says: "The little birds have God for their caterer," and he might well have added, "have man for their despoiler."

Why is it, when we see a little gray-coated chap flitting about in the trees hunting insects that we are immediately seized with a desire to kill him, and if we catch a bright woodpecker sampling our fruit, war is at once declared upon his entire family? But if that war is kept up and no truce declared, we need not expect much fruit that season. In a tomato field of, say, ten acres, a meadow lark or quail is worth ten dollars a season as a destroyer of insects. Yet when we see them taking a bit of tomato as a change in diet, we pop away at them with our ever-too-ready gun.



A critic in Florida says that for every bird sold to tourists for fifty cents, the State loses at least one hundred dollars. He thinks it would be cheaper to give away a gold bird of the same weight, than to allow the live ones to pass out of the State.

Our birds are getting fewer every year. State legislatures, the federal government have not seen fit to protect our feathered friends sufficiently. Now what the elders have not accomplished is to be left to the children, who are to be guided in their work by the National Association of Audubon Societies.

Mothers, fathers, can not you lend a hand? Encourage the children to make bird houses, which are cat-proof, encourage them to throw away the sling-shots and shoot at wooden targets with the air guns, and whether or no their name be on the Audubon roll, let them all be little Audubons at heart.

WINNERS IN THE CONTEST "HOW DO YOU LIGHTEN YOUR HOUSEWORK?"

We give below the articles which were awarded prizes in the contest:

First Prize

To Lighten Housework

Your own mind should control the situation. Do not let your work govern you. Have a place for everything and keep it there. As soon as done using an article put it in its place. Get your kitchen work done up early in the morning and do it quick. Maintain, if possible, a firm control over your temper and over your children. Silence will often accomplish more than speech.

As your clothes come from the line carefully fold all such pieces as pillow cases, hand and tea towels, sheets, etc. Lay them on top of each other and place a heavy weight upon them. After a few hours you will find them nicely "ironed," as our city sisters say, only theirs are pressed under the mangle in the city laundry. It is said "There is only one best way to do everything. Study to know what *best way* is really best for you. It will likely prove a short and easy way to lighten your housework.

MRS. ANGIE M. SLATE.
Gordon, Douglas Co., Wis.

Second Prize

How Do I Lighten My Housework?

I would answer: By keeping my heart light. I have discovered that if I keep light-hearted and cheerful I am well supplied with patience and "patience worketh wonders," you know. More work is accomplished in less time when we do not allow ourselves to get discouraged. "One thing at a time" is one of my mottoes, too. This is the best remedy I know to lighten housework. Try it, sisters.

L. C.

Third Prize

Ways to Make Housework Easier

Scald fish before scaling.
Soak clothes before washing.
Use a cream thermometer before churning.
Keep floors and all woodwork painted.
Place a piece of glass against window casing to prevent daubing the pane while painting.
Learn the infant to go to sleep alone.
Clean the painted wash sink with kerosene.
When quilting, take long stitches; let Mary clip and Johnnie tie.
Wash and suds the quilts, lay on a frame and let the boys pump and throw on plenty of water to rinse.
Lay the carpet on the grass, and scrub with a broom; and throw on plenty of water to rinse.

Sisseton, S. D. MRS. JOHN MURRAY.

Fourth Prize

I bake a quantity of biscuits and corn muffins at one time and warm them over by standing the pan up against the teakettle before an open wood fire and turning them as soon as one side gets hot. One pint of buttermilk and one teaspoonful soda makes four dozen biscuits or one dozen muffins. No woman on earth can stand to make fresh bread three times a day.

I hurry the butter by pouring in boiling water with one hand while I churn with the other if the cream is cold to my fingers.

"MARGERY."

Fifth Prize

Mothers

Teach your girls to wash the dishes. In a short time after the chairs are moved put the knives, forks and spoons in a quart tin, place the plates in the dishpan, cups and saucers around them; put the quart tin on the plates; pour water over them, which should be boiling; then with a mop wash them out to drain; rub with tea towel. This will take but a few minutes and you did no unnecessary handling. This is what my six and eight-year-old girls do before they go to school.

MRS. V. M. L.

Sixth Prize

I have been interested in housework more or less for forty years; had nine children of my own and kept "open house" for a dozen nieces and nephews. Many "short cuts" have been necessary. The golden key to all the rest is early rising. By retiring promptly at 8 o'clock one can begin again at half past four in the morning. Consider the pile of sewing you can "turn off" before the little folks are awake, or the clothes you can iron, or the amount of writing, or the baking, or churning, or the long start on the washing. Just try it this summer.

ANNIE HEREFORD.

EASTER LILIES

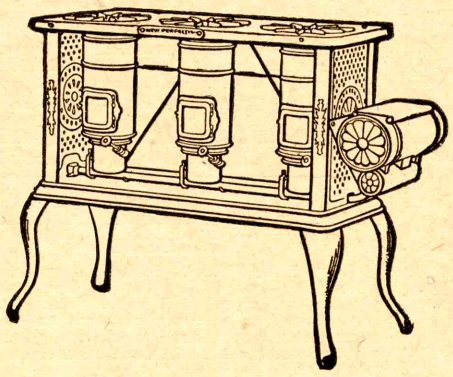
Of all the sweet flowers that herald the Spring
The sweetest and dearest are lilies that swing
Round altars, where kneeling we worship our King,
Who rose from the grave on a glad Easter morn
And blessed all the mourners there weeping forlorn,
And blessed all His people who yet were unborn.

The lilies of Easter, so fragrant and fair,
All white as the snow-drift, they bloom on the air,
The passing of Winter 'tis theirs to declare.
A symbol of joy and life from the dead
Their petals all fair to the morning are spread,
While the triumphs of Easter are trustingly said.
Oh lilies, pure lilies, of Jesus you tell
While music is rising from organ and bell,
The sadness of parting 'tis yours to dispell.
The earth's resurrection is like to His own
Who rose from its darkness to Heaven's high throne,
We crown Him with lilies, His love we have known.

RUTH RAYMOND.

Readers of this paper who are interested in raising poultry for profit should write Berry's Poultry Farm, Box 124, Clarinda, Iowa, whose advertisement appeared in a late number. Notice what they have to say and write them, mentioning UP-TO-DATE FARMING.

You Will Need an Oil Stove

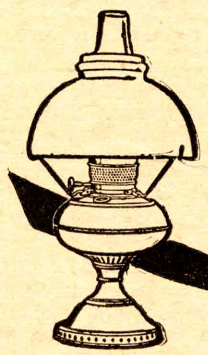


When warm days and the kitchen fire make cooking a burden—then is the time to try a New Perfection Wick Blue Flame Oil Cook-Stove.

Marvelous how this stove does away with kitchen discomforts—how cool it keeps the room in comparison with conditions when the coal fire was burning. The quick concentrated heat of the

NEW PERFECTION
Wick Blue Flame Oil Cook-Stove

goes directly to boil the kettle or bake the bread, and none is diffused about the room to overheat it. Thus using the "New Perfection" is real kitchen comfort. Made in three sizes and fully warranted. If not with your dealer, write our nearest agency.



The Rayo Lamp Just such a lamp as everyone wants—handsome enough for the parlor; strong enough for the kitchen, camp or cottage; bright enough for every occasion. If not with your dealer, write our nearest agency.

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

Dues to the F. S. of E. can be paid any time during the year. This in answer to many inquirers. But it is very unwise to delay the payment longer than absolutely necessary. The dues are $1.20 for each member. See first column in "Official Department" for full particulars.

Farmers can live a year without buying the other people's goods, but the other people cannot live a week without the farmer's crops.

We are traveling to the beautiful city of the ideal. We are aware that we will never reach it, but the suburbs are very pleasant.—HUBBARD.

The ideal will be the most nearly attained through the Society of Equity established. Therefore let all strive to promote this movement so equity may prevail in society, business and government, which surely will be the nearest approach to the ideal.

"THE THIRD POWER." If it would be read by every farmer in the country, it would give such a new education that the Farmers Society of Equity would be established, co-operation would be easy and profitable prices would result for all crops. 320 pages, cloth bound. 25 cents postpaid.

A member in Kansas wrote thus to Theo. G. Nelson:

As needle points toward the pole
You had our undivided soul.
But, since you've sailed without a chart
You've wandered vainly from the start.

THE 1908 CONVENTION

About one-third of the wheat raised in the United States comes to nine big "primary markets." The remainder, except that exported from the Pacific Coast, is mostly consumed near the place of production. The *third* that is handled commercially in the big markets makes the price. Sometimes more than half of all the wheat that is marketed during the year arrives between the first of September and the end of December.—*Saturday Evening Post.*

Admitting the above is true and it is so approximately, then December is too late to hold the national convention of the society. If delayed until that time, and the price of wheat is not decided upon until December, the society will not be of much benefit to wheat growers. October is late for the wheat growers, but it is the most logical month when we consider all the crops.

Should not the convention be held in October as in the past?

REPRESENTATION

A subject that should be considered in local union meetings and reported to UP-TO-DATE is representation in State and national conventions. Each member wants to know that he has an influence in these conventions, but it would be impossible for all to go. The nearest approach to it will be in having each local union represented. But each local union cannot send a delegate. The alternative is for several local unions to join together in sending a delegate. This delegate will carry credentials from each local he represents and should be allowed to cast as many votes as he represents locals.

The writer proposed such an amendment to the laws at the last convention but it was not adopted. If it is a good provision, see that it is adopted at the next.

SINGLENESS OF PURPOSE

Singleness of purpose must be the guiding principle of every member. Farmers know that they can only draw straight furrows by keeping the eyes steadily on the stake set at the other side of the field and walking uprightly. So with our society; we must keep our eyes constantly on the main object as a bright and shining mark, walking uprightly and not swerving to the right or left.

What crooked rows they make,
Who take their eyes from off the stake.

NORTH DAKOTA WANTS EQUITY EXCHANGES

Too many of the people are still agitating the plan of Equity Exchanges. It is reported that a late meeting of the North Dakota State board of directors resolved that the State president be instructed to submit to the national board at their meeting in June that the State union of North Dakota recommends that steps be taken to establish Equity Exchanges for the marketing of farm products to consumers and that such Equity Exchanges be incorporated by representatives of the society only.

It should be remembered that Equity Exchanges are capital stock corporations and the purpose of their advocates is to establish them in all cities to receive all farm produce and distribute all farm produce to the consumers. We may be assuming some when we say ALL farm produce, because we are not sure that this is their purpose, but if they do not handle all they cannot control the situation, and if they do not control the situation as regards supplies and prices, the very existence of the Exchanges will be jeopardied.

But the Exchanges will not make a market for a pound more of produce, hence are not justified on that score. They will not advance the prices of farm produce a fraction of a cent, but if successfully established in all the cities, may reduce the cost to the consumer. But should farmers, at this stage of their development in organiation, stop, or side step, to promote such a gigantic and impractical movement which cannot in itself give farmers larger markets or better prices?

Farmers have got to settle down to the plain and simple proposition that to make prices on farm crops, the crops must be controlled. Equity Exchanges are not to CONTROL CROPS, but, we quote from the North Dakota union's resolution again: "For the marketing of farm produce to consumers." To control crops we must have organization, and the necessary organization will be delayed unnecessarily if any of the energy or resources of the society is diverted to establishing Equity Exchanges.

UP-TO-DATE FARMING has done its duty when it warns the members to oppose any tendency on the part of any officers to depart from the true plan of the society to accomplish its objects. We do not charge any ulterior motives to the members of the North Dakota board of directors who may have joined in this resoultion; they simply did not understand what they proposed to do nor realized the consequences if their recommendation was attempted to be carried out.

Department of TOBACCO GROWERS

A FUNDAMENTAL PRINCIPLE

When a real surplus of any crop exists a reduction in production is necessary to maintain prices at a profitable level. Every tobacco grower may as well accept this as a fundamental principle that cannot be violated except a severe penalty will be the result. The Green Briar local union in the Stemming District subscribes to this principle as evidenced by the following preamble and resolutions:

Whereas, we, the members of Green Briar local union, and of the Stemming District, believe through organization and co-operation that much good has been and can be done; and

Whereas, we believe by limiting the acreage and the production of tobacco we can practically control marketing of same;

And believe by limiting the acreage we can improve our land, produce a better quality of tobacco, get a better yield per acre, and receive more of the profit, which is justly ours.

Now therefore we submit the following resolutions to the tobacco growers of the Stemming District for fair consideration and appeal to them, for the sake of their own families, to endorse same:

Resolved (1) That we, the members of Green Briar local union, do pledge ourselves to the limiting and controlling the production of tobacco for the year 1908, and ask the hearty co-operation of every tobacco grower, whether he be landowner, renter or share worker.

Resolved (2) That we ask the co-operation of all members in every school district to appoint a committee of five to look after the limiting and controlling of the 1908 crop of tobacco.

Resolved (3) That we condemn and deplore the acts of those who try to persuade and make people believe that there is no danger of over-production in 1908, whether he be member or non-union, producer, speculator or manipulator.

The report of the Commissioner of Agriculture of Kentucky, issued in March, shows a great reduction in the number of tobacco beds sown, which is one of the best indications of reduction in the 1908 crop. This fact also augurs well for a good price for the balance of the 1907 crop.

Mr. Hart Robinson of this county sold his 1907 crop of tobacco this week. He received for his tobacco $6,339.50. He received 15 cents per pound. Mr. Robinson raised this tobacco on twenty-one acres, and on each acre cultivated he made $301.88.—*Lexington Herald.*

ACREAGE IN DAVIESS COUNTY (KY.) WILL NOT BE LIMITED BY PLEDGE

On February 8, 1908, a mass meeting of growers was held in Owensboro and the following pledge was prepared to be circulated among the growers of the county:

We, the undersigned, hereby pledge our honor that we will neither plant nor allow planted on land that we own or control, for the year 1908, more than 10,000 hills of tobacco to one man or hand, and not over 5,000 hills for each boy over 12 and under 16 (no boy under 12 years to be counted). This is to apply strictly to those who labor in the tobacco fields, no one being allowed to transfer his allowance to any other person.

This pledge is signed with the distinct understanding that it shall be not binding unless signed by March 1, 1908, by growers producing 95 per cent of the tobacco of Daviess county.

The committee reported as follows:

We were appointed a committee to circulate the pledges and canvass the returns. Accordingly we sent the pledges to every school district in the county, and asked that they be returned to us by March 2.

About half of the pledges have been returned. These show that in some districts every man signed, while in others very few did. When all the districts report we will make full statement of the result.

But in the districts that have already reported enough have refused to sign to defeat the proposition, even should the remaining districts sign solidly. Though as a matter of fact we know that in a number of the unreported districts practically nobody has signed. So according to the terms of the pledge all who signed are released from any obligation.

The opinion has been expressed by many that if another meeting were held and the time extended that 95 per cent might be secured. If it is the general desire of the growers of Daviess county to take further action in this matter, we shall be glad to do our part.

J. C. TINIUS,
W. G. RINEY,
GEO. M. TAYLOR,
Committee.

Under such conditions each producer should consider himself in duty and honor bound to not plant more than a normal crop. Self-interest dictates that this will be the only safe and sane way to retain the advantage in liberal price already gained.

MEETING

J. H. Quigley, organizer, will address meetings as follows: Holly Hill, Ky., Saturday, April 18; Pleasant Hill, Ky., Friday, May 1; Lucas, Ky., Saturday, May 2. Ex-Congressman J. M. Richardson will also assist at meetings.

NOTICE

Manager Abernathy of the Equity Warehouse, Hopkinsville, Ky., solicits deliveries and consignments of tobacco. He is now preparing samples of all in the house preparatory to selling. The executive committee ordered six hogsheads of very low type sold at $6.00 to $10.00 per 100 pounds.

H. E. Hellsley, president; F. B. McCowan, secretary; H. H. Abernathy, salesman.

STORY OF WESTERN ENTERPRISE

Lessons in Economy for Everyone

The history of the Chicago House Wrecking Company reads like a romance. There is not another concern in the world that is able to offer such genuine bargains in merchandise and supplies of every description. They issue mammoth catalogs three or four times a year, which bring to the door of the farmer, the mechanic and merchant, bargains in everything that is needed on the farm, in the field or the home. Their method of securing goods is unique. They buy millions of dollars worth of the world's best products at forced sales. Their buyers are everywhere.

You read in your daily paper stories of commercial disaster, of business failures, sheriffs' and receivers' sales, and underwriter sales, marine wrecks, etc. The Chicago House Wrecking Company is the clearing house for all merchandise from these sources. Everything purchased in this way is shipped to their mammoth warehouses in Chicago, where it is sorted and cataloged, ready for distribution among thousands of customers. Wise buyers save from 30 to 50 per cent by watching for these bargain sales.

The Chicago House Wrecking Company is the largest institution of its kind in the world. Their mammoth warehouses, salesrooms and yards now cover an area of over thirty-five acres. Here you will find everything under the sun, from a package of pins to traction engines, stationary engines from one to a thousand horsepower—a veritable exposition in itself. The buildings comprise administration or office building, where over 200 stenographers are kept busy answering inquiries; roofing factory, where thousands of squares of steel and iron roofing, "Vulcanite Asphalt" roofing and "Rubberized Galvo" roofing, roofing cement and building paper are manu-

I Am the Paint Man
2 Full Gallons Free to Try—3 Months Time to Pay
You Pay No Freight to Try My Paint

I Have a new way of manufacturing and selling house paint that's unique—that's better.

Before my plan Paint was sold in two ways—either ready-made—or mixed by a local painter. Both these ways are at fault.

Ready-Made Paint settles hard in cans—and mineral pigments and chemical acting driers in ready-made paint eat the life out of Linseed Oil—which is the LIFE of all paint.

Painter-Made Paint can never be properly made by a painter—because of lack of heavy mixing and grinding machinery.

My Paint is **ready to use**—but **not ready-made.** My Paint is **made to order**—after the order is received—packed in hermetically sealed cans—(extra size to insure a full gallon) and dated the day the Paint is made.

Pure Linseed Oil and pure, **fresh paint ingredients** are used in my Paint. Such materials, found at local stores, are usually adulterated.

I sell my Paint **direct from factory to user**—at very low factory prices.

I pay freight on six-gallon orders or over.

When the order of six gallons or over is received, use two full gallons to test it—and if you are not perfectly **satisfied,** in every particular, return the balance of the order to me—and the two gallons you have used shan't cost you a penny.

No other paintmaker offers such a liberal proposition. My Paint is sold to responsible people on three months' time, if desired. I make three brands of Paint to suit the requirements of my immense trade.

My strictly Pure All White Lead Paint is absolutely the best paint in the world. My 40-60 Brand Zinc and Lead Paint is the best paint in its class on the market. O. L. CHASE, THE PAINTMAN, DEPT. D51, ST. LOUIS, MISSOURI

The Man Who Carries a

STEVENS

double barrelled shotgun knows that it's "up to him" *if the bird gets away.*

The gun is reliable. It shoots straight and hard, and is the equal of a much higher-priced gun, both in the field or at the trap.

Made with the celebrated Stevens check-hook and new cross-bolt through extension rib, permitting heavier charges of powder. Special steel barrels choke bored for any standard shell.

Send for 160-page catalog showing all kinds of arms for men and boys. Full of information about sights, ammunition, how to shoot, care of arms, etc., such as every man and boy should have. Sent free for 5 cents to pay postage.

RIFLES FOR BOYS:
Little Scout, . . . $2.25
Stevens-Maynard, Jr., $3
Crack Shot, ... $4
Little Krag, ... $5
Favorite, No. 17, . . $6

If your dealer can't supply you with genuine Stevens, we will ship direct on receipt of catalog price.

J. STEVENS ARMS & TOOL COMPANY
225 Front Street
Chicopee Falls, Mass., U. S. A.

Demand unlimited. Big returns on small investment. A Machine for artistic face designs and superior finish. Catalogue Free. Write
HERCULES MFG. CO., Dept. A37, Centerville, Iowa.

DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers

THE world has always acted on the principle that one good kick deserves another.
ELBERT HUBBARD.

Equity Exchanges as proposed by the North Dakota State union would be commission houses with no advantage over the old ones, but with the disadvantage of being owned by people inexperienced in this particular business and with little experience in any business but farming. Can they have a good chance to survive when pitted against the skill and financial strength of the old established houses?

WORKING CREED

Here is a creed to live by,
Worthy a nobler song:
Do always the best that is in you,
With a spirit serene and strong.

Forgive your enemy freely,
Tho' he work you bitter wrong,
Be honest, be brave, be cheerful,
And help the next fellow along.
JOHN COLEMAN.

TRUE OF FARMERS

Farmers will be the easiest people on earth to organize if they will quit following false leaders.

Farmers will stay organized for profitable prices if they will refuse to be deceived by slick people who want to continue fleecing them.

Farmers (many of them) believe they ought to make a thousand millionaires every year among the people who exploit them rather than grant a respectable living to the person who has taught them how to save the thousands of millions themselves.

But farmers are learning. Many of them can detect the claws under the velvet touch. The education farmers are getting right now will be more valuable to them than any education they ever had. And it ought to be, because it is costing them a terrible price.

To the founder of the A. S. of E.s
May God in His Mercy be with you
And land us all on that beautiful shore of Equity,
That we may all hand in hand
Fire from our glorious land
The gamblers in all our products.
G. J. EISTERHOLDZ.

Dues to the Farmers Society of Equity can be paid any time, but the best time is now. Any unions holding them out cannot do better than to send them in now, particularly as a break will occur in receiving this paper if they are longer withheld.

SOME ORGANIZERS OF F. S. OF E.

Barryton, Mich., Feb. 19, 1908.

Mr. Everitt.

Dear Sir—I see that you want more organizers now. Send me your terms, please, for I have been watching to see how the other faction was coming out. I was in hopes that it could be settled with but little trouble, but I am glad to see that you have stood for the right. I am glad that our State stands on the old plan and that Up-to-Date is our official paper. I believe that when the storm is over that we will have fairer weather than we had before and the society will grow faster.
A. K. FINEHOUT,
Former State Organizer of A. S. of E.

If you want an organizer, write to one of the following, who may be the most convenient to your place:

ARKANSAS
Levi Gatlin, Brookland.

DELAWARE
John M. Peckham, Harrington, Kent Co.

ILLINOIS
Delmar Lee, Patoka, Marion Co.
W. F. Hall, Raleigh, Saline Co.

INDIANA
B. F. Boultinghouse, Pueblo, Spencer Co.

IOWA
R. Sherod, Keosauqua, Van Buren Co.

KANSAS
F. C. Kessler, Newton, Kan.

KENTUCKY
N. M. Ashby, Sebree, Webster Co.
Robert Duddles, Spurlington, Taylor Co.
S. A. Hale, Earlington, Hopkins Co.
J. W. Lochner, Franklin, Simpson Co.

WISCONSIN
Owen Patenaude, Shell Lake, Washburn Co.
J. C. Fremont, La Crosse, La Crosse Co.

Cattle Helps

Milk tubes, lead probes, teat expanders and teat bistouries are necessities in the modern dairy and you want them *now*, so as to have them on hand in case of need.

An abortion remedy on hand may save lots of slunk calves, a timely tonic or fever remedy may put a cow on the road to recovery when delay would mean death. Join the crowd and write G. P. Pilling & Son Co., 2237 Arch St., Philadelphia, for their list of "Easy to Use" cattle instruments and remedies. Write today, because tomorrow may be too late. Your cow may die before you can get veterinary help, and one dead cow represents more money than would furnish full outfits of trouble-saving medicines and cases of instruments for half a dozen dairies. You or your hired man can use them as easily as a veterinary surgeon.

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues will not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say; "I saw it advertised in Up-to-Date Farming."

Agents Wanted

Agents Automatic Curry Comb, postpaid 40c. Over $5.00 daily or sample returnable. Particulars free. Clean Comb Co. [B] Racine. Wis.

Easy money for farmer boys. We manufacture three specialties that every farmer needs. A postal will give you full information. Write now and get exclusive territory. Western Mfg. Co., 1812 College Ave., Racine, Wis.

Protect your Family, Home and Telephone with our "No Risk" Lightning Arrester. We guarantee your telephones against lightning. Thousand of pleased customers. One farmer made over $450 last two seasons besides farming. Write for our booklet and agents prices. W. E. Ashby Telephone Cut Out Co., 207 Square Street, Chariton, Iowa.

Tell them you saw the "ad" in Up-to-Date Farming

factured and shipped daily; boiler works and machine shops, where boilers, engines and machinery of every kind are overhauled, rebuilt and put into perfect condition for further service, being practically good as new when leaving their shops; main warehouse and salesroom, over 600 feet long by 150 feet wide, containing furniture, rugs, drapery, stove, plumbing and heating, hardware and general supply departments; pipe department, containing thousands of feet of pipe of all kinds and sizes. They have facilities for cutting and threading pipe to order in any size or quantity; building supplies and lumber yard, containing millions of feet of lumber. Also thousands of bargains in doors, windows, sash, building supplies, etc., all seasoned and ready for shipment. If you intend to put up a building of any kind, it will pay you to let them figure with you. They will also furnish building and barn plans free of charge and any information or advice regarding the erection, decoration, heating, plumbing and finishing. They have a staff of architects and engineers at the service of their customers. This firm is the only concern in the world where you can buy lumber and all necessary supplies to build your house, a furnace, hot water plant or stoves to heat it, and furnishings for every room, including furniture, carpets, rugs, etc. Time, money and worry can be saved by placing your complete order with them.

Their reliability is unquestioned. With a capital of $1,000,000 they stand back of their iron-clad guarantee, to give absolute satisfaction.

AN INTERESTING HISTORY

The Chicago House Wrecking Company was organized in 1892 for the purpose of purchasing and dismantling the Columbian Exposition at Chicago, the first great World's Fair. The original cost of buildings and equipment was over $30,000,000. It was dismantled by the Chicago House Wrecking Company in a few months and its products scattered broadcast over the land, fitting into useful places in nearly every city and village in the United States.

The next attraction in this line was offered at Buffalo in 1901, when over $8,000,000 was expended in the construction of the Pan-American Exposition. When the gates were closed to the public, it was purchased and dismantled by the Chicago House Wrecking Company. Their wisdom in purchasing this material and returning it again to the channels of commerce has been attested by many economical buyers.

With the record of successful operations, it was natural that at the close of the Louisiana Purchase Exposition, the directors of this great undertaking should negotiate and successfully close a contract with the Chicago House Wrecking Company for the purchase of this famous exposition.

The huge sum of $50,000,000 was expended before the public was invited to inspect this vast exposition. In the construction of buildings and enclosure, over 100,000,000 feet of lumber were required, 500 miles of pipe, thousands of tons of structural iron and nails, enough material to build a complete city for 50,000 inhabitants.

Time has extended their line of action, as outlined in the first paragraph. Wrecking prices have come to be known as genuine bargains and associated only with the Chicago House Wrecking Company's name. This company stands between the consumer and high prices. Their business success is due to their economy in buying and their reduction of waste to a minimum. Every man who buys from them and is pleased with his transactions, sends them new customers. Fair, square and honorable treatment is their motto. They build, not for a year, but for ever.

If you haven't one of their latest catalogs, it will pay you to send for one, even though you do not wish to place an order now. Ask for catalog No. 204. It's free. You can save many a dollar during a year by careful buying from this great reliable institution.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

THE FIELD

A. S. OF E. AND LABOR UNIONS

J. A. EVERITT:

When the plan of uniting the A. S. of E. and the labor unions was first proposed I was rather favorably impressed; but after a careful investigation I am now thoroughly convinced that it is absolutely impracticable. It is to the interest of the unions to get food and clothing at the lowest price possible, just as it is to the interest of farmers to get the highest price possible. You cannot mix oil and water without an alkali, and as in days long since passed I have heard the good housewife say: "The lye must be strong enough to float an egg or it will not eat up the fat and there will be no soap." The lye in this illustration represents the "Equity Exchange" proposed by the promoters of this plan, and it would eat up the profits just as the beef trust eats up the profits of the stock raisers at the consumers' expense; or as the tobacco trust, the millers' trust, etc., eat up the profits of the producers at the expense of the consumers. In this day of insatiable greed it would be absurd to expect capitalists to build the commission houses without having absolute control of the business, and the producers of wealth have had sufficient experience along this line to make them very suspicious of any new scheme proposed by the money power.

S. E. HAMPTON, Milton, Ky.

FARMERS SOCIETY OF EQUITY,
Indianapolis, Ind.

Dear Sirs and Brothers—I was elected at our last quarterly meeting county secretary of the society. At this meeting we voted to go with Mr. Everitt's branch of the society and changed the name of the county organization to F. S. of E.

We have about 300 members in the county. Not much work was done last year toward organization. This year we intend to vigorously push the work of organization. The society has charge of the flouring mill at Lewistown and are manufacturing Equity flour. We are incorporating a farmers' Equity insurance company of the county and intend to keep one or more men constantly in the field this year writing insurance policies and taking members into the society. The split at Equity headquarters has caused some division here. This has caused delay in getting the annual dues. I hope to be able to send them in soon.

Fraternally yours,
C. A. DRINKARD,
County Secretary of Fergus Co., F. S. of E.
Garneill, Fergus Co., Mont., Feb. 8, 1908.

EQUITY WOMEN

MR. J. A. EVERITT:

Through the columns of UP-TO-DATE FARMING I wish to reach the ladies of Michigan. Many of them do not know that the farm women are organizing. Last October the Michigan Society of Equity was organized. Now we have a State union and officers. Our constitutions are printed and we already have some very enthusiastic ladies' locals and hope to see many more soon. I would be pleased to hear from ladies in every county and will reply to all letters. Let our watchword be Michigan ladies to the front. The ladies of other States are organizing fast, and helping their husbands and brothers in their fight for Equity. Let us do as well and not falter in this good work. The mission of the Michigan Ladies Society of Equity is the advancement of the farmers' wives and daughters and to aid the cause of Equity in every way possible. Address communications to Miss Julia Ball, State secretary, Hamburg, Mich., or to Mrs. Jas. Howey, State president, East Jordan, Mich.

[We commend very highly this movement on the part of the Michigan ladies and recommend the plan to wives, daughters and sweethearts of Equity members everywhere. —ED.]

MY DEAR BROTHER EVERITT:

I am in receipt of the last number of UP-TO-DATE FARMING. It certainly ought to bring results. It makes the marketing business so plain that I would think any one cannot help but see how simple the plan is and how easy it would be to put it in full force. Although I have not written to you for a long time, I want you to understand I have not forgotten you, nor forsaken the cause you so nobly and bravely battled for against such a mighty army of grafters and robbers. I know them from way back. I knew two years ago when Mr. Tubbs and ——— got up the buckwheat campaign that there were traitors in your camp. How I did want to see you, but I had spent so much money and time that I could not justly bear the expense. I wanted to tell you so many things, but not knowing you personally I hesitated to write them. I do wish you would come to Pennsylvania. I want to get acquainted with you. I assure you that I am with you for just what you stand for and will be until we win. Fraternaly yours,

A FRIEND IN EQUITY.

Canton, Pa., February 19, 1908.

PRIZE WINNERS IN MARCH 15 PUZZLE

The correct solution to the puzzle in the March 15 issue was as follows:

1. **The Eddystone Mfg. Co.**
2. **People's Supply Co.**
3. **Standard Oil Co.**
4. **Columbus Carriage & Harness Co.**
5. **The Manson Campbell Co.**
6. **National Co-Operative Realty Co.**
7. **Dr. Earl S. Sloan.**
8. **Duane H. Nash.**

Several hundred sent correct answers, and from those who wrote articles on the advertisement appealing the most to them we have selected the following as prize winners:

First Prize, $1.50

Joseph J. Carroll, Cazenovia, Wis.

Second Prize, $1.00

Lucile Hurd, Odin, Ill.

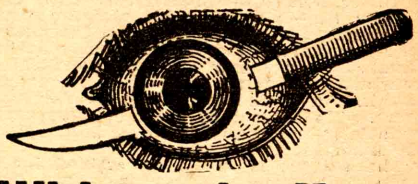
Third Prize, 50 Cents

Robert English, 752 Willow street, Lebanon, Pa.

Fourth Prize, 50 Cents

Vernie Ingram, McLeansboro, Ill.

Eyes Cured



Without the Knife

Grateful Patrons Tell of Almost Miraculous Cures of Cataracts, Granulated Lids, Wild Hairs, Ulcers, Weak, Watery Eyes and All Eye Diseases—Send Your Name and Address with Two-Cent Stamp for free Trial Bottle

The cures being made by this magic lotion every day are truly remarkable. I have repeatedly restored to sight persons nearly blind for years.

Ulcers, wild hairs, granulated lids disappear almost instantly with the use of this magic remedy. Weak, watery eyes are cleared in a single night and quickly restored to perfect health. It has repeatedly cured where all other remedies and all doctors had failed. It is indeed a magic remedy and I am glad to give this free trial to any sufferer from sore eyes or any eye trouble.

Many have thrown away their glasses after using it a week. Preachers, teachers, doctors, lawyers, engineers, students, dressmakers and all who use their eyes under strain find this Magic Lotion a safe, sure and quick relief. If you have sore eyes or any eye trouble write me to-day. I am in earnest in making my offer of a free trial bottle of this lotion. I am glad to furnish proof in many well-proven and authentic cases where it has cured cataract after the doctors said that only a dangerous and expensive operation would save the sight. If you have eye trouble of any kind you will make a serious mistake if you do not send for my great free offer of this Magic Eye Lotion. Address with full description of your trouble and a two-cent stamp, H. T. Schlegel Co., 2493 Home Bank Bldg., Peoria, Ill., and you will receive by return mail, prepaid, a trial bottle of this magic remedy that has restored many almost blind to sight.

Early Seed Corn

Buckhart's White Dent is a 70-day corn that surpasses every other variety for late planting. The cost is small and the grain is deep. Ears are medium sized. Put out some of this corn and you will not regret it.

Can You Solve This Puzzle?

Below we print the headlines and catch words of ten of our advertisers in this issue. Most of the advertisements are large, and can be easily found. All of the lines are not at the top, but some are found through the center. By looking through the advertisements you will be able to make each one out. Try for yourself and see and send us the result. Here are the lines:

TAKE YOUR CHOICE FROM THE DIFFERENT STYLES.
$7.15 BUYS THE BEST 120-EGG INCUBATOR.
IT'S ALL IN THE AWL.
GUARANTEED BEST IN AMERICA.
USE HAHN FERTILIZER DISTRIBUTOR.
WE HAVE THOUSANDS OF ENGINES IN SUCCESSFUL OPERATION.
P. & O. CORN PLANTERS.
LET ME PAY THE POSTAGE ON MY BIG BOOK.
I AM THE PAINT MAN.
WE SHIP ON APPROVAL.

It may be we will get no correct answer (and in that case the prizes go to those nearest correct), so send the best solution you can.

Read The Following Conditions

Arrange your answers neatly and number each consecutively, allowing an entire line to each. Give the name and address of each advertiser whose announcement contains the lines in question.

As a part of this contest it is necessary that you tell us which advertisement in this issue appeals to you most and give some good reasons why it does. The advertisement you write about must be some one other than those in the above puzzle, and must not be signed by Up-to-Date Farming, J. A. Everitt, or Farmers Society of Equity. Letters not containing such an article, of course, cannot compete for the prizes.

If more than four send correct solutions, then the ones who wrote the best articles will be given the prize.

For the best solution and article we receive on or before April 15, we will give a prize of $1.50 in cash. The next best will receive $1.00, and the two next best 50 cents each.

No money required to compete for, or to get a prize if you are entitled to it. This is a bona-fide offer made by the publisher of UP-TO-DATE FARMING and there is no "catch" in it.

Try your skill, as you stand an equal chance with any of our readers.

Winners will be announced in the issue of May 1 and prize money forwarded immediately. Address all answers to

UP-TO-DATE FARMING, Rebus Department **Indianapolis, Indiana**

AGAINST GAMBLING IN GRAIN

Haven, Kan., Feb. 1, 1908.

Hon. Chas. F. Scott,
Member of Congress.

Dear Sir—I notice with pleasure your appointment as chairman of the Committee on Agriculture. And this pleasure was intensified when I saw that you are turning your attention to the framing and enacting into law, a means to prevent gambling in grain. No subject of greater importance, financially or morally, has ever been before the American Congress.

The subject is little understood by a large proportion of our citizenship. Our people do not generally understand how unjust the Government has been when it has given information to the public as to the yearly production, yet has never given the farmer information as to the demand that would be made for his products during any particular year.

Speculators, or gamblers, have used this free information, which is often misinformation, furnished them by the Government, to their own selfish interests. Professional gamblers have usually sold our products for future delivery and so have of necessity become bears, wishing to buy the goods near the time of delivery at a lower price than that named in the contract. Hence every effort has been made on their part to lower the price of farm products. To this end I have known of their paying for reports on crop prospects that were "made to order."

The farmer, who is usually a holder of the real grain, or is interested in a growing crop, is, on account of his interest, the other party to the wager. The farmer, being isolated and unorganized, and a small holder, has no possible influence on the market. So, that in the last thirty years in Kansas, five years out of six, wheat has sold below the cost of production. Now, if the producer's loss was the consumer's gain this condition need excite little sympathy from the general public. But this is not the case. Observation has demonstrated that when the crop is largely in the producer's hands, bear influences predominate, but when the crop has mostly gone to market, bull sentiment and influences are in the ascendency.

I have not mentioned the familiar terms "supply and demand," for their influence has become uncertain, if not utterly impotent. All crops, during the last 100 years, or since the dawn of history, have been fully consumed, which indicates that the demand has always equalled the supply. The demand and supply are uniform and continuous, to a great degree, and neither one suggests the violent fluctuations that daily affect our market. Which violent fluctuations are occasioned wholly by the gamblers to promote trading. Now, the producer and consumer, both sufferers, outnumber the gamblers or speculators as a thousand to one, and it would seem, aside from the moral standpoint, that the wage-earning, bread-winning majority should be protected.

Wishing you Godspeed and a complete success, I am,

Sincerely yours,
C. W. PECKHAM.

I am decidedly in favor of the F. S. of E. and of the unadulterated plan as we started out. My only objection was that it should be exclusively for farmers, their wives and children. Mr. ——— has been at Chester twice and is working against you. I believe there are very few papers that are of real value to farmers, and I have no use for their new paper. The millers here have decided to not loan sacks to farmers, which has caused many to build granaries, which I think will be a benefit.

ISAAC R. PINKERTON, Chester, Ill.

DON'T WANT IT

(*Duplicate*)

Editor Equity Farm Journal,
Chicago, Ill.

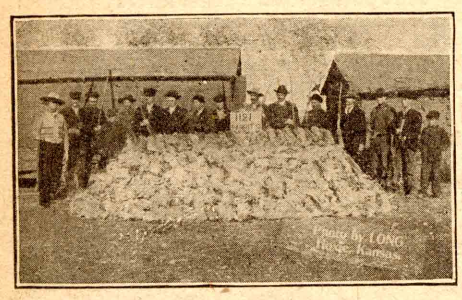
Sir—Please discontinue my name on your subscription list, as I never authorized you to send me your paper.

There never was a reformer lived but who was sacrificed and I suppose that as a matter of fact J. A. Everitt had to get it in the neck by his would-be friends just the same as Christ did and all other reformers have before him.

It works on the principle that I tell you all I know and you add that to what you know, and then you know a great deal more than I know, and there is where you took advantage of J. A. Everitt. You acknowledge that he was the founder of the Society of Equity, but you deny his right to stay in the councils of the society.

I am yours,
J. D. HECK.

Tenmile, Wis.



One day's hunting, January 4, 1908. All jack rabbits. Twenty-three men. All friends of Equity. Our best wishes to you and yours.

J. N. S., Hoxie, Kan.

MICHIGAN'S ATTITUDE

Great significance should attach to the resolutions adopted by the Michigan State convention as printed in this paper and as they relate to headquarters and the official paper. As our readers probably remember, Michigan from the first refused to submit to some of the actions of the 1907 convention. They had a meeting in December and most emphatically recorded their protest against all the attempts to depart from the true plan of the society and to destroy the influences that brought the society into existence and established it. Their second meeting, at which Mr. Barnett and Mr. Everitt were both present, consequently both sides had an equal opportunity, was a victory for UP-TO-DATE FARMING and the true principles of the society. May we not hope that some other States will realize the true significance of this action by Michigan and do likewise? Also, the matters in controversy have now been put squarely before the board of directors of the national union. Will they acknowledge the authority of the members, as expressed through State conventions, to dictate the policy of the society, or will they disregard their wishes and continue to attempt to inflict on them the usurping sheet under the guise of an official paper? This is the opportunity for the board of directors. We believe a majority of them, if not all of them, will gladly do the members' wishes. One hundred thousand members all over the country await their action. If they accede to Michigan's wish, conditions will be produced at once that will harmonize all interests that are true to the society and should result in a rapid development in the future. To refuse to do this will—well, the final triumph of the society will be delayed.

We have just received the latest catalog of the Chicago House Wrecking Co.—No. 204. It is chuck full of bargains in all kinds of farm material—lumber, engines, roofing, pipe, furniture, etc. Send for it. You will want it when you buy as a guide to prices. Address Chicago House Wrecking Co., Chicago, and be sure to ask for catalog No. 204.

The Allen Mfg. Co., 1250 Allen Bldg., Toledo, O., manufacturers of Portable Superb Bathing Outfits, write us that their business has made a wonderful increase in the last year, a gain of something like 800 per cent. This is certainly a good showing and proves that it pays to deal square and give a dollar's value for a dollar cash. They make a most useful bathing outfit at a low price, and you ought to have their catalog, which is free.

Free Sample of Congo

The best way to know what you are buying in a ready roofing is to get a piece of it in your hands. The manufacturers of Congo Roofing make a great feature of their sample distribution, because they consider a piece of Congo Roofing to be the best advertisement of their goods which they can get. If you are interested in ready roofing, you can get a sample of Congo without charge by simply asking for it from the manufacturers. Drop them a postal and it will come by return mail if you mention UP-TO-DATE FARMING. Address the United Roofing and Manufacturing Co., Philadelphia, Chicago, San Francisco.

Spring Time Is Paint Time

Now is the time to commence to think about paint—and the kind you are going to buy. Mr. Chase of St. Louis issues a very handsome and complete Paint Book—probably the most elaborate of its kind ever issued—which is full of useful information about paint. With this book he sends extra large color samples to select from—also a free book on all kinds of painters' supplies, which he sells direct to user at *direct-to-user* prices. These books are sent out absolutely free upon request, and anyone interested in paint should surely get these books before buying. They can be obtained by simply addressing a postal card requesting them to O. L. Chase, The Paintman, Dept. 51, St. Louis, Mo.

Now while there is not much doing on the farm is the time to gather up odds and ends of sound lumber and employ your time in making Up-to-Date Movable Fence Panels. We have seen a model of this fencing and believe its utility will be quickly observed by progressive farmers who are looking for time and money saving equipments in their business. This fencing will be particularly appreciated when quick work is desired for building sheep, hog or calf lots, etc., as it can be set at the rate of one rod in one minute. Invented by a farmer and for sale by a farmer. For further information write Mad River Fence Company, West Liberty, Ohio, and mention UP-TO-DATE.

The Best Potato on Earth

For Home Use and Market

Market gardeners, truckers and all others who grow potatoes for home or market will prize this potato ahead of all others on account of its *extreme earliness, good table qualities, fine size and shape, great productiveness and splendid keeping properties.* Just think of one variety of potatoes combining all of these qualities *in high degrees.* We positively assert and have abundant and undoubted proofs that EARLY SIX WEEKS MARKET POTATOES do make good-size, merchantable tubers *in six weeks from planting.*

We don't refer to a solitary instance. This potato can be *depended* upon for such results every time *if planted when the growing season has arrived, and the weather is favorable.* With unfavorable weather they will, of course, require longer. The potatoes cook fine and dry from the time they are large enough until late spring. Size is medium, skin light flesh color, shape like in illustration. They are perfect beauties, heavy and sure yielders.

One pound Early Six-Weeks Market Potato yielded 147 pounds of fine, sound, smooth tubers. Ripened in 75 days, and produced marketable potatoes in six weeks as you claimed. This is the most valuable variety of potatoes ever introduced. R. TAYLOR. Ashland Co., Wis.

I like the Six-Weeks Potato very much. I divided with my neighbors. One of them says they are the best he ever saw. They are excellent keepers. They are first-class in every respect. E. HARTMAN. Sutton Co., W. Va.

We have had much experience with this potato and are prepared to state that owing to their quick growth, escaping the drought, bugs, blight, etc., and extra yielding propensities, they make larger average yields for the ordinary potato grower than late varieties that often times are left to take their chances against unfavorable influences. This potato, *strange to relate, keeps sound, solid and fresh late into the spring, equal to any late potato that we ever saw.*

Size for use in six weeks. Ripen in ten weeks. 1 year yielded 420 bushels per acre next year, 380 bushels per acre; 2 years later, 600 bushels per acre. Get the genuine seed from us. We introduced and named this potato.

We have the genuine seed. Price very low, considering how fine this potato is *By mail postpaid*: 1 pound, 30c; 4 pounds, 75c. *By freight or express*: 1 pk., 60c; bu. $2; bbl. $4.50.

Catalog free. *Originally introduced and for sale by*

THE BREAD LINE

Frequently in the history of this and other countries there has been what was known as the bread line. Usually it is the line where poor, hungry people must come to receive food provided by charity. A notable bread line incident and one never to be forgotten by those who marched up to it daily, was in the days following the great earthquake and fire disaster at San Francisco two years ago. Then rich and poor met on common footing thankful to receive the food passed out to them by the authorities.

How many people have thought of the real bread line, that imaginary line that divides the farmers from the cities and towns or the people who have farms from those who have none? As things go along in their usual way year after year; as long as the farmers produce plenty and ship it to market and as long as the people who have no land of their own can go down to the market or grocery store and buy a plentiful supply, we are not going to give much thought to the real bread line.

But suppose the people who have the land would decide some day that they would feed the balance of the world only at fair prices of their own making, and they really quit moving the products off of the farms? Then the imaginary line would be the real bread line and it would be absolutely necessary for every person on the other side to approach it with the price the farmers would ask. And this would be no more than fair, because it is exactly what other people have been doing with the farmers for many years. They put the price on their goods and when the farmer steps over the store line he knows he must pay the price or do without.

We write this and print the illustration on this page to awaken the farmers to a realization of the power they possess if they would only assert it, and when this power is exerted in equity as this paper has always taught, none of the grimness that usually associates with a bread line will be present. Every fair minded person will freely grant to the producers of the necessities of life a fair and equitable price, in other words a living wage and a fair profit.

"Guilty"

SO SAID THE JURY IN THE EQUITY FARM JOURNAL CASE

JUSTICE TRIUMPHED. EQUITY WILL PREVAIL

The case of the State of Illinois against Theo. G. Nelson, John Gentner and Chas. W. Bowne for committing criminal libel against J. A. Everitt by publications in their paper, Equity Farm Journal, came to trial in the First Criminal Branch of the Municipal court of Cook County, (Chicago) Ill., Thursday, April 9th, and was concluded on April 18th with a verdict of guilty by the jury against all the defendants.

Mr. Everitt, as the members of the A. S. of E. and readers of their paper, also of this paper, know, was charged with many misdemeanors including mismanagement of the society while he was its president and head. These things were charged or insinuated against him before, and at the October, 1907 convention, but he was prevented from facing his accusers at the convention, except the alleged opportunity on Friday night when all of the work of the convention had been done and the truth could not have been used to prevent the conspirators from carrying out their designs. But it is not necessary to review the acts of the convention or subsequent ones leading up to the arrest of the three people who now stand convicted of one of the most contemptible crimes in the calendar.

Mr. Everitt was not allowed his day in the convention, but he has had his day in court and after the most searching investigation of nearly every act of his life for thirty years, stands an exhonerated and vindicated man. He has borne with meekness the insults and black accusations heaped upon him by his enemies who thought to profit by tearing his business down and besmirching his name and fame, but always confident that right must prevail. There doubtless were songs of thanksgiving among the angels in heaven when the jury returned the verdict that showed Justice and Equity still abide on the earth, and these songs were of peace on earth and good will to men.

But we do not write this in the spirit of vindicativeness. The crimes were committed, the prosecution was necessary, the verdict of "guilty" was inevitable, if justice was done. Mr. Everitt regrets all the past as he would much rather that nothing had occurred to arrest the development of the society. Even the guilty people should be thankful that the end has come as they have known for some time that the pendulum had swung to the limit of its arc and must return and would rend asunder the fabric of malice, wrong, injustice, and villification that they had woven. We believe every honest man, every true and loyal member of the society and every former subscriber to UP-TO-DATE FARMING will rejoice over the fact, as proven by the verdict, that their confidence in Mr. Everitt, the founder of the society, was not misplaced and had not been abused.

Right will prevail and wrong must perish. We now believe any who were placed in a position of doubt will doubt and hesitate no more, but that they will, without delay, renew their alleigance to this paper which was their guide and counselor in the past. By doing this its old time strength will be retained and it will speedily put our chosen people—the farmers—on a firmer and sounder basis than ever before.

Notwithstanding the doubt that has existed as to whether farmers can organize and whether they will stick together, we believe that before many months they will be stronger in organization than ever before. If any still hold back they confess that they are incapable of independent thought and action, but will be swayed by designing people bent on wrecking our beloved society and who, for selfish ends and for greed of plunder, struck the blows that have been so destructive and which shook the organization to the very foundation and which were intended to work Mr. Everitt's personal ruin, destroy his business and detract from his fame and character.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR. A CLUB OF FIVE FOR $2.00

Foreign Subscriptions, including Canada, $1.00 per Year.

Clubs. Two subscriptions for $1.00; five for $2.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY.* Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE.*

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

Notes of the Trial

Nelson is president of the A. S. of E. Department of Grain Growers and posed as president of the Equity Publishing Co.

Gentner was formerly an employee of Mr. Everitt's, was secretary of the Grain Growers Department and held the position of secretary-treasurer of the Equity Publishing Co.

Bowne was formerly assistant editor on UP-TO-DATE FARMING and held the position of editor of the Equity Farm Journal.

All the witnesses for the defense, except two, were discharged former employes of Mr. Everitt, and some of them were charged with embezzlement while in his employ.

The star witness, Martin Wade, admitted on the stand that he swore to lies in one of the articles published in the Equity Farm Journal.

On the witness stand, under oath, Nelson stated that he did not read any of the matter that went into the paper except the Grain Growers Department, and to the best of his recollection he did not read one of the copies of the paper after it was printed. In this way he hoped to evade responsibility.

Gentner denied any connection with the paper, and that he did not know what was printed in it. He employed an individual attorney to clear him on the ground that he was simply an employe.

Poor Bowne could not plead no connection with the paper, because his name appeared in it as editor, but he swore that he printed the articles about Mr. Everitt without a particle of malice and with the best motives.

The Equity Farm Journal must be a bastard sheet because every one of them disclaimed it as his child and the trial did not disclose any other father.

Secretary Pauley was present to place the minutes of the board of directors meetings since the convention in evidence, but the defense concluded to not use them.

This was only the second conviction for criminal libel in Cook County, Ill., in sixteen years, as reported by Attorney Cochrane.

The defendants employed three attorneys and clients were never more faithfully served in any trial.

Other people under arrest and awaiting trial are President C. M. Barnett, Secretary O. D. Pauley, former employee, Garret M. Walrod, and former director of organization, Charles A. Speer.

"No radiant pearl that crested fortune wears,
No gem that twinkling hangs from beauty's ears,
Nor the bright stars which blue arch adorne
Nor opening suns that gild the vernal morn,
Shine with such lustre as the tear that flows
Down Virtue's manly cheek for others' woes."

MR. EVERITT VINDICATED IN THE COURTS

His Slanderers Convicted of Criminal Libel

The true friends of the original principles of the American Society of Equity, and who have labored so devotedly and unselfishly with Mr. Everitt to build up the society to so great a power as it had attained previous to the advent of the promoters of the absurd capitalistic exchange idea, no doubt received with amazement the revelations that followed the convention of 1907 as given in UP-TO-DATE FARMING; and they must have been equally amazed at the scandalous attacks on Mr. Everitt's good name and personal integrity made by the cohorts of the exchange business and the promoters of the so-called Equity Farm Journal. And even the delegates to that convention who were inveigled into the treacherous den at the Lorraine hotel where they were filled with the same slanders that have now been thoroughly tested in court, must long since have realized that there must have been something in that crowd exceedingly rotten, and that they were dragged directly into the trench of it. Had they been permitted to go to the Denison, which Mr. Tubbs himself had announced as the delegates' headquarters, they could there have mingled with the uncorrupted delegates, and their understanding of things and their action in the convention would have been very different.

But uprightness and courage always come out ahead, and truth vindicates itself. The lies told and published concerning Mr. Everitt reached such a point that he felt compelled to take the only remedy left for him and appeal to the courts for that protection guaranteed every citizen. He acoordingly caused to be indicted for criminal libel, Nelson, Gentner and Bowne, who announced themselves as connected with the publication of the so-called Equity Farm Journal, Chicago, and others connected with the alleged headquarters at Indianapolis. When these men realized that Mr. Everitt was in earnest, and that they would have to account for their miserable falsehoods, there was such a scattering and rushing to cover as would have been pathetic but for the unexcusable wickedness of the acts which got them into the trouble. Their first play was for delay, and they were given every possible opportunity to get their evidence and prepare their defense. But on April 9th the Chicago trio, Nelson, Gentner and Bowne, were brought to trial. They were represented by as able attorneys as they could procure, and were given every possible opportunity to clear themselves. They were even allowed to go back for years and review Mr. Everitt's record, covering active business life, distorting every error that could be found, whether made by him or his employes. For nine days were they thus permitted to harass the court and weary the jury, but at the close of the trial every one of the defendants was found guilty of criminal libel. The case is still pending against the other parties.

The result of this trial, while they regret the necessity of it, must be as gratifying to the true friends of Equity as it is to Mr. Everitt and his personal friends. We do not rejoice at the downfall of anybody, but these defendants brought the trouble on themselves. Even meanness has a motive, and the motive of these people was clearly set out in articles previously published in this paper. They were astute enough to see the greatness of the Equity proposition, and combining together they thought they could step into Mr. Everitt's shoes, go far beyond his purpose and draw from the farmers millions of money to establish pretended exchanges, as well as other large sums to establish a paper which would make them both wealthy and great. They did not stop to count the cost of such a publication. Rainbow chasers never do. But they realized that to gratify their ambitions they must get control of the 1907 convention. To that end they began to disseminate their falsehoods among the delegates as fast as they were appointed, some of them making expensive trips through the country for that purpose. Then they officially announced the convention headquarters to be at the Denison Hotel, and immediately set their Lorraine Hotel trap to catch the unsuspecting delegates as fast as they should arrive in the city. Thus they succeeded in getting control of the convention; but they knew they could not capture the society and carry out their schemes until they had destroyed UP-TO-DATE FARMING and ruined Mr. Everitt.

Here is where their "vaulting ambition o'erleaped itself," and their weakness was manifested. Had they been as smart as they thought they were, they would have known that a man and an institution that had accomplished what Mr. Everitt and UP-TO-DATE FARMING had accomplished, and given the world what they had given it, are not made of material to lie down and be moulded into a path for wicked men to work upon to deception and fraud. The Chicago trio at least are wiser than they were before, as are also those who have looked through prison bars because of their perfidy in this matter.

But we are not rejoicing in this specially as a personal vindication, but only as it vindicates the right and makes for the establishment of Equity. No one need longer be deceived. In the ringing voice of the court the truth goes out to the world, and we again appeal to the agricultural manhood and womanhood of the country to once more rally to the accomplishment of the great purposes of Equity, and make of the society the greatest power for good the business world has ever known.

THE ASSOCIATE EDITOR.

WITH UP-TO-DATE'S PUBLISHER

Subscribers who allowed their subscription to elapse and then renewed can usually be supplied with the missing numbers if they request them.

We again remind our subscribers to notice their address on wrapper. The date thereon shows when your subscription expires and a renewal should be sent promptly. The paper is discontinued promptly after expiration if not renewed.

The following people have recently sent money to this office, but their address is insufficient, hence orders cannot be executed. We expect all of these people think they have been defrauded. We give the amount of money sent and any part of address we have.

On April 11 we received $2.85, no name, no post office, nor State.

On February 26 we received $1.95 from Kiester, Minn, but no name was given.

On February 4 we received $1.00 from Stanley, Ky., but no name was given.

The following sent 50 cents each: April 1, ———, Hixton, Wis.; March 28, ———, Memphis, Mo.; March 19, ——, Cairo, Neb.

On April 3 we received 50 cents from Fremont, Minn., no name given. Man says, "Please let me know if you get the stamps and this letter by return mail."

Big Factors In Prices

A surplus crop will establish an unprofitably low price, if the surplus is not controlled in the hands of the producers.

A crop only equal to the demand may, and often does, sell for an unprofitable price when left to gamblers and speculators to manipulate. Such a crop, however, if controlled by the producers and fed to the market as the demand comes can always be sold for a profitable price and this price may be as high, correspondingly, as other commodities are sold.

A case to illustrate our point. The world's wheat crop of 1907 with the surplus carried over from the former year was not more than the world's demand for a year. The remaining two months of the crop year (before new wheat will come on the market) will nearly complete wiping out the world's available supplies, and the new year (crop year) will start in with practically a clean platter.

This paper contended after the harvest of 1907 that the conditions were never more favorable for the American farmers to get an excellent price for their splendid crop. This belief was based on the **world's short crop** and a confidence that farmers would control their crop, in their own hands. Accordingly we recommended a price of $1.25 on basis of Chicago market which wheat ought to sell for to be on a par with values placed on other commodities.

Now let us see, taking a retrospective view, what justification we had for recommending a price of $1.25 and let us consider from subsequent developments whether this price might not have been realized if conditions in the farmers society had been maintained as formerly:

UNITED STATES VISIBLE SUPPLY OF WHEAT

April 11, 1908	34,298,000 bu.
April 13, 1907	52,377,000 bu.
April 14, 1906	42,746,000 bu.
April 4, 1908	36,281,000 bu.
October 7, 1907	54,051,000 bu.

The price of wheat, No. 2 red, at Chicago, October 17, 1907, the last price this paper printed in "The Situation," just before the 1907 convention was $1.03 to $1.05½. The visible supply then was (or on October 7 the last report) 54,051,000 bushels. Since the convention the visible supply decreased until at the present time it is lower than it has been at the same season for three years. As the visible supply decreases the supply ought to advance and since the Society of Equity became a power in 1903 up to October 1907, this was the rule without exception. But note the recent anomoly! As the visible supply decreased the price declined also and is now about 90 cents at Chicago. Farmers may well ponder on this. What was the reason?

Before the time of the Society of Equity farmers exerted absolutely no power on prices of their crops. They were totally helpless and in the power of the people who manipulated the markets. But on the coming of the society and with the teachings of this paper—UP-TO-DATE FARMING—a change came. Farmers then marketed differently, that is, they quite generally quit dumping and marketed gradually and when they could get their price. The results were positive. And to the teachings of this paper and to the confidence they placed in its advice, which advice was sane and sound were due the well maintained prices through 1903, 1904, 1905, 1906 and 1907 up to the time of the convention where a band of conspirators attempted to undo the good work of five years and did succeed in throwing farmers back to the conditions that prevailed before the time of the society and the plan given them by Mr. Everitt.

With the confidence of farmers in themselves destroyed, without a guide such as this paper was up to October, 1907, farmers are again without power to enforce their demands. Because of a vacillating policy in price-making farmers have not had anything definite to set their minds on for the price of wheat and each one was thrown on his own resources with the result of a declining price as we have seen, even with a decreasing visible supply.

In view of conditions as they exist today, which are what we predicted after the 1907 harvest, we are more than ever convinced that the 1907 wheat crop could have been sold for $1.25 per bushel just as well as the prices that have prevailed. At this time the shipments from other countries—Russia and Argentinia—"have dropped off to such an extent as to excite European buyers." We quote from a market report and the movement from those countries bear out the report. It is now evident, as the crop year is drawing to a close, that the world needed all the wheat **and would have paid the farmers price for it, if it could not have been had at the speculators price.** This should illustrate what the effect will be on the world's markets and prices if the farmers themselves keep the wheat and feed the demand as it comes **at their own prices.** And it is the same way with all their crops.

ANOTHER CROP REPORT

Secretary Wilson's crop report for March 1, 1908, issued March 9, cost the wheat growers of this country $2,974,420! The market report from Chicago for March 9 says:

> The wheat market was nervous and prices ranged nearly 2 cents. A sharp break at the opening, caused by extreme weakness in European markets, was followed in the first half hour by a radical advance caused by purchases by shorts. Sentiment continued bullish until the Government figures on farm reserves were announced, when prices declined to a new low mark for the day. The market closed weak.

The Government report was to the effect that of the crop of 1907 there was still in farmers' hands March 1, 1908, 148,721,000 bushels. The above dispatch shows that prices were making a "radical advance" until the Government report was received, when it took a tumble, and made a low mark, vacilating as much as two cents. Another dispatch said wheat lost three cents on account of the report.

If the farmers had that much wheat still on hand and the price dropped three cents, their loss was $4,461,630; a drop of two cents involved, as we say above, a loss of nearly three millions.

This is an entirely unnecessary, cruel, almost criminal waste of farm crop values. If there was as much wheat in farmers' hands March 1 as the Department reported, it was of no benefit to the farmers to know it, certainly no benefit to them to make it public; and so far as the market gamblers and speculators are concerned, it was none of their business. Besides, there was nothing alarming about it, because it was not so much as they held at the same time a year ago by nearly 58,000,000 bushels. Farmers did not hold their wheat so well last fall and winter as they did the fall and winter before. We do not know why, but we suspect the cruel effort made by a few who had been trusted to pervert the purposes of the society and divert it into other channels had much to do with it. But this affords no reason why the Department of Agriculture should pry into farmers' private affairs and notify the gambling interests how to direct their bets, especially when it involved the farmers in such heavy losses. For it must be remembered that, under the present system, the gamblers make the prices at which the farmers must sell.

It should be noted also that what the farmers lost on account of this report, the Bear side of speculation gained, for it widened the margin that much in their favor. The real result of the report, therefore, though of course not so intended by the Department, was to take nearly three million dollars from the farmers who had held their wheat and give it to the market Bears. No department of government would dare to treat any other industry so. UP-TO-DATE FARMING has insisted that these untimely reports should be discontinued, but it seems the Department can see no way to do but to issue them. All of which means that farmers must drown their petty jealousies, allay their silly suspicions, conquer their prejudices, quit following false gods and again stand shoulder to shoulder for equity, justice and truth, so as to make themselves heard.

GRAINS ON HAND

According to the report of the Department of Agriculture there is not as much of the three leading grains on hand this spring as there was last. If it were not for the control of the markets by speculative influences, this ought to mean better prices to those who held their crops. The first result, however, as we show in another article in this issue, was to depress prices and involve the farmers in loss. But since the matter is made public our readers may well know all about it, so they may consider what the results ought to be, and what they would be if farmers were truly co-operating to make their prices and control their marketing.

The wheat reported still in farmers' hands March 1, 1908, was 148,721,000 bushels, which was 57,923,000 bushels less than they had March 1, 1907. If prices were determined according to the law of supply and demand, this would indicate that wheat should be about a third higher in price this spring than it was last.

The quantity of corn reported in farmers' hands March 1 of this year was 962,429,000 bushels. This was 335,571,000 bushels less than what was on hand March 1, 1907. This indicates that the price this spring ought to be more than a third greater than it was last spring.

The oats reported in farmers' hands March 1, 1908, was 267,476,000 bushels. There was on hand at the same time last March, 384,461,000 bushels, or 116,985,000 bushels more than now. This again would indicate that the price of oats should be higher this spring than it was last.

These figures at least show one thing that might be turned to good account by farmers, and that is, if they were organized and could work together as other peopel do, they could undoubtedly so control their business as to secure to themselves such prices as the acknowledged condition of their products warrants. And that is worth the most earnest effort men can put forth.

APRIL CROP REPORT

The Crop Reporting Board of the Bureau of Statistics of the Department of Agriculture finds, from the reports of the correspondents and agents of the Bureau, that **the average condition of Winter Wheat on April 1 was 91.3 per cent** of a normal, against 89.9 on April 1, 1907, 89.1 on April 1, 1906, 91.6 on April 1, 1905, and 86.2, the average of the 10 years of 1898-1907, on April 1st.

From the same report we glean that Kansas grows 19.1 per cent of all the winter wheat acreage which is more than twice as much as any other State. Indiana comes second with 8.9 per cent.

On April 1 Oregon had the highest condition, 97 per cent. Kansas, Texas, Tennessee, and Kentucky were next with each 95 per cent.

Present indications are for a good crop of winter wheat in 1908 and, unless farmers will arouse themselves without delay it will start low and such a visible supply will be created as to compel low prices through the year.

POTATO GROWERS ORGANIZED

Western Michigan is an important potato-growing section, and Greenville is the leading market and shipping point. There have been and still are several buyers in Greenville, but the farmers were led to believe the buyers had formed a secret combine so there should be no competition in buying. They were led to this belief by the fact that there was never any difference in the prices offered by the different buyers, and when one buyer was filling a car and was short, the others would help him to make up his load, he to return the compliment when occasion offered. In addition to this the farmers believed the prices offered were always too low.

These matters led the farmers to organize to handle their own potatoes, which they did with good profit. And not only so; they soon got to buying their supplies, particularly their machinery, in carloads, and saved money by it. So successful are these farmers of Western Michigan that they are attracting the attention of all the buying companies of the State and are even worrying the Michigan State Potato Buyers' Association.

The farmers complain that the railroads are rather in line with the buyers, as it is much easier for the buyers to get cars than it is for the farmers to get them. But they are sure that by organization and co-operation they can fully overcome that difficulty. They are clearing about ten cents a bushel on their potatoes.

The principal interest that attaches to this matter as news is that it shows that farmers are masters of any of these situations when they try to be. It is only a question of organization and co-operation, and selling their products in a business way.

See here, Mr. Farmer, which is the more important problem, to produce more stuff or to get a profitable price for what you produce?

DEPENDS UPON CROPS

Mr. Paul Morton, once of Nebraska, son of his father, who was once Secretary of Agriculture, himself a former Secretary of the Navy, now president of the Equitable Life Insurance Company of New York, says the business outlook is promising, but that it all depends upon the crops. "If we have good crops we will have good times," Mr. Morton is reported to have said. "Confidence is coming back and a better feeling is evident."

But why do good times depend upon the crops; or, rather, how can good crops bring good times? If the financial institutions can sit down upon the money of the country and compel hard times in the midst of most excellent crops, and when trade was more active than ever before, imports and exports both larger than usual and more money in circulation than at any previous time, how can good crops "restore confidence" and bring back the good times that were driven away when every condition was favorable for them to remain?

Good times in this country is not a question of good crops, of abundant employment of labor, nor of activity in trade; it is entirely a question of the control of the money. The institutions that control the money can hoard it and create a panic whenever they please, and they can put it into circulation by the usual banking methods and make good times whenever they decide to do so. Mr. Morton being in touch with these institutions, being in fact a part of them, knows this as well as any one; but it may be that it has been decided to "ease up" in the face of a good crop so as to make that the excuse and keep hidden the inexcusable manipulation that has cost the industrial enterprises of the country millions of dollars and thrown multiplied thousands of industrious people out of work. The fact must remain, however, that the panic came when there were good crops, and when there was absolutely no condition that indicated it or justified it. This must undoubtedly mean that the remedy for panics, and a means to prevent them in future, is not the giving of the financial institutions more power over the currency, but to take from them the control of the money, so as to make it impossible for them to lock the money up and thus destroy values to compel legislation the Congress would not enact except under coercion.

But this thought comes to us: If the crops have so important a bearing upon the prosperity of the country, ought not crop values be better protected? Is it good public policy to allow the main source of the nation's wealth to be made the plaything of speculation and the subject of the most wicked gambling? A government policy is undoubtedly weak and falls far short of serving its greatest interest that permits so-called dealing in "futures" to unsettle values and make the crops of the country worth one thing today and another thing tomorrow, depending not upon supply and demand but upon the power of one side of the market farce to beat or turn down the other side.

And since the government, unaroused, permits this, what of the farmers who are most affected thereby? So powerful a class have no occasion to submit to injustice, and they may free themselves of this load without any disturbance, or the change of anything but their own practice. Organization, co-operation and controlled marketing takes their crops out of speculation, restores price-making to themselves in accordance with supply and demand, based on equity. We are not in sympathy with those who talk of the power of crops to restore prosperity, and yet who do nothing to free those crops from the hand of greed.

ENLARGING THE FIELD OF INDUSTRIAL SCHOOLS

Congressman C. R. Davis of Minnesota feels greatly encouraged concerning the passage in the near future of his industrial high school bill. The numerous indorsements from the leading educational men of the United States, including favorable resolutions from many educational organizations, farmers' associations, State colleges of agriculture and mechanic arts, commercial organizations, boards of trade, manufacturers' organizations and industrial organizations generally all over the country have inspired the hope that Congress will be induced to consider favorably the measure during the present session.

By appointment Mr. Davis had an interview with the President recently in which the provisions of the bill were considered. He was very much gratified to receive from the President his hearty and full indorsement of the measure. In this interview allusion was made to the President's speech at Keokuk in October last, and the President was gratified to know that his ideas then expressed concerning this measure were receiving such favorable consideration throughout the entire country. In this speech the President said:

> We should strive in every way to aid in the education of the farmer for the farm, and should shape our school system with this end in view; and so vitally important is this that, in my opinion, the federal government should co-operate with the State governments to secure the needed change and improvement in our schools. At present there is a gap between our primary schools in country and city which must be closed and if necessary the nation must help the State to close it. Too often our present schools tend to put atlogether too great a premium upon mere literary education, and therefore to train away from the farm and shop. We should reverse this process.

The purpose and scope of this bill are well outlined in an enthusiastic letter written by Judge Peter J. Shields of the Supreme Court of California, as follows:

> Rightly enforced the bill is admirable. First it provides for technical, industrial and practical education as distinguished from the old theory of educating all alike regardless of his type or the life he was to lead; of teaching the boy or girl books alone that they might thereby acquire the strength and fiber of mind to later learn men and things. The character of education proposed by this bill will teach the realities of life direct and in the process cultivate the mind as well as the old plan. One of the most fruitful fields of the education of the future will be nature, the wondrous world we live in, and of this field agriculture comprehends its best features. This bill is broader than that, however, including mechanics and domestic science within its purposes. I am sure that a vigorous distribution of learning in these arts and sciences can do no harm and will do incalculable good. I am not afraid of vulgarizing the word or making it what is called "utilitarian" by teaching all of the people to know plants and animals; through domestic science to feed the baby with wholesome food and the soul with all of the finer things which are comprehended within the limits of a real home, or through the mechanic arts which train men's bodies to their highest usefulness and to give expression to the mind's best conceptions. I am not afraid of the fate of a country whose people are given over to breeding perfect animals, rearing crops of best excellence, building good roads, labor-saving machinery, automobiles and railroads, constructing convenient houses, furnishing them perfectly and making real homes of them, to the building of bath tubs, arranging plumbing, weaving fine cloths and making them into right form. If the doing of such things does not make for peace and union, for moral industry and wholesome progress, then my judgment is hopelessly at fault.

It would seem there is only one thing more the bill could have provided for, and that is the business side of rural life. The schools teach the technical side of farming, with the latest discoveries and developments of crop production and stock raising, and this bill goes into the home management and the general educational uplift of those who labor, especially as to the technical requirements for the best performance of that labor, but not one of them, nor does this bill, teach farming as a BUSINESS. We cannot feel less than surprise that Mr. Davis, President Roosevelt and Judge Shields all fail to see the necessity that the farmer should become a business man. Each of these distinguished gentlemen would protest that he had not overlooked that point, and he would declare his purpose, at least in part, is to make business men of farmers. But how can that be when gamblers on 'Change are from day to day putting new and arbitrary prices on farm products, in utter defiance of any law of supply and demand, and when farmers from custom, not of necessity, accept of those prices at harvest time, and dump their crops on glutted markets? Farmers must find some other way than that to dispose of their products before they are entitled to be classed with business men, and they have a right to look to the schools to teach the pricing and selling side of farming as well as the technical and production side.

FARM FLYERS

Occasional panics may not be altogether unmixed evils. During the last several years almost every farmer who could tear himself loose from the soil went to the towns and cities, transported by the hope that he would there find the place of light work and big pay. Most of these flying farmers were renters, and had no permanent perches at best, but they had places to stay and make a living, and opportunities to get ahead as many left behind did. But some of them actually had farms of their own, which they turned over to persons whom they regarded as less enterprising than themselves.

But the panic came. Work ceased and pay stopped. Then these flying farmers that had lit in the town and city shops awoke for the first time to the fact that they had not been making anything. There was no money in the pocket, no meat in the smokehouse, no wheat in the bin, and no corn in the crib—everything had to be bought, and nothing had been saved to buy it with. Another flight—back to the farm country. There the "less enterprising" that had been left were found to have plenty to live upon at least, while the "enterprising" ones that hurried off to town a few years ago to make a big living have no place to stay. This is a history that repeats itself every time there is a panic.

The advice of UP-TO-DATE FARMING is that you now all get as good a place as you can, make it so much better every year that the owner will want to keep you on it, keep something growing as well as your family, watch the ins and outs. When you have a few dollars to spare invest them in something that will get bigger and be worth more, so that by the time the next panic comes you may be able to snap your fingers at it and thank the present one for driving you out of town.

Above all, clip the restless wings on which you have been flying back and forth and join with your neighbors in an earnest, determined effort to place farming in the front rank of vocations by securing to it through controlled marketing the right to a voice in determining the price at which its products shall sell.

SHOULD FOSTER AGRICULTURE

One of our ablest Southern contemporaries declares it is a short-sighted policy of government that does not seek unceasingly to foster its farming interests. The prosperity of a country is dependent upon its agriculture. Mining and manufacturing, commerce and transportation, all the wheels of industry refuse to run when agricultural conditions languish. With the tremendous strides made in other departments of labor, the farm cannot afford to stand still or to employ antiquated methods. Hand and brain must be intelligently directed that the products of the ground may be abundant and profitable. The treatment of the soil should be a matter of careful study. If allowed to run down, effort applied to its cultivation is little more than time misspent. Its preservation and up-building require as diligent concern as the care and improvement of stock, or as the proper cultivation of the crops that grow.

All of which goes to prove that our broadest minded men and best thinkers, men whose hearts are in the right place, and who look upon farming as the great calling it really is, still see but one side of it, the producing side. What is said is good and true, but it goes only half far enough. The fertility of the lands must be preserved or there will come a time when people will get hungry. The most approved system of cultivation must be adopted and the latest improved implements and machinery employed or farmers will grope in the shadows of the forgotten years while everybody else is working in the sunlight of progress. But two bushels of grain or two bales of cotton are not always worth twice as much as one. Profitable farming depends upon profitable marketing, and calls loudly for attention to the selling side of farming, the side that until very recent years has been wholly ignored. While the State and the nation are very properly adopting measures to foster and encourage farming, the part of farming upon which the income depends should not be neglected. Helping farmers to raise big crops, only to become the spoil of greedy speculation, is like leading a flock of sheep into a rich pasture while greedy wolves are protected in every adjacent thicket, to rush and prey upon the flock whenever there is a drop of blood more than is required to sustain life. The best service government could render the flock is to drive out the wolves, or at least to extract their fangs.

But farmers are not so helpless as the sheep. They can protect themselves if they will. Their blood is their own, and so is their sweat, and the wolves cannot get it unless it is voluntarily surrendered. Co-operation and controlled marketing make a wall the wolves can neither crawl through nor climb over.

A LIVING WAGE

BY REV. CHARLES STELZLE

To no two men does it suggest exactly the same thing. For to some to "live" means automobiles, steam yachts, summer homes and mansions; while to others it means simply bread and meat, rent and fuel, clothes and the barest necessities of life. To live, then, is a matter of temperament, taste and disposition.

"A living wage" means the securing of that which will permit each man to obtain that which will satisfy the cravings of his soul, his mind, and his body. There are some folks who would be content to live in a house which was built as by a machine, with no individuality and no personal selection in the matter of architectural design or beauty. They have that right. But why should you be compelled to live in that kind of a house? Others are quite content to keep the beautiful pictures and art pieces in the public museums and galleries. But suppose that you should prefer to have some of them in your own home, so that they may really possess you, as well as you them?

If you have tastes and desires which are different from those of the great mass of people, and if you are willing to work and sacrifice in order to satisfy them, without injuring or retarding your fellowmen, why should you be hindered in your endeavors? Your "living wage" must not be limited by anybody, if you have the power to earn it. If others are satisfied with less, well and good—that is a matter which they must decide for themselves. But their standards of living and their method of life must not be foisted upon you.

Your life is your own. You desire to live as God has shown it to you. If you can help any other man to live a better and fuller life, it is your privilege to do so, for that is also a part of the life which you desire to live.

Write to George Ertel Company, Quincy, Ill., for their 80-page illustrated book "Incubator Whys," which tells how to get started in the poultry business, and has many valuable pointers for experts as well as beginners. It is entirely free if you mention UP-TO-DATE FARMING.

Write the Columbus Carriage and Harness Co., 2030 So. High St., Columbus, O., for their catalog of vehicles. They have been 19 years in the business and are offering the consumer some excellent bargains in buggies. Their famous "Columbus" Buggies are known the country over for reliability and good service. Moreover, they will give their carriages on trial for one full month, and guarantee them for two years. You should have their catalog. A postal brings it.

WHAT FARMING IS

Most people like figures if they are not in such long columns or broad tables as to become tedious. Here are some that are too big to be understood but they are not tedious. There are said to be about 7,000,000 farms in the United States, and that as a result of the labor bestowed upon them, produce annually about $7,412,000,000 of stuff. These figures are incomprehensible. There are not dollars enough in all the world to buy the stuff and pay for it all at once. It begins to make all other callings look quite like 30 cents, don't it? Let us see. There are not quite one billion of seconds in thirty years. To contain seven billion seconds would require seven times thirty years, or 210 years. Then, according to the figures made at Washington, the farmers of the United States every year produce as many dollars worth of products as seconds in 210 years! Of course this includes all that is consumed by the farmer and his family and his stock, as well as what goes onto the market for others to consume, but the quantity is stupendous, incomprehensible. The farmer is truly the Biggest Man on earth. And yet he is doubled and twisted and manipulated in the value of his products by a few score very small men on the speculating exchanges of a few of the leading market cities! Those who produce that incomprehensible value of products have no more idea what they shall receive for them, beyond a mere supposition based upon what they had received before, than if they were slaves laboring in the jungles of Africa. Now, don't be knocked off your box. Read that sentence again, and see if it isn't exactly true. Farmers know what they have received at different times in the past, and they suppose and hope that they shall be offered something near the same for the coming crop; but they don't KNOW a thing about it. They only know that somebody says what it is worth and they accept the price, and that the offer may be one price today and another price tomorrow.

People who produce that sum of new values every year deserve a better system of price-making and marketing. That is the contention of UP-TO-DATE FARMING. All in favor say aye—and act it.

STATE OF NEW JERSEY AGAINST WATERED STOCK

New Jersey, the State that has enjoyed the distinction of being the home of trusts, is the first to take the most important step toward regulating them and limiting their power for harm.

By a unanimous vote the House approved the bill to protect investors from the stock-watering sharks of Wall Street. With this practice discontinued all over the country as far as new corporations are concerned and old ones that may not have indulged in it yet, a condition can eventually be produced that will force those corporations that have heavily watered stock to come down to a solid foundation or go into liquidation. To illustrate: "A" is a railroad with capital watered to three times the actual investment, and it earns 6 per cent on its capitalization.

"B" is another railroad operating under a capital represented by actual investment, or one-third the capital of "A." We are assuming that in other respects they are equal.

In practice "B" can make much lower rates than "A" and pay a satisfactory dividend of 6 per cent. Hence it is clear that "A" cannot compete with "B" until its capital is reduced, which it will be forced to do either voluntarily or involuntarily.

PANICS AND CROPS

In spite of the declarations of Paul Morton and J. Ogden Armour that good crops in 1908 are to bring back good times, we wish to reiterate that a panic brought on in the midst of good crops cannot be driven away by good crops, unless it is true that the hair of the hound will cure the bite. The crops last year of the seventeen States west of the Mississippi foot up a value of $1,091,000,000. The corn crop of those States was worth nearly half a billion, winter wheat $200,000,000, and hay $98,000,000, not mentioning the minor crops. This is a 15 per cent greater crop than that of a year before. The panic came in October of that bountiful year. Is it not a little amusing to hear the money kings say good crops will insure the return of prosperity? It is seldom that a remedy which will not prevent a sickness will cure the sickness after it has come. The panic was made by the banks for a purpose, and it can be stopped by them whenever their purpose is gained or abandoned, and without any reference to good or bad crops.

CLASSIFYING COTTON AND GRAIN

Congress and the authorities at Washington are taking steps to secure official or standard classification of both cotton and grain. The agricultural appropriation bill carries an appropriation for that purpose. It authorizes the secretary of agriculture to establish such classifications, which shall be recognized as standard in all the general markets.

This is in line with the Watson and McCumber bills to secure uniform grading of grain and cut out the elevator graft that has so long cut into the profits of the grain growers.

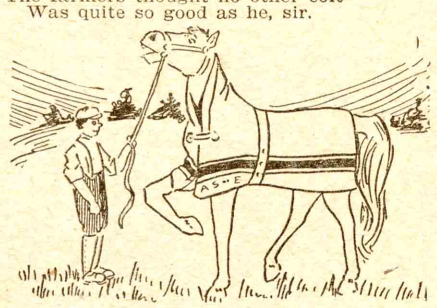
About the only way to conquer an evil is to dig it up by the roots, but whenever there is an opportunity to lop off a branch of the speculative exchange graft, it is a mighty good thing to do it.

We see this lesson in the above proposition: The lawmakers are not averse to the farmers. All they ask is to be shown what to do and they will do it. The most amazing thing of it all is that the farmers themselves are so indifferent. When things do not go to please them they grumble, but take no steps to effectively present their claims. If farmers would organize like other people do, they could have whatever they wish.

HOW IT ALL HAPPENED

A DECLAMATION BY LITTLE FRED,
BY M. I. GEE,
Tennison, Ind.

My Uncle Jim had raised a colt
  He called A. S. of E., sir;
The farmers thought no other colt
  Was quite so good as he, sir.



And when the colt was five years old,
  I'll not forget to mention,
The farmers came to our town
  To hold a great convention.

People were there from everywhere,
  Three hundred men or more, sir;
To see my Uncle's fancy colt,
  As they had seen before, sir.

Then Uncle told his stable boys,
  Charley, Wes and me, sir,
To saddle up the splendid colt
  We called A. S. of E., sir.

And when they got the saddle on
  For Uncle Jim to ride him,
They put at me to hold the colt
  While Uncle got astride him.

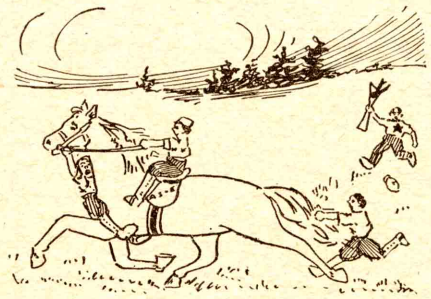
I might have told my Uncle Jim,
  Before he got astraddle,
The boys had placed some cockleburs
  Just underneath the saddle.

And when I loosed the bridle reins,
  I saw I'd made a blunder;
Though Uncle lit square on his feet—
  The colt had jumped from under.

Then all the people that were there—
  Excepting quite a few sir—
Helped turn A. S. of E. to graze
  In pastures strange and new, sir.

And now I see that hungry colt
  Is growing mighty lean, sir;
To make him toat a double load,
  I think is awful mean, sir.

The last I saw the colt and boys,
  They were going down the lane, sir;
Wes hung upon the colt's bare tail,
  And Charles swung to his mane, sir.



While Walrod sat upon his back,
  And tried to hold him level;
But Sheriff Clay brought up the rear.—
  All running like the—well, say Dickens for short.

—

But Uncle's got another colt
  He calls F. S. of E., sir;
As fine a colt in every way
  As you did ever see, sir.

He's built just like the other colt,
  But goes a little faster;
And Uncle means from this day on,
  To guard him from disaster.

ANTI-TRUST TWINE

Hon. August Post, Moulton, Iowa, has been handling binder twine to the farmer for nineteen years, during which time he has built up an extensive business with his First-quality, Anti-trust twine. Read his advertisement in this issue.

SEND FOR FREE ROOFING BOOKLET

MOST of the roofing manufacturers supply some simple sort of a circular or pamphlet with samples of their roofing.

The makers of Amatite Roofing have gone into the matter more deeply. Their Booklet entitled "Amatite" is a very handsome and interesting piece of printing.

It covers the whole roofing subject thoroughly.

The Ready Roofing proposition is explained at length, and the whole history of these roofings is given in detail, showing the steady progress that has been made. As this Company is the oldest and largest concern in the field, the history is accurate. This Company has been in the roofing business for over half a century.

Many of the improvements in ready roofings made from time to time have been its inventions, and the latest improvement, and in many respects the most important, is offered to the public in Amatite Roofing.

This material, as explained in the Booklet, has a surface of *real mineral matter*—Amatite—to take the brunt of the weather. It does not need painting. The kind of roofs that need painting are *out of date.*

The pain and labor of putting it on cost more than an Amatite Roof.

Amatite Roofing, once land, requires no attention whatever. Its mineral surface does not require painting any more than a stone wall does.

The Amatite Booklet also explains the value of the Pitch in Amatite Roofing. Pitch is the *greatest waterproofing agent ever discovered.*

Water does not affect it in any way. An unbroken lining if pitch furnishes complete and permanent protection, which can only leak by being actually punctured, and such a lining sheet is just what Amatite provides.

It is impossible to give the explanation in detail here, but if you will send for the Booklet, which is free, you will find the arguments in full.

With the Booklet the manufacturers send a free Sample of Amatite, in order to show just what the mineral surface is like.

A postal card adressed to the nearest office of the Company will bring the Booklet and the Sample to you by mail. Every progresive farmer should have it.

BARRETT MANUFACTURING CO.,

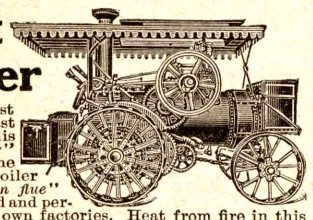
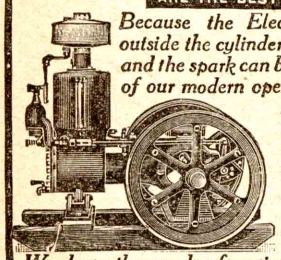
Most Power



You get most power from least fuel with this "New Huber" Traction Engine—because its boiler is the "*return flue*" type, developed and perfected in our own factories. Heat from fire in this boiler passes *forward* in a large flue, through the water, and then this heat comes through the water *again*, in tubes, to the smoke stack in the rear. Thus, the boiler has *double* heating capacity. Heat passes through the water *twice*. The "New Huber" Traction Engine has many other *exclusive* features, about which we tell in our new catalog of Traction Engines and Threshers. This catalog we send you FREE for the asking. Send no stamps. Just ask. No matter how you may wish to use a Traction Engine, you should get our catalog before making up your mind to buy. Write us today.

The Huber Mfg. Company, Dept. M, Marion, O.

Stickney Gasoline Engines
ARE THE BEST



Because the Electric Igniter is outside the cylinder where it is cool and the spark can be seen, because of our modern open tank cooling system and because of 57 reasons told in—Stickney's Free Catechism

1½ to 16 H. P. Stationary and Portable

We have thousands of engines in successful operation because of our years of experience in making engines of the best material and most accurate workmanship. **Send for Catalog.**

INTENSIVE FARMING

Farmers will have to farm intensively. There are as many acres now as there will ever be in this world, barring the few that may be reclaimed from swamps or deserts or built up from the shallow waters. But the people who want acres are constantly increasing. This means that the ranches and big farms are going to break to pieces, and fewer acres must be taught to do the work of many. This is not a difficult task. The experiment stations are helping with it. When land is expected to do a little better than it did last year, treat it a little better, that is all. If a team is to do a little more or harder work some particular week or month than at other times, it is given better and more feed. Land is more like stock than people think. It does not get lean and show its bones, but it gets poor and what tries to grow on it tells its story.

But UP-TO-DATE FARMING need not tell its readers much about production. Other papers tell them that and nothing else. So if we told the people all there is to tell about production, the other papers would have nothing to say. We are interested in abundant yields all the same. It does not take so much work per bushel to grow and harvest 30 bushels of wheat to the acre as it does 15 bushels per acre, and we want farmers to get the very best returns for their labor. We urge, then, that the land be brought to the highest production—to the best tilth, the greatest richness, and the longest yields. But such work as that must be accompanied by another line of work. The farmer must know what he is going to do with his surplus. He must know what about the market, what the price is to be and who is to make it. In plainer words, he must get in position to say who shall get the profit on the surplus. It is the profit on the surplus that makes intensive farming attractive; there is nothing in the mere accumulation of products.

FARMERS CAN

Our old friend E. L. Vincent tells one of our exchanges of a farmer in one of the Atlantic States who bought a rather unproductive hill farm, agreeing to pay therefor $1900. He paid $500, leaving $1400 to be paid in installments at five per cent interest. Our readers in the great central agricultural region scarcely know what an Eastern hill farm is, but they would not regard it a very desirable place on which to try to make a living, much less to support a family and pay an interest bearing debt of fourteen hundred dollars.

But that farmer and his wife were both business people. They bought some good cows which they fed well, though they had to buy most of the feed and for cultivated crops they planted largely of potatoes. That farm was purchased five years ago, and this spring the last payment is to be made.

It is only one of the gratifying life incidents of this great country. Business principles injected into farm life will bring success as surely as in any other calling. The thing most to regret is that farmers must labor under such a load of disadvantages that others know nothing of. Whatever they produce for market must go at prices made by somebody else often beaten down to the lowest notch to which speculation can drive them. But the same energy, perseverance and management that paid for that farm in five years would in less time bring about very different market conditions if directed to that end.

Binder Twine Farmers wanted as agents. AUGUST POST, Moulton, Iowa.

GENERAL PASTURE CROPS

At this time of year the mind naturally turns to pasture. The wood lot and the old waste field no longer supply the pasture need of the progressive farmer who is determined to keep up with modern development. In line with this thought, Prof. Barto of the University of Illinois gives the Farmer's Voice some good hints on general pasture crops.

Of course he begins with the clovers because they not only feed the stock that pasture on them but they feed the soil in which they grow. Being nitrogen gatherers, they leave the ground richer for having produced them. Minnesota clover is suggested as admirably meeting some conditions, but red clover is the one to most generally depend upon. Prof. Barto favors a mixed crop, and suggests clover, rape, peas, oats, corn and sorghum. Of course he would sow rye if it were in the fall, as he considers it the most valuable crop for early pasture, and after it is eaten down the ground may be seeded to some other crop.

Oats and peas grown together produce fine pasture when the crop reaches a height of six inches, and may be followed by some other crop, like rape or corn, or if clover is sown with the oats and peas, the feed will continue through the season. Sorghum makes an excellent feed and withstands dry weather better than most crops. Cabbage grown by planting the seeds in drills two and one-half feet apart and thinning to one foot in the drill produces an enormous amount of feed, and nothing is so much relished by sheep. They will eat every bit of the plant and the special advantage of this crop is that it is not injured by frosts, and so serves for late pasturing.

Experiments with these forage crops for sheep pasture were conducted for some years at the University of Minnesota and the results showed that about 100 sheep were kept on ten acres of these forage crops from the latter part of April till some time in November and the flock remained in fine condition and health, while the improvement of the soil and the extermination of weeds were very marked. A few years ago, after reading a report of these experiments at the University of Minnesota, Prof. Barto kept a flock of twenty-four registered Shropshire sheep and three cows on two and one-half acres, one-half of the land being in blue grass pasture and the rest of it planted to the forage crops that have been mentioned, from May 1 till the middle of November. The forage crops, however, were not pastured, but cut and fed over the fence on the sod as soiling crops, and the cows were fed a grain ration.

Only One Time to Harrow

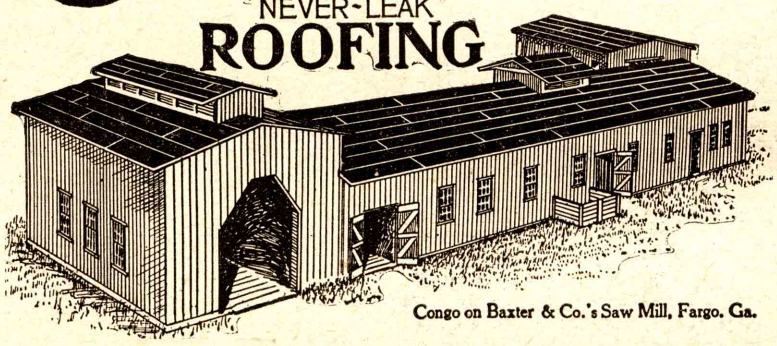
Every farmer's experience teaches him that the soil when it is freshly turned up by the plow pulverizes better than it does at any other time. That is when it can be made really mellow. It has had no chance to get hard or to "set." The quicker the harrow follows the plow the more perfect the seed bed.

Taking advantage of this fact, one of the most useful plow attachments ever made has just lately been brought out. The Kramer Rotary Harrow Plow attachment is just such a contrivance as farmers have wished for thousands of times. It enables them to harrow while they plow.

Thus it saves labor by making a single job of both plowing and harrowing. Any harrow would do good work following right after the plow, and the Kramer Rotary Harraw is so contrived that it does exceptionally well.

We believe our readers will want to know more about it. It ought to be attached to riding plows everywhere this spring. Write to the E. M. Kramer Co., Paxton, Ill., and ask for their catalog No. 40 and get full particulars.

CONGO
"NEVER-LEAK"
ROOFING



Congo on Baxter & Co.'s Saw Mill, Fargo. Ga.

Send for Free Sample---To-day

DOES your roof leak? Then get Congo.
Congo is the best ready roofing ever offered to the man who is looking for something *good, reliable* and *not expensive.*

It is called "never-leak Roofing. This sounds like a big claim to make but *we know* Congo.

Try it. Cover that old roof, which you have repaired for years, with Congo, and you'll find it the most durable, *proof-against-everything* kind of roofing made.

Economical? Yes, for your bills for repairs on other kinds in a few years would pay for Congo. It's not affected by heat, cold, rain or snow. It is soft and pliable,—like rubber—but infinitely superior because it will not crack, buckle or shrink. Congo will give maximum service at minimum cost. *Cheaper than shingles and will outlast them.*

Isn't Congo worth investigating?

Write for a Free Sample. *Test it.*. Soak it in water as long as you like. Water can't hurt Congo. To heat, cold and acid fumes it is also impervious.

Congo is the roof your want. Let us hear from you.

DO IT RIGHT

As hard a working farmer as we ever knew always had things in a jumble and could never make any headway. The trouble with him was that he was not careful enough with his work. He was always in a hurry and quit a job when it was done "good enough for this time." If the stock broke a fence, it was fixed so "it would do this time." If a plow did not run well, he could manage to "get along with it for the present." If the wood or coal was getting scarce, there was always enough to do for "a little while yet." If the weeds were getting a start, they wouldn't hurt much "for a day or two," and if the cultivator did not do good work and leave the crop in the condition it ought to be, he would do it "better next time." So it went. He did as much work as anybody, but it did not show like that of other people. It was because he was not careful enough to do it right.

No job is done well enough until it can be done no better. If a carpenter makes a joint, the work is not finished until the joint is perfect. If a stick is to be six feet long, five and fifteen-sixteenths feet will not do, nor will six feet and any fraction over. If something is to be done at ten o'clock, nine o'clock and fifty-nine minutes may answer, but that is not the time. If a cultivator should destroy a thousand weeds and leave one of the thousand so it may still live, it has not done its duty; and if any job of work is left so it may have to be done over again tomorrow, or before the proper time to do it again, time and labor have been wasted.

The man, whether farmer or something else, that never quits a job until it is done, and done right, is the man who has an easy time in life.

THE SINGLE FARM TEAM

Many young farmers just setting up for themselves, and other small farmers who are not at all to be derided, for they are useful citiens and good people, keep but a single team. In such cases we advise the keeping of brood mares in preference to horses. Regular teamsters and people in the cities prefer horses, and will pay good prices for them. Let such people have the horses. Keep the mares on the farms and raise colts.

We know there are fears that too much time may be lost on account of foaling if the mares are bred, but such fears need not be entertained. A little head work will plan it all so that only the minimum use of the mares need be lost, and that at a time when their services should be least valuable. The colts, it is true, are more or less trouble throughout the season, but an extra hundred dollars in the fall, or possibly a hundred and fifty or more, will pay for the trouble.

Horses will get older every year, and if no colts are coming on, there may be after awhile, only a team of old horses on the farm, that are trotting, and will soon be on the lope, down hill, constantly losing usefulness and value, until there is nothing left. The mares will get old too, of course, but they are arranging something to take their places, and two nice colts every year are like a pension.

Co-operation — not competition — is the life of trade. That is what we have been trying to teach our readers, lo, all these eight years. Perhaps in no case is there a better example of this than that of the National Co-Operative Realty Co., 129 Marden Bldg., Washington, D. C. They teach the real estate business right in your own home and then work with the beginner to help him succeed. They have many thousand representatives all over the United States and Canada, buying and selling real estate. If you get some properties to sell, list them with this company, after you become one of their members, and you will soon feel the force of this effective assistance. If you want to learn a pleasant and profitable occupation, send for their circulars and books. They are free.

In this issue our readers will find a large advertisement of the P. & O. Sulky Plows. We have seen these plows "in action," and they proved to be all that was claimed for them. It has very light draft, beam hitch, foot lift, low frame, self-leveling, and is equipped with the only genuine automatic steering rod. Certainly it is an implement you need on your own farm. Find out about it by writing to Parlin & Orendorff Co., Canton, Ill., and asking for pamphlet No. 41. A postal brings it.

Are you interested in buying farm land cheap? J. J. Snyder, 133 9th St., Austin, Tex., is offering some special inducements on Texas State land. Best land is selling for $1.00 to $5.00 per acre one-fortieth cash and the balance in forty years. $12.00 cash secures $160.00. Mr. Snyder has an interesting book telling all about it. Price is 50 cents, and it's worth it.

WHY IT IS SAFE TO BUY

INTERNATIONAL MACHINES

THERE is an International Agency right near you.

If you do not know where it is, write us and we will gladly send you the address.

This Company has 42,000 agents all over the world, and more than one hundred general agencies located at the important trade centers in the United States and Canada, where large supplies of machines and repairs are carried in stock.

Thus the International Company has made it **easy** for you to buy

Champion, McCormick, Osborne,
Deering, Milwaukee, Plano,
Harvesting Machines.

This Company has made it **safe** for you to buy these machines because of many reasons:

You are **safe** in depending upon the underlying principles of these machines because **you know** they are the six machines in which farmers have placed their greatest confidence through fifty years of practical tests.

You are **safe** in this respect because these machines have proved that they are built upon the right principles by withstanding every test while hundreds of competing machines were condemned and ceased to be manufactured.

You are **safe** in depending upon the greatest improvements in these machines, because the manufacturers maintain a $350,000-a-year staff of inventors and designers to constantly improve these machines and keep them in the place they have established as standard.

You are **safe** in depending upon the quality of material used in constructing these machines because the manufacturers have been able to buy their own coal and iron mines, thus securing the best fuel and ore—their own iron and steel mills, thus producing the best iron and steel, and their own timber lands and saw mills, thus securing the best lumber, and the quantities in which this company buys all other raw materials insure every advantage of highest quality.

You are **safe** in depending upon the quality of workmanship which goes into these machines, because the capital of these manufacturers has enabled them to perfect their equipments and manufacturing facilities in every way that inventive genius and the highest mechanical skill can devise, and gather to their plants the most skillful workmen in every branch of the business.

The business of farming is both profitable and pleasant —if you use International machines.

These machines are durable, because the best materials procurable enter into their construction.

These machines are efficient, because they are correctly designed.

Every precaution possible is taken to guard against the use of inferior materials. Well equipped laboratories are maintained at the Company's steel mills and at each of the several manufacturing plants. All raw materials are subjected to a careful analysis in these laboratories, the second examination at the works being a check on the test made at the steel mills. This rigid system of testing the materials makes it next to impossible for any defective iron or steel to be used in the manufacture of International machines. Without such tests it is impossible to tell the difference between superior and inferior materials. Therefore the small manufacturer must necessarily work at a great disadvantage, for he is continually called upon to replace defective parts.

Before being shipped out, every part and every machine produced by the International Harvester Company must pass the most rigid inspections and tests made by experts who devote their entire time to this work.

Binders are tested by actually binding wire-grass, and even chains are tested link by link by a violent pneumatic machine.

No machine is passed if a single imperfection is discovered, and the trained eyes of the inspectors instantly detect every defect.

Another point of safety for you in the International line is in the matter of repair parts.

If your team runs away or an accident occurs you can **always** get repairs near at hand because a full stock of repair parts is carried at every agency.

And your repairs always fit.

One part is an exact duplicate of another—all exactly like the original pattern.

Repair parts for machines in the International line are being sent out all over the world today, for machines that were built years ago, and each part fits perfectly.

With its 25,000 employes and 42,000 agents, this Company is supporting as many families as there are in Utah or Montana.

So you see you may safely depend upon the strength and reliability of the company behind the International machines.

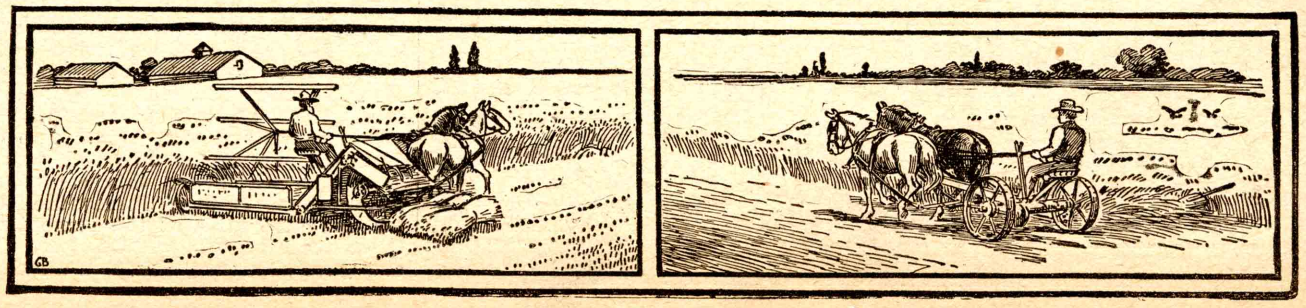
In the end you get the benefit of the magnitude of this business, because it is by doing business upon such a large scale that the International Harvester Company is enabled to give you these superior machines at such reasonable prices.

Equal in importance with a perfect machine is perfect twine. The most perfect twine made may be had in Champion, McCormick, Osborne, Deering, Milwaukee, Plano and International sisal, standard, manila and pure manila brands.

INTERNATIONAL HARVESTER COMPANY OF AMERICA
(INCORPORATED)

Chicago, U. S. A.

International Line:—Binders, Reapers, Headers, Header-Binders, Corn Binders, Corn Shockers, Corn Pickers, Huskers and Shredders, Corn Shellers, Mowers, Hay Tedders, Hay Rakes, Sweep Rakes, Hay Loaders, Hay Stackers, Hay Balers, Feed Grinders, Knife Grinders, Tillage Implements, Cream Separators, Gasoline Engines, Pumping Jacks, Manure Spreaders, Weber Wagons, Columbus Wagons, New Bettendorf Wagons, International Auto-Buggies and Binder Twine.



DE LAVAL SEPARATORS MAKE THE BEST BUTTER

The one purpose of every thinking buyer of a cream separator is the making of the most and the best cream possible, whether for home buttermaking, creamery patronage, or any other use to which cream is put.

It is possible to "claim" almost everything for the various makes of cream separators, but the one indisputable fact that would-be competitors do not even attempt to get around is the unquestionable superiority of the DE LAVAL machines in the making of the best butter.

Year after year, dating back to the invention of the "ALPHA-DISC" system of DE LAVAL bowl construction, butter made by users of DE LAVAL machines have scored highest and won all higher awards in every large and thoroughly representative butter contest throughout the world.

Beginning with the first annual contest of the NATIONAL BUTTERMAKERS ASSOCIATION in 1892 and ending with the 1908 contest at Minneapolis, March 11th to 13th, not only the HIGHEST but every anywhere near high award has been made to users of DE LAVAL separators and more than nine-tenths of all exhibits scoring above 90 per cent in quality have been DE LAVAL made.

The First Prize winners and their scores at every convention of the National Buttermakers Association since its organization in 1892 have been as follows:

THE ROLL OF HONOR
ALL DE LAVAL USERS

1892	Madison, Wis., Louis Brahe, Washington, Iowa	Score 98.
1893	Dubuque, Iowa, C. W. Smith, Colvin's Park, Ill	Score 97.
1895	Rockford, Ill., F. C. Oltrogge, Tripoli, Iowa	Score 98.
1896	Cedar Rapids, Iowa, Thomas Milton, St. Paul, Minn	Score 97.82
1897	Owatonna, Minn., H. N. Miller, Randall, Iowa	Score 98.5
1898	Topeka, Kan., Samuel Haugdahl, New Sweden, Minn	Score 98.
1899	Sioux Falls, South Dakota, A. W. McCall, Creston, Iowa	Score 97.
1900	Lincoln, Neb., H. T. Sondergaard, Litchfield, Minn	Score 98.
1901	St. Paul, Minn., E. O. Quenvold, Owatonna, Minn	Score 97.
1902	E. L. Duxbury, Green Bay, Wis	Score 98.5
1904	St. Louis, Mo., L. S. Taylor, Glenville, Minn	Score 98.5
1906	Chicago, Ill., A. Carlson, Rush City, Minn	Score 97.
1907	Chicago, Ill., A. Lindblad, North Branch, Minn	Score 97.5
1908	J. C. Post, Hector, Minn	Score 98.

(There were no conventions in 1894, 1903 and 1905.)

In the great annual contest just held 504 of the best buttermakers in the United States competed, with first, second and third, and all important awards, being made to users of DE LAVAL machines.

At each of the two big National Dairy Shows held in Chicago in 1906 and 1907 DE LAVAL butter made a CLEAN SWEEP of all highest prizes, and the general average of all the DE LAVAL made entries was conspicuously higher than the general average of all entries using other makes of separators.

Going back further, DE LAVAL made butter received the GRAND PRIZE at the ST. LOUIS WORLD'S FAIR in 1904 and as well at the PARIS WORLD'S EXPOSITION in 1900.

In the hundreds of important state and country contests the world over for twenty years the superiority of the DE LAVAL separator in the making of fine butter has been conclusively proven.

THE EXPLANATION IS TO BE FOUND IN THE IDEAL DESIGN AND CONSTRUCTION OF THE DE LAVAL SEPARATING BOWLS AND THE THOROUGHLY PRACTICAL CONDITIONS UNDER WHICH DE LAVAL MACHINES MAY BE OPERATED AND USED.

A new 1908 DE LAVAL catalogue—affording an education in this as in other features of separator knowledge—is to be had for the asking.

JUST THOUGHT ABOUT IT

If the sows are short of milk for their pigs, a slop of middlings and bran is a milk-increasing feed.

Almost any kind of pasture is good for the ewes and lambs now, except that it must be high ground. Wet, sloppy pasture will not do for sheep of any kind at any time.

More than half of the animal body is water. A fat calf is about 65 per cent water, a medium fat yearling is 60 per cent, a fat two-year-old is 52 per cent, while a fat sheep may be only about 43 per cent water.

Different animals digest different portions of their feed. A steer fed on cornmeal will digest, it is said, 60 per cent of the protein in the corn, 93 per cent of the carbohydrates, and 92 per cent of the fat. A hog will digest 88 per cent of the protein, 94 per cent of the carbohydrates, and 80 per cent of the fat. The low digestion of the protein by cattle is the reason for its being a loss to fatten beef stock without hogs running with them.

Hog raisers should never use scrub males. In this progressive age they should not use scrub sows, but even Uncle Threadbare is unable to find an excuse for using a scrub male.

Away back when the writer was a boy, artichokes were planted for a winter and early spring pasture for hogs. Years ago they went out of use, however, though they seem now to be coming in use again. They are richer in food elements than potatoes, and are said to yield more tons of feed to the acre than potatoes or sugar beets. Any fair corn ground will produce them. Plant in the spring, cultivate lightly, and turn the hogs in when the ground is not frozen in the winter and spring; they will do the rest. If not pastured too close, enough artichokes will remain in the ground to reseed it.

The carelessness displayed by some farmers in handling young colts is inexplainable, since so much of the future usefulness of the animal depends upon its first handling. The colt should be broken early, and it should be broken right — won by kindness and taught as a thing of life, sensitiveness and intelligence.

Dehorning the calves is much nicer and more humane than taking the horns from older animals. A little caustic potash, that may be had at any drug store, dampened and rubbed carefully and well on the horn button of young calves, say from one day to two or three weeks old, will do it nicely—the animal will never grow a horn. And the operation is no more painful than a slight burn. Don't let it touch the bare fingers.

Do you ever estimate what it cost to feed the milch cow during the winter? Last winter I bought a grade shorthorn as a matter of experiment as well as of use. She was not an extra milker at best, and she was only a "stripper" and very thin. The experiment part of the operation was to determine whether a thin cow could be improved in flesh during the winter and give milk at the same time. Of course I knew it wouldn't pay. The cow gave about a gallon and a half of milk per day. I fed her corn, wheat bran and hay, most of the time using oats cut just before ripening for hay, and I fed her liberally, just about as I would have fed a cow to fatten her for beef. She maintained her flow of milk all winter, excellent milk, and gained flesh nicely, but didn't get beef fat. I fed her thus 158 days, during which time she ate $27 worth of feed and gave 237 gallons of milk worth 20 cents per gallon, for which about half of it was sold, or $47.40 worth of milk. And in the spring I sold her for $5 more than I paid for her in the fall. The experiment paid.

STOCK BREEDING

Did you ever notice how hard it is to do anything when the heart is not in it? Poets are said to be born, and so are just about everybody else. Even the stock breeder must have a pride in and a love for his work, and a natural adaptation to it, or he is likely to travel what seems to him a thorny path quite thickly strewn with bad luck.

The most successful stock breeders are those who like the business. They love the animals and care for them because they love them. They soon learn to know the good ones from the bad, the excellent from the medium. They then cull out the indifferent, retaining only the best, constantly bringing the best to a still higher standard. Soon their herd begins to be spoken of by stockmen, and directly they have a noted herd and are themselves noted breeders. And notoriety is not the only thing they have gained. The indifferent stock they have thinned out has sold in as good markets as those of their neighbors, while the ideal ones that remain command the fancy prices that successful breeders, or those who wish to be successful, pay. It is much like the treatment of milk, except that the skim milk is taken away and the cream is left.

Persons of industry and perseverance may succeed in a way in almost anything, whether adapted to it or not, but the "lucky" one is the person who likes his work and whatever he works with.

Free Sample of Roofing You Don't Have to Paint

The makers of Amatite Roofing have advertised their goods very extensively, but the mineral surface proposition is unfamiliar to many people who do not see how it is possible to make a flexible, pliable roofing with a surface of real stone.

Any man will recognize that a mineral surface will wear longer, for instance, than a painted surface, but one has to see how Amatite is made to really appreciate its advantages. The manufacturers, therefore, distribute samples very freely and you can get one very easily by addressing a postal card to the manufacturers' nearest office, and mentioning UP-TO-DATE FARMING. Address the Barrett Mfg. Co., New York, Chicago, Philadelphia, St. Louis, Cleveland, Allegheny, Cincinnati, Kansas City, Minneapolis, New Orleans, Boston, London, Eng.

2256 Arch St., Philadelphia, Pa.

THE FLOW OF MILK

When the angels sang "Peace on earth!" we believe it was designed that peace should pervade all creation, and extend to everything that has feeling or sensibility. Peace pays. Especially is it found to be profitable to the dairyman and to the farmer who keeps one or more milch cows. It is a fact that the treatment of the cow affects the flow of milk. The normal condition of the domestic cow is quiet satisfaction and calm contentment. In that state her system is at its best, and goes ahead with its work to the very best results. When that peace and quiet are disturbed, the whole apparatus is disturbed, and the effect manifests itself in the flow of milk.

A cow that was always treated kindly and was an abundant and regular milker, changed owners, going into the hands of a hard, boisterous, abusive master, that kicked and beat her with little or no provocation. Complaint was almost immediately made that the cow was not the milker she had been represented to be. The reason was not far to find.

A beautiful young Jersey that had been a favorite milker, was a great lover of company. She was turned into a pasture where a number of dry cattle fed, and to which she became greatly attached. As they did not come up to the milking lot, the little cow soon ceased to come also. The owner, vexed at having to go into the pasture for her, drove her up rather roughly and rapidly, hoping to induce her to come of herself to avoid the chasing. Instead she became worse, and began to fail in her milk. He then took to riding a horse when he went to the pasture for her, and chased her more mercilessly, and with a buggy whip punished her more severely than ever; and it was not long until she was entirely dry, though when the chasing began she was comparatively fresh and giving a full flow of milk. She was sold for less than half her value, and the writer is now her owner. She is again fresh, and is giving a splendid flow of excellent milk. We shall see how it all turns out with the chasing and beating eliminated.

Easily provoked and not over merciful boys and barking and worrying dogs are bad messengers to send to the pasture for the milch cows. If cows brought up by such means fail in their milk, do not charge it either to the cows or the pastures. Try to teach the boys to sing "Peace on earth and good will to"—milch cows, and keep the dogs at home.

QUALITY AND PROFIT

Whatever business one takes up the prompting motive is profit, except where one may choose to do something simply for the pleasure there is in it. We are not writing for that kind of people, for, while they are not to be condemned, they scarcely need our advice, as their love of what they undertake will supply the enthusiasm necessary to success, and whenever that fails they will turn their attention to something else. We write for those who need to do what they are doing for the money there is in it.

In this case we wish a friendly word with young stock breeders. We have known young farmers whose principal anxiety was whether they would have trouble to sell their stock. There is a very simple rule which entirely eliminates that question, and that is—BREED THE BEST. No matter what stock you choose, nor what variety, secure the best blood obtainable, and then give such treatment as will make what you raise better than that of the man from whom you got the parents of your flock. Blood is not all there is in breeding. Young breeders sometimes make the rather natural mistake in believing that if they get the best to begin with they must naturally raise the best. But when they got the best they got animals that had been well treated from start to finish, and if what they raise are the best their stock must have that treatment too.

And so far as getting sales is concerned, those who have the best have no trouble on that score. Men that are able to buy are constantly in search of the best, and whenever they find it they will buy. Hence, we repeat, no matter how noted the breeder from whom you got your start, make it your aim and purpose to raise better stock than he had, and your sales are sure. The demand for the best has never been supplied and it never will be so long as the spirit of progress continues with the breeders, and if you have not the ambition to contribute to that supply, better turn your attention to something else.

Now, don't you think,
Quick as a wink,
Sam Smith saw what was wise;
E'en while he ate,
Read UP-TO-DATE,
And followed its advice.

Wasn't Your Neighbor Foolish?

Didn't he make a chump of himself? Wasn't it about the most senseless thing he ever did when he bought that "cheap" cream separator from a "mail order" concern that never manufactured a separator of any kind, and switches from year to year to the separator that can be bought the cheapest? Where is your neighbor going to get repairs? Why, he doesn't even know who built his separator, and the most important thing for a man to know when he buys a "cheap" separator is where to buy repairs every week.

There stands your neighbor's separator, down and out; broken; only used a few weeks; money wasted. Perhaps he could repair it if he knew where to get repairs, but he doesn't know. The fact is, there is no place to get them; his separator was one of a job lot sold "cheap" by a manufacturer who knew it was no good, and who unloaded his stock on a catalog house for what he could get. Now he's out of business.

The Tubular Cream Separator

"Different from the Others"

Easy to oil
Easy to turn
Easy to clean
Low supply can
No dirty oil cups
No bothersome discs

Simple, durable, convenient, handsome and profitable.

Why didn't your neighbor do as you are going to do? Why didn't he buy a **Tubular Cream Separator,** built and guaranteed by the largest cream separator factory in the world and the oldest in America. For twenty-eight years we have been building cream separators at West Chester, Pa., and TUBULAR separators are used in every dairy district of the world.

Tubular Has No Rival

ZIMMERMAN, MINN.

Tubular shows no wear after three years and has never given me any trouble and from present appearances is good for a lifetime. One of my neighbors bought a — — — — — — about a month before I bought mine, and it went to the scrap pile months ago. For skimming the Tubular has no rival in my opinion. JOHN M. COOK.

No Wonder They Are Pleased

Didn't Like Mail Order Separator

SOUTH SCHROON, N. Y.

The Tubular gives us perfect satisfaction. The longer we use it the better we like it. We bought one of the improved — — — — of — — — —, of Chicago, last spring, but we didn't like it a little bit. It was hard to run, hard to wash and hard to keep clean, while the Tubular is easy to run, easy to wash and easy to clean.
L. W. WHITNEY.

Discarded Mail Order Separator

ROBESONIA, PENNA.

After using a mail order cream separator for six months I decided to discard that machine and purchase a No. 4 Tubular Separator. The mail order separator would separate only 275 pounds of milk per hour, and did not give a thorough separation. I can skim two buckets of milk in 4 minutes. The mail order separator required ten minutes. I am more than pleased with the purchase I made from your people.
WM. F. BUCKS

We know how to build separators that will wear, and we are always where you can reach us when you want us. That's something you can tell your neighbor about TUBULARS. Maybe he would like to get right. Maybe he would like a little help. Probably he would like to have a TUBULAR if he could get a little something for his "cheap" separator. Maybe we can help him. Won't you suggest that he write for our new catalog No. 136? It tells all about it.

MORE MONEY From Your Cows and Much Less Work In Getting It.

If you could see the Real "DIFFERENCE" between the NEW BUTTERFLY CREAM SEPARATOR and any other made—Difference in amount of the cream you get; Difference in the quality of cream; Difference in the way the machine runs. Difference in the number of times a minute you have to turn the crank; Difference in the way the milk is aerated and purified while being separated; Difference in the time and trouble it takes to clean the skimming device—you would say, as hundreds of others are saying today—"I'll get the NEW BUTTERFLY CREAM SEPARATOR."

If you could see how to make easily $10 to $15 more a year on each and every cow you keep, and still do it with less work for your wife and yourself, you'd say: "I'll get a Cream Separator."

Right here is "The Difference"

OUR PATENTED ALUMINUM CORRUGATED SKIMMING DEVICE makes the New Butterfly Cream Separator different and 8 times as efficient as any other machine. Every drop of milk that enters the bowl of the New Butterfly Cream Separator is actually put through the skimming process 8 times. This guarantees complete separation, and you can't fail to get ALL THE CREAM. New Butterfly Cream Separators are sold as they ought to be. Not by agents, but direct from our factory to your farm. Freight paid and on 365 days' trial. Send today for illust'd catalog.

For average use, we recommend No. 4½, capacity 450 to 500 lbs. of milk per hour.

PRICE delivered at your town— $39.80

ALBAUGH-DOVER CO. Capital $1,000,000

925-937 Marshall Boulevard, CHICAGO, ILL.

THE ANIMAL JOKE, A MULE

God never made a mule. That much abused animal is a human invention. George Washington was the first prominent breeder of mules in this country, and that is sufficient warrant of their usefulness.

The mule is always ready for work, and he can stand a little more of it on worse treatment and less care than either of his parents, or his inventor. He is less subject to disease, easier cured when sick, requires less feed, and has a longer period of service than the horse, and he is really adapted to more different kinds of work.

It is not surprising, then, that there is always a demand for mules, a demand that is seldom satisfied; and he seldom fails to bring remunerative prices. During the last few years the price of mules has been almost fabulous.

But many people do not like to raise mules. The mule colt is more trouble to handle than a horse colt. He evidently had his origin in a freak of mischief, a heritage he has retained from the first to the last. And he is not to be blamed for it. It is simply up to those who use and handle him to remember they are dealing with a mule.

But the farmer who raises good mules is making no mistake financially. That animal is still going to command a good price. The effort should be for large-boned, heavy mules that will reach at maturity 15 hands or more. To secure such, breed large-boned, well-formed mares to a well-made full 15 hands jack.

SHEEP AND THEIR SURROUNDINGS

Amid proper surroundings the sheep is a hardy animal, otherwise it is not. Thousands of them are often seen in single herds in the mountain regions of the West, but there the air is dry and so is the ground on which they graze. No matter how rich their pasture, nor how carefully they may be housed from storms, if they are compelled to seek their food by wading in mud and water, or even in continually going through mud to get their drinking water, the flock will not long be a healthy one. Their feet will get bad, ticks will infest them, and internal worms will trouble them. The adult sheep may withstand these attacks, though they will show plain signs of suffering, but many lambs will perish after being perhaps half grown.

Sheep are three times profitable: for lambs, wool and mutton; and there is room in the United States for double the number there now is, and farmers may well grow them in small or medium flocks. But don't do it if your pastures are low and marshy. In some portions of the year our atmosphere itself is too moist for them, and when is added to that a moist bed and mud and water for them to walk and feed in for long at a time, success need not be expected.

Farmers who raise sheep, therefore, should always select the highest ground for their pasture, and if possible provide them clean drinking water that they can get to without going into mud. If this can be done, there is not a more profitable animal on the farm, except those whose actual services are needed and make them profitable.

BREAKING THE COLT

We don't like the above expression and never did. A colt should be no more broken than a looking glass. People, however, understand what is meant by it, and yet it is a harsh term and carries with it the idea that something must be done by force. The disposition of a horse represents half his service value, and we believe a colt should never have to be broken. The writer has raised quite a number of colts, and never yet had one that required to be broken in the usual understanding of the process.

All the colt needs is education, and the time for it to start to school is before it is dry from birth, and from that on it should never cease to be a pupil. If it has a good teacher, it will never reach a time when it needs breaking. It will find itself in many new and awkward positions, and it will be inclined to rebel sometimes. So does a child, but we read no articles on "How to Break a Child." The colt has only advanced to another lesson, and is up for recitation. If it has learned you are its teacher, it will accept your instruction as docile as a child, and so soon as it understands what you wish it to do, it will do it. It will be awkward, of course, but the true teacher is patient with the dull children, else what would become of them? The only difference between human young and the young of beasts is that the former have what is called an immortal spirit while the other is supposed not to have. Mentally they are much alike in the beginning; physically and in resourcefulness the little beast has the little human turned down to the bottom of the hill.

So, if there is a colt on your farm this spring, begin to educate it. Leave the breaking to the broncho buster of the West; the poor broncho that never went to school a day in its life and never had a friend.

BUSINESS MENTION

All makes of separators claim to be the best, natural enough, but it was proven at the Pan-American Exposition which was the last public, international test, which was really the best separator by actual tests.

In competition with all other makes of separators exhibited, the U. S. Cream Separator made the record breaking showing of skimming the milk from about a dozen different breeds of cows in fifty consecutive tests with an average of .0138 butter fat left in the skim-milk.

This remarkable record has never been approached by any other make of cream separator.

Notwithstanding the splendid character of the work of earlier models of the United States Separator, the improvements made in the 1908 U. S. makes this separator even more attractive than ever to dairy farmers, who quickly recognize the sterling merits of this marvelous cream producer. For the Improved United States, as proved at the Pan-American Exposition, it the best Cream Separator on the market.

A beautiful catalogue No. 187 can be obtained by addressing The Vermont Farm Machine Company, Bellows Falls, Vermont.

Use Absorbine on Your Blemished Stock

Mr. M. M. Bell, Jamesville, Va., writes under date of December 14, 1907: "ABSORBINE is one of the finest things that I have ever used. I had a two-year-old colt trained the past season. She came home with a bunch on her ankle that I hated to look at. After writing to you and using the ABSORBINE as you advised me, there is no more bunch. I think as much again of the colt."

A lame, blemished horse can be made sound and smooth with ABSORBINE without laying up the horse. No blister, no hair gone. ABSORBINE is mild but prompt in its action; stops lameness, kills pain, removes bunches. $2.00 per bottle at all druggists or express prepaid upon receipt of price. Manufactured anly by W. F. Young, P. D. F., 102 Monmouth St., Springfield, Mass.

Where can you beat it? 200,000 circulation for 5c a word. Compare with others. The Business Exchange sure pays.

You Can't Cut Out

A BOG SPAVIN or THOROUGHPIN, but

ABSORBINE

will clean them off, and you work the horse same time. **Does not blister** or remove the hair. Will tell you more if you write. $2.00 per bottle, delivered. Book 4-C free.

ABSORBINE, JR., for mankind, $1.00 bottle. Cures Varicose Veins, Varicocele, Hydrocele, Ruptured Muscles or Ligaments, Enlarged Glands, Allays Pain. Genuine mfd. only by

Bankers wont make the price for eggs a day longer than the poultrymen allow them to. The latter can begin the pricing business any time.

An active, watchful mother,
A dozen fluffy balls—
They promise many pleasures
After market in the fall.

THE SETTING HEN

There are so many new appliances now that most of the annoyances to which poultry raisers used to be subjected are forgotten. But one practice at least still prevails on the farm that results in much annoyance and no little loss. It is the practice of setting the hens where they lay. More hens than one often lay in the same nest and these are sure to persist in laying with the setting hen. The hens often struggle and fight for the nest, and then eggs are liable to be broken and the remaining ones besmeared and injured. Sometimes the setting hen herself becomes disgusted and quits a nest she cannot have all to herself.

Now, it is no trouble after an ordinarily gentle hen gets thoroughly broody, to move her to another nest. It may be necessary to have the new nest so it can be enclosed, in a box with a board over it, for instance, and shut the hen in for a day or two until she becomes satisfied with her new surroundings; but often even that is not necessary. A hen that will not accept this sort of treatment ought not to have a brood anyway.

The up-to-date way is to have connected with the hen house a separate apartment for the setting hens, to which all hens are to be moved before setting them. This at once removes many annoyances and the setting hens can be much better cared for.

BRONZE TURKEYS

In the whole range of poultry there is not a more profitable fowl to raise on the farm than the turkey. The demand seems to be increasing every year and the supply does not keep pace with it. The result is ready sales at prices well up to the profit line.

For many years we made a specialty of growing the Bronze, and we are sure there is not a better variety for the farm. Their hardiness, rapid growth and large size make them specially desirable, and their beauty of plumage and majestic bearing make them very attractive. We know of nothing on the farm more beautiful than a large flock of Bronze turkeys marching through the fields devouring myriads of grasshoppers and other insects, whose destruction makes the farm more valuable.

Many think their habits as rangers is objectionable, but we have not found it so. The instinct that comes to them from their wild ancestors leads them away from the home sometimes, but still they are really very domestic, and if gently treated, and fed at home, they are seldom any trouble on account of their ranging habit.

If there is a wood nearby, the hens are very apt to go to it to make their nests, but if attractive and partly hidden places are made for them near the house they are very apt to take to them. A Bronze hen will lay from twenty to thirty eggs for her first clutch. Then if broken up, which is not very difficult, she will begin laying again in about a week, but the second nest is very likely to be made farther from the house and more carefully hidden. For her second clutch she will lay from eighteen to twenty-five eggs, and our practice was to not break up the second nest, but to let the turkey hatch and rear a brood. We have often successfully moved a setting turkey and given her a new nest near the house.

The little turks need protection from the wet until they are two or three weeks old, and if fed regularly they will stay close about the house. This is about all the care they need. The turkeys are good mothers, and we have had several broods hatched and successfully reared when we did not know where the nest was nor of the existence of the brood until the little turks were two or three weeks old.

"What do you think,"
With a nod and a wink,
Said the hen to her little ones eight;
"They give us better feed,
And supply every need,
'Cause they're now reading UP-TO-DATE."

A Correction

In setting up the advertisement of Mrs. L. H. Mier, Paris, Mich., we made it read Single Comb Rhode Island Reds for sale, and it should have been Rose Comb as Mrs. Mier does not raise Single Combs at all. She has a fine strain of chickens, and any as our readers who are interested should write her.

Leaving the Bunch Behind

"Leaving the Bunch Behind" is the attractive picture adorning the gold embossed 1908 catalog cover of the "oldest exclusive bicycle house in America," a copy of which has just reached us. The catalog is a work of art and is brimful of valuable and interesting matter for riders or those thinking of buying wheels. It is well worth getting and may be had by writing the Mead Cycle Co., Dept. PX-80, Chicago. They also send a wheel for ten days' free trial and will engage live agents.

Money in Capons

Why sell a scraggy rooster all breast bone and comb when less feed will produce a fat capon bringing more pounds per fowl and more money per pound? Capons are remarkably easy to sell at top price. Did you ever hear of a glut in the capon market? And best of all they are easy to make—you can easily become a skilled operator. A skilled operator does not lose more than one per cent of the birds caponized. Look this matter of caponizing up, write the old firm of G. P. Pilling & Son Co., 2256 Arch St., Philadelphia, Pa., for their free catalog of "Easy to Use" Caponizing Instruments. There is money, big money in capons. Why don't you get your share?

DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers

Fruit prospects for 1908 are most excellent. So much more is the need for storage facilities owned or controlled by producers.

Neath God's blue sky the leaves unfold,
While every breeze that blows,
Wafts o'er the green enraptured earth
The fragrance of the rose.

ADAPTED.

THE SCHOOL GARDEN

In England and ther European countries, the garden is a feature of almost every public school. The idea has crossed over to America and in many portions of this country the school garden is found. But it is of questionable utility except in suburban schools where the pupils reside near the school grounds, and where there may be a janitor to do the heavy work, direct the planting and cultivation (though the last two it is thought the teacher may do), and take care of it, protecting it from depredations all the time. At the country schools where the pupils are present only from half past eight or nine to four, and reside some distance from the schoolhouse; and where besides most of the term, that which is attended by the larger pupils, is in the winter season, it is hardly practical to make such gardens either educational or in any way beneficial. However, the girls, even the small girls, may at the beginning of the spring term, plant some plants and flowers on the school grounds, to be protected by the school government, that might be a source of pride, pleasure and instruction to all the pupils.

But there might be a garden at every farm home where there are children, that appeals to us in the strongest terms. The object of all effort with and for the young ought to be to make better citizens, to make thrifty people, to make stronger, nobler, better men and women. It has been well said that there are three things which fixes a man's value in the world: his knowledge, or what he knows; his ability, or what he can do; his character, or what he is. The ruling passion of the ambitious American child is to make something—something all his own—and it applies to both sexes almost alike. This passion is a precurser of American thrift, but there is danger that it may develop into American greed. It is not best, therefore, to give it full swing or too much encouragement, nor is it well to attempt to suppress it. The latter has sent many a boy prematurely away from home, sometimes to win success, more times to meet disaster. The marvelous truths of nature are the great restrainers of evil, and in nothing can we see these truths opening up more beautifully than in the mysteriously germinating seed, the unfolding plant, the developing bud, the opening flower and the returning seed. Especially if the plant is our own and was planted for a purpose.

What we suggest, then, is a small garden, size to suit the ability of the child to care for it, for every child of sufficient size at the home on the farm. Here is a perpetual school, always open, whose teacher is God, employing as assistants father or mother, or older brothers and sisters. The book is Nature, and a new page is opening every day, with hope in bright anticipation written on the margin. For the garden, while mixed with the beautiful that may be given as appreciated and always timely gifts to friends, should have much of the useful that may meet a demand and profitable sale in a nearby market. Of course the proceeds belong entirely to the owner of the garden.

As we have before intimated, the garden should grow with the child, and the father will lose nothing but may gain much, by giving even the large boy ample time to cultivate his garden and harvest and market the crop even though it may have grown to a small field. When the writer was a boy in the old backwoods home, every Saturday afternoon was a holiday, and could be devoted to squirrel hunting or fishing. How eagerly would it have been employed in the cultivation of a garden patch of each one's own, provided the product would have sold for money however little! And don't you know we would all have learned things about plants and farming and marketing that our father did not know, and we would have been better contented with home. Give the children a garden.

HARDY PERENNIAL FLOWERS

It is pleasing to know that the hardy perennial flowers are becoming popular. They are so readily raised from seeds, so easily cared for, and withal so beautiful and lasting, that they are sometimes called "The Poor Man's Flowers," a name not inappropriate, as they do not have to be coddled and fussed over every year to have them grow and bloom.

Pansies and Daisies, which begin to bloom with the Snowdrop in early spring, soon usher in a wealth of snowy Arabis and Golden Alyssum and pink Carpet Saponaria. Then comes the Columbine in great variety, Campanula or Bell Flowers, stately rows of Foxglove, and glowing clumps of Clove Pink, Sweet William and Carnations, Forget-me-not, Feverfew and a host of other beautiful and fragrant perennial flowers, making a rich array of color in the garden, and perfuming the air with delicious odors.

May and June are the months in which to sow these seeds to get the most satisfactory results, and if you get and plant them at this season, you will never regret it. The plants are hardy, lasting, and free-blooming, and will afford a glorious return for the modicum of cost and labor of raising them. They will live and bloom well for years, and are a never-failing source of real garden enjoyment, Don't fail to start a bed of hardy perennials this season.

THE POTATO

This is really a field crop, but on most farms in the corn and wheat belt it is a garden crop, or what people most call it, a patch crop.

No matter what it is called, it should be treated for the best results. Early potatoes should have richly manured land, pulverized very deep, and the seed covered three or four inches deep. The ground should not be wet and soggy, but it should have a good supply of moisture, to maintain which the surface should be kept well pulverized. We like to begin cultivation with a harrow, about the time the plants appear above the ground, or a little before. Then we follow with the plow or cultivator, keeping the soil loose and allowing no weeds to grow. We finish by throwing the dirt to the potatoes, and ridging as high as we can. This is an old way, we admit, but it makes potatoes.

Some prepare the ground well and deep, lay off tolerably deep furrows, and then cover with a heavy coating of straw, giving no after cultivation. We have seen some fine potatoes raised that way, and heavy yields, but personally we never made very great success by that method.

Late potatoes, what we might call main crop potatoes, like comparatively new rich loam, with a reasonable mixture of sand. Do not plant any but the very best seed, and the seed best adapted to your locality, if you can determine it. Don't be afraid of cutting the seed. Two or three eyes to the piece and two pieces to the hill is likely to be followed by good results. However, cut the potatoes whole and give each eye the benefit of all the potato that belongs to it.

CHERRIES FOR BLOOM

Practical America can scarcely enjoy the bloom of the fruit trees, because we are constantly looking beyond to see the fruit which we expect to follow the blossoms. In Japan, however, the opening of the cherry blossoms is the signal for a round of merry-making, such as is unknown, perhaps, in any other part of the world. And they have cherry blossoms there to be proud of; both double and single, some pure white and others pink with true rose tints. Some of the double ones are two inches or more in diameter, and the double white and double pink planted together make a beauty words cannot describe. These double-blooming cherries have been introduced into this country, and are grown very successfully. In cultivating flowers and flowering plants, we are also cultivating our love of the beautiful, and our love of the beautiful enables us to realize that

"Little beds of flowers,
Little coats of paint,
Make a pleasant cottage
Out of one that ain't."

IF YOU LOVE FLOWERS WRITE ME A LETTER (not a postal) and I'll gladly mail you a splendid lot of Perennials—six mixed packets of my choicest Seeds:—Carnations, Pansies, Everblooming Pinks, Forget-me-nots, Carpet Saponaria and Giant Snapdragons, all hardy, lasting and beautiful—enough for six big beds that will be the envy of your friends. Now is the time to sow them. I'll also send a sample copy of **Park's Floral Magazine**, in its 37th year, finely illustrated, and teeming with practical floral notes and reading. It cheers, brightens and beautifies more than **450,000 homes monthly.**

WHY NOT YOURS? GEO. W. PARK, B75, La Park, Pa.

BETTER STILL—While writing, just enclose 10 cents and I'll send the **Magazine** on trial for a year, and a big Surprise Mixed Package of Perennials old and new—Columbines, Bellflowers, Foxgloves, and hundreds of other kinds, making a bed of surprising novelty, variety and beauty. No dime could afford more pleasure. Money back if not satisfied. Club of 3 only 25c. Club with friends. ☞This ad. will not appear again.

Gloxinias, 5 tubers in 5 colors, all for 25 cts. **Begonias,** Double, 7 fine tubers in 7 colors, all for 25 cts.

Up-to-Date HOME ON THE FARM

An hour in the garden may mean a slight backache but never a headache or heartache.

DAFFODILS

I wondered, lonely as a cloud
That floats on high o'er vales and hills,
When all at once I saw a crowd—
A host of warden daffodils,
Beside the lake, beneath the trees,
Fluttering and dancing in the breeze.

Continuous as the stars that shine
And twinkle on the milky way
They stretched in never-ending line
Along the margin of a bay:
Ten thousand saw I, at a glance,
Tossing their heads in sprightly dance.

The waves beside them glanced, but they
Outdid the sparkling waves in glee;
A poet could not but be gay,
In such a jocund company;
I gazed—and gazed—but little thought
What wealth the show to me had brought.

For oft when on my couch I lie,
In vacant or in pensive mood,
They flash upon that inward eye
Which is the bliss of solitude,
And then my heart with pleasure fills,
And dances with the daffodils.

WILLIAM WORDSWORTH.

SOME WEIGHTS AND THEIR EQUIVALENTS

Wheat Flour—One pound two ounces fills a quart measure.

Soft Butter—One pound is equal to one quart.

Powdered Sugar—One pound is equal to one quart.

Ten eggs are considered one pound.

One-half ounce will fill a tablespoon.

Two ounces is the capacity of the ordinary wine glass.

HELPS FOR THE SEAMSTRESS

When the machine belt is only a trifle loose, it may be tightened without being removed. Put a few drops of machine oil on the belt and turn the wheel a few seconds.

A glove finger may be easier mended if a marble is pushed up into it.

If you have materials to cut out that are thin and pull out of shape under a pattern, try basting their edges to a newspaper and then cut through the paper and material.

MORNING

Hark! hark! the lark at heaven's gate sings,
And Phoebus 'gins arise,
His steeds to water at those springs
On chaliced flowers that lies;
And winking Mary-buds begin
To ope their golden eyes;
With everything that pretty bin,
My lady sweet, arise;
Arise, arise.

SHAKESPEARE.

"PATCHES"

To make a faded carpet look brighter use a new scrub brush and scrub the carpet with half a pail full of hot water to which a tablespoonful of ammonia has been added.

Ink may be removed from a carpet by sopping up with blotting paper, then rubbing with a rag soaked with milk. After the ink has been removed wash with ammonia and water, to take out the stain.

To cure ivy poison soak a cloth in very hot water and apply to afflicted part. This application should be repeated several times and always as hot as patient can bear it. Do not rub while putting on the hot water.

Stained fingers caused by peeling fruits and vegetables may be cleaned by dipping in strong tea and rubbing with a nail brush. After this treatment they should be washed in warm water.

Don't paper a shaded room in green unless you want it to chill every one who comes in. Green is a subdued color and a pleasing one in a sunny room, but it has a cold effect where there is no sunshine.

Lace curtains look as well or better that are pinned to the floor than those which have been dried in the stretcher. As soon as the curtains are washed, spread a sheet upon the floor and upon the sheet spread the curtains one on top of the other, being careful to pull out and pin each scallop. Curtains treated this way will require no ironing.

SOME WEDDING SUGGESTIONS

When May arrives it is high time for the June bride to begin planning for her wedding and the entertainments she is to give her brides-maids. One bride-to-be is going to have her boquet made in sections and after the ceremony these sections are to be given to the different bridesmaids, who no doubt will be surprised to find a gift tucked away in their share of the boquet.

A pretty idea is, instead of the conventional wedding cake, to have a mound of flowers, preferably roses, heaped in the center of the table and the bridesmaids' gifts concealed in this mound.

If the bride gives a dinner for her attendants, another conceit would be individual cakes, made in the same style as the wedding cake. These should be placed at each bridesmaid's plate and have the gifts inside.

Instead of putting the squares of wedding cake into boxes for favors, one ingenious girl had white satin satchels on which were the initials of the bride and groom.

At a beautiful wedding, the ceremony was performed in the orchard under the apple trees when they were in full bloom. The bride carried a large bouquet of these lovely blossoms and the bridesmaids were dressed in delicate pink and green gowns and carried bouquets of the apple blooms. Tiny flower girls in green and pink held fancy baskets of the fragrant blossoms. The wedding breakfast was served on small tables in the orchard.

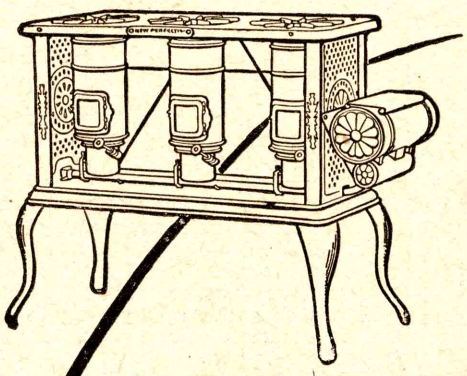
KISS BABY GOOD NIGHT

Whatever the child's daytime naughtiness may have been, at nightfall he should be forgiven and go to rest with the mother's kiss on his lips and her voice in his ear. Hardly anything can be worse for a young child than to be scolded or punished at bedtime and to carry into its dreams harshness or gloom. Children should never be allowed to carry with them in their thoughts the mental sufferings which too many parents seem to think an absolute necessity in the careful bringing up of children. All too soon will they have to face the world and its sorrows. Before the nursery brood is undressed and in bed, the lights turned low and the room quieted for the night, the mother or older sister can sweeten their last waking moments with stories before they embark for dreamland.—Exchange.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

Hot Stove—Cool Kitchen



How do you expect to endure the broiling days of summer if you prepare all the food over a glowing coal fire?

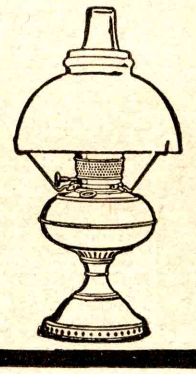
You need a "New Perfection" Oil Stove that will do the cooking without cooking the cook. It concentrates plenty of heat under the pot and diffuses little or none through the room. Therefore, when working with the

NEW PERFECTION
Wick Blue Flame Oil Cook-Stove

the kitchen actually seems as comfortable as you could wish it to be.

This, in itself, is wonderful, but, more than that, the "New Perfection" Oil Stove does perfectly everything that any stove can do. It is an ideal all-round cook-stove. Made in three sizes, and fully warranted. If not with your dealer, write our nearest agency.

The **Rayo Lamp** a substantial, strongly made and handsome lamp. Burns for hours with a strong, mellow light. Just what you need for evening reading or to light the dining-room. If not with your dealer, write our nearest agency.



STANDARD OIL COMPANY (Incorporated)

Marion Harland Says:

"For Years I Have Used and recommended JEWEL RENOVATOR"—for cleaning carpets and rugs on the floor, washing (without boiling) lace curtains, silks, woolen blankets, flannels, chenille curtains, and in fact, every fabric where care must be taken not to cause shrinkage or fading of colors.

The Need. **Jewel Renovator is not a soap. It works like magic.** Cleans carpets and rugs on the floor, disinfects thoroughly, kills moths, removes every stain or grease spot and restores dull faded colors to their former brightness and beauty. It is the inexpensive way of transforming the dullest room in your home into a place of cheery brightness. No boiling of the article to be washed is necessary and shrinkage is impossible. Contains no acid or other injurious substance.

The Offer. **This month we are giving every woman in America** a splendid chance to learn for herself, at our risk, why **Marion Harland** recommends Jewel Renovator so highly. Why the finest homes, the most exclusive clubs, and the largest hotels in New York, Chicago and other large cities use this cleansing preparation in preference to any other sold today. **Send us only 25 cents in stamps or silver** and we will ship you at once, **all charges paid,** a large **introductory package** of Jewel Renovator. A one gallon trial of this wonderful cleansing, disinfecting compound will be enough to prove its great worth to you. Every housewife from Maine to California ought to make "The Test" at our risk.

The Test. **Try it on your dullest rugs,** your most delicate lace curtains, your finest silks, or anything else that will test it severely, and if you are not completely satisfied with what it will do to lighten your labors, and to give that touch of freshness to the furnishings of your home—if you are not delighted with the results—if you do not find it worth five times what you paid for it, you can have your money back for the asking. House-cleaning time is here. Your order will be filled the same day we receive it. Write today.

JEWEL MANUFACTURING CO., 900-910 Marshall Blvd., Chicago, Ill.

GAMES! GAMES! GAMES!

Tricks and riddles will entertain the whole family, friends and neighbors. We own the assortment at a bankrupt price, and give you the benefit of it. Everyone can have games this season. **See what you get**—1 game Nine Men Morris; 1 game Fox and Geese; 1 game of Authors (48 cards in pack); 1 Chess and Checker Board and Men; 1 set Dominos; 1 game Pantomines; 1 game Tableaux; 1 game Clairvoyant 13 Magic Tricks; 1 game Forfeit; 1 game Fortune; 275 Select Autograph Album Verses; 50 Charming Conundrums with Answers; 11 Parlor Games; the great game of Rivals (size 12x18); Game of Letters; Magic Music; Assortment of Comic Cards--the Button Busters and Side Splitters, "Well, I'll Be Blowed," "The Missing Link," "Only Spooning," "It's the Man Behind the Gun that Does the Work," etc. All sent postage paid to anyone sending only 2 new subscribers to The Welcome Guest at 10c each. Send today to

TO MOTHERS OF BOYS

Don't keep nagging your boy.

Don't treat your boy as a hardened criminal if you discover him in sin.

Don't forget that if you make the boy think he is going to the devil he won't be apt to disappoint you.

Don't forget that by treating your boy like a gentlemen you will do much to make him one.

Don't deny your boy the helpful, healthful, restraining influences of plenty of outdoor sport. There is a whole sermon in that phrase, "muscular Christianity."

Don't make his room a sort of junk shop for all the odds and ends of furniture too shabby or old-fashioned to be used in any other part of the house.

Don't be above apologizing to your boy if occasion demands it. He will honor you for it.

Don't neglect to win the confidence of your boy and hold it no matter what occurs. A mother who has her boy's confidence can be sure that he will not wander far from the right road.

Don't have a thing in the house too good for him to share and enjoy with you.

Don't shut him out of all the confidential family talks concerning home and business and neighborhood affairs, but teach him to respect the confidence.—Exchange.

FRUITS AS MEDICINES

In Modern Stories we find that fruits are divided by the famous French Dr. Dupoury into five classes: (1) acid, (2) sweet, (3) astringent, (4) oily and (5) mealy.

In the first he counts cherries, strawberries, raspberries, gooseberries, apples, peaches, lemons and oranges, and regards them as of great hygienic value.

Cherries he prohibits to those affected with neuralgia of the stomach.

Strawberries and raspberries he recommends to the billious and gouty, and denies them to those affected with diabetes.

Of the sweet fruits he particularly values plums, especially for the gouty and rheumatic.

The small-seeded fruits, such as blackberries, raspberries, currants and strawberries are among the best foods and medicines. Their sugar is nutritious, their acid is cooling and purifying.

Grapes he awards the first place and thinks them the cure par excellence for the anaemic, dyspeptic, consumptive, gouty and billious.

Bananas are recommended for the typhoid patient.

Lemons and tomatoes are cooling.

Lemonade is the best drink in fevers.

The juice of half a lemon in a teacupful of strong black coffee without sugar often cures a sick headache.

The apple is one of the best of fruits. Baked or stewed it generally suits the most delicate person.

Green figs are an excellent food and are laxative.

Prunes supply the highest nerve or brain food, dried figs contain heat, nerve and muscle food, hence are good for both cold and warm weather.

Sweet, ripe fruit in prime condition only is called a perfect food.

THE PRIZE CONTEST

We were very much gratified with the answers in our late contest of "How to Lighten the Housework." There were several good articles and you may be sure the editor found it a difficult matter to decide upon the lucky ones. With the contest articles came a letter which was so good that we here print it in full:

PLAIN TALK

Our honorable editor has asked us to send in different methods of doing our work easier, in which I hope a good many will participate by sending in the ways they have learned, that may help us all. For I am always ready to learn what is to our interest.

But as for looking out for ourselves, as our country gives us a perfect right to—begin as soon as the knot is tied by knowing what is really our duty to do. If you were chosen for an affinity, through devoted love and admiration, your pathway will be strewn with more roses than thorns.

One should, of course, attend to all household duties in a tidy and homelike manner. One shouldn't think because husband is stronger he should leave his work to run the washing machine or tend baby while you mix the bread, unless really necessary. Instead one should learn to do work easier, by learning all new methods of doing housework and caring for children. Don't teach baby an unruly notion, by rocking and walking the floor with it, just because it is cross. It only makes a bad matter worse. Children would be easier managed if more judgment was used when babies; anl then less work and worry.

A woman that has all the housework to do alone, care for a family of small children, sewing to do, milk and butter to care for, farm help to work for, chickens to raise and garden to care for, and three meals to get a day, has enough to do. And a man that expects his wife to go into a dirty barnyard and milk cows twice a day, feed hogs, and has a hired man too; take in boarders for the sake of a few dollars, or if a thrasher will bring home one or two men, on rainy days or Sundays, then he only married her for cheap help and is no more than a bugbear, and there will be more thorns scattered along her pathway than roses.

Life is short at the longest, and we should strive to make each day brighter, by loving words and kind greetings, for we cannot reap roses if thistles we sow.

PRAIRIE.

THE WEAVING

A man's life is laid in the loom of time to a pattern which he does not see, but God does, and his heart is a shuttle. On one side of the loom is sorrow, and on the other is joy; and the shuttle, struck alternately by each, flies back and forth, carrying the thread which is white or black as the pattern needs. And in the end when God shall lift up the finished garment, and all its changing hues shall glance out, it will then appear that the deep and dark colors were as needful to beauty as the bright and high colors.—HENRY WARD BEECHER.

THE GOOD ROADS NUMBER

This issue of Vick's Magazine will be no less interesting than will be the Arbor Day number. Among its most interesting features will be approved extracts from President Roosevelt's splendid address at St. Louis, regarding the subject of good roads, and a timely symposium contributed to by prominent educators and good roads experts throughout the United States and Canada as to the editorial suggestion made in the April Vick's proposing that a Good Roads Day be established, when this important subject may be made the theme of special exercises in our schools with a view of developing interest and intelligence therein among our citizens of tomorrow, whose duty it will be to build the good roads and streets yet to be.

Later numbers of this magazine will be equally interesting to all progressive people, who are weary of constant "knocking" and believe in "boosting."

By special arrangement, we are able to make our readers this unrivaled offer: UP-TO-DATE FARMING for one full year, Vick's Magazine until January 1, 1909, and a mammoth package of over 3,000 flower seeds (300 varieties), 6 fine rose bushes, and 10 choice Chinese cinnamon vines, all for $1.00. Do not miss this splendid opportunity.

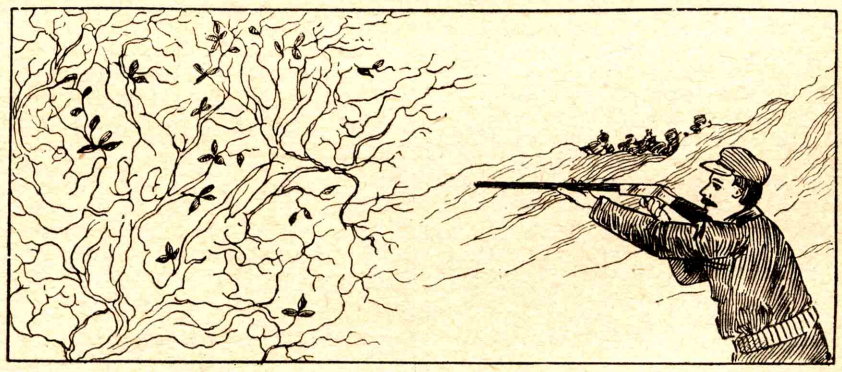
Help The Hunter Find the Game

Below is a man out hunting. He had seen several animals and had aimed and was ready to shoot when they suddenly disappeared from his view. However, they are all in just a short distance from him. There are two quail, two rabbits, and two squirrels. See if you can find them, and when you do, cut out the puzzle, mark each animal, send to us, and win a prize.

It may be that no one locates the animals correctly (and in that case the prizes go to those nearest correct), so send the best solutions you can.



READ THE FOLLOWING CONDITIONS:

As a part of this contest it is necessary that you tell us which advertisement in this issue appeals to you most and give some good reasons why it does. The advertisement you write about must not be signed by Up-to-Date Farming, J. A. Everitt, or Farmers Society of Equity. Letters not containing such an article, of course cannot compete for the prizes.

If more than four send correct answers, then the ones who wrote the best articles will be given the prize.

For the best solution and article we receive on or before May 15, we will give a prize of $1.50 in cash. The next best will receive $1.00, and the two next best 50 cents each.

No money required to compete for, or to get a prize if you are entitled to it. This is a bona-fide offer made by the publisher of UP-TO-DATE FARMING and there is no "catch" in it.

Try your skill, as you stand an equal chance with any of our readers.

Winners will be announced in the issue of June 1 and prize money forwarded immediately. Address all answers to

UP-TO-DATE FARMING, Puzzle Department Indianapolis, Indiana

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

UNION LABEL TRADES AND LABOR COUNCIL 33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

MEETINGS

Send the dates of your meetings. Organizers are especially urged to make their dates sufficiently in advance so that they can be published in this paper one or more times. Also send us names to whom we will send sample copies free. We can help you very much. Use this paper. Forms close ten days before date of issue.

HARRISON COUNTY, OHIO. Mr. J. T. Pugh, Elizabeth, Harrison county, Ohio, will hold meetings constantly in his county and adjoining ones. Farmers in that section desiring his services and who will cooperate with him to organize are requested to address him as above. Mr. Pugh has had a large experience in organizing in Kentucky.

The pendulum is returning.

Were the delegates deceived?

Might as well ask, were the twelve men who sat for nine days in Chicago as jurors deceived after hearing the evidence?

The difference is this. The delegates heard only one side and would not hear the other; the jury heard both sides.

The verdict **"GUILTY"** was not pronounced only against the three men on trial in Chicago, but against every man who has helped to spread the charges against Mr. Everitt. Members and non-members everywhere should grasp this thought with its full significance.

Farmers are the most trusting class of people on earth. Because of their honesty and trustfulness they are easily swayed and have always been led. This paper has sincerely tried to lead them aright but it was nearly overwhelmed by false leaders at the 1907 convention. The time has now come when all the farmers should trust it again implicitly and see in it their best friend, and safest counselor.

To the thousands of farmers who have listened to Drayton, Sharp, Jones, Pauley, Pierson, Crawley, Parkins, Kump, Emmerton, Aldrich, Morrell, Davenport and others abuse Mr. Everitt and spread the false charges against him we will say they are as guilty as the three who are convicted. The only difference is, they were not in court.

And all the members who have had the lieing, libelous, deceitful, bastard (because not one of them would own it in court) sheet thrust on them we ask them if they will assert their manhood and refuse it admittance o their homes? Is there a single member of the American Society of Equity who will accept such a sheet published by convicted criminals? If there is then he should be thrown out of the organization because he cannot be in for any good purpose.

And now every member should write to President Barnett, C. M. Barnett, Hartford, Ky., and demand that the Equity Farm Journal (what a misnomer) be discontinued and give them their old paper—UP-TO-DATE FARMING. This will be following Michigan's example and Michigan's recommendation and is what Mr. Barnett pledged himself, before the Michigan convention, to work for.

Although we fought the greatest battle of our life to bring the guilty people to justice, we bear no malice toward anyone who will now discontinue unfair fight and will help to rebuild our beloved society. To all others, however, our duty is plain and every hour will find us battling to remove the last hindrance to a return to the original plan, the true principles and the accomplishment of the genuine objects of the society. We know that these things can only be done when the society is represented by honest, capable and loyal officers. When, we may say, the society does what it teaches, gives Equity to all.

If you are for Justice and Equity; if you believe in a square deal; in short, if you approve of the verdict returned by the Chicago jury, Mr. Everitt would like to hear from you. We know every true man will rejoice to know that Mr. Everitt has been vindicated, but he wants to hear from each one.

To accomplish the purposes of Equity the movement must be national. The organization must cover every section of the country and it must include every crop. No one crop can protect itself alone. Whenever a single crop undertakes to do that, all the other crops are against it, but when all go together for equity to all there is nothing to oppose.

An unmistakable proof that those who manipulated the 1907 convention forgot or ignored the objects of the society, is the fixing of the annual meeting for December. The main purpose of the society is the adoption of prices for farm crops. There is not a crop but is due to sell before December. What is the use to make prices after the crops are sold?

Though painfully aware that, in the mad chase after capital stock exchanges, farmers were losing much that had been gained, we have been patient. But there has now been time to test the exchanges. What has been gained by them? How much products have been handled by them, and how much additional profits have farmers secured by them? Men may be deceived and not be blamable, but how about sticking to the deception?

UP-TO-DATE FARMING has nothing before it but the accomplishment of the original purposes of the Society of Equity. It has no side issues to call it away. Hence it cannot be otherwise than true to its mission. No wonder the Michigan State Union resolved to stand by UP-TO-DATE FARMING.

We appeal to every friend of Equity to make the spring and summer of 1908 memorable for activitly in Equity development. UP-TO-DATE FARMING has never thought of relaxing a single effort. Our face is set to the front, determined to bring farmers to the front by securing profitable prices for all farm crops. Help us, and do the greatest posible work for yourselves at the same time. It is true we have been passing through quite a storm, but the storm has about blown over now, and all are ready for a forward movement. Onward all along the line.

MICHIGAN RESOLUTIONS

The editor was absent when the report of the Michigan convention reached the office and was placed in April 15th number. We regret very much that part of the resolution No. 7 on affiliation and official paper was omitted. The resolution as printed is as follows:

Therefore, be it resolved, that we, the American Society of Equity of Michigan, in convention assembled, do now renew our allegiance to the principles of the society as originated and promulgated by J. A. Everitt; and be it further resolved, in the opinion of this convention, that the best interests of this society can be subserved by the adoption of UP-TO-DATE FARMING as the official paper for the society, and that our national officers and directors be hereby requested to take steps toward discontinuing the Equity Farm Journal and substitute UP-TO-DATE FARMING.

The resolution adopted at the convention is as follows:

"Therefore, be it resolved, that we, the American Society of Equity of Michigan, in convention assembled, do now renew our allegiance to the national organization of the American Society of Equity of North America, with UP-TO-DATE FARMING as our official paper.

"Resolved, that this State convention of the American Society of Equity of Michigan, in convention now assembled do renew our allegiance to the principles of the society as originated and promulgated by J. A. Everitt; and be it further resolved in the opinion of this convention that the best interests of the society can be subserved by the adoption of UP-TO-DATE FARMING as the official paper of the society, and that our national officers and directors be hereby requested to take steps toward discontinuing the Equity Farm Journal and substitute UP-TO-DATE FARMING."

The above resolutions were the result of a compromise, and if the few who stood for the usurping sheet had not agreed to them, Michigan would undoubtedly have proceeded under the name of the Farmers Society of Equity.

We have just received the April number of the paper Equity Farm Journal published by a trio of convicted criminals at Chicago and it would be amusing, if it were not so serious, to note how that paper, on page 2, flounders to give its readers the impression that the Farmers Society of Equity was turned down in Michigan. Why, bless them, their bastard sheet was the only thing turned down with a demand on the board of directors to turn it down for all the members. But that paper would be for nothing if not false. Every person who supports it has been grossly deceived and imposed upon, or, knowing how false it is, is as devoid of honor as are the publishers and editor. Also on page 7 under display head "Special Notice," they say, "We delayed going to press with April number * * * intending to report results of the Everitt trial, etc." but concluded to print it and report the trial in the May number. The fact is they printed their paper on Friday when the trial ended on Saturday and then it was evident that they would be convicted and they wanted to avoid the report. See the deceit again. If one farmer in ten thousand will pay to be thus deceived they are made of different material than we supposed.

Harrow While You Plow

Make one job out of the two, and get your ground in finest condition by harrowing when the soil is first turned up.

KRAMER'S Rotary Harrow Plow Attachment

enables you to do this. Regular rotary harrow which attaches to any gang or sulky plow. It levels, pulverizes and makes a mulch of the "moist soil" that is not possible after the ground dries and "sets." Draft only slightly heavier—you'll be surprised to see how little. Everybody needs this great time and labor saver. Write for circular No. 40

THE E. M. KRAMER CO., Paxton, Illinois

Baldwin County Alabama

is proving to be, by far, a greater, better and more profitable land for the farmer than we claimed for it. The displays of spring crops there are something wonderful.

Many Northern visitors, during the past month, have gone with our agents, to farm after farm, that early in March showed Tomato, Potato, Melon, Bean, Egg Plant, and many other crops well advanced.

The peach trees are loaded with half-grown fruit, while strawberries, etc., have been ripe for weeks.

Numbers of farmers who testified that two, or three, or maybe four years ago they arrived in Baldwin County with scarcely anything, some of them having to be assisted by this Company, now have acres of as fine growing crops as the sun ever shown upon, and to say they are not only happy and contented, but greatly elated over their present success and immediate prospects, is only half of the story.

The Climate
The Water
The Land
The Crops

all as nearly perfect as the Creator often provides, have made our farmers healthy, are rapidly making them wealthy, and they ARE wise, and WERE wise, when they left the frozen North and settled on a BALDWIN COUNTY FARM.

Oh, ye of little faith, come and be convinced!

"Seeing is Believing"

Twenty-four hours spent there will show you beyond a shadow of doubt what a wonderful land it is. Get on one of our excursions leaving all points connecting with the L. & N. Railroad the first and third Tuesdays every month. It won't cost you very much. You need not stay but a day or two.

Come Along

Get a ticket to Robertsdale (Silver Hill Railroad Station), our Southern Headquarters, and let us show you that we speak the truth when we say that we are offering the Northern farmer the greatest opportunity he ever heard of. Railroad fare refunded to all who buy 40 acres or more.

We are selling land that will grow two or three crops a year, for from one-half to one-fifth of the price of Northern farms, and selling them on long, easy payments. Possession is given when the first small payment is made and the purchaser can improve his land, make a good living in a perfect climate, and soon pay for the farm out of his numerous, quick maturing crops.

The tobacco grower in Kentucky, Ohio, Virginia, etc., is wasting his time when compared to what he could do in Baldwin County. We will accept Tobacco Warehouse Receipts in payment for farms and credit the full proceeds on the cost of it. Every tobacco grower has a chance to improve his condition. Better land, better climate, more money.

We are demonstrating on an experimental farm, the wonders of both Shade and Sun Grown Sumatra Wrapper Tobacco. For that product our soil and climate are superior to that of Quincy, where the least of them made $900.00 per acre net on Sumatra Shade Grown Tobacco last year.

This is no Dream—These are Facts, so Why Hesitate

Write for literature that will give you full information about our lands. Mention UP-TO-DATE FARMING when writing.

C. H. LEE, Sales Manager

Southern Plantation Development Company

1024 Unity Bldg., CHICAGO

This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

QUESTION. *I very much wanted a local of the Farmers Society of Equity here and several farmers asked me about the proper steps to take. When I told them that the fee or first payment was $2.00 and that this included payment for the official paper, they allowed that it would be up-hill work to form a union. The trouble is this: Most of our farms are thin and worn and produce only small crops. The farmers are poor and the average renter and even the owner thinks $2.00 quite a sum and they are so short-sighted that they do not take into consideration the benefits to be derived from organization. I will offer to pay into the treasury $5.00 if they will organize. What can be done for such shortsighted farmers as I describe?—Val. Naffziger, Sumner, Ill.*

ANSWER. The problem is a hard one to solve, but we believe it will yield to education, reason, common sense, self-interest or self-defense. Farmers must organize in very self-defense, while it is equally evident that their self-interests suggest organization. They must be shown that they are making many multi-millionaires every year, while they, as in the case you report, are so poor they think they cannot pay $2.00 in self-defense. They acknowledge their land is thin and incapable of producing good crops and we dare say it is getting poorer every year. Yet they must pay just as high for plows, binders, other machinery and clothing as if the ground was rich and produced big crops. And the probability is that they wear out more machines raising small crops than they would raising large ones.

Mr. Oliver, the great manufacturer of plows, amassed a private fortune of $63,000,000. Each farm in the country contributed about $10 to his fortune. There are probably a thousand others who have done the same, and are doing it, and will continue to do it. One thousand such men will cause each farm to contribute $10,000 to them in a lifetime (at $10 each). And don't understand that we are saying a single word of protest against the money they make. They may be entitled to it all or they may not be, but the point we want to make is that the farmers in their present condition have no power to make it otherwise, therefore protests are useless, and agitation against these conditions is a positive harm and serve only to unsettle business.

The Society of Equity teaches farmers to protect themselves in the price of what they sell. If they will do this, the price they pay need not hurt them. But when organized they can also have something to say about the prices they pay. Farmers must get in a condition to have *all* to say about the price they sell at and *something* to say about the prices they pay. Their self-interests demand this. They must be educated to put aside their envy, suspicions and hypocracy and co-operate to protect themselves in the prices they sell at. Then, and only then, they can cheerfully pay the prices asked. Or, if too high, compel lower prices. Then also they can renew the fertility of the exhausted soil, thus securing larger crops, which, selling at profitable prices, will a thousand times justify all the expense of keeping up the society.

Explain these matters to your neighbors and they should not hesitate a day to organize.

Q. *How would it be to hold our meetings away from the towns, out in the country? I have found a trouble in the town meetings that those who are opposed to us persuade some of the members to not attend the meetings.—G. M. Karnes, Pleona, Kas.*

A. This is a matter that must be left with the local union. No person, farmer or fair business or professional man should oppose our society and will not when they understand it, as it will help every one of them. Particularly no farmer should be prevailed upon to remain away from the meetings, as this indicates that his mind is not strong enough to guide him in the right for his best interests. And the person who is guided by another's mind is in danger indeed. At this season of the year, when crops are being planted, meetings can be made very interesting. The acreage of crops, best methods of planting and cultivation, best varieties to plant and sow, pledging crops, etc., are subjects that can be discussed. Also the matter of bulletins from experiment stations, seed catalogues, farm papers and other papers, catalogues from manufacturers who solicit your trade, their methods of doing business and propositions, will each furnish entertaining and instructive subjects for discussion. In fact there need be no dearth of subjects and we recommend that the subjects for next meeting be always selected before adjourning.

Q. *Please let me know if merchants, professional men or others who are friends of farmers may become members of the Farmers Society of Equity?—S. B. Quisenberry, Pleasureville, Ky.*

A. See "Special Members," first column of F. S. of E. Official Department in this paper.

Q. *Will members who have not paid their dues to the F. S. of E. S. be suspended after April 1?—Many Inquiries.*

A. The by-laws provide that a member twelve months in arrears for dues stands suspended.

Live Outdoors the Year 'Round

Texas is the land of Sunshine.

Its climate is so mild, you can live outdoors practically all the time. Soil here is fertile and easy to till. Rain is plentiful—but never too much. Droughts are unknown.

You can raise hay—grain—cotton—sugar—tobacco—fruit—vegetables—stock or poultry with little effort. Profits are sure because markets are handy—transportation good—and the demand for Texas products constantly on the increase.

You can have a farm of your own in this country—live on it, enjoy it and be happy, while you pay for it out of profits on what you raise.

Health, prosperity and wealth abound in Texas.

Churches are numerous—all denominations. Schools are magnificent. Good neighbors are plentiful. Communities are peaceful—law abiding. This is a white man's country where tax rates are low. Water is abundant and pure. All conditions are healthful.

Right now you can buy farm lands in Eastern and Southwestern Texas at reasonable prices—on easy terms. These lands are a splendid investment—increasing in value every day.

Come, see this Texas of health, of wealth and of happiness. It is reached by "The Iron Mountain Route" in connection with the I. & G. N. R. R., and is so near—so easy to get to—railroad fares so low—you can afford to visit it before you decide where to locate.

Write today for facts about Texas lands—and for time tables and information of

Low Railroad Fares

Do this now. If you wait, the very spot you would pick out for your home may be sold to another before you get here.

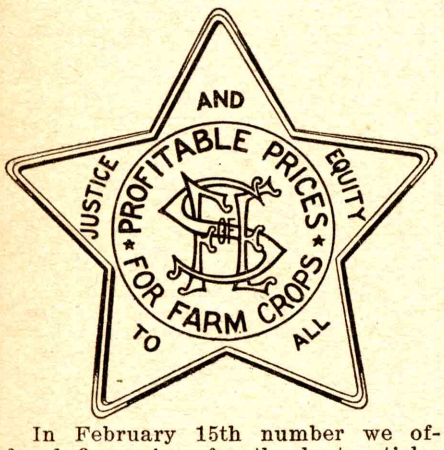
THE STAR OF HOPE FOR FARMERS



In February 15th number we offered five prizes for the best articles describing the emblem of the Farmers Society of Equity as above. The first price to be $2.50; second, $1.00; third, fourth and fifth, 50 cents each. Total, $5.00.

Following are the awards and the letters submitted:

First Prize, $2.50

J. L. Potter, R. R. 1, Harmon, Ill.

Since the "morning stars sang together" at creation's birth they have been in human thought emblems of guidance, excellence and righteousness. There can be no higher ideal (always excepting the star of Jacob) than this emblem, bearing the inscription "Justice and Equity to All," and which so closely compounds with the refrain of Bethlehem star: "On earth peace, good will toward men," which shall be to all people. Such a consummation is the earnest desire of the Farmers Society of Equity and to such its labors tend, but in its own way and by its own means and methods which must be strictly followed. The original idea, the center of the star, must be the central object and kept as the apple of its eye. To accomplish which it must avoid entangling alliances, whereby its identity as a farmers' society may become lost in a maze of foreign amalgamations. It must deal with all classes, but must never surrender its vital principle, that it is a distinctive farmers' society under farmers' control, organized for a specific purpose as shown in the center of the emblem. It should keep an eye single to the above proposition, which, when justly attained, all classes will necessarily become sharers in the benefits. Its duty, then, is plain. Support and work with the means already in use and devoted to the cause, and with honest, united, unselfish effort, always recognizing others' rights, the world may yet realize what our emblem means—the farmers' star of hope.

Second Prize, $1.00

Clarence H. Hodges, R. R. 2, Eckman, N. D.

Truly it has been said a new star has arisen to shine forever on the earth's people, giving forth its bright thoughts to the farmers of this universe.

Every society and nation has some emblem as a badge or banner to represent it. The Farmers Society of Equity has chosen a suitable emblem, in a star. It is simply a star as all stars are represented to be, but it embodies a grand idea. In its five points we find the words "Justice and "Equity to All." In the center are the letters "F. S. of E." entwined. The interpretation which all farmers should know. Encircling these letters we read the words "Profitable Prices for Farm Crops"—a good maxim for farmers to think about.

Let us compare our emblem to other stars. New stars in the heavens as well as new societies are being brought into prominence. In their infancy they were hard of but little, but by careful study we learn more of them. The farmers are now beginning to realize the importance of the F. S. of E.

The star of the Farmers Society of Equity will some day shine brighter upon the farmers and it will point out as in the olden times, when the three wise men were guided by a star to the place of birth of our Christ; justice and solace to all men. When farmers become educated to the idea of uniting so as to enable them to control the prices of the farm products, we will be grateful to this one guiding star.

Third Prize, 50 Cents

E. D. Gee, Tennison, Ind.

STAR OF EQUITY

Behold! a bright and morning star
Has risen o'er the hills afar,
That honest farmers all may see
The road that leads to Equity.

CHORUS

Oh, morning star, bright morning star,
Now shining o'er the hills afar,
To shed thy light o'er every State
Where farmers now co-operate,
Who through the good F. S. of E.
Have found the road to liberty.

Our star of hope now shining bright
Has chased away the shades of night,
And when it shines from shore to shore
The farmers need be slaves no more.

There was a time no one could tell
(When farmers had products to sell)
Whether his crops were going to pay
When speculators had their way.

At last the good F. S. of E.
Has brought the farmers Equity,
And they can always sell at par
If guided by this morning star.

Though wicked men may all conspire
To keep our star from rising higher,
Still through the good F. S. of E.
We'll wage our war for liberty.

While mammon's stalking through our land
With greed and avarice hand in hand,
Our object and our aim shall be
To claim our own in Equity.

Then let us hope this star may shine
O'er every land and every clime,
Till by its light from zone to zone
The farmers all can claim their own.

Fourth Prize, 50 Cents

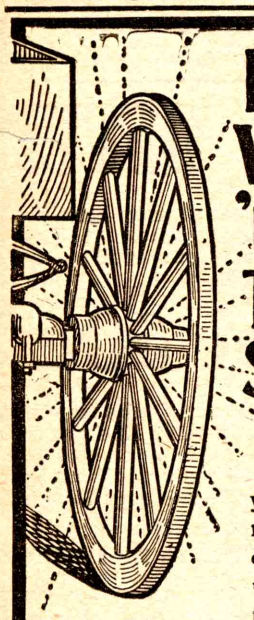
Fannie E. Poole, Hobart, Okla.

A NEW STAR HAS ARISEN

Beautiful star of Equity,
Emblem of justice and privity,
Light of our homes in the land of the free,
Beautiful, beautiful, star.

Representing the sons of the soil,
Placed aloft by hands of toil,
Claiming justice, not asking for spoil,
Beautiful, beautiful star.

Hearken you farmers who follow the plow.
Who earn honest bread by the sweat of the brow,
Come under our star; we're calling you now
Come, follow our beautiful star.



Don't Wait 'till They Sing

You make yourself unneccessary expense for repairs every time you use a poor wagon grease or allow an axle to go dry.

An occasional application of

MICA Axle Grease

removes two thirds of the trouble and cost of keeping a wagon. Try "Mica" next time you go for a load—you'll *see* the difference and the horse will *feel* it.

Mica Axle Grease is almost as good as roller bearings. Ask the dealer for it.

A New Record in Railroad Building

The Chicago, Milwaukee & St. Paul Railway has just extended the train service on its new Pacific Coast extension as far west as Terry, Montana.

This extension carries the new train service about one hundred miles farther west. The record of the Chicago, Milwaukee & St. Paul Railway, in building its Pacific Coast extension, has never been equaled in the matter of time by any similar undertaking. Track is now being laid at the rate of five miles per day, and the east and west track laying forces in Montana will soon meet in the vicinity of Miles City. It is confidently expected that trains over the new transcontinental line will be operated from Chicago to Butte, Montana, by May, 1908, and to Seattle and Tacoma, Washington, about one year later.

"We believe in the goods we offer and we think the truth about them is strong enough to convince you of their merits. We don't promise impossible things and we want you to hold us strictly to our promises. We cannot afford to have any reasonable person dissatisfied."

The book from which the above is quoted is a great poultryman's book. It is issued by the Des Moines Incubator Co., Des Moines, Ia. Their proposition sounds very fair and we know they make an excellent machine. Write for the book; it gives very valuable information. It's free if you men-

$5.00 DRESSES ANY MAN

FREE TRIAL OFFER

I WILL give you my splendid outfit on a 60-day free trial entirely at my own risk, providing you are the first from your locality to accept my generous offer. I have always sold these splendid Outfits to dealers, but this season, commencing with this very day, I have made up my mind to sell direct to the wearer and save every man the enormous profit that has always gone into the pocket of the dealer. To make my new plan a success right from the start I decided to place with one reliable person in each community my complete outfit for $5.00 and not one cent more.

This is my stylish ten-piece Outfit — 1 Stylishly tailored suit, 1 President dress shirt, 1 King Edward cap, 1 pair Empire suspenders, 1 pair mend-proof hose, 1 Chesterfield tie, 3 fine handkerchiefs, 1 set gold buttons.

To be safe in securing this offer send at once for tape, order blank, etc., for I can give to but one in a locality at this advertising price.

F. O. LINDQUIST, Manager

CANADA MILLS CO., Dept. 264 . GREENVILLE, MICH.

Fifth Prize, 50 Cents

S. M. Woodward, Tangletown, Ky.

A NEW STAR HAS ARISEN

This star sends out a brilliant light
To all the world around;
Where'er its beaming light is seen
Equity shall e'er abound.

We wish fair prices for our corn,
Our wheat, rye, oats and cotton;
But unless we organize
The same will not be gotten.

Then let the farmers rally
Around the star of F. S. of E.,
And drive the trust from out the land
And then we'll prosperous be.

Oh bright and glorious little star,
Continue thou to shine
'Till every land beneath the sun
May see thy rays benign.

ORIGINAL IDEA RIGHT

We believe from past observations that it is best for producers of farm products not to invest in stock exchanges or in tobacco manufacturing companies. Leave such investments to those who do not produce the raw material. As long as members of the organization stick to the idea of controlling the marketing of their produce and pricing the same, all will be well, but we feel for them when they enter into the realm of speculation and handling products for profits. Merchandising is one kind of business and farming and marketing is another.

N. M. ASHBY, Sebree, Ky.

MR. J. A. EVERITT,
Indianapolis, Ind.

Dear Sir—Enclosed I hand you bank draft for the following subscribers: G. L. Kent, W. L. McDonnell, Z. S. Morgan, A. J. Walrath, Harry S. Smith, A. T. Hamilton, A. D. Weaver, Geo. W. Spring.

So far matters in Montana are going peacefully and smoothly. I hope the farmers all over the country will not become stampeded, but stay together and win in this great movement which you set a-going. We bought an elevator at Bozeman last June and now have a large steel one almost completed at Belgrade, seven miles from here.

With best wishes for your success, I am,
Most respectfully,
HARRY L. SMITH, Treasurer.
Bozeman, Mont.

EQUITY MEANS ALL THIS

To MR. EVERITT:

I am still reading UP-TO-DATE FARMING and I see nothing wrong in it. You have had some trouble in conducting it to your liking, and so will anybody that advocates equal justice to all.

Equity is the most expressive word in the English language. It signifies honesty, humanity, equal rights before the law, benevolence, justice in the courts; everything ennobling, elevating, civilizing and honorable; not revengeful, but loving, peaceful, God respecting; patriotism, courage, truth in testimonies, discretion in action, clearness in thought and a fair development of all the faculties of the mind; an abiding respect for the constitution of the United States, and for all that is good and great in the nation.

The man of Equity who lives it, has good reason to be proud of his record.

J. H. S., Reynoldsville, N. Y.

MY DEAR FRIEND MR. EVERITT:

I was glad to hear from you and want the terms for organizers for the Farmers Society of Equity.

I was an organizer last winter and organized four local unions with a membership of 52. I sent the money to headquarters, but not a single member ever received the paper. When the members did not receive the paper they said to me I am a swindler and I have got to pay it back. I paid the money back to some of the members out of my own pocket, and you can imagine I don't feel very well over the transaction. Yours truly,

GEO. LINK.
Zeeland, N. D., February 17, 1908.

Post Hole Augurs

The true test of an implement is in practical use. Here is what one man says about the Iwan Post Hole Augurs:

ARCADIA, IND., May 24, 1904.—Gentlemen: In answer to yours of the 11th, the 12 inch augur I bought of you some time ago I use for making holes for end and second fence posts, also for 20 foot, 5 inch top, telephone poles, and my men can dig about three holes to one any other way. They say it is "a regular go to get 'em." Yours truly, J. S. EILER.

Are You Looking Ahead?

The well-to-do farmers and stockmen of to-day made their start in the West within the last quarter of a century. They located in a new country, but conditions were not as favorable as they are today.

Today's opportunities for success and independence are also in the West; they are in the Dakotas, Montana, Idaho and Washington, along the Pacific Coast Extension of the

Chicago

Milwaukee & St. Paul

Railway

Land there is cheap; homestead lands are still plentiful; good crops and markets are assured; railroad facilities good.

In March and April a great many homeseekers bought tickets to points on the new line in the Dakotas and Montana. Some of these people secured a free homestead from the government; others bought their land. These people are looking ahead; they are taking advantage of the opportunities; they will be the well-to-do settlers of the future.

Send for free descriptive books. They will interest the farmer, the stockman, the merchant, the fruit grower, the workingman and the professional man.

GREAT CLUBBING OFFER

Subscribers to UP-TO-DATE FARMING, either new or renewal, may have their choice of any one of the following high-class publications a whole year as a premium. **Two papers—UP-TO-DATE FARMING and any one of the others for 50 cents.**

$1.00 Worth For 50c

You know UP-TO-DATE FARMING well enough. None other can take its place. But the following home and farm magazines are leaders in their line and you will profit by reading them.

SPECIAL—If you want more than two papers add 25 cents additional for each other selected. Three papers—UP-TO-DATE and two others—only 75 cents.

SPARE MOMENTS

This magazine has had a meteoric career and made a record in the publishing field. In less than three years, it has obtained a subscription circulation of 300,000 copies a month. Started as a twelve page paper it increased by gradual stages to a 24-32 page magazine, with a cover in colors, and a subscription price of 50 cents a year. It is printed with good ink, clear type on a good quality paper. It contains articles by the same writers who contribute to the "Saturady Evening Post," "Collier's," "Munseys," and other magazines which sell for 10 to 15 cents a copy. During 1907-7 this magazine will contain three serial stories, a dozen or more short stories by the best writers of the day, articles of current interest, besides departments devoted to Cooking, Dressmaking, Fancy Work, Physical Culture, the Children, etc.

PARKS FLORAL MAGAZINE

This is the oldest floral magazine in the world. It was established in 1871, has been issued monthly ever since, and has now a circulation of more than 450,000 copies. It is devoted entirely to floriculture, is original, practical, profusely illustrated, and the favorite journal among amateur florists who find it an indispensible guide in their floral work. In fact, it is the flower-lovers' own journal, answering his questions, suggesting remedies for diseases and pests, and keeping him well posted upon new plants, and up-to-date methods of culture. If you cultivate but a dozen plants you need the help of this magazine.

THE NATIONAL HOME MAGAZINE

There has long been room for a great, big, home and family magazine, nicely printed and finely illustrated, at 50 cents a year. The National Home Journal is IT. It is full journal size 11¼x16 inches, from 32 to 40 pages each issue, printed on fine paper, with a beautiful cover in colors. It has everything any of the other home journals have and many additional features such as articles on current events, town and neighborhood improvement, travel articles, nature study, etc. Every issue is liberally supplied with high-class fiction.

In short—The National Home Journal is well arranged, well printed, all-round home and family magazine which is sure to please its readers.

THE AGRICULTURAL EPITOMIST

Is an all 'round farm paper for every branch of farming. It contains 16 to 32 pages, is well printed. Pages same size as UP-TO-DATE FARMING.. Published monthly. Every up-to-date farmer should read The Epitomist.

THE PEOPLES POPULAR MONTHLY

The People's Popular Monthly is a large thirty-two page household magazine, printed in colors. The cover page, each month, is especially noteworthy, and compares very favorably with that of the highest priced magazines of the country.

The reading matter is of the highest grade; serials by authors like Louis Tracy, Gen. Charles Ring, Meredith N. Nicholsen and others, are published regularly. Every issue contains a number of the best short stories obtainable.

The full page of editorial comments on current events, has proven very popular, and in addition there is a brief synopsis of the leading events of the month. The department of the household and affairs is very complete as are the fashion and fancy work departments. In addition, ther are pages for the children and a well selected page of humorous anecdotes in every issue.

SUCCESSFUL FARMING

Successful Farming treats of every branch of farming, agriculture, live stock, dairying, poultry raising, fruit growing, trucking, floriculture and the home.

It is condensed. Its articles go to the hearts of things. It is filled with common sense. It teaches carefulness and economy. It is profusely illustrated.

Prof. Holden's wonderful corn articles just appeared in Successful Farming, which gives some idea of the valuable features it contains. Besides Prof. Holden's corn articles we publish a series of live stock articles by Prof. Curtiss, hog articles by Mr. Lovejoy, etc. You ought to have our special articles as they appear in each issue.

SPECIAL—All selecting Successful Farming will also be given a copy of Prof. Holden's great Corn Book.

Send all orders to UP-TO-DATE- FARMING, INDIANAPOLIS, INDIANA

THE STAR OF HOPE FOR FARMERS

In February 15th number we offered five prizes for the best articles describing the emblem of the Farmers Society of Equity as above. The first price to be $2.50; second, $1.00; third, fourth and fifth, 50 cents each. Total, $5.00.

Following are the awards and the letters submitted:

First Prize, $2.50

J. L. Potter, R. R. 1, Harmon, Ill.

Since the "morning stars sang together" at creation's birth they have been in human thought emblems of guidance, excellence and righteousness. There can be no higher ideal (always excepting the star of Jacob) than this emblem, bearing the inscription "Justice and Equity to All," and which so closely compounds with the refrain of Bethlehem star: "On earth peace, good will toward men," which shall be to all people. Such a consummation is the earnest desire of the Farmers Society of Equity and to such its labors tend, but in its own way and by its own means and methods which must be strictly followed. The original idea, the center of the star, must be the central object and kept as the apple of its eye. To accomplish which it must avoid entangling alliances, whereby its identity as a farmers' society may become lost in a maze of foreign amalgamations. It must deal with all classes, but must never surrender its vital principle, that it is a distinctive farmers' society under farmers' control, organized for a specific purpose as shown in the center of the emblem. It should keep an eye single to the above proposition, which, when justly attained, all classes will necessarily become sharers in the benefits. Its duty, then, is plain. Support and work with the means already in use and devoted to the cause, and with honest, united, unselfish effort, always recognizing others' rights, the world may yet realize what our emblem means—the farmers' star of hope.

Second Prize, $1.00

Clarence H. Hodges, R. R. 2, Eckman, N. D.

Truly it has been said a new star has arisen to shine forever on the earth's people, giving forth its bright thoughts to the farmers of this universe.

Every society and nation has some emblem as a badge or banner to represent it. The Farmers Society of Equity has chosen a suitable emblem, in a star. It is simply a star as all stars are represented to be, but it embodies a grand idea. In its five points we find the words "Justice and "Equity to All." In the center are the letters "F. S. of E." entwined. The interpretation which all farmers should know. Encircling these letters we read the words "Profitable Prices for Farm Crops"—a good maxim for farmers to think about.

Let us compare our emblem to other stars. New stars in the heavens as well as new societies are being brought into prominence. In their infancy they were hard of but little, but by careful study we learn more of them. The farmers are now beginning to realize the importance of the F. S. of E.

The star of the Farmers Society of Equity will some day shine brighter upon the farmers and it will point out as in the olden times, when the three wise men were guided by a star to the place of birth of our Christ; justice and solace to all men. When farmers become educated to the idea of uniting so as to enable them to control the prices of the farm products, we will be grateful to this one guiding star.

Third Prize, 50 Cents

E. D. Gee, Tennison, Ind.

STAR OF EQUITY

Behold! a bright and morning star
Has risen o'er the hills afar,
That honest farmers all may see
The road that leads to Equity.

CHORUS

Oh, morning star, bright morning star,
Now shining o'er the hills afar,
To shed thy light o'er every State
Where farmers now co-operate,
Who through the good F. S. of E.
Have found the road to liberty.

Our star of hope now shining bright
Has chased away the shades of night,
And when it shines from shore to shore
The farmers need be slaves no more.

There was a time no one could tell
(When farmers had products to sell)
Whether his crops were going to pay
When speculators had their way.

At last the good F. S. of E.
Has brought the farmers Equity,
And they can always sell at par
If guided by this morning star.

Though wicked men may all conspire
To keep our star from rising higher,
Still through the good F. S. of E.
We'll wage our war for liberty.

While mammon's stalking through our land
With greed and avarice hand in hand,
Our object and our aim shall be
To claim our own in Equity.

Then let us hope this star may shine
O'er every land and every clime,
Till by its light from zone to zone
The farmers all can claim their own.

Fourth Prize, 50 Cents

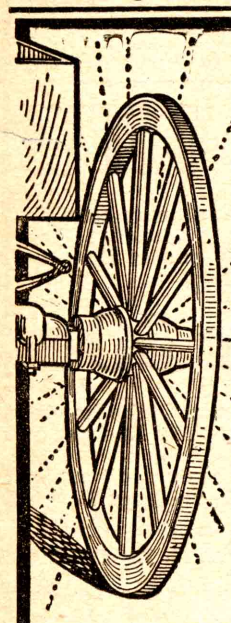
Fannie E. Poole, Hobart, Okla.

A NEW STAR HAS ARISEN

Beautiful star of Equity,
Emblem of justice and privity,
Light of our homes in the land of the free,
Beautiful, beautiful, star.

Representing the sons of the soil,
Placed aloft by hands of toil,
Claiming justice, not asking for spoil,
Beautiful, beautiful star.

Hearken you farmers who follow the plow.
Who earn honest bread by the sweat of the brow,
Come under our star; we're calling you now
Come, follow our beautiful star.



Don't Wait 'till They Sing

You make yourself unneccessary expense for repairs every time you use a poor wagon grease or allow an axle to go dry.

An occasional application of

MICA Axle Grease

removes two thirds of the trouble and cost of keeping a wagon. Try "Mica" next time you go for a load—you'll *see* the difference and the horse will *feel* it.

Mica Axle Grease is almost as good as roller bearings. Ask the dealer for it.

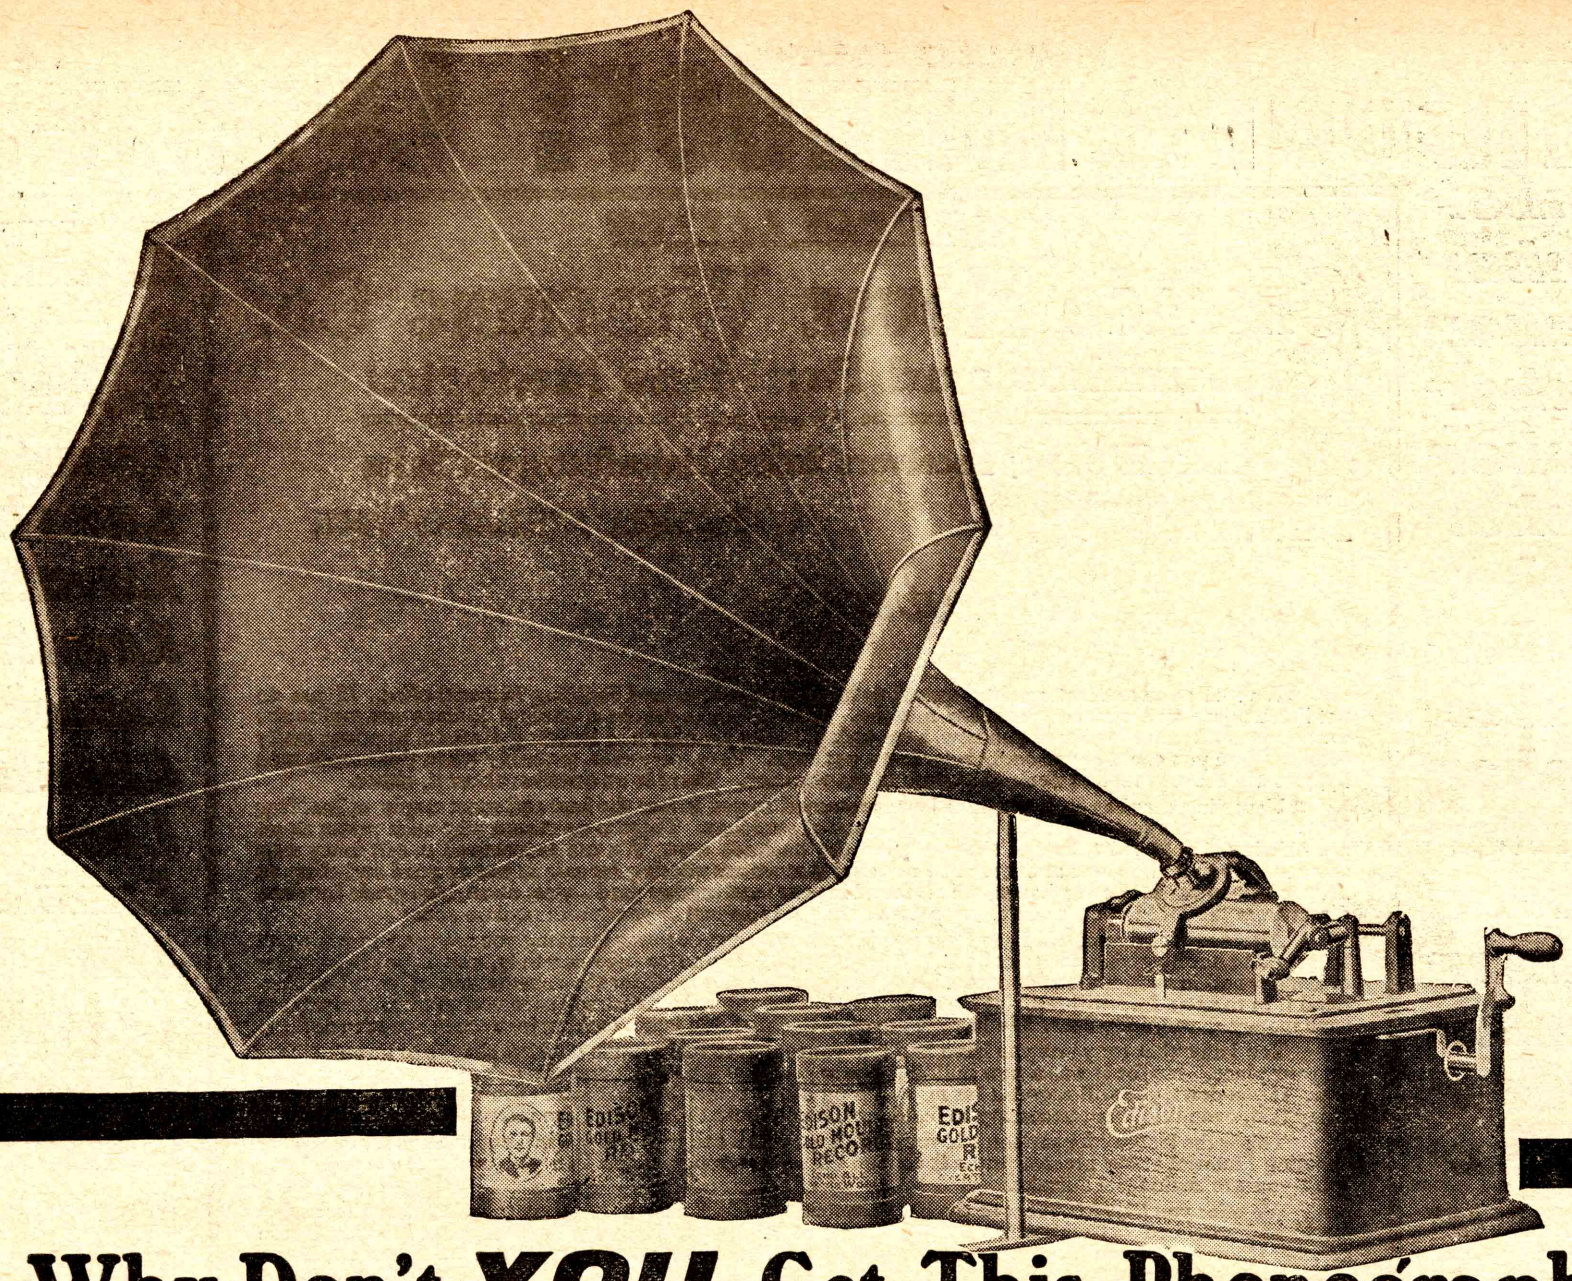
A New Record in Railroad Building

The Chicago, Milwaukee & St. Paul Railway has just extended the train service on its new Pacific Coast extension as far west as Terry, Montana.

This extension carries the new train service about one hundred miles farther west. The record of the Chicago, Milwaukee & St. Paul Railway, in building its Pacific Coast extension, has never been equaled in the matter of time by any similar undertaking. Track is now being laid at the rate of five miles per day, and the east and west track laying forces in Montana will soon meet in the vicinity of Miles City. It is confidently expected that trains over the new transcontinental line will be operated from Chicago to Butte, Montana, by May, 1908, and to Seattle and Tacoma, Washington, about one year later.

"We believe in the goods we offer and we think the truth about them is strong enough to convince you of their merits. We don't promise impossible things and we want you to hold us strictly to our promises. We cannot afford to have any reasonable person dissatisfied."

The book from which the above is quoted is a great poultryman's book. It is issued by the Des Moines Incubator Co., Des Moines, Ia. Their proposition sounds very fair and we know they make an excellent machine. Write for the book; it gives very valuable information. It's free if you men-



Why Don't *YOU* Get This Phonograph On FREE TRIAL?

For almost three years I have been making the most liberal phonograph offer ever known! I have given hosts of people the opportunity of hearing the genuine Edison Phonograph right in their own homes without a cent of cost to them.

Think of it! Thousands and thousands and thousands of people have been given the opportunity to hear in their own parlors concerts and entertainments by world famous musicians just such entertainments as the greatest metropolitan theatres are producing.

So far you have missed all this. Why? Possibly you don't quite understand my offer yet. Listen—

MY OFFER:

I will send you this Genuine Edison Standard Outfit (the newest model), complete with one dozen Edison Gold Moulded Records, for an absolutely free trial. I don't ask any money down or in advance. There are no C. O. D. shipments; no leases or mortgages on the outfit; no papers of any sort to sign. Absolutely **nothing** but a plain out-and-out offer to ship you this phonograph together with a dozen records of your own selection on a free trial so that you can hear it and play it in your own home. I can't make this offer any plainer, any clearer, any better than it is. There is no catch about it anywhere. If you will stop and think just a moment, you will realize that the high standing of this concern would absolutely prohibit anything except a straightforward offer.

WHY I Want to Lend You this Phonograph:

I know that there are thousands and thousands of people who have never heard the Genuine **Edison** Phonograph. **Nearly everyone** is familiar with the screechy, unnatural sounds produced by the imitation machines (some of which though inferior are very expensive). After hearing the old style and imitation machines people become prejudiced against all kinds of "Talking Machines." Now there's only one way to convince these people that the Edison is superior and that is to let the people actually see and hear this remarkable instrument for themselves. **That is why I am making this offer.** I can't **tell** you one-twentieth of the wonders of the Edison, nothing I can say or write will make you actually **hear** the grand full beauty of its tones. No words can **begin** to describe the tender, delicate sweetness with which the genuine new style Edison reproduces the soft, pleading notes of the flute, or the thunderous, crashing harmony of a full brass band selection. The wonders of the new style Edison defy the power of any pen to describe. Neither will I try to tell you how, when you're tired, nervous and blue, the Edison will soothe you, comfort and rest you, and give you new strength to take up the burdens of life afresh. *The only way to make you actually realize these things for yourself is to loan you a Genuine Edison Phonograph free and let you try it.*

You Don't Have to Buy It:

All I ask you to do is to invite as many as possible of your friends to hear this wonderful new style Edison. You will want to do that anyway because you will be giving them genuine pleasure. I feel absolutely certain that out of the number of your friends who will hear your machine there will be at least one and probably more who will want an Edison of their own. If they don't, if not a single one of them orders a Phonograph (and this sometimes happens) I won't blame you in the slightest. I shall feel that you have done **your** part when you have given these free concerts. You won't be asked to act as our agent or even assist in the sale of a single instrument. In fact, we appoint no such agents and at the rock-bottom price on this wonderful new outfit we could not allow any commission to anyone.

If You Want to Keep

The Phonograph—that is if you wish to make the Phonograph your own, you may do so, but it is **not** compulsory. I am asking you merely to send for a free demonstration. I won't be surprised, however, if you wish to keep the machine after having it in your own home. If you do wish to keep it, either remit us the price in full, or if you prefer, we will allow you to pay for it on the easiest kind of payments.

Our Easy Payment Plan.

There are so many people who really want a phonograph but who do not have the ready cash to pay for it all at once that I have decided on an easy payment plan that gives you absolute use of the phonograph while paying for it. $2.00 a month pays for an outfit. There is absolutely no lease or mortgage of any kind, guarantee from a third party, no going before a notary public, in fact, no publicity of any kind, and the payments are so very small and our terms so liberal that you never notice the payments.

Get the Latest Edison Catalogs

Just sign your name and address on this coupon now and mail it to us. I will send you our superbly illustrated Edison Phonograph Catalog, the very latest list of Edison Gold Moulded Records (over 1,500 of them) and our Free Trial Certificate entitling you to this grand offer. Sign this coupon now, get these catalogs and select your records at once. Remember the free concerts. Sign this coupon right now or send a postal card or letter if you prefer. But do it now. No abligations, just get the catalog. Sign the coupon and mail it to us right away before you forget it. Address F. K. Babson, Edison Phonograph Distributers, Edison Building Chicago.

WRONGS DONE THE PEOPLE

Ye turn away from this priceless jewel, permit it to fall into the grasping hand of the spoilsman, and when too late, cry out against a system that permits such mighty injustice.

One would think nothing to menace its perpetuity would grow up in a popular government; that when people had once tasted freedom as it ought to be enjoyed in a government all their own, nothing would ever be permitted to develop that could be oppressive or work wrongs to the masses on whose shoulders legally rests the governing powers. But it is still true that "Eternal vigilance is the price of liberty," and that "Where the carcass is there will the vultures be gathered together." In any kind of government there are opportunities for spoilsmen, and where the opportunities are spoilsmen will be found, The only things wonderful in this regard about the United

(Continued on page 2)

WRONGS DONE THE PEOPLE

(Continued from page 1.)

States is, that it has bred so many spoilsmen. In a country where all are supposed to have equal opportunities one would not expect to find a special privileged class, but while the masses have busied themselves in legitimate pursuits, the few have grown up in an atmosphere of exploitation. Such people make government a study, politics a profession, manipulation and deception a practice, and office-getting and job-securing the aim of their lives.

From public office and public plunder it was but a step to the creation of more selfish, more dangerous and self-perpetuating corporate powers that soon grew into monopoly, taxing the public for private gain, and even threatening equal rights, privileges and opportunities, undermining the power of the people, perverting many of our free institutions, and weakening the general effect of popular government.

But the people have at last become awakened to the dangerous extremes to which these evil influences have already gone, and a demand for reform is more insistent. Will the agitation and demand for reform result in accomplishment, or will it prove only a temporary wakefulness, to be followed by a still more profound slumber? Prof. Woodrow Wilson, president of Princeton University, says it is only a spasm of reform that will soon pass off, leaving affairs to float on in the same channel along which they have glided to the present deplorable domination of special privilege. We trust otherwise, and we must regard Dr. Wilson as not much in sympathy with the reforms. Indeed the great institutions and the so-called great men are seldom in sympathy with reform. Those who have worked themselves to the top, no matter whether by the giant strides of honest endeavor, or whether carried to the top on some wave of popular impulse, or whether they insidiously made their way there while others slept, seem to get out of touch with the masses, gather all their inspiration from the classes, and prefer things should remain as they see them in the imaginary upper circles. For this reason reforms must always work up from the bottom, and the real reformer is the ridiculed crank of today, the statesman of tomorrow, and the idealized, perhaps deified, character of the day following.

And yet Dr. Wilson admits there are wrongs imposed upon the people. In an address delivered not long since before the Commercial Club of Chicago, he is reported to have said:

> The production of certain kinds of commodities has been concentrated in the hands of great corporations which are virtually monopolies. These monopolies have in some instances been built up by methods of competition fundamentally unrighteous and unfair and have been maintained by methods as arbitrary and as contrary to the spirit of the law as those by which they were created. The railways have in many cases assisted in the unfair competition by granting special rates to some shippers to the exclusion of others, serving not as true common carriers, but rather as the partners of particular capitalists.
>
> "This is one class of abuses. Another class perhaps more far reaching in its effects manipulation of securities and the use of trust funds. The stock of railway corporations and of many industrial stock companies has either been issued so much in excess of the real values of the forms of business or the properties represented as to be really fraudulent in character, or has been so manipulated by men in a position to influence the stock market as to be changed in value without any regard to the earning capacity of the enterprises represented to the great profit of a few and the wholesale loss to multitudes of innocent investors. Insurance companies have used the funds accumulated in their hands not for the benefit of the policy holders, but for the private benefit of their officers or for the convenience and profit of great stock jobbers. Such are the things that have gone wrong.

It should seem that conditions outlined in the above extract are themselves sufficient to arouse every patriot to the most earnest effort to find and apply a remedy.

But those mentioned by Dr. Wilson are not all the wrongs done the people, nor are they the worst. Let the hundreds of thousands of laborers now out of employment in this country, tell of wrongs imposed upon them. The panic of 1907, whose miserable length still drags through our trade and industrial centers, is the most inexcusable financial disturbance that was ever forced upon a strangely afflicted people. There was not the least reason for it in any of our financial, commercial or industrial conditions. There was more money in circulation than there had been before, our shops and factories had orders reaching far ahead of their capacity; our imports and exports both exceeded previous years; and yet, like a clap of thunder from a clear sky, came the panic during the last weeks of October, and blighted like an untimely frost all these conditions of activity and prosperity. That there is a power anywhere to precipitate a thing like that is a menace to the welfare of the people, a perversion of our free institutions, and a stab at popular government. It ought to be the highest aim of patriotic statesmen to discover the power that can do these things, and, in the love of mankind and for the sake of good government, to take such action as will forever remove that power from the evil agencies that exercise it.

But will our statesmen do it? The attempts at financial legislation by the present congress are not reassuring. The Aldrich bill, and other measures that have been discussed are like administering alcohol as a cure for drunkenness. They are almost every one designed to increase the powers that made the panic, and of course aggravate the disease. It all constitutes but another emphatic reminder that the masses of the people must qualify themselves to take a more active part in the work of government. And as the agricultural masses constitute the greater portion of the common people, the farmers must get in position to act more nearly together, to work in harmony in the exercise of a power that shall maintain equal and exact justice to all and accord special privileges to none. To this end how important is it that farmers become organized so as to know each other better and to more harmoniously work together. Get ready even though required to mark time for a while; some day the order will come to march and then there need be no delay.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FIVE FOR $2.00

Foreign Subscriptions, including Canada, 75c a Year

Clubs. Two subscriptions for $1.00; five for $2.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE*.

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

CROPS AND MARKETS

Notwithstanding excesive rains have fallen in some places and in a few places droughts have been experienced the 1908 crop prospects to date are excellent. The government crop report, summarized, shows the following:

Total area of winter wheat standing on May 1, 29,751,000 acres, which is a reduction of 1,318,000 acres or 4.2 per cent from the acreage sown last fall and is 1,619,000 acres or 5.8 per cent more than harvested in 1907.

The condition of the crop on May 1, is reported as 89 per cent against 91.3 per cent on April 1 and 82.9 per cent on May 1, 1907. How reliable the reports are we cannot say, but they should not be taken as correct criterions of the final crop.

What should interest farmers more now is the visible supply. We call attention to the following table which tells an interesting story:

UNITED STATES VISIBLE SUPPLY OF WHEAT

April 4, 1908	36,281,000 bushels
April 11, 1908	34,398,000 bushels
April 25, 1908	30,968,000 bushels
May 2, 1908	28,344,000 bushels
May 4, 1907	52,719,000 bushels

The present visible supply is only about half as much as a year ago, see table. It has been decreasing at the rate of 2,000,000 bushels a week, hence in twelve weeks, as early as the new wheat can come in the market to any considerable extent, if farmers control it as well in the future as in the past, the platter will be practically clean to start in the new crop year. But it will be about eighteen weeks before the new crop wheat will reach the markets that usually figure in the visible supply. Therefore, the 28,000,000 bushels must supply the shipping and export demand for that length of time. Will it?

The visible supply is now the lowest it has been for 18 years with one exception, the year of 1891. How the manipulators are going to string the present supply out to meet the requirements we don't know. If farmers will control what little wheat they have left prices are bound to advance materially before harvest and this is the only way to break the power of the speculators to start the new crop out low, as they are now buying and selling it (September futures) at seventeen cents below the present price.

All the conditions as they developed have borne out the estimate of this paper, made last fall of a short world's crop, and our prediction that all the wheat would absolutely be needed before another crop would be grown. We then pointed out the reasons why American farmers could get an excellent price for their fine crop and recommended $1.25 a bushel. We now affirm, if the 1907 pledging campaign had been continued after the Omaha convention as it had been conducted before, and if that convention had been wise and elected honest and capable officers to lead the Grain Growers Department, and who would have continued it on the A. S. of E. plan, wheat would have sold at $1.25 per bushel months ago. But as long as farmers and their representatives refuse to think independently, and allow themselves to be deceived, and led or driven, without as much as investigating for the truth themselves, they need not expect any better deal than they have been getting. It is discouraging to contemplate the present prospects for 1908 wheat, the excellent and practical plan given farmers by which to pledge, control and direct the marketing of it, and then realize that the department that was designed to carry out the plan has been practically abandoned after wrecking it on the shoals found in attempting to sail on unchartered and unknown seas. Farmers are paying a terrible price to learn the lesson and our sincere wish is that it will be worth the money.

PROGRESS OF THE FARMER

Herbert N. Casson in the American Review of Reviews, gives an interesting article showing the progress the farmer of the world has made in little morethan a hundred years. The first scientist to apply the principle of scientific research to farming was a Frenchman, Lavoisier. In 1783 he discovered the composition of water, and was in the midst of many other discoveries when the mad fanaticism of the French Revolution sent him to the guillotine. Liebig soon after founded the first agricultural experiment station, and Berthelot pushed soil invesigation until he startled the world by declaring "The Soil is Alive!"

Science has now become the handmaid of agriculture, and the farmer finds himself in touch with it everywhere. He is told that there are more living things in one pinch of rich soil than there are people on the whole globe, and the chemist can tell him just what crops will do best in his fields.

The first American experiment station was opened by Prof. W. O. Atwater in 1875, and now such things are almost as common as county seats in the States, and 15,000 scientnfic farmers have been graduated from the agricultural colleges and universities. We pay eleven million dollars a year for the support of our national department of agriculture, and each year adds to it sdevelopment and discoveries.

Step by step farming has become a sure, a polite and a scientific calling. It is no longer a business without rule, or order, or method. In only one respect does it lag behind and that is in its selling side. When our grandfathers plodded on in uncertainty, doing as their fathers had done, but not knowing why, producing things but not knowing how, they sold as prices were fixed and offered them by others. While we have abandoned the old methods of production and would not return to them under any circumstance, we still retain the old way of selling. We even do worse than our grandfathers did, for our great transportation facilities enable us now to sell our surplus all at once, and we rush it to market at the time in all the year when it is least needed, and when the market is most glutted and prices demoralized and lowest, and then call ourselves scientific business farmers!

It remains for farmers to take the one remaining step, and learn to cooperate, to make their own fair and equitable prices, and control their marketing, so as to give their products to the world as the world needs them, and is willing to pay for them a price that measures up to the general level of current values.

WITH UP-TO-DATE'S PUBLISHER

Several subscribers have complained about not receiving acknowledgement of renewal. This is to inform all that an acknowledgement is not usually sent except as shown by the change of date on wrapper. Watch the date.

Several old subscribers have complained that they have not received the paper since April 1st. Upon investigation it was found that they had not renewed. Of course it was an unintentional neglect on their part, but they should not forget that it costs money to publish a paper like UP-TO-DATE FARMING and that while we labor for our subscribers' welfare, the laborer is worthy of his hire.

Several inquiries asked price for bundles of May 1st number with the report of Chicago trial. For the information of all readers we quote the price at 2 cents a copy as long as the supply lasts. If you know of any subscriber who has not renewed, or who is receiving only the Chicago paper, order a copy for him.

THE FARMER *and* THE MERCHANT

BOTH ESSENTIAL *To* A PROSPEROUS COMMUNITY

The merchant and the farmer are essential to a prosperous community. When the grandfathers of today were young, it took the farmer, the merchant, the miller, the shoemaker and the blacksmith to meet the essential demands of every well-to-do neighborhood. But invention, concentration of effort, resulting in greater skill and cheaper production, and the wonderful change in transportation, enabled people to get along without cobblers and smithies, and even without local mills; but nothing has yet been found to take the place of local merchants.

Some have thought the city catalogue house may supplant the local merchant, but with strongest emphasis we may say it cannot do so. We are told that one of the business necessities of the farmer is to get what he must buy at the lowest possible price. Admitting the importance of economy in farm management we must join issue on this proposition. Lowering of price is not always proof of economy of purchase. It is seldom economy to buy cheap goods. In this expression we do not mean low priced goods of poor quality. Such goods are dear at any price, and a printed description is not always a safe guide as to appearance or quality. It seldom is, and even appearance is not always to be trusted. Shoddy goods are so made in these days of device and subterfuge as to "deceive, if it were possible, the very elect." The catalogue merchants, like local merchants, cannot do business without profits. And the former must necessarily have greater profits in the aggregate than the latter. They are in the centers of commercial activity, where everything is high. They must pay higher rents, higher wages to their help, tremendous printing bills, astounding sums for postage, hordes of stenographers and typewriters, armies of wrappers, packers and boxers, heavy bills for stationery, lighting bills and water rates, and many other expenses of which local merchants know nothing. All these expenses must be paid out of the profits on the sales made.

God gave humans a power he did not give to beasts — the power of reason. And the more intelligence men have the higher ought to be the development of the power to reason. Does it not stand to reason that merchants involved in such tremendous extra expenses must have greater profits, at least in the aggregate, than must those who are free from that load of expense? We concede that an increased number of small profits may help build up the aggregate, but the catalogue houses must not only pay the extra expenses to whcih we have referred, but the profits must so far overreach the expenses as to make gains on the investment and incomes for the proprietors the mere suggestion of which would take the breath of the local merchant. We have in mind now one of the largest houses of this kind in the country that began in a Northern city of considerable size, but which soon proved too small, when the firm moved to one of our largest cities, where it has accumulated such enormous profits as to have built up for its own business what would be almost a city were it located anywhere else. And all this has been done with money sent in from the country above the cost of the goods the country people purchased. It took business ability to do that, we freely allow, and we respectfully lift our hat to ability in any line; but our purpose in writing this is to show our country readers that they cannot be getting goods on so small a margin of profit as they have been taught to believe by the fine illustrations and glowing descriptions in the big catalogues.

And since we are reasoning beings, take another view. The local merchant has access to the same manufacturing establishments the catalogue houses have, and they can buy from them just as cheaply, barring possible small concessions because of larger purchases. But manufacturers all make different grades of goods. It is impossible for them to have absolutely uniform raw material, and it is also impossible that there should never be mistakes in construction. Manufacturers cannot afford to throw away the imperfect material, nor can they destroy the articles that may have been accidentally marred in the making. But reliable houses are honest in these matters. The material is carefully selected and graded before it is used. That which is perfect is assigned to the highest grade work, and that which is imperfect is used in the construction of lower grade articles. Every process of construction is also watched with care. Each imperfection of material or workmanship is noted, and the article having it is doomed to a lower grade. The result is different grades of goods — firsts, seconds, thirds, or even lower still. When the local merchant buys, he knows his goods must be sold before the eyes and in the hands of the purchaser, that every article and every part of it must be subject to careful personal inspection. And not only so; it goes to a regular customer who resides in the immediate vicinity of the merchant, and the goods must there stand the test of actual use. The merchant whose business depends upon pleasing his customers, dares not buy any but good goods, for which he, of course, must pay the price of good goods, which the catalogue merchant must do also if he gets good goods.

But here is the difference, a logical and natural one, the result of opportunity instead of superior ability. The catalogue merchant sells his goods by printed picture and description, and a weak stick can be painted as beautifully and given as perfect a polish as a strong one. Paint hides flaws, and the pictures do not show them. Nor does the eloquent language employed in the descriptions reveal them. When the article is sold it does not go to a customer with whom the merchant is in almost daily contract, nor is it subject to the test of use in sight of the store where it was purchased. On the contrary, the picture on the printed page is the thing inspected and the description does the selling. It is the most natural thing in the world that the catalogue man should buy the cheaper, we may safely say the cheapest, goods — the seconds, thirds, etc. Then the catalogue prices are compared with those of the local merchants' superior goods. The comparison is not fair.

It is not enough to say "money back if not as represented." This expression has cheated farmers out of more money than any other like number of words in the English language. The descriptions, the representations, are carefully made, and they are generally hedged in by shrewdly concealed conditions. Besides, the purchaser is in the country, perhaps hundreds of miles away. He needed the article before he ordered it. He waited longer than he expected for its arrival. When it came he was impatient and in a hurry. He was not much accustomed to claiming rights from people abroad, and, whether fully satisfied or not, he put the article to use, with the conclusion, "I guess it will do!"

Our farmer readers know this is just about the way such things go. And it is not saying the catalougue houses are dishonest. They are out for business, and this gives them an opportunity to make what seems to be low prices, and yet they are prices which carry greater profits than those of the local merchants. When an occasional case turns back on them, they redeem their pledge of "money back if not as represented." They can well afford to. Even then the purchaser is the loser, for he has lost time, the use of the article and patience, all of which would have been avoided had the deal been with the local merchant.

But the farmer is a seller as well as a buyer. The mission of UP-TO-DATE FARMING is to teach the selling side of farming. When the farmer is a seller he must have a buyer. The prosperity of many rural communities depends almost entirely upon the sale of eggs, poultry, butter, etc. Search the big catalogues through; you will find no proposition to buy these, or to exchange goods for them. If the local merchant cannot sell goods, he can ill afford to handle these or any other products. He certainly cannot at the prices he now pays, for when he sells goods, implements, vehicles, etc., he strains up the price of products, whether he pays in cash or goods, and depends for compensation upon increased business.

These are sober truths, to which every local merchant, and almost every intelligent farmer, will testify. No system yet discovered, no improvement yet made, enables rural communities to dispense with the local merchants and be as prosperous without them as with them, and that is why we make this plea. The farmer and the merchant are both essential to a prosperous community, and we sincerely regret any influence that tends to create any but the most friendly feeling between these two classes. It must be confessed that earlier efforts at farm organization did that. Not so the developing Society of Equity. We realize that our prosperity lies in successful and profitable selling rather than in nigardly buying. Selling is compulsory. Farmers must sell or have no money, saying nothing of profits. But they are not compelled to sell at any particular time nor at every offered price. On the other hand, buying is optional. They may buy or they may not. But when they buy, they should buy of those to whom they sell, that those who buy from them may be better able to handle their products at prices remunerative, so that the business of both may be increased to the advantage of both, and the prosperity of the community assured.

But this does not absolve the local merchant from equity in price. Those dependent upon each other as these classes are, must give as they would receive, equity. Hence the motto of this society and the purpose of UP-TO-DATE FARMING: **"Equity in all the business relations of life."**

Farming and Banking

UP-TO-DATE FARMING has several times suggested the beneficent results that would undoubtedly follow a banking system, or at least a line of related banks that had direct connection with farming, and were specially amenable to farmers if not actually owned and controlled by them. We now find in American Industries an article by D. A. Tompkins, director of the National Association of Manufacturers, that contains many good thoughts along that line. We strongly endorse what he says concerning our present banking system, except that we would make it much stronger than he does. Mr. Tompkins says:

"We have a wartime banking system which is neither correlated to agriculture nor manufacturers nor commerce. It is only correlated to the bonds, bondholders and panics. No other country in the world has such a system. No other country in the world has such panics as we do. It promotes inflation at one time and disastrous contraction at another."

That is a strong arraignment, but it is not a whit too strong, and many other evils connected with it might easily be mentioned. The country has entirely outgrown the system. Business and production have become too large for it; and it is surprising that the Congress, usually regarded as a progressive body, has not grown with the country until it is large enough to break the shell of the old system that our finance may grow into proportions adequate to meet the needs of our expandng agriculture and manufactures. The trouble is, the political activity of the banking interests has terrorized the politicians until they fear the banks more than they do the people. This is apparent in the strenuous efforts to pass the Aldrich bill, which Mr. Tompkins says "is a provision to extend the bond secured currency system and thereby bind us tighter to dependence on the bondholder." UP-TO-DATE FARMING has several times said of it very much the same thing.

Mr. Tompkins, whom we may regard as the spokesman for the National Association of Manufacturers, favors what is known as the Fowler Bill, a measure introduced in the House by

(Continued on page 5)

Obtuseness of *the* Schools

It is a pity that the educational institutions of the world are the last to see and promote, or even accept, new ideas for the advancement of mankind. But it has been always so. Columbus found his bitterest opponents in the scientific men of his day. So did Cromwell in the overthrow of tyrrany, Harvey in regard to the circulation of the blood, and hundreds of others who did things and proclaimed truths that revolutionized the thought and action of civilized humanity. It is unfortunate so far as human progress in concerned. In spite of the great work done by the schools, and the world would be in mental darkness without them, all the epoch making discoveries and revolutionary changes of the method of doing things, have been made without the endorsement of the schools, and in spite of their opposition. The thought of the school men is narrowed to a single line, and in that line they are proficient, excellent, unsurpassable, perhaps. But whenever they depart from that line and speak with authority on any subject outside of their particular field they are like tottering babies in a rocky road. Among the ancients we may refer to Malthus with his doctrine that a percentage of the human race must be destroyed at intervals that the remainder might have room and enough to eat to prevent the deterioration and ultimate extinction of the race. Among moderns we have shining examples in Dr. Osler declaring that humans should not be permitted to live more than forty years, as after that age they are no longer useful, and are only "cumberers of the ground;" in the numerous vagaries of a certain Professor in Chicago University, and in Chancellor Day with his frequent explosions. And now we may add Prof. Kemmerer of Cornell, who essays to instruct the world concerning trade exchanges and market manipulations. We find the following from him in Leslie's Weekly of April 23:

Exchanges are big insurance companies, in which every member of the society of a member and the speculators are the managers. They assume great risks and their position requires ability, and, therefore, society must pay them highly. Although there is undoubtedly evil in dishonest manipulation, it is more than overbalanced by the good which speculation brings to the society in the form of this insurance. In obtaining advance information as to the condition of crops and the political conditions, the speculators are liable to keep prices firm and to prevent sudden fluctuations, and thereby are insuring society against a sudden drop or swift changes.

The writer of the above paragraph, whatever he may know of the technicalities taught in the schools, knows no more about markets, market conditions and price-making than the bulls and bears of the market know of his Latin and Greek; and it will be a better day for human affairs when these one-sided, one-idea professors, abnormally developed in some one line and abnormally obtuse in all others, confine themselves to the subject they understand. Prof. Kemmerer, of whom we confess we never heard before, has no more knowledge of the gambling pits which comprise the Exchanges than he has of the time to plant ginger snaps or to harvest sauer kraut. We once knew one of his kind who actually got so near to farming as to plant some beans; but when the beans came up he was sure he had planted them the wrong side down because they came up with crooked necks and the leaves still in the ground. To correct his mistake in planting and to relieve the beans of their misery he pulled them up and reset them with their stems downward. "Every man to his trade" is still not a very bad motto, and if observed it would often keep learned men from saying silly things.

The Extravagance *of* Literature

Farmers are like other mortals. They love to be bragged on; to hear pleasant songs all about themselves. Secretary Wilson knows how to sing to please the agricultural ear, but a writer in the American Review of Reviews for May can sing such a song as would make the distinguished Secretary of Agriculture "go way back and sit down." Read and think:

If the American farmer went out of business this year he could clean up thirty thousand million dollars. And he would have to sell his farm on credit; for there is not enough money in the world to pay him half his price.

Talk of the money-mad trusts! They might have reason to be mad if they owned the farms, instead of their watered stock. When we remember that the American farmer earns enough in seventeen days to buy out Standard Oil, and enough in fifty days to wipe Carnegie and the Steel Trust off the industrial map, the story of the trusts seems like "the short and simple annals of the poor."

One American harvest would buy the Kingdom of Belgium, King and all; two would buy Italy; three would buy Austria-Hungary, and five, at a spot-cash price, would take Russia from the Czar.

Talk of swollen fortunes! With the setting of every sun the money-box of the American farmer bulges with the weight of twenty-four millions. Only the most athletic imagination can conceive of such a torrent of wealth.

Place your finger on the pulse of your wrist, and count the heartbeats,—one,—two,—three,—four. With every four of those quick throbs, day and night, a thousand dollars clatters into the gold-bin of the American farmer.

How incomprehensible it would seem to Pericles, who saw Greece in her Golden Age, if he could know that the yearly revenue of his country is now no more than one day's pay for the men who till the soil of this infant Republic!

Or, how it would amaze a resurrected Christopher Columbus if he were told that the revenues of Spain and Portugal are not nearly as much as the earnings of the American farmer's hen!

Merely the crumbs that drop from the farmer's table (otherwise known as agricultural exports) have brought him in enough of foreign money since 1892 to enable him, if he wished, to settle the railway problem once for all, by buying every foot of railroad in the United States.

While the above language is extravagant, we are not objecting to the song. The earnings of the farms of the United States are enormous; the value of the crops they produce is almost beyond estimate; but if it runs to anything like the figures mentioned above, there could be no stronger proof that there is something wrong somewhere in farm management or economy. The indivndual farmer has not the money possesed by those whom it is said he could buy. He does not live so well as they; he is not housed so well as they; he does not spend for pleasure, recreation, amusement and information as they do. If the farmer makes all that money why does he not enjoy it? Because there are still systems in vogue that take it from him who produced it and give it to those who "toil not neither do they spin!" Excessive transportation, excessive charges for storage and handling, excessive profits in speculative buying, made possible by the madness of rushing all, without a thought of time, or glutted markets at prices that naturally attend forced sales—this is why farmers are less wealthy than others though they produce the wealth in which an extravagant world revels. If farmers would only exercise the common sense in selling that everybody else exercises, then in truth would the farmer be the Croesus of the industrial world.

The Fruit Crop *and* Marketing

Recently we saw in a newspaper the prediction that strawberries would sell in New York at 5 cents a quart. The reason given for this low price was the excellent prospect for a crop.

If the prediction is realized the ducer of the berries will not receive a living return as, before he will receive anything the handlers, transportation companies, pickers, and makers of the crates and packers must be paid. It will be seen that the pay of all the people concerned in putting the berries on the market is certain with one exception—the man who produces them—the person above all others who should protect himself first.

And it is the same way with all other fruit crops. A favorable season oftentimes reduces the producers profit below what it should be or eliminates it entirely. If there is a large crop of cherries, peaches, pears, apples or other fruit this year, and as present indications point to, the commercial grower in many cases will be left with too small a profit or no profit at all. And the teaching of some farm papers that the grower should create a **special** market for his fruit and get a **special** price is not sufficient, for suppose all would follow this advice, as they probably want them to, the **special** markets then would be the regular market and the low prices would prevail just the same. If there is a large crop of fruit we will see much of it spoil under or on the trees because "there is no market," while what goes to market may sell too low. We have seen it many times.

Naturally the question arises, "is there a remedy?" Yes, there is a remedy, in fact two of them. Some years one of them will be sufficient and some others both may need to be applied. And either of them, to apply it, absolutely requires organization of the producers.

The first remedy is to increase the consumption. Regardless of the size of the crop, the inability of the producers to sell their crops at profitable prices, or at any price; or the gluts that may be in New York and some other cities, there have always been millions of families in the country who had no fruit or not as much as they wanted. This was because of the bad system of distribution, or the high retail prices charged, or both.

We believe, if the producers were organized on the Equity plan and had their representatives in the markets to report the demand that such an improvement could be made in the distribution that, when there is a large crop, every market would have all it could use and the consumption would be greatly increased. Also, when the Equity plan of marketing is in force high prices in seasons of abundance would not be known anywhere and consumption would be increased from 25 to 100 per cent, thus taking all that has heretofore been considered surplus.

But if a crop is produced that cannot be disposed of when all the markets are fully supplied and the prices maintained fair and equitably to the buyers and producers, then the Equity plan again provides the remedy we referred to, to maintain profitable prices. It is no less than to keep off of the market any real surplus. When an actual surplus exists, after all markets have all the demand calls for, such surplus must be allowed to spoil at home, or be preserved or disposed of at home.

We have before us a newspaper account of the experience of peach growers in Oklahoma in 1907, a year of a very short crop, it says:

"Peaches in Kansas and Oklahoma, especially, have rotted on the ground in large quantities because transportation is either insufficient or the rates too high to pay for picking and shipping."

Who will claim that these peaches, in a season of scarcity as in 1907, would have spoiled if the producers had been in control of the situation instead of the handlers who were interested in keeping the market scant on supplies, so they could get high prices? Further along the article says:

I want to call your attention to the difficulty of getting good peaches in Chicago at any price. The common retail basket sold here this season measures 4½ x 8½ inches by 3 inches deep, holds about 16 medium sized peaches and sells retail for 30 cents. Better peaches in a slightly larger basket sell for 40 cents. To date very few good peaches have arrived and at no time has the price been low enough so the housewives could afford to put them up in jars for winter use.

Is not the reason that peaches were so high in the cities and yet spoiled in the orchards; and because the price offered would not pay for picking and transportation, because the producers were not in control of marketing, but were at the mercy of the handlers and transportation companies? And it is so with practically every other similar crop.

In 1906 The A. S. of E. Dept. of Fruit and Produce was organized at Chicago for the purpose of directing the marketing of perishable and semi-perishable crops on the Equity plan. The plan is sufficient and the department started off under favorable auspices. But the farmers' representatives would not let good enough alone, and at the 1906 convention they began to change the plan and elected officers who were totally incompetent. At the 1907 convention they made matters even worse and today there is nothing left of the department but a memory.

Until the producers will learn to do business as successful business organizations do, show wisdom in electing competent officers and discontinue changing their plans as frequently as the wind changes they will not have better conditions. But yhen they are willing to work out their problem by the Equity plan taught by this paper, certainty of markets and profitable prices can be secured for their products as surely as manufacturers have certain markets and profitable prices.

FREIGHT RATES AND PRICES TO CONSUMERS

A dispatch from Washington on May 2 says that the freight rates on fresh meat in the southeastern territory, also known as the Carolina territory, will be increased from 3 cents to 10 cents per 100 pounds. The same dispatch also says:

The increase in rates on fresh meats into the southern territory is regarded as the entering wedge of a general increase on all commodities.

Also we quote the following from the dispatch:

It is the first material raise in the rates on foodstuffs made by the railroads of the country for a good many years. It will mean much to the consumers as it will probably result in an increase of approximately 1 cent per pound on low grade meats and perhaps as much as 2 cents a pound on the select cuts. While the increase to the consumer in the territory affected by the proposed rates is noticeable, it is likely that it is intended as a feeler of public sentiment with a view of making a general raise on all commodities.

This is another illustration of what happens when a class is not in a position to resist, or protect itself. Why an almost imappreciable advance of 3 cents to 10 cents **per cwt.** will cause an advance of $1.00 to $2.00 per cwt. to consumers is incomprehensible except by the well known disposition of every class, having the power, to sieze every excuse to advance prices to the consumers or depress them to the producers. It has always been so and is the strongest kind of an argument that **every** class should organize for protection so there will be no weak people to be preyed upon by the strong.

Tobacco Growers' Mistake

It is not much to be wondered at that the jangling voices which grew out of the arbitrary attempt to rule made by the directors of 1906-07, and the disturbing events which followed it, retarded organization and led farmers, even Equity people, to make many mistakes. But, if reports are to be credited, the greatest mistake has been made by some of the tobacco growers of Kentucky, and that, too, on the eve of such a victory as was never before won by tillers of the soil. It is reported that some of them have decided to organize independently; that is, to cut loose from the parent society that has led them to victory, and prosecute the remainder of the fight single handed and alone.

We are not inclined to deny their right to do so, but we seriously question the wisdom of such action. Tobacco growers know they had tried many expedients to curb the power of the trust. They had organized variously among themselves as neighborhoods and districts. They had formed capital stock companies and discussed the practicability of going into competition with the trust as buyers and manufacturers. But all had been fruitless. Every effort had failed. The trust had constantly grown in power, and the growers became more and more helpless.

This was the siuation in which the Society of Equity found them. It at once placed its strong arms around them, bringing to their aid not only the combined power of the tobacco growers, but the sympathy, influence and strength of every crop produced in this country and of every farmer who planted, cultivated and harvested crops. And this is the only way farmers can succeed. A neighborhood may plan to do this or that, and another neighborhood will, consciously or unconsciously, plan counter to them and neutralize their efforts. A district may concentrate and propose to co-operate; another district with equal earnestness, if not with perverseness, will refuse to combine and so defeat co-operation. The producers of a whole crop may organize and bring their product under good control, but the producers of other crops will be envious or jealous, and their infiuence instead of going to strengthen the combined effort, may be exerted to weaken it. The only road to agricultural independence, and the just control by farmers of what they produce, leads through an effort which shall include **every** crop and cover the **entire** country. Anything narrower than that cannot meet the world wide evils that confront crop selling. Anything shorter must fail to reach the market manipulations which extend to the market centers of the world.

Up-to-Date Farming has labored earnestly for the success of the tobacco growers of Kentucky. It has watched every aspect of the fight with as great an interest as though the fight were all its own—it made the fight its own. It has brought into the ranks every recruit that could be mustered. It has furnished argument and ammunition to meet the most astute and best equipped enemy. It has brought to bear the power and influence of every crop that is grown and of every Equity farmer in the whole land. This effort may not have been appreciated. The power and prestige of general organization may not have been understood, but we are glad we were able to thus aid in the conflict, and we cannot but grieve to see the tobacco growers make the mistake of returning to the old plan of single-handed effort and inevitable failure. We hope that wiser counsels will prevail, and the slogan of "all crops to aid all crops" will still be the rallying cry to marshal the agricultural hosts and lead them all to victory.

Too Narrow For Results

In another article we spoke of what we regard as a great mistake being made by the tobacco growers in attempting to organize an exclusive tobacco growers' society in the hope of thereby controlling the price and marketing of their crop. Since writing that article we find the following in the Owensboro Inquirer, and since it is doubtless the argument mainly given for a separate organization, we quote it:

It is essential that the A. S. of E. should be maintained, because there are national products—such as corn, wheat, potatoes and other crops, but tobacco is restricted in its area, therefore the A. S. of E. is not essential in the handling of tobacco, and that being true, there are many tobacco growers who will never go into the Equity organization. They want tobacco handled exclusively by those who produce and know something about tobacco. They are unwilling to risk the control of their chief crop—therefore their "all"—to an organization which has within its membership more people who are not tobacco growers than those who are.

That is exactly the spirit which prevailed in all attempts at farm organization that preceded the Society of Equity, and if it can be called an argument at all, it may be applied to every crop produced. Cotton is grown in a restricted area, and, therefore, the cotton planters are not concerned with any other crop. Hence by the same argument, they can go it alone. So of wheat, though the area is larger; and of corn, of oats, of barley, of beans, potatoes, and everything else. This leaves farmers precisely where the Society of Equity found them—the producers of each crop making spasmodic efforts to do something in the way of controlling it, and every farmer selling as he pleased at whatever he could get and growling at unprofitable prices. Returning to the same efforts must be to return to the same results.

To say that tobacco growers are not willing to join with producers of other crops in plans for the equitable control of all, is too small and narrow for the genius of the present age. In the Society of Equity, the tobacco crop is in the hands of "those who produce and know something about tobacco." In the annual meeting the committee on tobacco is made up exclusively of tobacco growers, and they report concerning tobacco. Precisely so with the cotton planters, the grain growers, the livestock men, and all other agricultural interests. Each has in hand his own, but all their separate acts are reviewed by the whole body and when finally affirmed each is sustained by all, and has the powerful support of all. Thus the great crops perform the happy function of sustaining and protecting the small ones, guarantee equity to all producers, and compel it in all the business relations of life. Besides, should any seek to overleap the bounds of Equity, and thus extortion upon the rest, all are there to crush the possible greed and hold to right and justice. It is the only plan that can win the confidence and compel the respect of the world and gain a permanent victory, and those who are inclined to "go off alone," will see their error and regret it.

WE PRONOUNCE IT A LIE

The following is the opening paragraph of a long editorial in the Lexington, Ky., Herald of April 30:

According to dispatches from Frankfort, members of the American Society of Equity have received letters warning them not to raise corn, or wheat, or any other grain, with the threat that if they disobey this warning their cattle will be poisoned, or their residences and barns burned. Some of these leters have been given to the Adjutant General and will be turned over to the Postoffice Department, that the State and Federal authorities may endeavor to discover and bring to punishment their authors.

We unhesitatingly pronounce that whole thing a lie. If there have been any such letters, genuine and written seriously as threats, as implied, send them to us for publication. The Society of Equity is for peace, and law, and order; but it is for farmers as well as others having a right to control their own business.

THE TOBACCO CROP

Farmers must act wisely. It seems quite evident that for several years too much tobacco has been grown, and that the excessive crop enabled the combined buyers to force the price below the line of profit to the producers. As the farmers found they could not make a living growing tobacco only, they let up a little on tobacco, and proceeded, though slowly and in a half-hearted way, to grow other things.

This deserting of tobacco diminished the supply and should have improved the price ,but by this time the buyers had learned their power and still held the price down. Then the farmers organized and pooled their crops. This was such a radical departure from the usual method of selling that it took the buyers aback, and a struggle ensued. Of course victory perched upon the banner of the farmers. But now is the time for wisdom. As the low prices that had prevailed for several years led to a reduction of the tobacco crop, better prices, though forced by the united action of farmers, is liable to stimulate production, and thus precipitate the original difficulty. Wise men in the movement saw what the trouble was and inaugurated a movement to reduce the crop—to even abandon certain grades entirely for a year. This proposition met the approval of the most farsighted growers, but how about the selfish and the ignorant? Reports come to us of increasing crops in some places, the result of a hungry thirst to gather something at the expense of everybody else. But farmers must be wise. They got control of their crop by united effort; they can only continue that control by united effort. When it is the judgment of a majority that 1908 should be made a year not of production, but for the unloading of the surplus, all should acquiesce in that judgment, and work together to the accomplishment of the purpose. It is difficult to realize that sometimes in intelligent men cupidity becomes stronger than honor. We would appeal to all farmers, no matter what their standing, to be loyal to the decision of the society that has saved them.

HONOR TO WHOM HONOR IS DUE

We clip the following from the Mason county, Kentucky, Independent:

We are reliably informed that a very prominent farmer in Brown county, who has six tobacco beds sown, has decided that he will not grow any tobacco this year. He gives his reason for cutting out the crop this year to the price he received for his 1907 crop, which he sold for $3200, making him the sum of $1000 over the price he received the year before, and he is man enough to stand up and give the Society of Equity the credit of making that $1000 for him.

If all the non-Equity farmers would look at it in this light it would not take very long for the Equity to win its fight with the Trust. Now, Mr. Independent farmer, is the time to get your thinking cap on and join your brother farmer in the fight for a living price for your product.

If the spirit manifested in the above ruled all the papers of the country, and that which prompted Mr. Brown to raise no tobacco this year animated all the farmers, a moon would scarcely wax and wane until farming would be on a real business basis, gambling in prices would be a thing known only in memory, and oppressive trusts would take their place among the evils that enlightened civilization has discarded.

FARMING AND BANKING

(Continued from page 3)

Representative Fowler. Of that measure he says:

It will abolish our old war bond system and give us practically the same as is now in operation in France, Germany, Scotland, Canada and other civilized countries. It will give the banks a better chance to make money. It will give the farmer money when he wants it to carry part of his crop. It will give us all cheaper interest. It will emancipate us from the bondholder. It will correlate the bank with the farm and factory as the farm and factory are already correlated and working for each other's benefit.

We cannot so unreservedly endorse the Fowler Bill, but its enactment and execution would no doubt give us a much better banking system than we now have. But it will not become a law. The people elect the Congress, but they do not always choose the candidates. The "interests" that seek to enact or prevent legislation attend to that; and those same "interests," eternally making themselves heard at Washington, have more influence there than do those who cast the votes, but who at other times are silently engaged in the country's work and business.

We agree with Mr. Tompkins that the industrial interests must unite. The farms and the factories cannot live without each other, and the mines can look to no other source for customers that can begin to take their output. The transportaiton companies, too, are nothing if their trains do not run between farm and factory, while the merchantile interests are everywhere dotted between. Hence it is high time that we had a banking system more directly connected with these interests, and more adequate to meet their constantly expanding needs. The war is over. Its stern necessities have been met, and its grim pictures hang like a frightful dream on memory's walls. It is a serious lack of statesmanship to still hold the country to the banking system the war's bloody trials forced upon us. It was a measure whose adoption in 1862 brought tears to the eyes of Congressmen who voted for it, as they acknowledged themselves compelled at that time to accept what they knew to be bad. But a serpent's fangs are hard to break loose once they become fixed.

We cannot say we would favor what Mr. Tompkins would substitute for the present system, but we do say the problem must be solved by the united farmers, the united manufacturers and the united business interests, all working together in harmony, not only for the greatest good to the greatest number, but for the greatest good to all.

SETTLED RIGHT

[*Published by request of C. S. Van Dyke*]

However the battle is ended,
Though proudly the victor comes
With fluttering flags and prancing nags
And echoing roll of drums,
Still truth proclaims this motto
In letters of living light—
No question is ever settled
Until it is settled right.

Though the heel of the strong oppressor
May grind the weak in the dust,
And the voices of fame with one acclaim
May call him great and just,
Let those who applaud take warning
And keep this motto in sight—
No question is ever settled
Until it is settled right.

Let those who have failed take courage,
Though the enemy seem to have won,
Though his ranks are strong, if he be in the wrong,
The battle is not yet done.
For sure as the morning follows
The darkest hour of night,
No question is ever settled
Until it is settled right.

Clearing Stump Land

Stump pullers or dynamite, which?

A great advance has been made during the past year in stump-pulling machinery by the Hercules Manufacturing Company, Centerville, Iowa. They have a brand new patent out, a stump puller of solid steel, the first of its kind.

Stump pulling instead of blasting has lately been given a new impetus by high authority. One very good reason is because it removes the roots so satisfactorily, something which cannot be done with dynamite. The land is left in better tillable condition. He says stump pullers are the right method if strong enough.

The new Hercules machine is advertised elsewhere in this paper. Look up the advertisement and write th company for free catalog.

The great superiority of the low-down, wide-tired, steel-wheel wagon is evident to anyone who sees it. Wooden wheels are always affected by the weather, while the steel wheels are practically indestructible. Then, too, they make loading easy, and also will not cut through and mire down in the roads as the tall, narrow-tire wagons do. For the benefit of those who have wagons in a good serviceable condition, with the exception of wooden wheels, there is made a line of steel wheels differing in height, width of tire and size of axle. Catalogs describing both wagons and separate wheels sent on application. Address Empire Manufacturing Co., Box 68, AD, Quincy, Ill.

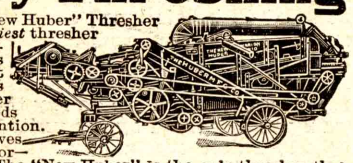
Easy Threshing



The "New Huber" Thresher is the *easiest* thresher made, because it is the fastest—requires least power—and needs least attention. Thus it saves time—labor—money. The "New Huber" is the *only* thresher that delivers every kernel of your crop—clean and in first-class condition. With the "New Huber" Thresher, both grain and straw come out in first-class shape, because all parts of this thresher are so adjusted that the separation of grain is thorough—clean—quick—and easy. The whole story of the "New Huber" Thresher is told in our book, the "School for Threshermen." Just your name and address on a post card gets you this book by return mail, postpaid—FREE—and it tells how to thresh a full crop so it will bring top prices. Write for the book at once. Address—

WONDERFUL

Isn't it wonderful when you think,
How the creepy grasses grow;
High on the mountain's rocky brink,
In the valleys down below?
Men make great things come to pass,
But men can't make a blade of grass.
—Adapted.

CROPS WILD AND CULTIVATED

The difference in the effect upon soils of wild growths and cultivated crops is one of the mysteries of nature. The same soil will produce year after year heavy crops of weeds and other wild growths, and will become richer or more fertile all the time. Giant trees will grow up into dense forests with a tangled mass of vines and undergrowth, perhaps, and add to such growths every year possibly for centuries, and when these are all cleared away we call it virgin soil, with no thought of its fertility having been exhausted.

But when we have cultivated it for a few years, growing crops of our own planting, and making a tonage yield much less than its natural growths, we talk about the exhaustion of its fertility, which we must restore in some way or fail to grow profitable crops.

Some of the wild growths, no doubt, like the legumes, gather fertility from the air and deposit it in the soil, but one of these principal reasons why the wild growths do not exhaust the soils is that they keep the ground shaded during the dryest, hottest season. Bare earth baked in the sun loses its fertility, just how or why we may not know. That is why bare slopes so soon get yellow and begin to wash. Such places, if not to be cultivated, ought by all means to be set in shrubs or growths of some kind that will shade the ground during summer. Wild growths also return to the soil in the shape of cast off leaves and decaying stems, most of what they take from it. It must be observed, however, that virgin soil or new ground soil, especially in timber lands, is much thinner than it is in cultivated fields. In fact soil will become dark and productive as deep as it is plowed. Hence deep breaking is to be commended as a means of opening up the ground and exposing it to the action of air and water. Surface water does not penetrate the undisturbed earth but very slightly. True in wet times the earth seems full of water, and apparently becomes water soaked, but in such cases it carries no fertility with it, the fertility being filtered out very near the surface.

Cultivated grounds must have humus, which is organic matter, and makes the earth porous so that the atmosphere may penetrate it and the water may carry deep into it any elements of fertility it may hold in solution. No better way has yet been discovered to provide humus than by turning under vegetable growths, the nitrogenous growths like clover, alfalfa and peas, being most valuable for that purpose, as they furnish not humus only but nitrogen also. And yet harm may be done by turning under too heavy a growth. If the growth turned under is dense enough to ferment and heat the acid is imparted to the soil and its productivity at least for a season may be impaired.

In cultivating the soil man is interfering with nature. The crops he plants, and the way he plants them and stimulates their growth by cultivation, draws unnaturally from nature's storehouse of fertility, and he must make amends by restoring what he takes or he must suffer from the depreciation of his lands.

SPELTZ OR EMMER

Farmers everywhere are interested in forage crops, and as the necessity for growing stock on the farms increases the demand for forage crops, feed crops, will increase. Speltz or emmer is grown quite extensively in the Dakotas, and in other portions of the Nortwest where it is considered quite valuable. We see no reason why it might not be grown with equal profit in any of the northern States. Mr. C. S. Man, of Maple Glen, reports an experiment with it in Pennsylvania:

We drilled it in fair clay loam that the previous year had produced a good crop of corn. The land was well plowed and harrowed and seeded about the middle of April. We applied 300 pounds of phosphate per acre. The 100 pounds of seed, except about four quarts lost by a rent in the bag during the long journey, drilled nearly one and one-half acres. It was cut in dull, threatening weather and openly shocked. Heavy rains followed in succesion, but the emmer dried out nicely, while oats cut the same day under similar conditions had to be unbound and spread out to sun or it would have rotted. The weather continued treacherous, so we hauled the emmer to the barn before thoroughly dry. Oats as tough and damp would have become mow-burned and musted badly, and yet the emmer came out of the mow bright and sweet, and when threshed last winter it yielded over 55 bushels of bright heavy grain, which, when well cleaned, weighs 38 to 40 pounds per bushel. Cattle, horses and poultry eat it greedily and do well on it. They are also fond of the straw.

MILLET AND PEAS

An Iowa farmer gives the Journal of Agriculture his method of raising millet and peas together. We have never tried the combination, but it ought to make an abundant crop of valuable feed. We believe sowing the peas lightly broadcast, following at once with the millet sowed in the same way, then harrowing and rolling would do just as well and save the cultivation mentioned. We have mixed peas and corn, sowing both broadcast at once with excellent results. The feed, however. is liable to be coarser than the peas and millet. Mix three of peas to one of corn, or, if preferred, two of peas to one of corn. Below is the Iowan's method for peas and millet:

The latter part of May I plow the ground, harrow it well and plant the peas in rows about 36 inches apart and about an inch and a half deep. I plow them twice and just after the last plowing, about June 10, I sow the millet by running a one-horse drill between the rows of peas and leaving about six inches on each side of the rows. I usually sow about a peck and a half to an acre, which makes a strip of millet about two feet wide between each row of peas. Just after the millet has completely headed out, I harvest the mixture. I usually mow the hay anl leave it in the field till perfectly wilted. Then I pile it up in small cocks and leave it till thoroughly cured. One need not fear rains or dews as neither the millet nor cow peas is injured by these. As soon as cured I stack it under a shed till I am ready to feed it. This mixture makes a most excellent combination for dairy cattle. Then it keeps the ground in good shape. Millet is very exhaustive on the soil. Owing to its shallow root system, it draws heavily upon the plant food next to the surface. To counteract this the peas gather nitrogen from the air and store it in the soil, thus the combination keeps up the fertility of soil. The peas sometimes do not grow very large, but there is always enough to make an elegant combination.

IMPROVING SEED CORN

Prof. G. I. Christie of the Purdue Experiment Station is taking quite an interest in the improvement of seed corn. He believes every farmr should have a special seed corn patch. He says:

One way in which every corn grower can do much to improve and maintain the quality in a variety of corn is by planting a seed corn patch. For this patch he should select about twenty-five of the best and most typical ears of corn of the seed to be planted this year. A germination test should be made of each ear in order that no weak ears may be planted. Shell off and discard the small and irregular butt and tip grains. Then shell the ears together and mix thoroughly. At the usual time of planting, plant this corn on the south or west side of the field to be planted with the same variety. This location should be changed if it is near a field planted with another variety. Give this patch usual good cultivation, keeping the ground free of weeds and preserving a loose soil mulch. When the corn is five or six inches high, go through the patch and remove all weak or backward plants. Also when the tassels begin to appear, go through and remove them from all stalks which are either weak, barren, smutted, badly suckered or for other reasons undesirable. When the corn is mature and not later than October 15, the seed should be harvested. Select the seed ears from the strongest stalks with a large leaf development and those bearing the ears four or five feet from the ground, and holding it in a right position.

Through the seed corn patch the farmer can do much to fix a desirable type in his corn and to reduce the number of barren diseased and suckered stalks that appear in his field. It also furnishes him a convenient place from which his seed corn in the fall can be selected and he knows that it is from the best seed that he planted.

MAKING A PASTURE

As lands increase in value such lands as are devoted to pasture must yield the greatest possible value per acre. The old waste field will no longer serve for a pasture. William H. Underwood of Illinois gives the Farm-

LUMBER BARGAIN PRICES.

A wonderful opportunity is offered you to buy lumber and building supplies of every kind at ***Prices that will save you big money.*** Such a chance seldom occurs. Lumber for your house, church, barn, meeting house, crib, store, factory, and in fact, buildings of every kind. We can furnish absolutely everything needed in construction material. Have your carpenter or builder make a complete list of everything you require, including Lumber, Sash Doors, Nails, Roofing, Siding, Ceiling, in fact, anything you may need in building material or merchandise of any kind.

Send us your Lumber Bill for Our Estimate.

We bought at Manufacturers' Sale over 50,000,000 Feet of all kinds of Lumber and Finishing Material We are making special concessions, to those who buy at once. Even if you have no use for this lumber at once, it will pay you to buy now. Our prices will save you 30 to 50 per cent.

We cheerfully invite inspection of our Lumber stock and will be glad to have you come to our warehouse and yards at Chicago, see the lumber we are offering, and you will recognize that it is all what we say of it; make your own selection and see it loaded. It is not necessary to come to Chicago; we can easily sell you by mail. We can quickly convince you of the wisdom of placing an order with us. Just send us your lumber bill, and we will easily ***"Show You."*** On application we will send copies of letters from customers who have bought. They saved money why can't you? Write us to-day. ***WE PURCHASED EVERY EXPOSITION, INCLUDING THE $50,000,000 ST. LOUIS WORLDS' FAIR. Send for our Free 500 page Catalog No. C.H.*** 204 It quotes low prices on Furniture, Household Goods, Building Material, Machinery and Supplies.

CHICAGO HOUSE WRECKING COMPANY, 35th and Iron Sts., CHICAGO.

ers Voice the following excellent directions for making a profitable pasture:

"To make a good pasture it is very essential that the soil be put in the best possible condition. It is folly to sow tame grass seed on poorly prepared land, and, worse than that, it is a waste of good seed. As the land in question is pretty well run down, it is absolutely necessary to first put on a good application of manure, with a spreader if possible, and then thoroughly incorporate this manure with the soil by the use of a disc harrow, running the disc deeply both ways over the field. After this, a spike-toothed harrow should be run over the field, followed by a planker or roller to make the land level and smooth. If the soil is thus prepared it will be in the finest condition for the reception of the seed.

"From my own practical experience and observation in making a pasture for sheep, I do not believe there is a better mixture of seed to sow on this kind of land than the following combination: Four pounds of mammoth clover, four pounds of common red, two pounds of alsike, eight pounds of timothy, and six pounds of "fancy clean" bluegrass seed. This is for one acre.

"In sowing the seed, it is best to sow it broadcast, going over the field twice, in two directions, using half of the quantity each time, so that an even seeding may be secured. Then the ground should be dragged with a light brush harrow and finally rolled. The use of the roller is very important. The packing of the dirt around the seed insures a higher percentage of germination, and the firming and packing of the surface soil prevents the rapid escape of water and hence less by the drying out of the seedlings."

We would substitute red top for timothy in the above formula.

A GRAIN OF CORN

Few things are more common within the broad circle of our readers than a grain of corn, and we are sure the inquiring minds of our young readers will be glad to study so common a thing technically.

Prof. C. B. Hutchison, of the Missouri experiment station, divides a grain of corn into six parts—the seed coat, the aleurone layer, the white starch, the horny starch, the germ and the tip cap. The seed coat is the outer covering of the grain, and makes the bran when the grain is crushed. Immediately within the seed coat is the aleurone layer, which is the first layer of the grain proper, and is made up of a layer of rather large cubical cells which contain a high percentage of protein. The white starch comprises the larger portion of the grain, and occupies mainly the upper part of the kernel, but extends down and surrounds the germ. The horny starch is found at the sides of the germ, and comprises the flinty portion of the grain; it also contains a high percentage of protein. The germ lies at the center of the side of the kernel next the tip of the ear, and rests in a well-known and distinctly marked groove. It has a creamy appearance, and may be regarded as the "oil can" of the corn. The tip cap fits over the tip of the kernel, and, like a tooth, attaches it to the cob. The germ is the embryo plant, and it is that which, encouraged by the moisture absorbed by the grain when it is planted, bursts into life, and starts the growth of a new plant.

These elements are possessed in different proportion in the different varieties of corn, and upon this proportion depends its value. We trust our young readers will take a grain of corn, dissect it, and locate these different parts. In a future issue we shall tell what it is made of and how it gets its food.

KINDS OF FEED CROPS

Much time and labor and land rentals are lost by not growing the most valuable feed crops that would grow just as well on the land. The nutritive value of feeds is being studied now, so one may know just what he is feeding and how nearly it meets the requirements of the animal to which it is fed.

Feeds rich in protein are always to be desired. Alfalfa, clover, soy beans and field peas are the best feeds of this character, and soil that successfully produces them never fails to pay the rent. Timothy hay, though not so rich in protein as the others named, is still the favorite for horses. It is, of course, supplemented with grain.

IMPROVING THE PASTURE

In the farming sections of the older States, where the cultivated fields crowd the pastures into the smallest possible area, the pastures are very likely to be overstocked, and probably the same land run into pasture for too many successive years. In such cases the ground may become too firmly tramped, and the pasture grasses may be killed out to give place to the hardier and ungrazable weeds, or the grass roots may become so compacted in the overtrodden soil that they can not do their best. In any case the pasture loses its richness and needs renovating.

The first thing recommended in such a case is to top dress the pasture with good manure. Here the manure spreader is a valuable aid, and one the work cannot be done so well without. At first it may seem that to top dress the pasture with manure would be superfluous, but it must be borne in mind that the droppings from the stock are left upon the surface, that they are not spread at all, that the soil is tramped hard, and that the useful elements in the manure either evaporate in the air and are carried away by the winds, or are washed away by the rain water flowing over the surface. Compact earth like trodden pastures are but very slightly penetrated by the surface water. The freezing and thawing of winter is a great helper in this regard, but it still does not save the value of the stock droppings on pasture or uncultivated land. Nor will the top dressing suggested meet any better fate if nothing more is done.

The top dressing, which is supposed to be done in early spring, should be immediately followed by a light but close discing. Both ways is preferable. It is well, then, to go over with a light seeding with mixed grasses. It is quite likely that the old pasture has run almost entirely to a kind of dwarf blue grass, dwarfed by constant close grazing. In such case a sprinkle of mixed seed will improve it wonderfully. Some now recommend harrowing with a very slant-toothed harrow. We do not. It tears too much of the old grass up by the roots. An old-fashioned brush drag is the very best thing with which to treat it. Following the "brush" with a roller will pay for the labor, but it will do very well without that.

Any run-down pasture treated as above becomes a new pasture without the loss of a single season, and is good for several years.

A Valuable Poultry Book

A book that will be read with a great deal of interest on account of the rapid growth of the poultry industry and the prolts to be realized in this field, is Greider's 1908 Catalogue of Poultry and Supplies, prepared by R. H. Greider, the well-knwon poultryman of Rheems, Pa.

This book fully describes the leading breeds of fowls; it gives a chapter on the right way to build poultry houses, with plans and pictures; explains feeding methods, and in addition gives a set of chromo colored pictures of fowls. It is a book that cannot be purchased elsewhere for anything like Mr. Greider's price of 10 cents, postpaid. In fact this just pays the postage. You should write Mr. Greider today and it will come by return mail if you mention UP-TO-DATE.

"He that hires one garden (which he is able to look after) eats birds; he that hires more is eaten by the birds."

We daily see examples of that old proverb, of a man renting 760, 320 or 640 acres, working all day and most of the night, going into debt for his summer necessities, and harvesting just enough to pay his debts and carry him over the winter — simply being eaten by the birds. Let him throw over his big farm, sell his great stock of implements and live stock, buy a few acres near a city and try truck and poultry farming. He will be relieved of the great worry and in the end find himself better off than ever before.

There is being offered near New York and Atlantic City exceptional opportunities for truck farming. If you want more details about this, write to the Daniel Frazier Company, 718 Bailey Building, Philadelphia, Pa., and ask them to send you their free illustrated book.

CANADIAN CROP REPORTS

How One Farmer's Winter Wheat Crop Realized $38 Per Acre in Southern Alberta

Coaldale, Alta., Nov. 19, 1907.

Sir—I beg to say that this year we had 349 acres of grain. The average yield of wheat was 38 bushels per acre and oats 74 bushels. We were offered $1.00 per bushel for wheat and 50 cents for oats, making the acre values for the two crops $38 and $37 respectively.

During the spring of 1906, we hired about 300 acres broken by steam. We put in and harvested 55 acres of grain last year, did the remainder of our breaking, worked up the ground and seeded this year's entire crop, put in 7 acres of alfalfa and 5 acres of garden potatoes, trees, etc., all with one four-horse team. The one team did the work of raising practically 19,000 bushels of grain, worth $12,000.

Yours truly,
W. H. PAWSON, JR.

[Information as to how to reach these districts and all about them can be secured from any agent of the Canadian Government, whose advertisement appears elsewhere.—ED.]

The "Chatham" People's New Chicago Office

Every reader of this paper who visits Chicago at any time should take time to call and see the daily demonstratoins being made with the famous "Chatham" Fanning Mill—"Chatham" Incubators and Brooders, and "Chatham" Fireless Cookers at the new offices that have been opened by the manufacturers — Manson Campbell Company, whose U. S. factory is at 171 Wesson Ave., Detroit, Mich.

These Chicago offices are at 45 Exchange Ave., right at the gate or entrance to the Stock Yards, and a postal with your name and address written there will promptly bring you a free catalog telling all about any of the above articles if you say which ones you are interested in.

Bill Galloway, 509 Jefferson St., Waterloo, Ia., has just sent us his new manure spreader catalog. It goes into detail as to the construction of his machines. It tells just how they are made, the material used and the plan upon which they are built. Besides this he gives valuable information every farmer should know. He tells it in such a friendly way that you can't help being interested. Write for it today. It's perfectly free. A postal will do.

P. & O. CULTIVATORS

As the cultivating season will soon be on it will be a matter of some interest to our readers to know that the P. & O. line of Cultivators manufactured by Parlin & Orendorff Co., Canton, Ill., is the most complete and varied of any line of similar implements made.

The following is a partial list of their Cultivators:

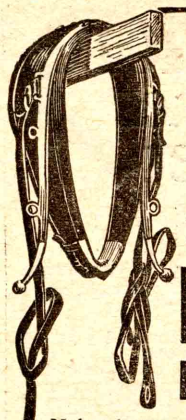
Walking, Riding, Combined Riding and Walking, Double Row; about twenty-five different styles, each of which can be equipped with all styles of gangs and attachments. In addition to these there are many special styles, such as Disc, Listing, Beet, Orchard, One Horse and Garden.

The P. & O line has been on the market for two-thirds of a century, and its steady and ever increasing growth is the highest testimonial of its merit.

These lines are carried in stock at nearly forty branches and distributing houses in all parts of the country. Write them for their booklet, No. 41, and mention this paper.

Remarkable Growth of a Fence Concern

Although comparatively a new concern in the business, the Ward Fence Co., Box 821, Decatur, Ind., is today, perhaps, the largest manufacturer of ornamental wire, wrought iron and steel picket, and Don't Rust farm and poultry fencing in the country. No investment on a property brings greater returns or adds more to the appearance than an ornamental fence, and the small cost is offset at once by the increase in the property value. To properly describe their various kinds of fences the company has issued several catalogs. Two catalogs illustrate ornamental fences, the prices of which range from eight cents a foot up. Ornamental wire fencing is shown in catalog "C," and ornamental iron fencing in No. 20 A. "Don't Rust" diamond mesh farm and poultry fence, a splendid fence for general use, is told of in Catalog 57, while the "Don't Rust" square mesh farm fence is described in No. 140. The makers will cheerfully send you prices and catalogs of the lines you are interested in, on request. Their advertisement in this paper is worth noting.



Harness with a Pull

The load will follow the horse if traces, back strap, breeching and lines are *kept* soft and strong with

EUREKA Harness Oil

Makes harness strong because it keeps it *alive*—prevents sweat and wet from rotting it—makes it look and wear like new. You ought to use it.

CHANGE OF SUPPLY

On western range's broad expanse,
Once countless herds were seen to feed;
But now from older, smaller manse,
Must come the meat for human need.

LIVE STOCK ON THE FARMS

There is no doubt but the live stock interest on the farms is on the increase. The immense heads upon the ranges in the West a few years ago discouraged the growing of live stock as a market proposition on the farms. But the ranges are not so great a competitor of the farms as they used to be. The ranges themselves are not what they formerly were. Constant and excessive grazing has impaired they richness, and settlements have crowded them into smaller compass. The demand for meat stuffs has increase rather than diminished, and what the diminishing production of the ranges fails to supply must be made up from the farms. This demand upon the farms must constantly increase, and farmers may safely broaden their plans for the production of live stock. It is well even for consumers that this is so, for the fact that farm lands are too high priced to be devoted extensively to pasture is a guarantee that what pasturing is done will be of the richest kind, and that the flock brought up on expensive feeds, will necessarily be pushed to the earliest possible maturity, and will go to market in far better condition and make much better meat than range stock can posibly do. It only remains for farmers to get in position so they will not market their stuff in competition with each other. When farmers reach a point of producing the best stuff in the shortest period of time, and then market only to supply the demand at steady and equitable prices, the golden age of agriculture and stock raising will be here. And it could be brought on in a single season if stockmen would.

PERCENTAGE OF FAT IN CREAM

A reader wishes to know what percentage of actual fat should be in good cream. One-third pure fat is very high grade cream, and not many separators will make it so. Thirty per cent of fat is rich cream, richer than the average, but it is well to have it so, and the separator should be so speeded as to make the cream about that grade. It reduces the bulk of the cream and makes it easier to handle and transport, and it leaves behind a larger quantity of skim milk.

KEEP YOUR TEMPER

It is better to have an even, good temper than a big bank account. A hasty temper is a curse to any man or woman. It can be controlled just as any other emotion and we owe it to ourselves and friends to see that our own temper is kept under sway. Friendship is often killed by bad temper, and our digestion is sadly impaired by this ugly passion.

HOGS FOR PROFIT

Live stock conditions indicate that hog raising is to be a profitable business. There seems to be an increasing demand for pork, as there very certainly is an increased consumption of bacon. This may be owing more to the scarcity of other meats than to an increasing fondness for hog meat, but the effect on the demand and the price is the same. It is said that sheep production has fallen off about thee million head annually during the last thirty years, or a total reduction during that time of about 93,000,000 head. While this has naturally made sheep higher, it has left a deficit in the meat supply to be made up with pork and bacon.

The point is to make the pork as cheaply as possible. This points to pastures, full feed and rapid maturity. It used to be thought that hogs could not be made ready for market until they were from a year and a half to two years old. Now they are brought to two hundred or more pounds at from eight to ten months old. But it must not be attempted altogether on costly feeds. Hog pastures need not be expensive, but hogs need be changed from one pasture to another occasionally. Clover and blue grass make excellent early pasture; and we know nothing better than white clover which grows so nearly spontaneous in most of the Mississippi Valley States. Cow peas are good, and alfalfa perhaps is best of all where it can be grown successfully. Hogs having the run of such pastures that can be changed every few weeks, will grow rapidly, and require very little grain feed until time to get them ready for market. Pigs farrowed in March or April, and pushed on pastures through the spring and summer with only enough grain to keep them at their bst, ought to be ready to go on full feed in October, and be marketed in November at 200 to 300 pounds, bringing more clear money than any other farm animal.

THE TRUTH ABOUT IT

A wise old cow
Surveyed a plow
At which her friend, the mare, was pulling,
And moo-ed a word
The equine heard,
Which sounded like "I think you're fooling."
"Yes, I know,"
The mare said low,
"But wait till the day is ending,
And then you'll be
A fool like me,
Your sweet milk in pail descending.
Yes, help the man
The best we can
Is proved to be our daily mission;
But sure as fate,
Says UP-TO-DATE,
Man ought to treat us with compassion."

HOG PARASITES

Unless hog pens, especially their sleeping quarters, are kept clean, the hogs may become lousy. Mr. T. S. Coker, of Hamilton county, Illinois, has adopted a very simple but effective plan of riddin hogs of this pest. Hogs infested with lice rub a great deal. Mr. Coker sets a few stout stakes in their pen or pasture. Growing bushes answer every purpose if there are any. The body of these he wraps to the height of about two feet with rags; woolen ones being the better kind. These he ties with a strong twine, and saturates with coal oil every day or two. In rubbing, the hogs apply the remedy to themselves, and it is needless to say they wil apply exactly "where it will do the most good," for they naturally rub where the lice are most actively at work. They will be rid of the pest in a surprisingly short time.

Wood ashes, coal slack, or small coal, trown upon their feeding place, so that they will eat some of it, will keep hogs free of internal worms. They will eat charcoal or small lumps of stone coal as eagerly as they will eat grains of corn, and it is very good for them.

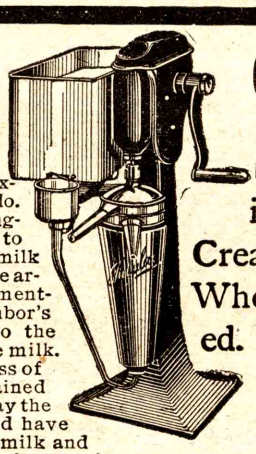
To Make Harness Last

Harness oil serves an important purpose in stable economy. Every one knows how a water-soaked shoe hardens, and how much more liable it is to crack or wear through when in that condition. It is just so with a harness. The leather and making may be the best, but continued use in all weathers—wind, rain, sun and cold—tend to harden and dry out the leather and leave it without "life" or elasticity.

If a harness is kept soft—the pores filled with Eureka Harness Oil—it will go through daily service under the most trying weather conditions and last very much longer than it otherwise would.

When a harness is cleaned, an application of Eureka Oil makes it pliable—soft as a glove, tough as new leather. In point of fact—barring wear on the stitching—just as good for looks and actual service as a new harness.

Tubular Gained $30 More in a Month, for Cream Alone, than Whole Milk Yielded. Hauling and Time Losses Also Saved.



In February a certain man wished to try an experiment with a Tubular separator He wanted to know by actual test exactly what the Tubular would do.

He had no cows so he arranged with a dairyman neighbor to make the experiment with the milk from the dairy of the latter. The arrangement was for the experimenter to skim the milk at the neighbor's dairy, and the cream to go to the creamery instead of the whole milk.

The dairy owner feared a loss of cream in this way, and so bargained that the experimenter was to pay the difference between what would have been obtained for the whole milk and the money actually received for the cream.

At the end of the month Mr. Dairyman was surprised to find that the cream had returned him $30 more money than the factory would have allowed him for the whole milk.

Sequel—Next day the dairyman and two neighbor dairymen each bought a Tubular separator. and then hired a man out of employment to kick them because for years they had been throwing away $30 per month in ignorance of what a Tubular would do for them, though the opportunity to try a Tubular in their own dairies was always open to them.

If you haven't a Tubular you can gain profitable knowledge by a test similar to above; and money profits twice a day after you put the Tubular in your dairy. Write for Catalog No. 136.

DEHORN THE CALVES

Dehorning is now almost universal among stockraisers. Cutting off the well grown horns seems like a barbarous act, and it is. But the gain to the animal itself justifies the seeming barbarity. Nature seems to have provided a defensive weapon for all it created. What was capable of fighting was given something to fight with, and that which could not fight was given a protection of color or something else to save it from its enemies.

The horn is the defensive weapon of the bovine species, as well as of some others. In the wild state among animals of prey, and where every beast seemed to be the enemy of every other, such means of protection was indispensable. But in civiiization it is not so. The cow no longer has any enemies but those of its own species, and if all are alike disarmed, peace necessarily takes the place of war.

It is all right, therefore, to dehorn. But the most merciful time to destroy the horn is in the calf, and it can be done easily then, and almost entirely without pain. But it must be done early, the earlier the better. The calf should not be more than a few days old. Get a stick of caustic potash, which may be obtained at any drug store. Dip one end in water and rub thoroughly with it the horn button, or the place where the horn is to grow. Rub until the hair comes off, and even if it bleeds some the operation is all the more certain. Some recommend more than one treatment, but we have never failed in a single treatment, though it must be done thoroughly. Caustic potash burns or crisps the skin when moistened, and as a protection for the fingers, the end held should be wrapped in paper or some other substance to prevent the potash from coming in contact with them. It may be handled with impunity when perfectly dry. It absorbs moisture when exposed for any length of time. Hence to save what is left after treatment, it should be put in a small bottle and tightly corked.

In case of failure to treat the calf until the horn has started but before it has become fixed to the bones of the head, it may be easily removed with a sharp pointed knife, or a gouge made for that purpose. After that the saw or clipper is the alternative.

Department of Elevators and Warehouses

If you are thinking of building an elevator or warehouse send us the news. If a meeting has been called, send place and date. If you have built or have decided to build, send description, cost, capapcity, officers, manager, etc., and we will print in this column free of charge. Photograph or drawings with descriptions are particularly solicited.

PROSPECTUS OF "THE DURANGO FARMERS' CO-OPERATIVE MILLING ELEVATOR AND MERCHANTILE CO. Durango, Colorado.

The agricultural lands of La Plata County, Colorado, and adjacent counties thereto having been demonstrated to be productive in the growing and raising of wheat and other small grains.

As conditions exist at the present time, local dealers of flour send to the San Luis Valley for a considerable portion of their stock of flour and pay practically the same rates or prices for flour there as they do for the flour produced from local wheat. To this is added the freight of 45 cents per hundred pounds from point of shipment to Durango. The flour from the San Luis Valley is sold at a profit. This forty--five cents freight charged from the San Luis Valley or the 55 cent freight charge for flour from Denver, should act as a protective tariff to the local farmers; but under the same manner the "Flour Trust" pays for local flour and sells Denver, San Luis Valley and local flour, a greater portion of this 45 and 55 cent tariff goes into the pocket of the trust. It is the object of the company to be formed to get farmers interested and working together and endeavor to put this protective tariff of 45 and 55 cents into the pockets of the local farmers. If this can be done, the farmer can realize a greater profit for his produce than under present conditions and be able to get rid of his debts and be even with the world. It is not how much you can raise in the way what you have to sell.

To encourage farmers to produce a greater diversity of crops and furnish a good home market for such grain and produce, it is the desire and intention of the subscribers hereto to organize and incorporate a flour mill company with a capital stock of *Twenty-five Thousand Dollars* ($25,000), divided into 2500 shraes of $10 each, under the corporate name and title of "The Durango Farmers Co-operative Milling, Elevator & Mercantile Company"; located at or near Durango, Colorado, with the following as some of its principal purposes and objects:

First:—To create and furnish the farmer with a steady and good home market for his grain.

Second:—To enable the farmer to have a voice in fixing and determining the selling price of his grain.

Third:—To encourage the farmers in the raising of grain by giving them market therefor at their home door.

Fourth:—To operate a flour mill and feed mill so as to supply flour and feed produced from grain and feed raised by the local farmer to the local markets.

Fifth:—To conduct a flour and feed store for the sale and handling of flour and feed in the usual course of retail and wholesale trade.

Sixth:—To make farmers to be independent of the grain and flour trust now operating in the La Plata County, Colorado and adjacent counties.

Seventh:—To enable the farmer to exchange his grain for flour and grist and know that he will receive a fair exchange as to weights.

Eighth:—To enable the farmer to secure a just and equare deal as to weight for whatever wheat and other grain or feed he may have to sell.

Ninth:—To enable farmers to receive for their wheat a price commensurate with the selling price of flour.

Tenth:—To enable local farmers to cultivate their land and sell his crops at prices which assure them a profit.

Are you with us on this proposition? If so, sign up for the stock in agreement herewith submitted and by so doing you will be doing something for yourself and be protecting your own interests.

The members at Eckman, **N. D.**, are agitating the matter of building an elevator. —W. J. McConnell, Sec.

Haven't you had about enough of the rust-quick kind of fence? We are of the opinion that there are just as good fences made today as ever before. We have in mind a company that has advertised with us for years. They claim to use the old process of galvanizing, the best grade of spelter and that their fence will last for years. Their claims are so broad we certainly would have heard from some of our subscribers if their fence was faulty in any way. Their catalog is the largest of the kind published and is full of useful information. We request all needing fence to write for their free catalog. Mention UP-TO-DATE and address Kitselman Brothers, Box 289, Muncie, Ind. See their "ad" elsewhere in this issue.

Write C. H. A. Dissinger & Bro., Wrightsville, Pa., for their catalog of gasoline engines. They offer a most serviceable and reliable 2½ H. P. engine for only $60. A postal brings their catalog by return mail.

Ignorance Is the Real Name of Accident

One hundred persons killed and fourteen hundred wounded last Fourth of July by "accidental" gun and pistol shots.

It is very significant that only twelve of these "accidents" happened in the South, where almost everybody is familiar with the use of firearms.

Every parent should have the 160-page book on firearms which the J. Stevens Arms & Tool Co., of Chicopee Falls, Mass., will send to anyone who will send 5 cents in stamps to pay the postage. That free book tells all about rifles and shotguns and pistols and ammunition and how to care for the firearms, and how to arrange for target practice; and it explains the proper firearms for boys and girls, and for the different kinds of game. You will learn from it that the Stevens Co. have provided the best and most accurate and safest and nicest firearms of all kinds, at the lowest possible price.

M. M. Johnson, the Incubator Man, was again elected president of the Nebraska State Poultry Association. The old saying that we can judge a man by the way his neighbors like him is a good way to pass judgment. Johnson and his "Old Trusty" Incubator seem to have made friends on the expansion order, beginning among his neighbors at Clay City, Neb., and expanding until his goods are known in every corner of the earth among poultry raisers.

Our own (the manufacturer's) guarantee protects you on every AMERICAN machine. We can ship immediately. **Write for our great offer and handsome free catalogue on our new waist high model. Address, Box 1105,**

AMERICAN SEPARATOR CO. BAINBRIDGE, N. Y.

THE BEST CREAM SEPARATOR

AND THE DIFFERENCE IN CREAM SEPARATOR ADVERTISING

—o—

All separator advertisements seem very much alike to the average reader, who is at a loss what to make of them and how best to attempt guessing which may be the best machine, where all claim to be the best and all appear to be about everyhing that could be asked for.

THE EXPLANATION AND THE SOLUTION ARE TO BE FOUND IN THE DIFFERENCE BETWEEN DE LAVAL AND OTHER CREAM SEPARATOR ADVERTISING.

The De Laval Company has always stuck to the old fashioned plan of having its advertising written in its own offices, by the men who make and sell its machines and have been doing so for years, and who know no more about advertising than to describe as simply and best they can the merit and efficiency of the machines they offer to the public.

Practically every other separator concern of any consequence has its advertising composed and in a great part "invented" by professional agencies and hired advertising writers, located in the big cities, who could not themselves tell the difference in looks between a cream separator and a corn sheller, and who take up the advertising of everything that comes to them, from needles to automobiles, for anybody able to pay for their services, just as does the lawyer for any client who comes along, whether the case is good or bad and the client right or wrong.

It is up to these professional composers of prose, poetry, fiction and romance in an advertising way, and the professional artists who work with them in illustrating their productions and putting them into showy and attractive shape, with their wide knowledge of what "takes" with the public generally, to claim the utmost their prolific brains can evolve for the separators they are retained to advertise.

What these professionalists all do know, or are at any rate first told, of cream separators is that the DE LAVAL machines and the advertising descriptive of the DE LAVAL machines are the ESTABLISHED STANDARDS by which their advertising productions must be measured, and MUST ENLARGE upon in some way, or else they will stand little show of drawing any business for their patrons.

As a result, the biggest advertising claims are frequently made for the poorest and trashiest separators. The biggest advertising done and the biggest claims made are by jobbing and "mail order" concerns who don't even make their own separators at all, but simply buy them where they can buy them cheapest, and who are almost invariably selling a machine which has already proved a business failure once or twice before under a different name and different coat of paint.

When the DE LAVAL claim was justly made of saving $10.- per cow every year for its users one of the poorest and cheapest separators ever produced put out a claim of saving $15.- in the same way, and since then another has come along and made it $20.- The next may as likely make it $25.-

BUT IT IS THE MACHINE AND NOT THE ADVERTISING THAT SKIMS MILK POORLY OR PERFECTLY AND LASTS TWO YEARS OR TWENTY YEARS AFTER THE BUYER HAS PUT HIS MONEY INTO IT, AND THAT IS THE DIFFERENCE BETWEEN THE DE LAVAL AND OTHER CREAM SEPARATORS, SMALL AS THE DIFFERENCE MAY SEEM IN THE ADVERTISING CLAIMS MADE.

The 1908 DE LAVAL catalogue—to be had for the asking—is an educational text book of separator facts, of interest to all who read and think for themselves.

IRVINGTON RHODE ISLAND REDS

The best all-round poultry for farmers to raise is the Irvington strain of

RHODE ISLAND REDS

Reds are hardy, good large size and make excellent table fowls. They lay with the best of "laying" varieties, often begin to lay at six months. 200 eggs per year.

FARMERS CANNOT AFFORD

to raise mixed and inferior chickens. Make more money with the best. Same expense for feed—same care and the result is more eggs and "fries" at a good price if you have Irvington Reds. Either Rose Comb or Single Comb $1.50 per 15; $7.00 per 100,

IRVINGTON POULTRY YARDS, IRVINGTON, IND.

Start This Summer

to protect your cows and horses from flies. Every farmer who uses

FLY-FUMA

increases his profits. Cows give more and richer milk; stand still while milking. Cures sores. Harmless to man or beast. **Free** with first order a 50c Electric sprayer. Quart 35c, gallon $1.00, 5-gallon can $4.00. Made and sold by

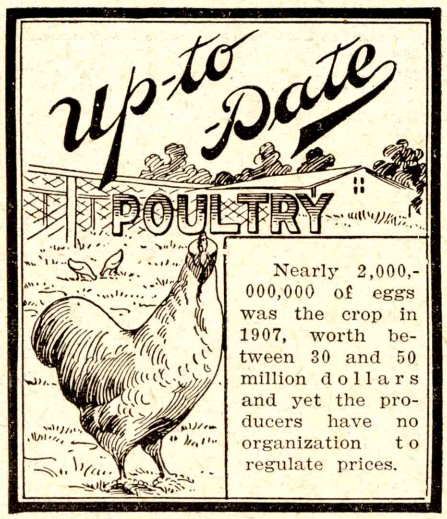
O. K. SEED STORE
Indianapolis, Ind.
Dealers Write for Prices.

F. McGavock, Nashville, Tenn., writes: "I used *Fly-Fuma* last year on 50 cows in dairy with perfect success. The cows like it. One man with Electric Sprayer will go over the entire herd in ten minutes. By using night and morning the cows are not troubled with flies at all. I also use it on horses with fine results and found it one of the best things for sore shoulders and all harness galls I ever saw. I used *Fly-Fuma* on dogs for fleas and on chickens for lice with perfect results."

DO YOU WANT TO SELL YOUR FARM?

An advertisement in the Business Exchange will carry your message into 200,000 farm homes. Thousands want to buy a farm. The cost is moderate—only 5c a word each insertion. Try it.

UP-TO-DATE FARMING
Indianapolis



Nearly 2,000,000,000 of eggs was the crop in 1907, worth between 30 and 50 million dollars and yet the producers have no organization to regulate prices.

POULTRY AND PROSPERITY

The little flock that scratch to live,
Is larger than the herds afield—
The income that the poultry give,
Is greater than the pastures yield.

LITTLE TALKS

It is a fact that the income derived from poultry in the United States exceeds that from live sock, from any one, or even two, of the farm crops, or from the gold mines. We are familiar with many localities where the people could scarcely live if it were not for poultry. But poultry is so common that little thought is given it, and less attention is paid to it as a rule than to any other important productive interest. If the care, attention and expense were bestowed upon poultry that is given other things there is no telling what effect it might have upon rural prosperity. There is yet an unsupplied demand for all poultry products.

Laying hens may be overfed, especially with grain and other fat producing feed. Poultry must have grit, lime (in some form,) some meat, and an abundance of water, which should always be fresh and clean. That these are seldom furnished fowls that run at large is no proof that they can do without it; they gather it from their ranges, insects playing an important part in the supply.

While laying hens may be fed too much, growing chicks cannot and yet they should be fed in such a way as to induce them to do some scratching for exercise and development. It is now well understood that the sooner anything can be brought to market in good condition the greater the profit. Hence young things of all kinds intended for market should be fed judiciously with all they can profitably consume . This applies to poultry as well as to pigs and calves.

If so situated that the poultry cannot have a very large range, or cannot run to cultivated ground, it pays well to have a plot plowed or spaded for their special benefit. They will work in it industriously, and fowls do not work for play; they are getting what pays them.

Fowls, especialy hens with young chicks, will go under shelter when it rains. Therefore, there should be plenty of shelter in the main runs. Small boxes inverted, and with openings at one side for them to go in easily, are good for such a purpose. The boxes should be scattered about over the runs. Always place them on the highest ground, and have the openings opposite the direction from which the blowing rain storms are most likely to come. It is well to weight the boxes down where winds are sometimes severe.

Let us say a word about the kind of poultry grown on the farm. We do not care to urge any particular variety, for all the improved varieties are good—some for one purpose and some for another. The grower must determine what feature he prefers to make a specialty of. But do not be contented with an indifferent, unselected flock. There are excellent, good, indifferent and bad. Select for the best. Always have the very best roosters of their kind.

The old way was to make hens in summer scratch for their living, roost in trees, find water somewhere or do without, take the weather as it comes, hot sunshine, cold rains, wind storms, with no protection from anything. Civilization has got beyond that now, and there is more profit in poultry than there used to be.

Few men like to have geese on the farm, and we are one that don't. Yet we must confess that geese may be raised at a good profit. Feathers are not in such demand as they were a few years ago, but for several years fat young geese have brought a good price. They are hardy and easily raised, though the goslings need protection from heavy, beating rains. A pond is not necessary. In fact, a pond of stagnant water, infested with tadpoles is bad. The goslings soon learn to eat the tadpoles and if they obtain enough of such food it will kill them, even after they have become almost grown and full feathererd.

Speaking of geese leads one to think of ducks. There is a good market demand for ducks, and if properly treated, they get ready for market early. But a duck can eat all the time, or as nearly so as any other fowl or animal. The fact is, the resources of the farm are inexhaustible. No one, man or woman, wirl or boy, need lack something to turn his or her hand to to make money. We are often amazed at farm boys wanting to rush off into some other business, when on the farm more opportunities are offered them than anywhere else in the world.

The boy's a fake
That drops his "stake,"
And thinks he can't live on a farm.
Learn Equity from UP-TO-DATE,
And find life's richest, greatest charm.

ARTIFICIAL INCUBATION

As the weather grows warmer the temperature needs more watching.

In the middle of the day, it is safe to remove the lamp from the machine if the temperature goes up.

At no time is cooling the eggs more important than in spring or summer hatching.

The idea of running an incubator in a damp cellar on account of moisture is a mistake. It was an old-time theory of no worth.

At first it takes five minutes to cool down the eggs, but as the animal heat grows, toward the end of the hatch, the cooling is apt to require from one to two hours.

Pure air in the incubator room or cellar is imperative; there cannot be pure air where there is dampness.

When incubators are run in a dry place, it is a good idea to sprinkle the floor of the room when the eggs begin to pip.

Drafts of air and direct sunlight must not strike the machines, or it will jeopardize the hatch.

Here is a good test given by an anonymous writer and which seems practical: After placing the thermometer so that it is perfectly level, open the doors and ventilators, place a lighted candle inside, close the door carefully, test the amount of air inside by gradually closing ventilators just sufficiently to keep the candle burning. If it flickers, there is not enough air and the ventilators should be opened just a little more or just enough to keep the candle burning. Test this for about ten minutes before starting the hatch, and remove before putting in the eggs.

The lack of oxygen is the chief cause of poor hatches and weak chicks. Oxygen is necessary for the embryo after it begins to breathe.

When the hatch is over, allow the chicks in the incubator for 36 to 48 hours, so that they will become strong, they will require no food nor water during this time.

One and two-year-old hens furnish the best eggs for hatching. Badly shaped eggs should be rejected.

Do not fuss with the machine. Tampering does more harm than good. Use good common sense and watch the thermometer. Closely follow the instructions as given by the incubator manufacturer.

INCUBATOR CHICKS

Annie Hoffarth tells the Farmer's Voice how she treats incubator chicks, and her way is so near to nature and so well told, that we give it to Our Up-to-Date People:

The chicks are taken from the incubator as fast as they hatch and get thoroughly dry, and are placed in flannel-lined receptacles.

In doing this I save them from being weakened from the heat, and lack of fresh air, which would be the case if left in the machine until the hatch was finished.

The brooder is kept in a room in the 90 degrees or more, and when all the chicks are out they are placed in the brooder.

A newspaper has been spread on the brooder floor and covered with some kind of chaff, as the paper is too slick for the baby chicks to stand up without the chaff.

The brooder is kept in a room in the house if the hatch comes off in cool weather, and an old quilt is folded and placed on the cover of the brooder.

This lessens the amount of oil necessary to keep the heat up to the right temperature.

A 25-cent thermometer registers the temperature, and assures me that it is just right, leaving no room for guesswork.

If the weather is cool, I have a fire in the room where the brooder is kept, as I have an unlimited supply of firewood, which is cheaper than kerosene. A warm room calls for less heat inside the brooder.

When the chicks need feeding, a paper is spread in front of the brooder, enclosed by the wire provided for that purpose, and wheat bran scattered over it.

The drinking fountains are filled and placed in this little run, the brooder door opened and the chicks let out.

Soft sandstones have been crushed with a hammer to provide coarse sand and a pie-pan full of warmed sand is placed in readiness.

The chicks seem to know by instinct that sand should be a part of their diet, as they will begin picking at it first of all, and a brood of 75 will consume a pint or more every morning until several weeks old.

A spoonful of dry-rolled oats is sprinkled around for the chicks to eat, and after a short play time they are again put in the brooder, and looked at often until the temperature is up to the right point, 90 to 95 degrees.

When the chicks are comfortable they will all spread over the floor of the brooder and sleep with their little beaks resting on the floor.

Should you raise the lid to take a peep at them, they will raise their heads with a sleepy twitter, as if protesting against being disturbed.

If their brooder is not warm enough for comfort, they will huddle up together and keep up a shivering, plaintive twitter that is soon recognized by their caretaker.

Again, if the brooder gets too warm for comfort, they are restless, but seldom make any noise. If the heat is too high for any length of time, it injures the chicks.

My brooder, being a hot-air brooder, I have only to raise the lid slightly for a short time, and all is well.

EGGS AND EGG FARMING

The male bird has no influence over egg production.

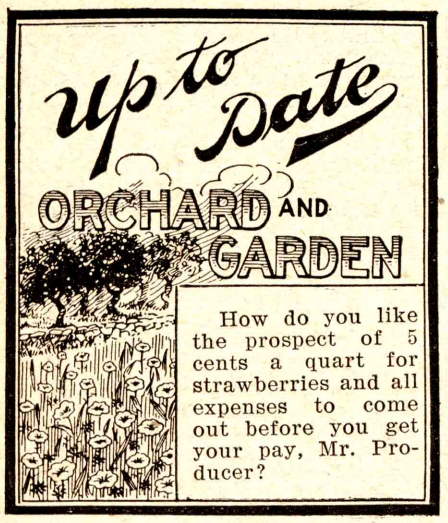
As the ovum or yolk of the egg out male birds as with them, for the egg actually is half developed before fertilization takes place.

As the ovum or yoke of the egg becomes ripe it drops away from the bunch, which is attached to the backbone of the hens, and falls into the mouth of the oviduct, when it is immediately fertilized. Development begins before fertilization and this being so, development must become complete, and at the same time whether fertilization takes place or not.

Double-yolked eggs are due to the hen becoming over-prolific, two yolks dropping from the bunch of ova instead of one; too stimulating food will often cause this, or if the bird be over-fat, which may hinder the ovum passing through the oviduct or egg tube until another ovum drops and passes it on; these unite, and the result is a double-yolked egg.

In a new-laid egg the air space is no longer than a ten-cent piece; in a week it becomes the size of a nickel; and on account of the shell of the egg being porous the contents evaporate, and the air space consequently enlarges, soon becoming as large as a fifty-cent piece. Preserved eggs can often be detected in this way.

Milk will work no two days alike. The same may be said about an egg. The changes may be due to the condition of the weather, food, or physical condition of the hen.



THE ROSE

Dame nature sought to give a prize
That all her beauties would disclose,
And taking all beneath the skies,
She gave it up, and made a rose.

IN THE VEGETABLE AND FLOWER GARDEN

After the tomato plants are staked up so they will no longer trail upon the ground, lettuce may be sowed among them, and afford a fresh supply throughout most of the summer. Turnips or radishes may also be planted around the tomato plants, after the tomatoes need no further cultivation.

To save special plants from cutworms, thin strips of wood, or even pastboard, may be pressed an inch or two into the earth around the plant, remaining about an inch above the surface, forming a small box around the plant. The worm will neither work under it nor crawl over it. In setting cabbage or tomato plants wrap leaves of any kind around the stems.

Wood ashes is valuable on ground that is to grow cabbage, onions or potatoes. It is best not to grow cabbage twice on the same ground.

Bunch or bush beans, dwarf peas and early beets, lettuce and radishes should occupy a single plot of ground, because they all come off about the same time, and the ground may then be planted to something else.

Late cabbage may be planted in the early beet and radish rows. As the beets and radishes are used, put in cabbage plants. Many vegetables may thus be made to follow others, and both work and ground saved. It is a mistake to make the farm garden too large; it makes only that much more room for weeds.

Pie plant needs deep, rich soil, and it should have a place in every farm garden. It is healthful in any way it is used.

Celery is another healthful plant. It is used only as a relish, and is said to be good for nervous people. It is not so difficult to grow as is generally thought.

The lima bean is another useful but neglected vegetable. Try the large bush limas, and you will find them profitable.

Never let the weeds get ahead of you in the garden. It is not difficult to keep them constantly in check; but it is a task to get ahead of them once they get a good start.

In life's progression you are late,
If you don't read UP-TO-DATE.

FLOWERS IN SMALL SPACE

To have an abundance of flowers in a small space, first plant the tall growing, profuse blooming kind. Gladiolus and dahlias are good for such purpose. Then plant those of dwarf or low habit all around them in the same bed. Verbenas and petunias are good. Thus a single bed of small dimensions may yield an abundance of bright flowers during the entire season. The weeds will mostly be smothered out, but should any appear, they can be pulled without injurying the plants, if done as soon as they show themselves.

DOUBLE-FLOWERING PEACH

When in full bloom there are few more beautiful trees than the common peach. The beauty soon disappears, however, and then we, more or less impatiently, wait for the ripened fruit.

But there is a double-flowering peach, Prunus Davidiana, that yields the palm of floral beauty to few other trees. It is a native of the Orient, China and Japan, but is entirely hardy in the central latitude of the United States. It resembles the common peach in habit of growth, but the leaves are smaller and the branches slender and willow-like. The blossoms, which open very early, in advance of almost any other flowering shrub or tree in this country, are pink and white, double, and slightly fragrant. They are borne in the greatest possible profusion on branches of the previous season's growth. Coming out when all other trees are bare and leafless, it is a most attractive sight.

PLANTING A TREE

The following, which we find in the Farmers Voice, is about as good as anything we have seen on the subject:

"In the first place a deep, spacious hole should be dug in soil that is conducive to the tree's growth. It is useless to put the tree in a soil or location where it will not receive proper nourishment. Death or a scrub tree will be the inevitable result. It is also a good plan to pour a bucketful of well-rotted manure in the bottom of the hole, even if the soil is fairly fertile. This will make the growth more rapid and the life more vigorous. Spread some of the soil over the manure before setting the tree in . When the tree is placed into the hole, the roots should spread out well. Never bunch or twist them up together, and be careful to cut away all broken roots with a sharp knife. Set the tree at the depth it stood before it was removed from the earth at the nursery. As soon as two or three inches of dirt are thrown over the roots, pour in water, that the earth may settle well around and between the roots. Pile the dirt up around the trunk of the tree, for it will settle some the first rain, besides it also helps to brace the tree on windy days.

"To keep away mice and rabbits and prevent borers, wrap the body of the tree with paper. If the young tree is exposed to the ravages of stock, drive stakes about it and box it in. It pays to do all necessary things at one time. Neglect may rob a farmer of a good orchard and lose him money."

TO PROTECT FORESTS FROM FIRES

The following, which comes to use from the Department of Agriculture at Washington, speaks of a movement of very great importance to the material interests of the country:

"One of the most important economic movements of the day about which the general public has yet learned little is the concerted action of owners of timber in different parts of the country in organizing associations to protect their holdings from fire. In the Pacific Northwest, the Washington Forest Fire Association has just elected officers at Seattle and begun work for the year with 3,000,000 acres under its care. The plans include a system of patrol by rangers resembling the work done by the United States Forest Service in guarding against and extinguishing fires.

"Organizations of similar kind and for a like purpose are at work in Oregon and Idaho. In the latter State, a portion of the expense is borne by taxation and paid from the State treasury. A western railroad company which holds large tracts of timber has taken steps to guard its property from fire, and during the short time that its plans have been in operation, it has met with most encouraging success.

"Similar work is being done on the other side of the continent. Forest owners in Maine have gone to work in the same systematic way to control the forests' great enemy, fire. Like organizations are found in other parts of the country, showing how fully it is now realized that protection against fire is of the greatest importance.

"It is safe to say that fires in this country have destroyed more timber than lumbermen have cut. When timber was abundant, the waste pased almost unnoticed, but now that a scarcity is at hand and an actual wood famine threatens in the near future, the owners of forest lands are waking up and taking action to save what is left."

LEGUMES IN ORCHARDS

Even bearing orchards should be cultivated, or, which is about the same thing, set in clover. An old orchard set in clover makes the best hog, calf or sheep pasture that can be provided.

The cow pea is also a splendid crop for old orchards. The ground should be well prepared, care being exercised not to seriously injure the roots of the trees. We then prefer to drill the peas in rows twelve to fifteen, or if preferred, eighteen inches apart. If the ground has been thoroughly worked before planting, (it should be broken early and worked two or three times at intervals), the peas will need no cultivation. Instead of being drilled they may be sowed broadcast, though that is liable to take more seed.

Peas should not be planted until the ground is warm and well suited to plant growth. They then come up quickly and grow rapidly. We prefer to pasture them down with hogs. Turn in when the first pods begin to yellow. Except in the case of early fruit the hogs will get only the windfalls, and they should be consumed on account of the insects they contain. They can be taken out before the good fruit begins to drop; and it is very likely there will be good pasturage for hogs after the fruit has been harvested.

GROWING APPLE SEEDLINGS

An Oklahoma subscriber asks how to grow apple seedlings for nursery purposes. The greatest difficulty is to get the seeds. Where cider is made extensively, however, the seeds may be washed from the pomace. Or where apples are dried on a large scale, the cores may be ground or crushed, and the seeds washed out the same as from pomace. But seeds may be bought from most seedsmen.

To grow seedlings it is necessary to commence in the winter. Take a box of suitable size and put in a layer of damp sand, then sprinkle thickly with seed; cover with sand and again sprinkle with seed and so on until the seeds are all used. Wet the sand thoroughly, and bury the box deep to prevent freezing. Take up in February or early in March, sow in ground that has been previously prepared, in rows two feet apart, trying to have the seeds not more than two inches apart in the rows. Cover an inch or a little more in depth. Light, sandy soil is best. Mice are an enemy to be carefully guarded against.

When your trees show blight sprinkle the affected part with salt water when it first appears. This will stop the blight at once. I have used it for five years and have not lost one. —W. B. Blackwell, Ark.

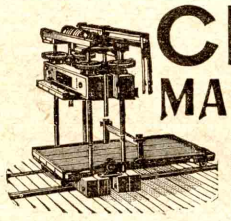
A Cook Book That Really Helps

"The Enterprising Housekeeper" is the name of a cook book that contains, besides its 200 tested recipes, hints, helps and valuable information for the household. It gives illustrations, demonstrations, and instructs for using that indispensable kitchen utensil — the Enterprise Food Chopper. It shows how the housewife can, with very little labor, a few "left overs," and an Enterprise Food Chopper, produce a meal far outrivaling many a alboriously prepared "feast."

A simple request to the Enterprise Manufacturing Co., 225 Dauphin St., Philadelphia, Pa., will bring a copy by return mail. They have agreed to send a copy free to each subscriber of this paper as long as the edition lasts.

A NEW SPRAYER
Thoroughly Tested Has No Equal
For Potatoes, Strawberries, etc.
Double Cylinder High Pressure
Index Plate Shows Pressure. Has Vibratory Syphon Agitator and Pedals to guide nozzles over uneven rows and against side winds.
Spray nozzles in front — No straining of eyes and neck as with a rear spray. Write
Aspinwall Mfg. Co., 313 Sabin St., Jackson, Mich.
The World's Oldest and Largest Makers of Potato Machinery.

Nitrate of Soda
THE NITRATE AGENCIES COMPANY
64 Stone Street, New York, N. Y.
36 Bay Street, Savannah, Ga.
305 Baronne Street, New Orleans, La.
Holcombe & Co., 50 Clay Street, San Francisco, Cal.
Address Office Nearest You



CIDER MACHINERY
We have had 35 years' experience in furnishing outfits for both Custom and Merchant Cider Mills.
OUR GOODS ARE THE STANDARD.
Send for catalogue.
BOOMER & BOSCHERT PRESS CO.,
474 West Water St., Syracuse, N. Y.

Cutnomore No more worrying over the grub worm if you use CUTNOMORE. Sample package good for one hundred plants—ten cents silver.
J. P. STOCKER CO., Dept. A. Mahwah, N. J.

Early Seed Corn
Buckhart's White Dent is a 70-day corn that surpasses every other variety for late planting. The cob is small and the grain is deep. Ears are medium sized. Put out some of this corn and you will not regret it.
Price Peck, 60c; bushel, $2.00; bag (2½ bushels), $4.50. Bags free. Catalog free.
O. K. SEED STORE, Indianapolis, Ind.

SCALECIDE
CONQUERS SAN JOSE SCALE
Now Is the Time to Spray
Leading fruit growers endorse SCALECIDE as the only remedy for the dreaded San Jose scale. Kills the scale without injury to the tree or bud.
SIMPLE, SAFE, ECONOMICAL
Scalecide is antiseptic and healing to the skin. Absolutely non-poisonous. Don't allow your good orchards to be ruined by the terrible San Jose Scale. Use Scalecide—
A SURE REMEDY
Use 1 gallon of Scalecide to 20 gallons of water. We will send 1 quart for 35c, gallon for $1.00, five gallons for $4.00. Sent by freight or express f. o. b. Indianapolis.
O. K. SEED STORE, Indianapolis

BUY FROM ADVERTISERS IN UP-TO-DATE FARMING
You will save money. The advertiser will do more business and increase his advertisement. This gives us more money to make a larger, better paper—to carry more advertisements—to save you more money—to increase the business of advertisers and enable them to enlarge their advertisements. Again we will increase number of pages, etc.
Your purchases will help—no matter how small. Send for catalogs; ask for particulars

Simpson-Eddystone
Zephyrette Ginghams

Remarkably durable new dress ginghams of great beauty, fine fabric and absolutely fast colors. These results are obtained by our scientific new process which marks a decided advance in the making of stylish and economical dress ginghams.

New Process Dress Ginghams
SIMPSON
TRADE MARK
REG. U.S. PAT. OFF.

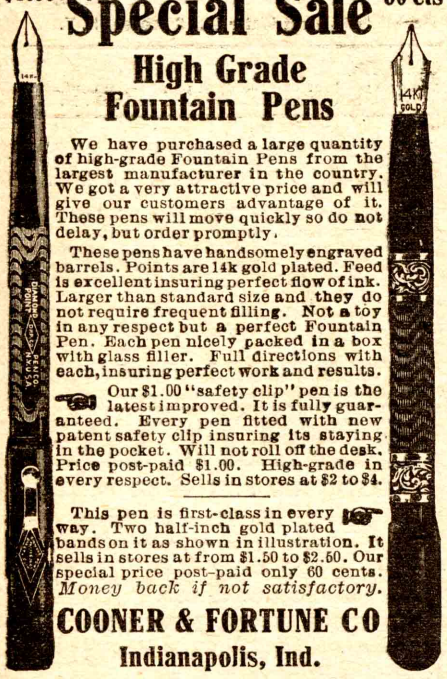
Cards Latest style—correct size for ladies and gentlemen. Best quality cards and printing. 100 for 50c, 50 for 35c, postpaid. The Everitt Press, Indianapolis, Ind.

2941 Hidden Name, Friendship, Silk Fringe, Envelope and all other kinds of CARDS and Premium Articles. Sample Album of Finest Cards and Biggest Premium List, all for a 2 cent stamp. OHIO CARD COMPANY, CADIZ, OHIO.

25 FLOWER POSTCARDS 10c
Roses, Pansies, Daisies, Apple-Blossoms, For-get-me-nots, Chrysanthemums, etc. JAS. LEE 72B Canal St., CHICAGO.

$1.00 **Special Sale** 60 cts
High Grade Fountain Pens



We have purchased a large quantity of high-grade Fountain Pens from the largest manufacturer in the country. We got a very attractive price and will give our customers advantage of it. These pens will move quickly so do not delay, but order promptly.

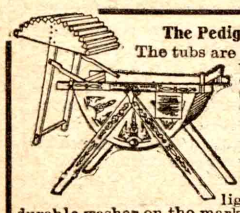
These pens have handsomely engraved barrels. Points are 14k gold plated. Feed is excellent insuring perfect flow of ink. Larger than standard size and they do not require frequent filling. Not a toy in any respect but a perfect Fountain Pen. Each pen nicely packed in a box with glass filler. Full directions with each, insuring perfect work and results.

Our $1.00 "safety clip" pen is the latest improved. It is fully guaranteed. Every pen fitted with new patent safety clip insuring its staying in the pocket. Will not roll off the desk. Price post-paid $1.00. High-grade in every respect. Sells in stores at $2 to $4.

This pen is first-class in every way. Two half-inch gold plated bands on it as shown in illustration. It sells in stores at from $1.50 to $2.50. Our special price post-paid only 60 cents. *Money back if not satisfactory.*

COONER & FORTUNE CO
Indianapolis, Ind.

IF SUBSCRIBERS MENTION UP-TO-DATE FARMING IN ANSWERING ADVERTISEMENTS THEY ARE PROTECTED AGAINST LOSS BY OUR Guarantee



The Pedigo Perfection Washer
The tubs are made of best quality galvanized steel, put together with bolts, rivets and solder. The rub is made of hard maple. The side pieces, wringer bar and legs are of oak or other hard wood, nicely finished. All are firmly united by malleable castings and bolts. It makes the lightest, strongest and most durable washer on the market. Pay more for a fancy washer if you want to. Remember "perpetual motion" has not been discovered. Pedigo washers have no "nick-nacks" to get out of order. And the price is only $3.00. You can't beat it anywhere.
Cooner & Fortune Co., Indianapolis, Ind.

Up-to-Date HOME ON THE FARM

"A cheerful temper joined with innocence will make beauty attractive, knowledge delightful, and wit good natured."—Addison.

WHERE AND WHAT ARE YOU?

Do you come nearer day by day
To the port where your dreams all anchored lie?
Or do you sail farther and farther away
In an angry sea with a sullen sky?
Do you come nearer the Ought-to-be,
The land where all the successfuls are?
Or do you drift on hopelessly,
Content to stay with the Things-that-are?

Are you a Drone or a Do-it-now?
A Hurry-up or a Wait-a-while?
A Do-it-so- or an Anyhow?
A Cheer-up-boys or a Never-smile?
It's none of my business, that I know,
For you are the captain and mate and crew
Of that ship of yours, but the Where-you-go
Depends on the What-and-how-you-do.

Are you a Yes or a May-be-so?
Are you a Will or a Guess-you'll-be,
A Come-on-lads or a Let's-no-go?
A Yes-I-will or an Oh-I'll-see?
It isn't the least concern of mine,
I know that well, but as time endures,
When they thresh the wheat and grind it fine,
You'll see its a big concern of yours.

—J. W. FOLEY in Youth's Companion.

NEW DRESS IDEAS

Fancy pins for holding the new tailored waists and shirts in place, are seen in the stores. The belt is also fastened by this plan.

White is seldom seen alone this season, but is usually combined with a little touch of delicate color.

Large hats or small hats; either are in equal favor.

With the reign of the tailored waist come the mannish ties again. These usually consist of white collars and colored ties.

Tan shoes and hose are the leaders for this season and look well with most any colored gown.

Cerise is a favorite color for brightening sombre hats this season.

Have your short skirt very short and your long skirt trailing.

Cuff buttons and tie pin to match are considered the correct thing.

The chic girl today, like her brother, has her cravat, handkerchief and hose to match.

A new, old idea is to wear a bando of black velvet around the head, to prevent the short hairs from looking untidy.

SOME QUEER FLOWERS

A member of an exploiting expedition to the South Pole describes a sight to delight the eye in that desolute region. One day the party came upon great fields of flowers on the sea of ice—not the kind boys and girls of of less frigid countries know, however. These were ice flowers. They are described as beautiful beyond description, waxen white, perfectly formed with delicate feathery leaves, when caught by the sun agleam with every color of the rainbow.

The phenomenon is explained in this way: while the sea is freezing much of the salt is pushed out and the part which comes above the ice assumes these exquisite flower forms.—Ex.

CHEERFULNESS

Emerson said: "There is no beautifier of form, behavior or complexion like the wish and intention to scatter joy and not pain along the path of this life. Happiness does not come by shutting out others from our good times."

We know a wonderful little woman who has had a great sorrow and who feels it intensely, so intensely that she never speaks of it except to those she feels nearest and dearest to. She has known wealth and affluence, but now earns her living for herself and child by teaching. On the front blackboard in her schoolroom is written this motto: "Keep sweet." And this motto is the keynote to her character. Her pupils idolize her, and her friends almost worship her. For no matter how blue she is, she has always a smile and a word of encouragement for everyone who comes to her for comfort.

And that is the kind of disposition we must all try to cultivate. We must not think of the bridges that are to be crossed, nor the hills that are to be climbed. But by being cheerful, we may store up strength for any emergency and trust the Great Helper to be with us.

WHITE FLIES ON PLANTS

When you find tiny white worms or white flies at the roots of your plants, you may know they are there because the plants have not enough drainage or there is too much moisture in the soil.

To rid the plants of these pests, let the soil dry out until the plants begin to droop and then thoroughly soak the soil with water that is quite a little hotter than the hand will bear.

Roots as well as the tops of plants can stand more heat than the human hand. Root pests are most successfully eradicated by this hot water method.

BRIDAL LORE

A January bride will be a prudent housekeeper and very good tempered.

A February bride will be a humane and affectionate wife and tender mother.

A March bride will be a frivolous chatterbox, somewhat given to quarreling.

An April bride will be innocent, not very intelligent, but fairly good looking.

A May bride will be handsome, amiable and likely to be happy.

A June bride will be impetuous and generous.

A July bride will be handsome and smart, but a trifle quick tempered.

An August bride will be amiable and practical.

A September bride will be discreet, affable and much liked.

An October bride will be pretty, coquetish, loving but jealous.

A November bride will be liberal, kind, but of a wild disposition.

A December bride will be well proportioned, fond of novelty, entertaining and extravagant.

PRETTY SURROUNDINGS

The old boys who knew the home on the farm fifty years ago have no nightmare memories of house-cleaning time. The bare hard wood floors were scrubbed bright every week or so, the plain chairs were scoured at washing time, the unpolished furniture was easily kept dusted, the bedding was sunned every day or two, and the sheets and covers had their regular time to go to the wash. But now there is housecleaning in the country as well as in town; and while the women folks are tidying up everything inside and making the home look fresh and new, the men ought not neglect the outside and the surroundings. A little paint may add a world of freshness, and repairing a broken gate or fence may make the home look like a new place. Don't neglect the home yard. A well kept lawn is the setting for the home picture. Lawn mowers are not costly, and an idle hour devoted to the proper use of one in the proper place at the proper time, may add as much to the cheerful look of the home as anything else that could be done.

The poultry that must necessarily be more or less in the yard, makes flower beds measurably impracticable, but vines, shrubs and larger flowering plants may be had in abundance. We almost said in profusion, but they must be planted and set with a thought of the lawn. It is easy to spoil a lawn by scattering plants and flowers all over it, and making the lawn mower a useless implement. The farm home should be the prettiest and most cheerful place on earth, and much of that depends upon the surroundings.

FARM SOCIABILITY

Farm boys and girls sometimes long for the city because of what they have heard of city festivities. They are deceived and do not understand the situation. The country is the greatest place of all for sociability. It is not equal to the city for idle, frivolous time-wasting, perhaps, but for real sociability and genuine friendship the country is much to be preferred. Neighbors know each other for miles around. They know each other's plans and share each other's joys and sorrows. Country boys or girls that cannot find congenial companionship lack something in their social make-up and would not find it in the city.

SOME IDEAS OF WOMEN

The best woman is the woman who is least talked about.—Old Proverb.

Nature is in earnest when she makes a woman.—Oliver W. Holmes.

Women see without looking; their husbands often look without seeing.—Des Noyers.

Women forgive injuries, but they never forget slights.—Haleburton.

Wherever women are honored, the gods are satisfied.—Hindu Proverb.

SAUCES FOR MEAT

With fresh salmon, cream sauce and green peas.

With roast beef, grated horseradish.

Boiled fresh mackerel, stewed gooseberries.

Roast veal, tomato or horseraddish sauce.

With tripe, fried bacon and apple rings.

Roast mutton, currant jelly.

Broiled steak, mushrooms.

Roast pork, apple sauce.

Cold boiled fish, sauce piquant.

Roast lamb, mint sauce.

Roast turkey, chestnut dressing, cranberry jelly.

Roast venison, grape jelly.

Roast goose, tart apple sauce.

Roast quail, currant jelly.

Roast duck, orange salad.

Roast chicken, bread sauce.

Fried chicken, cream gravy, corn fritters.

Cold boiled tongue, olives stuffed with peppers.

Veal sausage, tomato sauce.

Pork sausage, tart apple sauce.

Fruzzled beef, horseraddish.

Pork croquettes, tomato sauce.

Corned beef, mustard.

JEST ASK DAD

Our family is the queerest one
I'll bet you ever see;
There ain't but one in all the batch
With a good quality.
The rest o' us have lots o' traits,
But all of 'em are bad,
An' if you don't believe me, why,
You jest ask dad.

There's sister Kate an' sister Nell,
Their fault in makin' breaks;
The ain't like pa a single bit,
Because they make mistakes.
They ought to have been better with
The trainin' they have had,
But if you don't believe, me, why,
You jest ask dad.

Next comes my sister, Bess and Sue,
With fault of too much style;
They seem to think o' nothin' else,
They talk it all the while,
They keep us in hot water with
Some fool, expensive fad,
An' if you don't believe me, why,
You jest ask dad.

Now last—not least—comes Bill an' me;
Forgettin' is our trait,
It ain't no habit we've acquired,
It seems to be our fate.
We all take after ma, we do—
No wonder we're so bad—
An' if you don't believe me, why,
You jest ask dad.

BEE-HIVE.

GEMS OF THOUGHT

Write your name in blindness, love and mercy on the hearts of those who come in contact with you, and you will never be forgotten.—Chalmers.

Do not be troubled because you have not great virtues. God made a million spears of grass where he made one tree. The earth is fringed and carpeted, not with forests, but with grasses. Only have enough of little virtues and common fidelities, and you need not mourn because you are neither a hero nor a saint.—H. W. Beecher.

Do today's duty, fight today's temptation, and do not weaken and distract yourself by looking forward to things which you cannot see, and could not understand if you saw them.—Charles Kingsley.

"Little denials, little honesties, little passing words of sympathy, little nameless acts of kindness, little silent victories over favorite temptation—these are the silent threads of gold, which, when woven together, gleam out so brightly in the pattern of life that God approves."

MAKING LIFE BEAUTIFUL AND ARTISTIC

Dr. Brooks, the author of various school books, says:

"Man should endeavor to embody beauty in all that he does, and thus make life itself artistic. Our daily tasks should not be regarded as drudgery; they should be moulded by some idea of excellence, and then the humblest occupation will become a pleasure to us. Moral action patterned after a high ideal becomes artistic—and we have the beauty of conduct. Character should be the development of ideals of excellence, and life itself becomes a fine art. Contemplating these models of excellence, we rise to a higher appreciation of that Divine beauty which is above all, through all and in all. We may thus come to feel with the ancients that the soul alone is beautiful; and in loving beautiful, the soul loves its own image, as there expressed. And as the soul is a reflection of the infinite mind, our highest admiration will be for the Divine Artist in whom is the fullness and perfection of beauty, and who is thus The Beautiful."

SOME COMPLEXION HINTS

For washing the face, select a pure choice soap (the best is none too good) and a soft wash cloth.

When the skin is very dry, use a cold cream for cleansing the pores, but if the skin is inclined to be oily, this is not necessary.

Have the water as hot as the hands can bear it. Get the cloth well saturated and covered with a generous supply of soap, and apply several times to the face, always moving the cloth upwards.

While the face is still wet, use a massage with the finger tips. The chin should be rubbed with a rotary motion, the lines about the mouth upward and outward.

The forehead should be rubbed from the middle toward the temples.

Press the fingers at the back of the neck, having the thumbs meet under the chin. Now draw the thumbs backward to the nape of the neck. This exercise will remove the wrinkles caused by high or tight collars.

After massaging the face, wash again with hot water and then spray the face with cold water.

"PATCHES"

Before putting the meal for mush in to cook, grease the kettle. There will be no sticking then.

To remove the marks of matches on polished wood, rub the spots with lemon juice, then quickly wash away the lemon with clear water.

Grease stains on wood may be removed in the following way: Make a paste of water and pipe clay and let it remain over night on the grease spot. Remove paste next morning and the grease will be gone.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

To make a new broom last longer, steep it in hot water a few minutes.

Light scratches on furniture may be removed by rubbing camphorated oil briskly over the surface, using for this a soft flannel cloth.

Bamboo furniture should be washed in a mixture of one gill of salt to each quart of warm water.

Dip your bread knife into hot water just before cutting new bread to make it cut neatly.

When the windows have become covered with steam, wipe off with a cloth that has been immersed in very cold water. The steam will not then return.

To make the heels of your rubbers last longer, fit a piece of card board into them.

If your slippers have rubbed a blister on your heels, apply the skin off the inside of an egg shell.

When you need to apply a facing and have to finish out with a piece which does not match, put the odd part in front, where it will not be noticed.

Wash boilers that have become rusty may be cleaned with sweet milk.

To keep moths out of blankets, sprinkle with borax and wrap up in clean muslin.

THE BROOK

I come from haunts to coot and hern,
I make a sudden sally
And sparkle out among the fern,
To bicker down a valley.

By thirty hills I hurry down,
Or slip between the ridges,
By twenty thorps, a little town,
And half a hundred bridges.

I chatter over stony ways
In little sharps and trebles,
I bubble into edging bays,
I babble on the pebbles.

With many a curve, my banks I fret,
By many a field and fallow,
And many a fairy foreland set
With willow-weed and mallow.

I wind about and in and out,
With here a blossom sailing,
And here and there a lusty trout,
And here and there a grayling.

I steal by lawns and grassy plots,
I slide by hazel covers;
I move the sweet for-get-me-nots
That grow for happy lovers.

I slip, I slide, I gloom, I blance,
Among my skimming swallows;
I make the netted sunbeams dance
Against my sandy shallows.

I murmur under moon and stars
In brambly wildernesses;
I linger by my shingly bars;
I loiter round my cresses;

And out again I curve and flow
To join the brimming river,
For men may come and men may go,
But I go on forever.

TENNYSON.

A COOK'S TIME-TABLE

The time given for cooking these foods applies to most portions of the central plain but not to places of hight altitude.

Boil potatoes 25 minutes.

Steam potatoes 35 minutes.

Bake wheat rolls 25 minutes.

Bake graham rolls 35 minutes.

Cook old carrots one hour.

Cook young carrots 30 minutes.

Cook parsnips 40 minutes.

Cook turnips 20 minutes.

Cook lamb 15 minutes for each pound.

Cook pork 30 minutes for each pound.

Cook veal 20 minutes for each pound.

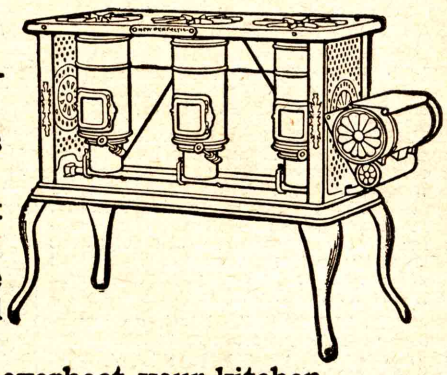
Cook mutton 13 minutes for each pound.

Cook corn 12 minutes.

Cook old cabbage 25 minutes.

Cook young cabbage 15 minutes.

Use A
NEW PERFECTION
Wick Blue Flame Oil Cook-Stove



Because it's clean.
Because it's economical.
Because it saves time.
Because it gives best cooking results.
Because its flame can be regulated instantly.
Because it will not overheat your kitchen.
Because it is better than the coal or wood stove.
Because it is the *perfected* oil stove.

For other reasons see stove at your dealer's, or write our nearest agency.

Made in three sizes and fully warranted.

The **Rayo Lamp** cannot be equaled for its bright and steady light, simple construction and absolute safety. Equipped with latest improved burner. Made of brass throughout and beautifully nickeled. An ornament to any room, whether library, dining-room, parlor or bedroom. Every lamp warranted. Write to our nearest agency if not at your dealer's.

STANDARD OIL COMPANY
(INCORPORATED)

Ten Karat ROLLED GOLD BRIDGE **Spectacles GIVEN AWAY**

This Offer is Also Extended to All Who Have Ever Written Me Before.

DON'T SEND ONE PENNY:

Just write me your name and address and I will mail you at once my Free Home Eye Tester and full particulars how to obtain a pair of my handsome ten karat ROLLED GOLD BRIDGE Spectacles without one cent of cost.

You see, I want to prove to every spectacle-wearer on earth that the Dr. Haux famous Perfect Vision Spectacles are really and truly ever so much better than any you have ever worn before—and I am going to give away at least one hundred-thousand pairs of the Dr. Haux famous Perfect Vision ten karat ROLLED GOLD BRIDGE Spectacles in the next few weeks, in order to introduce my wonderful glasses to the largest number of spectacle-wearers in the shortest possible time.

Write today for my Free Home Eye Tester and ten karat ROLLED GOLD BRIDGE Spectacle Offer. Address:—

DR. HAUX SPECTACLE CO., Block 203, St. Louis, Mo.

I ALSO WANT A FEW AGENTS

And any person not earning at least $50 weekly should ask for my Special Agents Terms at once.

NOTE.—The Above is the Largest Mail Order Spectacle House in the World and perfectly reliable

The discriminating farmer keeps a supply of
SLOAN'S LINIMENT
For spavin, curb, splint, sweeny, capped hock, founder, strained tendons, wind puffs and all lameness in horses—

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

(Temporary name for American Society of Equity)

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

SOME ORGANIZERS OF F. S. OF E.

If you want an organizer, write to one of the following, who may be the most convenient to your place:

Barryton, Mich., Feb. 19, 1908.

Mr. Everitt.

Dear Sir—I see that you want more organizers now. Send me your terms, please, for I have been watching to see how the other faction was coming out. I was in hopes that it could be settled with but little trouble, but I am glad to see that you have stood for the right. I am glad that our State stands on the old plan and that Up-to-Date is our official paper. I believe that when the storm is over that we will have fairer weather than we had before and the society will grow faster.

MINNESOTA MEMBERS—NOTICE

Mr. C. A. Patterson, 1111 7th St. South, Minneapolis, Minn., wants to hear from local or county unions that want to hold a rallying meeting in May or June with the view of helping them. Write to him as above.

MEETINGS

J. H. Leighton, organizer, will hold a meeting at Wynans, S. D., May 30th, in Woodman's Hall. A large attendance is hoped for and a pleasant and profitable time is promised. Spread the call among all your acquaintances.

CALL FOR 1908 CONVENTION

Pursuant to the power vested in us, we, the directors of the American Society of Equity of North America, also called the Farmers Society of Equity, do hereby call the Sixth Annual Convention of the society to meet in Indianapolis, Ind., on the Nineteenth day of October, 1908, and to continue until all the business that comes before the convention is transacted.

Also, in view of the complications that have existed in the society we make the following declarations:

First. That the convention that elected C. M. Barnett and his associates in 1907 was fraudulent in its conception, and largely in its composition, that many of its acts were illegal, because not justified by the charter and the constitution and by-laws of the society, and the laws of Indiana, and that all of its acts were illegal as binding the American Society of Equity of North America, because the convention was held under the name of The American Society of Equity,and not under the incorporate name—The American Society of Equity of North America.

Second. That the second convention, composed of delegates that retired from the hall where the revolutionary convention was meeting, was the only legal convention of the society in 1907, because it retained the corporate name of the society, complied with the conditions of the charter of the society and its constitution and by-laws, and the laws of the State. The officers elected by this convention are the only legal representatives of the society.

Third. The first convention changed the time for holding the convention from October to December. As the chief duty of the convention is to decide prices on the year's crops and make provisions for marketing them, and as a large part of each of the 1908 crops will be marketed before December, this date is illogical. Therefore, we call the Sixth Annual National Convention of The American Society of Equity of North America to meet in October, as before, which is the most logical month considering all the crops.

Fourth. A crisis has confronted our society since a few people determined in 1907 to divert it from its true plan and the accomplishment of its original objects. This crisis must be met with honesty and firmness if the society is to be saved for the farmers to whom it was dedicated by its founder. If it is ever to become the power for good we hoped, its original principles and its simple but practical plan must be preserved. To these ends we do now call upon every member who was in good standing at the time of the 1907 convention, or who has joined the society since, to interest himself in the Sixth Annual Convention. The by-laws provide for representation in the national convention as follows:

Each local union is entitled to one delegate; each county union to one delegate at large and one additional delegate for each 200 members in the county; each State union to one delegate for each 500 members in the State. To make this convention thoroughly representative we request that when a local union cannot send an exclusive delegate, that several locals join in sending one delegate and that each union give him credentials. In such cases the convention will be asked to give such delegate as many votes as he represents unions and no doubt the request will be granted.

On this Sixth Annual Convention depends the future of the society and we may truly say, more of weal or woe for the future of American agriculture depends on this forthcoming convention than on any former event in the country's history. Therefore, let it be truly representative of the great business of farming and represented by the best men the industry affords. Delegates can be appointed at any meeting and should be reported to the president, vice-president or secretary as below and we advise writing also "Farmers Society of Equity" to insure safe delivery of the mail.

W. H. MITCHELL, Hutchinson, Kansas, Pres.
J. A. EVERITT, Indianapolis, Indiana, V.-P.
I. C. ROUS, Indianapolis, Indiana, Sec.
C. W. PECKHAM, Haven, Kansas.
Z. S. MORGAN, Bozeman, Montana.
W. A. HARDING, Winnebago, Minnesota.

Whatsoever the farmer soweth that does the speculator reap. This is all too true even to this day.

To run a thing is little—to create it is much. But some people find they can't run a thing after it is delivered to them ready made.

For farmers to win their industrial independence they must show the organized powers that they possess a greater power.

German Third Power

It is the English translated by an able German scholar. Ought to be read by every German farmer. Well printed, illustrated and cloth bound. Price by mail, postpaid, 50 cents. See that your German friends and neighbors read it.

J. A. EVERITT, Publisher, Indianapolis, Ind.

THE "GET POOR QUICK" PLAN.

J. A. EVERITT, Indianapolis, Ind.

Dear Editor:—I am a reader of "UP-TO-DATE FARMING", though not a member of the A. S. of E. You are teaching us farmers "The Truth" in America, and if all farmers would know "The Truth," as you teach it, "The Truth would make them free. I wrote the truth about "Controlled Marketing," and the haphazzard, "What Will You Give, and What Will You Take" method of "Farmers in the Market," to a so-called farm journal, but the editor must have put it into the waste basket. How long, Oh! how long, will so-called "farm paper" farm the farmers?

Most "farm papers," so-called, along with the Experiment Stations, teach the farmers to get "poor quick," by greatly increasing their yields of wheat, corn, etc., per acre. Thus, if my land averages eighteen bushels of wheat they urge me to make it produce thirty-six bushels. I figure that my land is my "stock in bank," or asset, and why am I urged to exhaust its wheat elements so rapidly, at a price set by a set of speculating gamblers? I do not wish to do so. Why *don't* "The Boards of Trade," so-called, speculate and gamble on the prices of binders, mowers, threshing machines, wagons, buggies and autos awhile, and give us farmers a rest? I think the "Bears" ought to go it for quite a while on these things before the horns turn them into "Bulls."

Wishing you the greatest success possible, I am

Yours truly,
JAMES D. SHEPHERD.

Concordia, Kas., May 4, '08.

WHO IS RESPONSIBLE?

Farmers Don't Stick to the Original A. S. *of* E. Teachings

Is it fair to put all the blame for unprofitable prices on the buyers, be they individuals, companies or trusts? We think not.

For instance in the past farmers were taught to produce all they could and as prices went down they were told to hump themselves and produce more yet. Under such conditions do you think buyers were legally or morally bound to take all the crops and pay profitable prices for them?

Let us suppose they were morally bound to do so, as nearly everybody is claiming they were and are abusing the buyers because they did not, what would have been the result? The certain result would have been that farmers would have produced so much of all the crops that the buyers would have been swamped and would surely have gone bankrupt.

We knew this when preparing the plan of the A. S. of E. and we said then that each producer must be made responsible for **production** as well as for **price.** We then warned them that if they would produce too much and continue to do it, they could not possibly sell at profitable prices; that no individual, company, corporation, trust or even government could safely agree to always pay profitable prices for farm crops unless the producers would limit the supply to only equal the demand; or in years of surplus control the surplus into the next year and reduce the next acreage in proportion to the surplus held over; also to sell to ALL buyers at the same price.

This is the gist of the matter and farmers should quit crying against the buyer who, in the past, was obliged to buy as low as possible so his competitor could not buy below him. Besides, the only way the supply could be regulated under the old system, or lack of system, was for the price to go so low that growers were forced to grow less. This was a cruel system but farmers brought it on themselves and should blame nobody but themselves.

To give a definite illustration, take tobacco. Years ago the price of tobacco was profitable but farmers continually increased their planting, consequently supply, until the buyers had two or three years' needs ahead and the price reached the lowest in the history of the industry. Now just suppose the American Tobacco Company, which we believe buys only 40 per cent of the tobacco raised in the country, would have continued paying profitable prices, as it is argued it should, where would the money have come from to buy all the farmers would have raised? What could it do with all the tobacco raised? Suppose the other buyers bought for less, how could it meet competition in selling?

Is it not clear now that the foolish farmers, goaded on by their false teachers, brought the old troubles on themselves and is it not strange that a single farmer will hold out against the only organization that possesses the plan to enable him to control planting, consequently regulate the supply, as well as control the supply and compel profitable prices?

But to make this still plainer we will reverse the illustrations: A certain dealer has greatly overstocked and he advertises a bargain sale. Farmers and others flock to his store. They don't say: "We won't see you lose and we will pay you profitable prices." No, the merchant wilfully accumulated too many goods, he is forced to sell and the buyers embrace the opportunity to buy at low prices.

Or the manufacturers of plows would disregard the law of supply and demand and make all the plows they possibly could until there were three times as many on the market as the demand required. Farmers use plows but would they take all the manufacturers could turn out and pay them profitable prices for them?

So we see the problem is entirely with the producers of farm crops. We cannot in justice blame the tobacco trust for the low prices for tobacco in the past. We do, however, censure them and all buyers who have opposed the growers' efforts to organize. But this also has largely been because of the short sightedness of the farmers who should have cultuvated the friendship of the buyers instead of antagonizing them when they were in a position to exert their power.

The plan of the American Society of Equity as taught by this paper will secure for farmers all they are entitled to, it will do this without opposition from those with whom they must do business and will not lead to violence or lawlessness.

HIGHLY SIGNIFICANT CONGRATULATIONS

The following letter should be read, and its sentiment pondered long and carefully, by all members of the society who, in the past, were undecided where to send their 1908 dues. As the F. S. of E. (temporary name for the A. S. of E.) is operating under the 1907 by-laws, dues can be remitted any time during the year. This letter has added weight because it comes from the county in which Mr. Barnett lives:

Beaver Dam, Ky., May 2nd, 1908.
THE FARMERS SOCIETY OF EQUITY,
Indianapolis, Ind.

Greetings: Please find enclosed certified check for $9.00 of which $8.70 is for the dues of twelve A. S. of E. members that want to pay upon the right side. The balance, 30 cents, is for membership buttons of the F. S. of E., as we are ashamed to wear our A. S of E. buttons after reading the last copy of UP-TO-DATE FARMING. If you could now send a good organizer through this, Ohio county, you could do a good work as a great many members refused to pay to the acting A. S. of E. headquarters although they have been harangued by Sharp and others until they are a little fearful to come out on the right side.

Yours for Equity,
JAMES H. BARNES, Sec. L. U. 287.

While on this subject we will print a few more of the many congratulations on the result of the Chicago trial as follows:

MR. S. F. EVERITT:

Please convey to your father my heartiest congratulations at this display of justice as placed on record by "twelve good men and true". Aside from the satisfaction to be gathered from this complete vindication, there is a business side to the matter which is worth considering. There be many men who are too quick to form ugly conclusions at the first wind which blows to the detriment of a man's character, and particularly so when the man has been prominent, as has your father, in work which has for its object the cure of abuses and the advancement of any special class of workers. And to this class nothing appeals like a court or jury decision. And well as others, and to this class this decision will put both publisher and paper on a plane which will draw business which otherwise might remain in abeyance. Full publicity ought, in my judgment, to be given this action of the jury which passed on the guilt or innocence of the three scalawags, who, it is to be hoped, will receive at the hands of the Judge, who sat in the case, their just deserts.

CHAS. H. HOPKINS,
150 Nassau St., New York.

MR. J. A. EVERITT:

Dear Sir: We wish to congratulate you upon your success in your legal battles with the enemies who have beset you on all sides.—Arthur Hopper, Pres. United Publishers Association.

A verdict of "guilty" was brought in against Theo. G. Nelson, John Gentner and Chas. W. Bowne. publishers and editor of the Equity Farm Journal at Chicago. * * * The charges were echoed against Mr. Everitt by a few hide-bound members of the society and others, hence the suit. The result is Mr. Everitt's complete vindication and the confusion of his enemies.—The Forest Review, Forest, O.

MY DEAR MR. EVERITT:

Today I am rejoicing in your great courage for honesty and a square deal. I am glad that you have proved yourself a gentleman, just as I always said. * * * I was one of the delegates of our local and we were not allowed to instruct our county delegate to the national convention at Indianapolis. But he was called upon to explain when he came back. He got his instructions when he got aboard the cars. I am glad you have been vindicated and that justice triumphed.—Thos. C. King Perryville, Mo.

MY DEAR MR. EVERITT:

Allow me to congratulate you on your splendid vindication in the face of the most venomous opposition. I certainly admire your dauntless spirit. All along I felt

MORE MONEY
From Your Cows and
Much Less Work
In Getting It.

If you could see the Real "DIFFERENCE" between the NEW BUTTERFLY CREAM SEPARATOR and any other made—Difference in amount of the cream you get; Difference in the quality of cream; Difference in the way the machine runs. Difference in the number of times a minute you have to turn the crank; Difference in the way the milk is aerated and purified while being separated; Difference in the time and trouble it takes to clean the skimming device—you would say, as hundreds of others are saying today—"I'll get the NEW BUTTERFLY CREAM SEPARATOR."

If you could see how to make easily $10 to $15 more a year on each and every cow you keep, and still do it with less work for your wife and yourself, you'd say: "I'll get a Cream Separator."

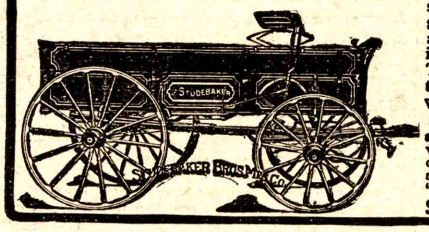
OUR PATENTED ALUMINUM CORRUGATED SKIMMING DEVICE makes the New Butterfly Cream Separator different and 8 times as efficient as any other machine. Every drop of milk that enters the bowl of the New Butterfly Cream Separator is actually put through the skimming process 8 times. This guarantees complete separation, and you can't fail to get ALL THE CREAM. New Butterfly Cream Separators are sold as they ought to be. Not by agents, but direct from our factory to your farm. Freight paid and on 365 days' trial. Send today for illust'd catalog.

For average use, we recommend No. 4½, capacity 450 to 500 lbs. of milk per hour. PRICE delivered at your town— $39.80

ALBAUGH-DOVER CO. Capital $1,000,000
925-937 Marshall Boulevard, CHICAGO, ILL.

It's Service You Really Pay For in a Studebaker

There is more real economy in buying a Studebaker farm wagon than in paying a lower price for some cheaper make. A Studebaker has quality and gives real service. It is built to last and does last as thousands of farmers will testify. Every vehicle is dependable—honest in material—honest in make. That is why the farmers of the country have made the Studebaker the largest vehicle factory in the world.



See the Studebaker Agent and ask him to show you the Studebaker line of farm wagons, farm trucks, buggies and harness. If you don't know one, write to us. If you mention this paper and send us two cents in postage, we will mail you "Studebaker" 1908 Farmer's Almanac—FREE.

UP-TO-DATE FARMING
Indianapolis, Ind.

within myself that you would eventually win in your struggle against your malicious enemies. I hope you will gain every point against them. My father and I have been so anxious about the outcome of the trial. It places it mildly when we say we are highly pleased at the result..—Miss Mae Manning, Sec., Mt. Olivet, Ky.

DEAR MR. EVERITTS
I have just received the report of the Chicago trial in my UP-TO-DATE FARMING. I congratulate you. I never had a doubt of your honesty and uprightness and now I hope those who have been against you will be your best friends. Go forward with the good work you are trying to accomplish be of good cheer and great courage for I know you are bound to win.—Mrs. Nannie Pierce, Nashville, Tenn.

MR. EVERITT:
I see by my UP-TO-DATE FARMING that you have gained a great victory over wrong. I congratulate you.—James Farmer Barry, Ill.

FRIEND EVERITT:
Congratulations on results of the Chicago trial. I could have told those fellows better than to monkey with a buzz saw.—J. L. Porter, Harmon, Ill.

MR. EVERITT:
Dear Sir and Bro: I am truly glad that the court has vindicated you but sorry that you had ever to resort to it. We will hope that all will work out for the best. You are right and on the right track. You were the first man to strike the key note for the farmers industrial salvation. As ever yours for the right,—C. R. Gough, Klondike, Tex.

MR. EVERITT:
I see by my last paper that you won in the Chicago trial, and that both sides got a hearing in the Chicago court which could not be obtained in the convention. It is good to know that you have brought the rebels to Equity. I believe now that I can go ahead again after nearly two years lost. You have certainly won a great victory and your words and works will be living when the bones of your opposers and oppressors will be moulding in the gravel. I consider you one of the greatest men in the United States and I pray God will spare your life until you accomplish the great work you have undertaken.—R. Sherod, Keosauqua, Ia.

PUBLISHER UP-TO-DATE FARMING:
I am glad the court has found Mr. Everitt's persecutors guilty. We in Millersburg have been waiting for the verdict and are now willing to do all we can for our paper, UP-TO-DATE FARMING. I will call a meeting and try to revive our union.—J. H. Harpster, Millersburg, O.

MR. J. A. EVERITT:
It pleased me to learn that you won in the trial against those who were after your shoes in an unbusiness like way. I had the verdict pronounced before the trial. I have been a reader of UP-TO-DATE for several years and in that time have formed an opinion of the paper and the editor. Since the trouble last October I have been sort'er stunned, but still I could not lose confidence in you. When the Equity Farm Journal came out they sent it to me although I had not subscribed. I read the first issue with eagerness; the second issue I also read carefully, but the edge was somewhat off, by the time the third issue came it was all off and there was one conclusion for me to reach, after all said nothing was said.

Now, Mr. Everitt, redouble your efforts to bring the society to the front. I believe you are stronger with the members than ever before and that they will now stand by you more loyally and the more quickly throw off their bondage. I wish you success and promise what assistance I can give you. —P. J. Bradt, Sheldon, Ia.

THE FIELD

OUR EQUITY FRIENDS:
I believe it would be a good plan for all locals to hold an annual summer picnic. Where there is a county union it might be best to have it as a County Equity Picnic.

At this picnic a good program should be given and a band should be employed to furnish music, where possible.

In the first part of June when the trees are green all over the country I consider the best time to hold these farmers' picnics. I suggest that the president of the society recommend a day each year for the annual picnic. Even though the society was started in winter it would be the most pleasant to have the annual picnic in summer.

We celebrate our country's Independence Day every year. Let us celebrate our independence from other classes of people. Let us keep on organizing and act according to the teachings of the organization and we shall soon be an absolutely free class of people.

I would suggest that each county and local union hold at least two big rally meetings each year, besides the annual picnic. Decoration Day will soon be here. I wish we had an undivided society, as we have an undivided government. But while this is at present impossible, let us console ourselves by thinking that our members are working harder now than if there had never been a division, and let us hope that soon they will be one again.

Your Equity Friend,
AUGUST W. KRUGER, Arco, Minn.

MICHIGAN LADIES SOCIETY OF EQUITY

FOR-GET-ME-NOT Local Union No. 2 of the Michigan Ladies Society of Equity was organized Sept. 4, 1907, with 11 members. The roll now gives 28 names, all in good standing with quarterly dues paid. In naming our local we chose the name of the humble For-get-me-not, and we will in every way make good our name, for we do not intend to be forgotten among the locals of Michigan.

The motto for our local is "The Willing Helpers." We have had many good meetings and have learned to know each other better, and when sickness came to many of our homes this winter it was with willing hearts and hands that the members assisted each other and so much better than if we were not organized together. One of our members should have special mention, Mrs. Nellie Thompson. like an angel of mercy, she went from one sick home to another spending nights and days in sick rooms. One important subject we are interested in is a State paper for the Michigan Ladies Society of Equity; another one being membership buttons for the society. We have also taken up the work of assisting in paying for the State printing and have turned over all membership money and dues to the State committee to help pay for constitutions.

In our local we have recorded the first bride in the Michigan Ladies Society of Equity, our little president, to whom we gave a reception. We have also done some charitable work in our local and have aided the men's local whenever needed. We are financially in good condition and are sending a delegate to our State meeting. Another subject before our local is the ladies waiting room being finished in the new court house at Belleaire. Our local and other sister locals will donate a chair each with an engraved plate giving the name of local, number and name of society. Other ladies' clubs will help.—Secretary For-get-me-not L. U., East Jordan, Mich.

GOD FATHER TO SON

That I trust and respect Mr. J. A. Everitt may be known that I have chosen him over a year ago as godfather for my youngest boy, whose name is "James Adam Carly," and was born December 10, 1907. The boy can now walk and is doing fine. Looks very healthy, eats hearty and grows very rapidly. Have four boys and four girls. Will send you our photograph some day when we get more money for our crops.

Must say that the crops were very poor the last two years and money very scarce. But we are looking ahead for better times, crops and better prices, when farmers will have something to say about what their crops are worth. "The laborer is worthy of his hire," says the Apostel Paul But make yourself into an ass and everyone will lay a sack on you, a good proverb says. When will farmers cease to be other people's burden bearers?

Yours respectfully,
J. J. SCHNEIDER.
Danube, Minn., R. R. No. 2.

FARMERS TO THEIR OWN BUSINESS

To the Farmers of America:

I wish to say, and especially to those that have been studying the principles of the Society of Equity as taught by UP-TO-DATE FARMING, edited by J. A. Everitt, that one of the cardinal principles taught by the Equity plan is, that farmers must learn that they have a business of their own and that business is farming. We only have a few men capable of looking after more than one business at a time and be a success; therefore farmers should be strictly farmers. I do not wish to be understood that I wish to dictate to this large and intelligent class of citizens, but that I wish to impress upon their minds the great necessity of sticking strictly to their special calling in order to reach success.

I see in some of the papers that some of our friends in the Burley tobacco district are talking about going into the manufacturing business, in order to, as they think, to accomplish their victory over the tobacco trust. The F. S. of E., as I see it, never taught any such doctrine, but exactly to the reverse. The tobacco trust will greatly rejoice if such manufacturing enterprises are started by the farmers. That will be exactly what they want. Then all they will have to do is to sacrifice a small sum and give the consumers a little cheap manufactured tobacco for a while and then the members of the farming manufactory will get sick by reason of having to hold their tobacco so long, and when they do sell will have to sell so low they will not like that much.

Right soon some one will say, "I wish I had my stock out of that concern and I am going to have it out as soon as possible, and I will not take any more stock like that," and some will say that they think farming well looked after suits a farmer the best. So say you all, gentlemen. The people that are already in the manufacturing business are up on all the points and understand the business and are well prepared for it and can pay a profitable price for the raw material if they would. So it is the duty of the Farmers Society of Equity to see to it that the manufacturing interests pay a living price for the raw material.

Complete organization and co-operation of the producers will accomplish all the farmers desire, and this can be done without force or intimidation of any kind. Let the farmers, the producers, organize and attend strictly to their own business and let other people's business alone and all will be well. Let such business as Farmers and Consumers Equity Exchanges at the expense of the farmers and manufacturing, not only of tobacco but any other thing except farming, strictly and fearfully alone, as farmers and members of the F. S. of E. This course, I think, will bring full salvation to the lost and nearly ruined farmers.

I hope you have noticed that I use the word farmer freely. I mean him and no one else. We wish all people well, all kinds of labor and business of whatever kind, and believe in co-operation in the proper way for all our mutual benefit.

N. M. ASHBY, Sebree, Ky.
Organizer F. S. of E.

TILL "EQUITY" IS ON OUR SHIELD

UP-TO-DATE FARMING is up and coming. And as the smoke of battle clears away those that have been watching to see how you would come out are falling into line again. We have had too many Liodiceans to accomplish all that we desired, but we have a few names even in Sardis that have not defiled their garments. We have started the fine mill that had been idle for a long time. We pay 32 cents per hundred for grinding our wheat, and get 45 pounds No. 1 flour, 20 pounds No. 2 flour, 14 pounds shorts and 20 pounds bran. It had been costing us 6 bushels of wheat to get 100 pounds of No. 1 flour. This means keeping at home about $70,000 annually.

The Greeks believed that the gods helped those who helped themselves; but Benedict Arnold tried to help himself by helping the enemy, and the only thing I regret is that they didn't catch Arnold instead of Major Andre. Rome conquered the world by dividing her enemies. The trusts and speculators are doing the same with farmers. Let us reverse their guns; then we will unite and prosper like Nehemiah in rebuilding Jerusalem. We are engaged in a great work, therefore we cannot come down at the call of every Tobias and Sanballet, lest our work be hindered. The land is ours by right; let us hold it ours by might if necessary.

"Scots who ha' wie Wallace bled,
Scotts who Bruce to victory led;
Welcome to your glory bed,
Death or victory.
The twad throw away his shield,
The twad quit the battlefield;
Let him basely go."

Peace hath her victories no less than war. Let us therefore meet our enemies in the arena of intellect and vanquish them with weapons keener than any forged steel. But some one says "The farmers won't stick." Well, all good causes have been troubled with "won't-stickers." Moses was worried with them in the wilderness, Columbus was troubled by them on the great sea and Washington was troubled with them. Of course we would like to make it unanimous, but we can triumph with 60 per cent of the farmers. The less our members the greater the glory. With Equity inscribed on our banner we will face our foes on every field.

The fight may be long, but we never will yield,
We'll never leave the ranks till "Equity's" our shield;
Yes, we'll keep fighting on. Glory, glory, hallelujah!

G. W. DRINKARD,
Vice-Pres. American League of Montana.
Lewistown, Mont.

SHOULD READ "MISREPRESENTATIVES"

I notice in the Daily Drovers Telegram of the 16th an article where it states representatives of the grain growers, shippers and exporters resolved against national inspection. This should read "misrepresentatives" of growers and raisers of grain. Until such time as we get national inspection on grain shipped by country elevators and shippers, we have no conception of what our grain will grade when it comes on the market. If this national inspection is not going to pinch the exporters and large shippers, why do they raise such a vigorous protest? What the raisers and country shippers of grain want, is inspectors who can pass an examination showing that they are qualified to pass judgment on a car of grain, and not men who have no qualifications whatever, only a political pull to show their efficiency.

Would it not be the proper thing for the producers and country shippers to send a committee to present their side of the case to their representatives in Congress?

Yours truly,
FARMERS GRAIN AND COAL CO.,
Per N. E. Gailey, Manager.
Otis, Kan.

OHIO MILLERS TO ADVERTISE FLOUR

The Ohio State Millers' Association met at Columbus, April 14th and 15th, and raised a fund of $30,000 to advertise Ohio Winter Wheat flour. J. W. Greenfield, Blanchester, Ohio, is chairman of the advertising committee. The meeting at Columbus was addressed by O. J. Prentice of the Long-Critchfield Corporation, who spoke upon "What Advertising Does for a Business."—Printers Ink.

LEGALIZING THE FARMERS TRUST

A farmers' Trust will be legalized in Ohio, it is said, with the passage of a bill now pending before the legislature, which exempts from the provisions of the State anti-trust act combinations "formed to limit or reduce the production or price of agricultural products." The sponsor of the bill says it is intended for the benefit of southern Ohio tobacco growers.—Judicious Advertising.

A SPECIMEN REPORT

DEAR EDITOR OF UP-TO-DATE:

Our local union meets on the first and third Saturdays of each month. We are trying to carry out your plans. In a letter from Secretary Staats he says our local union has not paid the 1908 dues. He is mistaken, for while we have not paid to the new A. S. of E., we have paid to the original A. S. of E. and sent in the name Farmers Society of Equity, so we would know they reach the right place. Also received a letter from C. O. Drayton saying he would like to come to Patoka and make a talk if we would furnish him a hall. We wrote him that we didn't want to hear him and rather insisted that he stay away from our neighborhood. I trust that all locals will put forth a greater effort to carry out the plan to emancipate the farmers.

TOM BALLANCE,
Sec. Chance Local Union, Patoka, Ill.

To the Editor of UP-TO-DATE:

I send you a copy of the Equity Farm Journal sent to me by Charles W. Bowne, managing editor and of that H—h Chicago company. The blackguard thing made me so mad that I threw the wrapper in the fire and came very near sending the dirty sheet after it. But my wife said: "Keep it and read it; read every word and see what he has to say about our editor." We have known of the conspiracy and my wife wanted to know just how they went about their slanderous work. So I kept the Journal and we both read it. We think the people who would get up such wicked, evil, slanderous things against an innocent man should be dealt with to the fullest extent of the law. And to think how it pulls down the common people, the farmers!

We have labored so long for poor pay and wore poor clothes, and now to think these people would put us back where Mr. Everitt found us and lifted us up, just because he (Mr. Everitt) would not go with them in their wildcat schemes. But I can't say just what I want to. I do want to see them get justice. I think I could then work with more spirit again.

I am sincerely yours,

D. M. CHRISTIAN.

Trenton, Ky., February 19, 1908.

MR. EVERITT, Indianapolis, Ind.

Dear Friend—I see that I am in arrears for UP-TO-DATE FARMING, but I don't want the paper stopped. I will remit for it soon. Last November we did not know what to do, but as the smoke has cleared away we have taken our stand for UP-TO-DATE FARMING and what it advocates. From this time henceforth you can count on us in the ranks doing loyal service. The two last issues of UP-TO-DATE FARMING were grand and don't forget it. The contents all clean, clear cut reading matter, simple, plain to the point and best of all, true and wholesome. They were really "never let die" numbers and we will not let up until victory is won. I could write much more but I know you are very busy so this is simply to express the sentiment of the people in this section. Your answer to Henry V. Leibig on the "Kentucky Situation" in March 1st issue was correct. Maybe I did-not prod our delegates for sitting in that convention and letting such work be done.

Yours truly,

R. H. NASBETT.

Providence, Ky., March 4th.

Ault, Weld Co., Colo., Jan. 30, 1908.
Mr. J. A. Everitt.

Dear Sir—Enclosing request for light upon the problem of helping in your fight, I embrace the opportunity to hazard a few remarks upon a feature of the question concerning which I addressed you once before—about a year ago.

While I am of the opinion that it is quite possible that we, the American people, will have escaped from the mire of the Sherman law before the F. S. of E. can have so manifested its power and essential character sufficiently to attract that prosecution under the Sherman law with which other industries have been visited. I believe, more and more, that we would be in a safer position were we to take the bull by the horns. The question whether or not we are a trust—and therefore liable to prosecution as such—hinges, I take it, upon the question, what constitutes restriction of trade?

In the market place governed by the Sherman law or any like anti-trust legislation, there must be no understanding between sellers calculated or even intended to prevent prices falling below even a minimum price fixed ruinously low. There must be no fixing of prices whatever, neither high nor low. Each seller must independently sell for himself, though the devil take both foremost and hindmost! It is assumed that the seller who has ventured into the lion's den and found himself skinned, may recoup himself later, when, as buyer, he may catch some other fellow in the same plight. All of which may be profound philosophy, and may be unwashed cannibalism; but, at any rate, it is all up the attorney's sleeve—right now.

Why does the seller in such a market accept little? Simply because he fears! He fears that, should he refuse little he may be obliged to accept less. Remove that fear from his heart, and the buyer finds himself facing a new condition. And the buyer and the attorney general are agreed—nor can we logically deny it—that conspiracy in restraint of trade is essentially the act of introducing just about that sort of condition into the market.

JOHN H. SANFORD.

Ault, Weld Co., Colorado.

GIVE HONOR TO WHOM HONOR IS DUE

There is one man who has done more for the farmers than any other man under the sun, and he is the founder of our Society of Equity. Many people can think of a good thing after a great man has demonstrated it, and when a great work is about done then there are a great many men who think they can do it much better and if they get a chance they will say to the pioneer: "We can do without you; step aside." But can they? God forbid that I may ever have such ungratefulness in my heart. If we people in Kentucky sell our tobacco for 15 cents or even 10 cents, to one man should be given the praise—Mr. Everitt. I just received some sample copies of the Ohio Farmer. I take it that they want to come in for a share of the praise. They claim their paper teaches the same principles as UP-TO-DATE, but I fail to find a single article like has always been in Mr. Everitt's paper. I am for equity; I am for UP-TO-DATE FARMING, because it built the society, so why cannot it sustain it? and why should not the society sustain the paper while it teaches equity, organization, pooling, controlled marketing and profitable prices? I am also for Mr. Everitt, and may he live to see the union organized on his plan all over the country. When it will make farming a pleasure and be a joy to manufacturers and all other business men.

J. H. BEATTY, Glencoe, Ky.

HINTS ON MAKING THE LOCAL UNION MEETINGS INTERESTING

BY JAMES H. SAUNDERS

Sylvan Shade Local Union met Feb. 22. Roll call showed all the officers and a good number of the members present. As an event of the meeting was an oyster dinner. It was moved to change the order of business to eat dinner while the soup was warm and transact our business later. Motion carried almost unanimously.

The committee on seed oats, peas and potatoes reported and the report was discussed with the result that T. H. McMurray and Jesse McNeil were appointed a committee to make further investigation about seed potatoes and peas.

The president and secretary reported progress on circulating library, letterheads, organizers, financial settlements, etc. Geo. B. Threlkeld, J. J. C. Roper, S. H. Linder and Levi Spillers should have special mention in the discussion of this report.

The first subject for discussion was "How to Utilize Our Agricultural Departments." The subject was well handled by T. H. McMurray, Allen Davis, the secretary and others, with the conclusion that farmers pay millions of dollars annually for the support of national and State departments of agriculture, colleges and experiment stations; that these institutions, as conducted, are more for the interests of the speculators in farm products than for the farmers' interests. It was further decided that farmers must organize, then get all the reports from their institutions, discuss them in their meetings, commend what is wise and helpful and condemn what is unwise and harmful to farmers and true agriculture. Where jealousies exist among farmers they must end. It will never do to attempt to stand in little departments, the cotton growers fighting the tobacco growers, the tobacco growers fighting the peanut growers, both of these fighting the fruit growers, all of these fighting the grain and stock growers, and the stock growers and dairymen fighting the grain growers. But we must ALL co-operate and each seek the welfare of all and all of each. If the law now pending in the Kentucky Legislature prohibiting the planting of tobacco, is passed, it will be a legal battle between the departments of agriculture and will force the tobacco growers to raise more horses, cattle, sheep, corn, hay, etc., which will damage us as much as it would damage the tobacco people if we, the grain and stock growers, should begin to raise tobacco. If this law is just, the cotton growers have the same right to place a prohibitory tax on planting cotton, and the stock people to prohibit raising hogs, etc.

In fact, we have already fallen into the old disorganized plan of overdoing the production of hogs and reduced the price of hogs from six to four cents. Then such legislation must be upheld by Night Riders, incendiaries and mobs. The farmers must organize on a broader, more liberal plan or the organizations will go as the Grange, the Wheel and the Farmers' Alliance.

There have been some indications in our society to depart from its original plan and continue the old plan of guerilla warfare, one class of farmers against another, but we put our faith in the good sense of farmers to not make such a serious mistake.

Second subject: "How Can We Make Our Meetings More Interesting?" was introduced by W. H. Brashfield. He gave the president and secretary such a severe grilling that the other members took pity on them and let them off without discussing the subject.

J. M. Roper's reading from "The Third Power" was well received.

Resolutions were passed thanking the teachers and trustees for the use of the school house, also the local members for the oyster dinner, with special thanks to Mrs. W. B. Clark and Will for the extraordinary good soup.

Program for next meeting: (1) "Corn Raising for Profit from Seed to Market," Allen Davis; discussion by Levi Spillers, Jesse McNeill and S. H. Linder. (2) "The Problem of Good Roads," Geo. B. Threlkeld; discussion by J. J. C. Roper and C. C. McMurray. (3) "Best Method of Reporting Crops," W. N. Brashfield; discussion by W. B. Clark and W. M. Shaw.

Adjourned to meet Feb. 29 at Dillon's shop.

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues will not advertise here if we know it. Report any unsatisfactory transactions promptly. MR. BRYAN'S OPINIONS

The plan of guaranteed bank deposits has probably found favor, among all classes of people and irrespective of political affiliation, more rapidly than any other public question.

The new State of Oklahoma has already enacted a law taxing State banks, the fund thus accumulated to be used in paying the depositors of any State bank that from any cause becomes unable to meet its obligations. A special session of the Kansas legislature has been called for the purpose of enacting legislation similar to the Oklahoma plan. The Governor of Nebraska is considering the advisability of calling a special session of the legislature on account of the growing belief among the people that protection to bank depositors in the form of State or Federal guarantees of their deposits will stop the hoarding of money, bring into circulation sufficient currency to conduct the business of the country, and prevent a recurrence of such disastrous panics as the one through which we are now passing.

Mr. Bryan has been an advocate of a law guaranteeing deposits in State and national banks since 1893. The legislature of Ohio has adopted a joint resolution inviting Mr. Bryan to address its members in joint session Feb. 18, 1908, on the subject of "Guaranteed Bank Deposits."

Mr. Bryan, in discussing the tariff question, insists that residents of the United States should be permitted to buy home-made goods at home at as low a price as the foreigner can buy American-made goods abroad. He also insists that our Government should be by and for the people as a whole, rather than by and for the trusts, and administered in the interest of a few beneficiaries of the trust system. He believes that national legislation for the purpose of better regulation and control of interstate commerce and common carriers should supplement State legislation, and not be a substitute for State legislation.

Mr. Bryan's paper, the Commoner, reflects his opinions each week on questions of public importance, and in its columns may also be found his magazine articles, public speeches, addresses and lectures, which are referred to in the daily press from day to day.

If you are interested in political questions, if you desire to keep in touch with the progress of the campaign and to read Mr. Bryan's campaign speeches, send 60 cents to the Commoner and the paper will be sent to you each week until the close of the next presidential campaign.

Postoffice money order, currency, or stamps will be accepted. Only 60 cents. Address **The Commoner, Lincoln, Neb.**

This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

QUESTION. (1) *In this section we raise a great many peanuts and unless the price can be maintained at a higher level the farmers must turn their attention to other crops. The growers are at the mercy of a few "cleaners," who are piling up dollars while the growers are becoming poorer year after year. Good peanuts now sell for 2¾ to 3 cents per pound. This is not enough to pay for producing. Can you, through the columns of Up-to-Date, awaken the peanut farmers before it is eternally too late?* (2) *If possible, print the price of peanuts in your city.* (3) *What uses are peanuts put to? I think your paper is the most valuable farm paper in the country.* (4) *How can we get a fair price for peanuts?—B. B. Joyner, Sec., Courtland, Va.*

ANSWER. (1) The growers must forget about the cleaners and consumers and the profit they make or the prices they pay and organize to control the crop and get their own price. This is the only salvation for the growers. Any attempt to put the cleaners out of business or make them work cheaper before the growers are in a position to control their own business is going back to the Grange and Alliance ideas. Peanut growers must quit fighting anybody and quietly go to work to control the supply. When they are to this point they can dictate to all who handle the crop. And the same applies to all farm crops. We don't know whether we can awaken the growers. No person has had very good success awakening the dead since Christ was on earth. Perhaps the peanut growers are not quite so bad off yet. We'll see. (2) Jobbers claim to pay in Virginia 3½ cents to 6¼ cents per pound, according to grade. The retailer pays the jobber for roasted nuts 7 cents to 10 cents per pound (loss in roasting about 20 per cent of green weight). Consumer pays at rate of 15 cents to 20 cents a pound. (3) Acres cultivation in 1899 (1900 census report) 516,658; yield, 11,964,957 bushels; average acre yield, 23.2 bushels; weight per bushel, 22 pounds. (*Scientific American*, December 29, 1900.) Value of 1899 crop, $7,271,230, or about 3 cents a pound. The price in 1868 was $2.50 per bushel, which had declined to 61 cents in 1899 (*United States Census Report*). In 1899 Virginia produced 3,713,347 bushels; North Carolina, 3,460,439 bushels; Georgia, 1,435,775 bushels; Alabama, 1,021,708 bushels; Florida, 967,927 bushels; Tennessee, 747,668 bushels. *Uses.*—Shucks good feed for hogs, vines good fodder for stock. A bushel of peanuts makes a gallon of oil, which is used as substitute for olive oil. Peanut meal used to feed stock, also baked into bread largely used in Germany and France. Nuts are roasted and eaten, also largely used in confections, made into peanut butter. (4) The only way is to pledge your crop, organize, agree on a price and hold for it *and you can get any fair price you want.* Will you do it?

Q. *I have not received my paper for some time; what is the reason?—Many Inquirers.*

A. The trouble probably is that your secretary or some other person ordered your paper stopped. If you want UP-TO-DATE FARMING and have paid for it, insist on it being furnished for the money you paid.

Q. *In March 15th Sunday Examiner is a letter from C. A. Windle, who assumes to speak for the society, and he says the platform of Hearst's Independence League (political) suits the Society of Equity exactly and he intimates that the next step of the society may be to lead the farmers straight in to Hearst's political aggregation.—A. Member, Huron Co., O.*

A. Have no fear. Some people would like to expose the society to the dangers of the political rocks that wrecked former farmers' organizations, but they will not succeed as long as this paper exists. Such attempts are always to provide a vehicle on which designing people may ride to power. Farmers can get all they need, politically, when organized, from any party and they are not going to inject politics into the organization in its infancy and need not ever.

Q. *Cannot you tell us more about the markets through Up-to-Date Farming. We used to depend on it very much and miss its advice and direction.—Several Inquirers.*

A. We dislike to do things that are useless, if indeed may not be said to be foolish.

The plan of the Society of Equity provided for an official paper. We said the official paper was absolutely necessary in carrying out the plan. It was represented that the official paper would go to all the members of the society so all could have the same advice, about the same things, at the same time, so all could co-operate for the accomplishment of a common object.

For four years this idea was carried out and the official paper — this paper — was very powerful. Equitable and profitable prices were set on the various crops and this price was carried to all the members and through them it reached practically all the other farmers. The price announced by the society and promulgated by UP-TO-DATE FARMING were accepted as the fair market prices by a very great many farmers. They held for them and, with very few exceptions, they were realized.

But later some of the directors concluded that they wanted another official paper and caused one to be started. Since then the power of this paper has been weakened, because the members had two sources of information and oftentimes they were at variance. As a result farmers have had very little influence on prices and we see the unmistakable results in the markets.

We are anxious to make this paper all it was in the past, but we cannot do it until it has a clear field; that is, when another paper does not go to the members and destroys the good that otherwise would result. We hope and believe that time will come soon. In the meantime farmers are paying heavy penalties.

FARMERS' BATTLE SONG

[Tune, "Marching Through Georgia."]

Bring the good old golden rule, the time has come again,
To rally round the standard and declare for honest men;
No tyrany can daunt us, for the right will triumph when—
The farmers are fighting for freedom.

CHORUS

Hurrah! hurrah! we ring the jubilee,
Hurrah! hurrah! for the cause that sets us free;
We're going to have a society that stands for you and me,
Founded on justice and freedom.

The crowd that worships greed and gold is massing for the fight,
It's scheming in the daytime and is plotting in the night,
To capture all farm products—oh, rise up with all your might!
Fighting for justice and freedom.

So here's a pledge of loyalty unto the cause we love,
We want the Society of Equity, and its friends we're going to prove;
We'll fix the boss who beats us, for we're always on the move,
Fighting for justice and freedom.

This song was written by Organizer J. D. Fish, Painesville, Ohio. We advise other organizers to use this song also. It has the right ring and particularly the thought expressed in the next to last line, "for we're always on the move," will stir your people to action. We must be always on the move like an invading army, which brings peace, justice and equity to all.

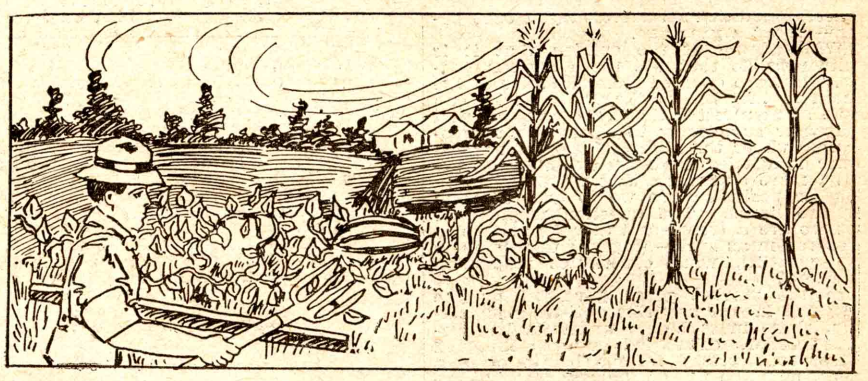
Some People Say that a "Nigger" won't Steal

The man in the picture is hunting for two colored men who had been stealing watermelons. As soon as he tried to catch them, they ran to the cornfield and hid. However, they are real close to him, if he only looks in the right direction.

ARE YOU A DETECTIVE?

You don't have to have a badge to find the culprits here for the farmer. See if you can find them, and also a hoe and a basket they had with them, and when you do, cut out the puzzle, mark each object, send to us, and win a prize.

It may be that no one locates the men correctly (and in case that the prizes go to those nearest correct), so send the best solutions you can.



READ THE FOLLOWING CONDITIONS:

As a part of this contest it is necessary that you tell us which advertisement in this issue appeals to you most and give some good reasons why it does. The advertisement you write about must not be signed by Up-to-Date Farming, J. A. Everitt, or Farmers Society of Equity. Letters not containing such an article, of course cannot compete for the prizes.

If more than four send correct answers, then the ones who wrote the best articles will be given the prize.

For the best solution and article we receive on or before May 30, we will give a prize of $1.50 in cash. The next best will receive $1.00, and the two next best 50 cents each.

Try your skill, as you stand an equal chance with any of our readers.

Winners will be announced in the issue of June 15 and prize money forwarded immediately. Address all answers to

UP-TO-DATE FARMNG, Puzzle Department Indianapolis, Indiana

DEAR MR. EVERITT:

Your noble efforts in behalf of the oppressed farming class are deeply appreciated in this section of the Bluegrass State. Brother Ed is an enthusiast in the cause of Equity; he thinks no other farm journal in the United States can compare with UP-TO-DATE.

A copy of the Equity Farm Journal made its initial bow to us yesterday, but was promptly returned to the publisher labeled "Not Wanted."

Asking our Heavenly Father to bless and assist you in your grand life work, I am,

Your sincere friend,

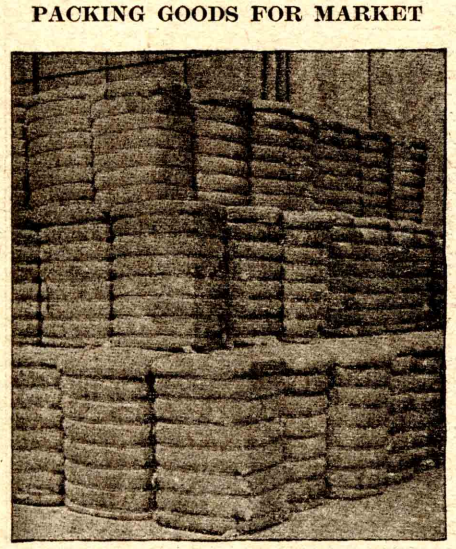
Cynthiana, Ky. MARIE LEONARD.

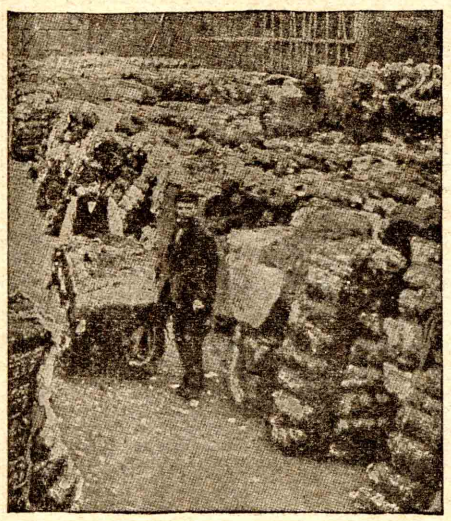
HOW TO CONDUCT A MEETING

We must have system, an orderly proceeding, in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceding meeting.
5. Call for applications for membership.
6. Report of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood?
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting?
17. Discussion of special topics for the good of the farmers and the society.
18. Program for next meeting.
19. Adjournment.

PACKING GOODS FOR MARKET





This first picture shows Egyptian cotton in the European markets, and the lower picture cotton from America. America has been charged with being the most extravagant nation on earth. Perhaps in no way is this more clearly proved than in her exports. Germany, France and England have maintained a preponderance of trade in South American countries because of the greater care they exercise in packing the goods. Surely no advantage can possibly result in delivering cotton to our foreign customers in such ragged condition. The sale price must be less on this account, besides there is a loss in weight, all of which affect the price to the grower.

The illustration was furnished by "System," published at Chicago, Ill.

A FARMER ADVERTISER

Our rural residents are rather slow to adopt the new ideas, but a New Hampshire farmer has been quick to seize on the prevailing post-card scheme and issues a weekly bulletin in this form:

MERRIEMYO FARM

The Points, North Goshen,
P. O. Mt. Sunapee, N. H.
Offers this week, January 13, 1908,

TO BUY

Pigs about four weeks old, $2 to $3.
Calves just dropped, mail us a card if you expect one soon, $1 to $2.
Cows to come in $15 to $30.
Yearlings, will pay cash or trade hay, $6 to $12.
Hens, any kind, any number, 10c lb.

TO SELL

Shotes, just right to put on manure, $4.50.
Cockerels, that get big brown eggs, $2.
Ayrshire Bull, 7 months old, full blooded, $50.
Hay in barns, $11.50; or delivered, $13.50.
Single Driving Harness, in good shape, $2.

DEAN BOWMAN, Proprietor.
GEORGE G. MASON, Manager.

He mails fifty out to his nearby neighbors every Monday. The postage is fifty cents and a local printer charges $1 to make the changes weekly and print the fifty cards. So at an expense of $1.50 the whole country 'round knows what he wants to buy and has for sale.

Mr. Mason, the manager of the "Merriemyo Farm," claims that the plan beats anything yet tried in the way of advertising, and is equal to attending a country auction or town meeting, and spreads information with better results.

Any business farmer might adopt the idea of this Yankee and trade in an approved way, and Mr. Mason's word for it the plan will add many dollars to his exchequer above its cost.

The above was clipped from Printer's Ink. Readers of UP-TO-DATE FARMING who want to improve on the plan should advertise in the Business Exchange. Instead of reaching 50 they will reach 200,000 of the most progressive farmers—think of it, two hundred thousand who are interested in what you have to sell. The cost is only 5c a word each insertion; twenty words $1.00. Try it. Put an advertisement in UP-TO-DATE'S Business Exchange and in addition to reaching thousands in your own State it goes to scores of thousands all over the country.

Low Prices on High-Grade Vehicles and Harness

There are few business concerns in this country that have a stronger hold upon the public than the Elkhart Carriage and Harness Manufacturing Company. For over thirty-five years—over a third of a century—they have been manufacturing vehicles and harness and selling them. People all over this country have learned to know this and the result is that the Elkhart Carriage and Harness Manufacturing Company now enjoys the proud distinction of being the largest manufacturers in the world doing business direct with the people.

The company's great catalog shows 200 styles of vehicles and 65 styles of harness. The time-honored Elkhart plan is to send everything on approval. It costs you nothing if you are not satisfied on style, quality or price. Write the company for the big catalog at Elkhart, Ind. It's free if you mention UP-TO-DATE.

One of the best remedies for heaves known to veterinary science, one guaranteed to cure in any stage whatever, is Newton's Heave, Cough, Distemper and Indigestion Cure. The price is but $1.00 a can, and it is for sale by all dealers, or will be sent prepaid by addressing the manufacturers, the Newton Remedy Co., Toledo, O. This company publishes a book, entitled "Horse Troubles and Stable Hints," which wil prove of great interest. It deals with the diseases of horses and also contains much valuable information regarding their care. It will be mailed free to those interested. Simply drop a postal and one will be sent by return mail if you mention UP-TO-DATE.

The Care of a Wagon

Hosts of farmers and teamsters, who ought to know better, think that "grease is just grease anyway" and so cut the boxes out of their wagon wheels by using some inferior lubricant which runs off and leaves the spindle dry, or forms a stiff, almost gritty substance in the wheel, which is just as bad.

A proper axle grease for use on every type of heavy wagon should have just the right "body"—that is, it ought to be neither so thin as to run, nor so heavy as to stiffen. It should have, too, a long-lasting quality if it is to be economical.

Perhaps no preparation for the purpose is quite as good as Mica Axle Grease. Certainly no other axle lubricant on the market possesses what we have termed "proper qualities" as truly as "Mica" does. A very little of it goes a long way and saves the teamster much loss and trouble.

A WATER DOCTOR

Should be consulted in all cases where a Safe, Sure and Speedy cure is desired. Consultation, analysis of urine and report of your case free. Send 4 cents for Book of Cures and mailing case for urine. Fee for treatment low. Medicines furnished. 20 years experience. References sent on request.

ADDRESS J. F. SHAFER, M.D.
485 PENN AVE., PITTSBURG, PA.

Stop that Crime Against Your Horse

That sore under the collar is a crime against your most patient and faithful servant.

Metal Adjustable Hameless Collars

will cure and prevent it. They are the best and most humane collar ever made because of this. Won't wear out. Always keep their shape. Don't rust. Perfectly adjusted to the horse, whether spring fat or fall poor. Make him pull better with more load and keep him in perfect working condition every day in the year. Distribute the draught evenly. Attached to any harness. Easier than others to put on and take off. No straps or buckles. Set easier and more perfectly comfortable. All wearing parts can be replaced for a few cents when worn out.

Send for catalogue, which shows how they are made, and we will send hundreds of testimonials of satisfied users. Ask your dealer for them. If he doesn't handle them, send us his name and address when you write for catalogue. Perhaps you would like to sell them. Agents wanted.

Johnston-Slocum Co., 426 State St., Caro, Michigan

Get yourself a paying Farm in the **SUNNY OZARKS.** Land of delightful climate, mild winters, running water, timber, market near by, close to railroad, ideal stock and fruit-growing section, blue grass and clover. **Be Independent** and own one of these fine farms. Improved and unimproved. Farms to suit the big stock raiser, orchardist, or the truck gardener. Prices and terms to suit you. Big exchange list. Write to-day for catalogue.

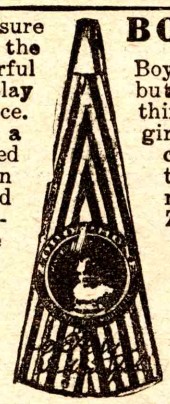
FLOWER POST CARDS FREE TO YOU

In order to introduce our large illustrated monthly, The Epitomist, which is of interest to every member of the family, we make this big offer to you.

Send 10c for a six months' trial subscription and we will send you, prepaid, twelve beautiful flower post cards absolutely FREE. These cards are strictly high-class and are something entirely new. Each card represents a scenic view and has THE LANGUAGE OF THE FLOWERS worked out most beautifully in mottoes in flower designs. For instance, in this series the violets spell out the words "Faithfulness;" the sweet peas, "Wish You Joy;" Chrysanthemums, "I Love You;" roses, "Love," etc. You won't be disappointed, for these cards are not like any you ever saw, and REMEMBER, we have a surprise for everyone that sends for these cards. There are only a limited number, so send today if you want them. THE EPITOMIST, 55 Main St., Spencer, Indiana.

A Wonderful Musical Novelty

Nothing affords so much pleasure and harmless amusement as the Musical Zobo. It is a wonderful musical novelty. Anyone can play it in a minute without practice. The latest "hits" rendered on a Zobo are delightful. Can be used in the house around the fire or in street parades. It furnishes good dance music; can be used for amateur theatricals or any place where music is desired. Boys and girls, young and old are delighted with a Zobo for home music or for entertainments. The Zobo is made of strong material and is not liable to injury. The Zobo is six inches long.



BOYS' ZOBO BAND

Boys, organize a Zobo Band. Costs but a few pennies apiece. Just think of the fun serenading the girls and the "grown-ups." A costly instrument requires practice to learn and an expert to make beautiful music. With a Zobo a novice can make pleasing music from the start. Send for one on my recommendation. If it don't suit return and get your dime.

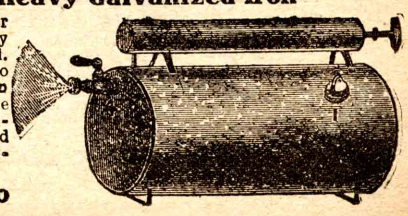
Price: Sent post-paid 10c each; $1.00 a dozen. Send dollar bill for a box.

S. E. FERRY, Indianapolis

Lightning Compressed Air Sprayer, $1.50

Capacity 2 Gallons. Made of Heavy Galvanized Iron

THE most convenient and handy compressed air sprayer on the market. Where a 4 gallon sprayer is too heavy to handle conveniently, this is just what you need. Well made, strong and durable. We can recommend it to our customers. Has a clean-out hole in bottom from which the valve can be oiled, which should always be done before putting it away after using. We furnish latest improved nozzle with each machine, for fine spraying and can be adjusted for tree spraying, washing windows, buggies, etc. Will throw a stream 15 feet high.



Regular dealer's price $2.00, **our price only $1.50**

O. K. SEED STORE, Indianapolis, Ind.

STUDY THE MAP

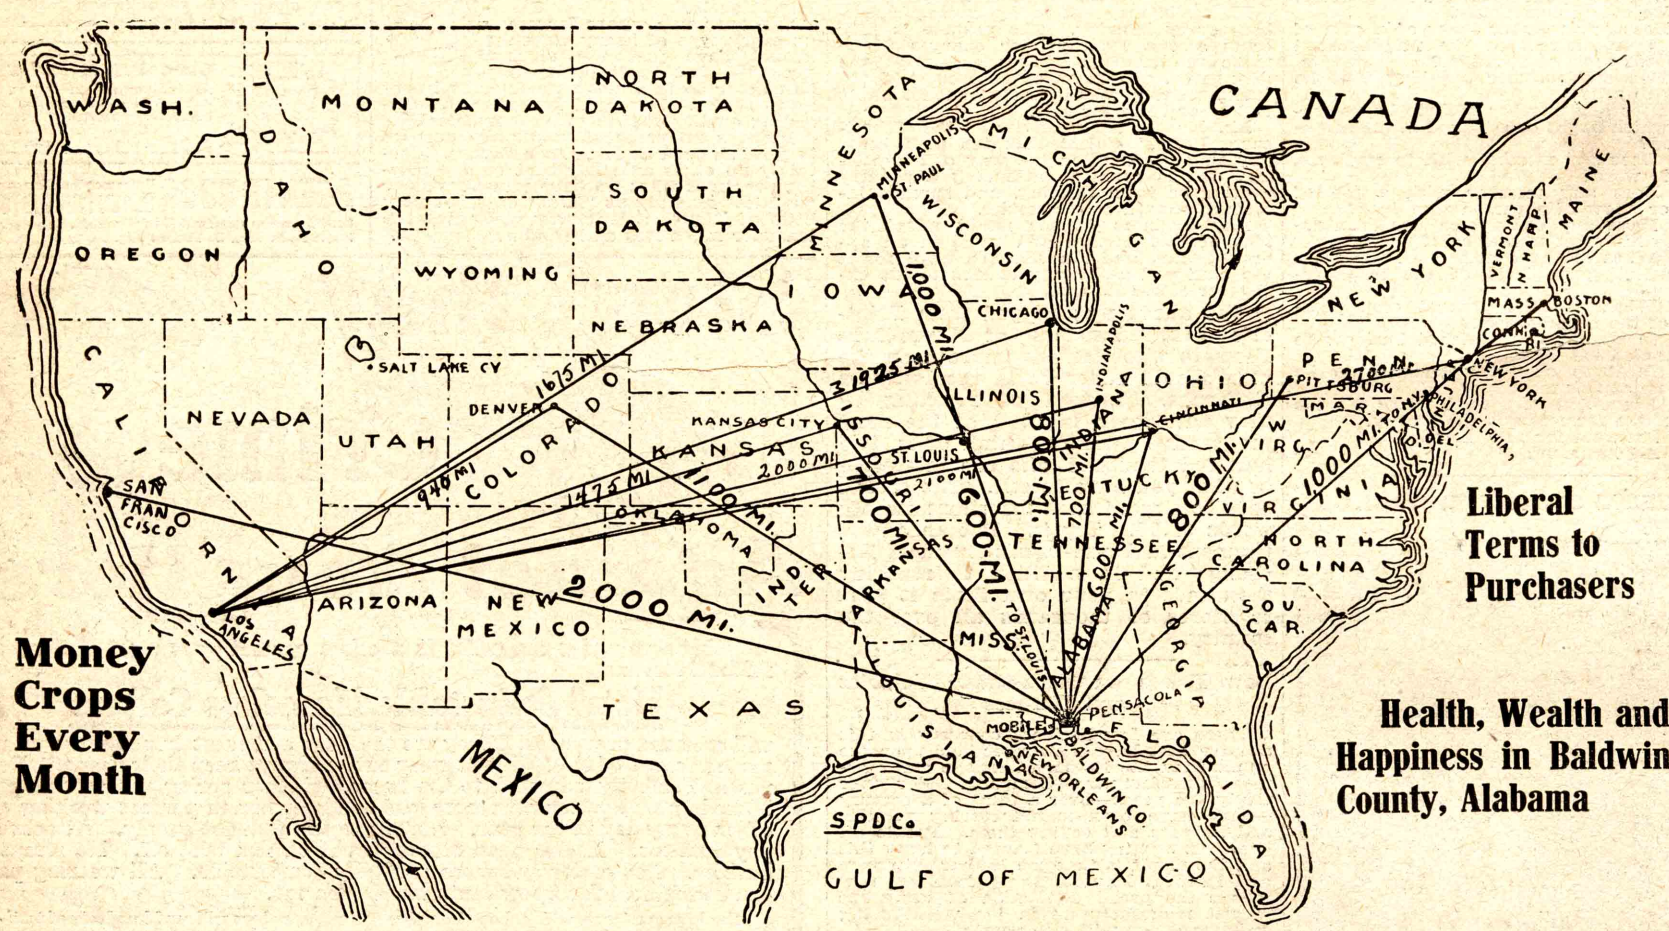
Baldwin Connty With its Delightful Climate is Hundreds and Thousands of Miles Nearer Principal Northern Markets Than California. Our Lands Grow Many Californie Products to Perfection, The Best of Water and Healthful Conditions.

SCORES of readers of UP-TO-DATE FARMING are buying farms in Baldwin County, Alabama. But there are thousands more who will when they fully realize the proposition I have for them. First, you want a location where the climate is good and with pure water. We have both in Baldwin County. Warm in winter and not too hot in summer when the cool breezes of the Gulf of Mexico make the climate delightful. There is no more healthful place in the United States.

The money making crops that can be produced on our lands excel all other sections of the country. We are 1700 miles nearer New York than Los Angeles and have water rates on freight.

Every party I take down to Baldwin County develops into a lot of enthusiastic Baldwin County rooters. Our customers find that I have not over-drawn the facts. You will find things just as I tell you. I believe in a square deal and invite all to come and investigate.

PRICE In farms of 40 acres or more the price is $20 per acre. We pay the taxes twice. Sold on easy payments if desired and NO INTEREST on DEFERRED payments. Pay as little as $100 down on 40 acres. Balance 20 cents per acre a month. A farm on these terms will pay for itself so soon and so easy you will not notice the cost.



Money Crops Every Month

Liberal Terms to Purchasers

Health, Wealth and Happiness in Baldwin County, Alabama

Figure what that means on early garden truck and fruit. Hundreds of dollars per acre made from these crops yearly. Celery produces as high as $1,000 per acre net profit in a season. But shade grown tobacco is the greatest money maker. $1,800 from one acre is the record. $1,000 is the average amount it produces an acre. Baldwin county can produce as good shade grown tobacco as is grown anywhere. Open air tobacco produces abundantly and sells for 25c a pound. Figure the profits at this rate.

Baldwin County soil is adapted for general farming and stock raising but it is our special crops that produce the money. Wealth in abundance to those farmers who live in Baldwin County. 40 acres equals 160 in the north.

In January Baldwin County farmers are working out of doors. Stock feeding in pastures and much plowing is being done. Spring work goes forward with a rush. Our northern cousins are tied indoors by bad weather and at the same time burning up summer profits. None of this on the Gulf of Mexico.

Money invested in Baldwin County farms is not subject to the tactics of bankers. No financial flurry can touch it. The ground is producing dollars and your land is going up, up, up in price all the the time. Similar land in Florida that has been in cultivation longer sells as high as $1000 an acre. $125 per acre is a usual price. Our lands now sell for $20 an acre but in a comparatively short timewill bring ten times this price. Buy now and if you are willingto develop a little bit you will have a regular gold mine.

We pay the R. R. fare to all who purchase 40 acres or more. If land is half paid for when purchaser dies we deed it to his heirs without further payment. We will accept warehouse receipts from tobacco growers in payment for land and credit the full proceeds on the purchase. Don't need to wait until tobacco is sold—if you have it, it is worth the money and we accept the certificates.

I am going to Baldwin County on the first and third Tuesday of each month. These are excursion days. Come, join me on one of these trips. I want to show you what our company has to offer. The proposition will speak for itself, and if you want Health, Wealth and Happiness, you will buy a Baldwin County farm. I want to hear from every reader of UP-TO-DATE FARMING who is not satisfied with his present condition, or who wants more opportunity and the co-operation of climate and location to help him in business. Bring your wife and go along. I don't ask you to buy without investigating and the more you do investigate the better you will like it.

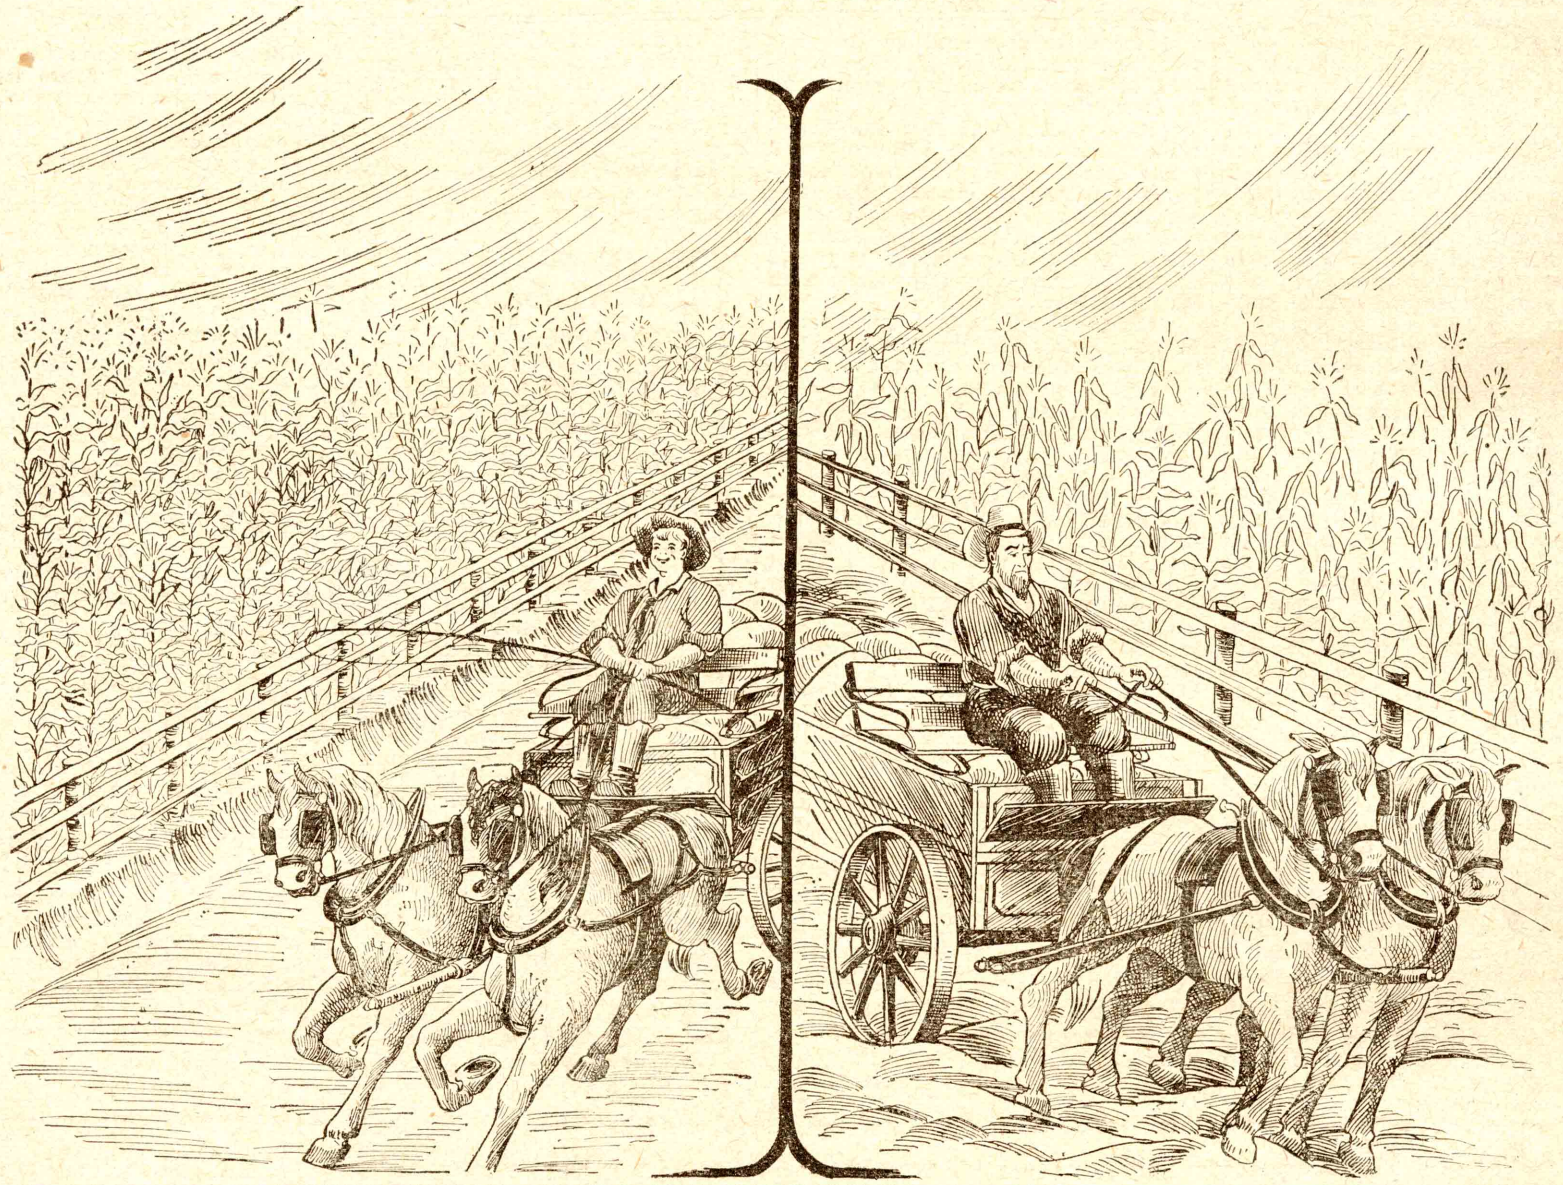
THE RECLAMATION SERVICE

FOR WHOSE BENEFIT?



"The government waters the stock of these western farmers, besides furnishing them pastures where only sage-brush grew before." Nine-tenths of the farmers, those who have bought their farms and by their industry made the country great, must not only supply their stock with water at their own expense but they must devote some of their best acres to their pasturage.

Millions of acres of United States lands were, a few years ago, thought to be worthless from an agricultural point of view, or as possible homes for civilized people. It comprised the Great American Desert or Rainless Region, and was to all intents and purposes a barren waste. But on June 17, 1902, President Roosevelt signed a bill that had been enacted by Congress, appropriating the money that should arise from the sale of public lands in the thirteen western States and three territories, to be added to a fund already in the treasury to be used by the Secretary of the Interior in the "survey, examination and construction of works for the reclamation of arid lands." In the less than six years that have elapsed since that time, Director F. H. Newell tells us in "American Indus-

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FIVE FOR $2.00

Foreign Subscriptions, including Canada, 75c a Year

Clubs. Two subscriptions for $1.00; five for $2.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE*.

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

THE RECLAMATION SERVICE

(Continued from first page)

tries," a large organization has been created under the Secretary of the Interior, and some of the most notable hydraulic works of the United States have been brought to such a degree of completion that they are being utilized in the irrigation of lands and the providing of sites for thousands of homes. Upward of $40,000,000 have been expended for that purpose.

The vacant public lands which are watered and rendered fruitful by this great expenditure of money, are subdivided into areas of a size which, in the opinion of the Secretary of the Interior, is sufficient for the support of a family. The land is then given away in tracts of 160 acres or less, under the terms of the Homestead act, actual settlement and cultivation being required, and the homesteaders must in easy annual payments return to the government the money actually invested in the irrigation of the land, the money so paid back continuing in the reclamation fund to be again expended in the reclamation of other lands.

Without entering into a detailed account of this work, it is sufficient to mention some of the most important ones. In Arizona the largest item is the great Roosevelt dam which is being built to conserve the flood waters of the Gila River for use in the broad valley vicinity of Phoenix, The foundations of this dam have been laid, the main structure now rising above the reach of water. It will impound an amount sufficient to irrigate upwards of 160,000 acres of land. The water coming from the reservoir will develop power which will be transmitted to the valley to pump water to lands which cannot be reached by the gravity system.

The stored waters from the great Roosevelt dam will be allowed to flow down the river and will there be recovered by another dam about forty miles below, being turned out into canals leading from both sides of the dam to the north and south of the stream. This, the Granite Reef dam, is nearly completed and water is being utilized for the irrigation of the thirsty lands in the beautiful valley in which lies the capital city of Arizona.

Farther down the river, below the confluence of the Gila and the Colorado, is the Yuma project. Here a large dam, about 4,800 feet long, is being built across the Colorado river to raise the water and throw it into canals on each side, that on the west or California side running down parallel with the stream and crossing under it at the town of Yuma. This dam is notable from the fact that it is founded on the soft lands or mud of the river bed and is about ten times as broad as it is high.

In Colorado a tunnel nearly six miles long is being built to take the Gunnison River from its bed and under a mountain mass to the Uncompahgre Valley, where nearly 200,000 acres will be irrigated in the vicinity of the town of Montrose. This tunnel is nearly completed, about a mile of rock being yet to be pierced. A part of the main canal system leading from the lower end of the tunnel has been finished, and it is hoped that in 1909 the Gunnison River will be flowing through the tunnel into the fertile valley renowned for its apples and other fruits.

In Idaho a large dam has been built across Snake River to take out the water of this stream and irrigate about 80,000 acres of land which was formerly desert and covered with sage brush. Here hundreds of families have been established within the last two years. Thousands of acres of land have been cleared and are now in crops. Farther down Snake River in the vicinity of Boise a dam is being built across the Boise River, taking the waters into a large depression known as Deer Flat, where a reservoir is being formd by building two large earthen dams. These have been completed and the feed canal is now in operation.

In Kansas it has not been found possible to store water in open reservoirs, but it has been discovered that the gravel underneath the bed of the Arkansas River is saturated with water which can be recovered by lifting it from twenty to thirty feet. Accordingly a series of wells have been sunk diagonally across the broad valley for a distance of about five miles and from these water is being pumped into a cement-lined canal which, crossing the valley, goes under the river and reappears on the north sids, where it enters the head of the Farmers' Canal. Power for operating the pumps is derived from steam turbines, with electrical transmission.

Other works have been constructed in other States and Territories, or are in course of construction, but we have mentioned enough to show the greatness of this work. By a single work in Arizona 160,000 acres of land that would not produce anything is brought to the highest productive power. In Colorado another work brings in 200,000 acres, while one in Idaho brings in 80,000 acres. These are but single acreage reports, while in hundreds of other places numerous smaller tracts but aggregating much more, have been reclaimed, and the work has but just begun. As to the far reaching benefits received from this government irrigation we quote from Director Newell:

"These outposts of civilization are infinitely more valuable in proportion to the number of persons concerned than of apparently worthless open land.

"Out on the boundless tract of grazing land the little irrigted community finds it profitable to maintain large herds of cattle and sheep. The losses on these are small, as they can be provided with winter forage from the irrigated fields. The great grazing areas can thus be utilized to better advantage than in the past. Large profits are derived from the vast stretches any other communities of the size in the country. As before stated, they bring into use, or render possible the development of mineral and grazing wealth and also furnish opportunities for the development of the water powers, forests, and other natural resources. They encourage the railroad builder and the promoter of all kinds of enterprises; and as previously stated, they have probably the largest beneficial influences per capita upon the manufacturing and transportation interests."

We would not minimize this important work, and we commend the enterprise of the Roosevelt administration which undertook it, and is so successfully carrying it out. Whatever makes a man and woman a home, and provides an opportunity to bring up an independent and intelligent family, is a beneficient work and deserves the plaudits of the human race. But there is a feature connected with this reclamation service that is strangely overlooked.

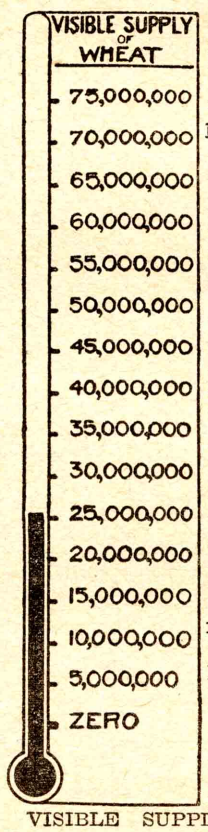
In more than thirty States of this Union there are millions of citizens who have bought lands and paid for them out of their own earnings and savings. They have expended other dollars laboriously earned by themselves in taming those lands and making them more productive. In accordance with the law of supply and demand these lands have attained a value which according to the laws of

(Continued on page 5)

THE FARMERS' POOL

On more than two million farms in the United States the 1908 wheat crop, that is to be the most important factor in feeding the people of the world, is approaching maturity.

In possibly two thousand offices in the large cities of our country a small army of people are plotting and scheming how they can get hold of the most of this crop at the least cost.



VISIBLE SUPPLY

May 16,	25,444,000 bu.
May 9	26,979,000 bu.
May 2,	28,344,000 bu.
April 25,	30,968,000 bu.
April 18,	30,528,000 bu.
May 18,'07,	54,109,000 bu.

Notwithstanding that the present price of wheat is one dollar and more per bushel in the chief market, these few people who make millions by gambling in the necessities of life, are buying and selling the new crop at 85 cents a bushel and some of them predict that they will buy it at 75 cents.

And while these few people are laying their plans to transfer the 1908 wheat crop from the farms to the great elevators which will result in a lowering of price and the more they can transfer the lower the price will be, what are the millions of farmers doing to secure them a fair return for a season's hard toil and a just profit on their investments?

Is it a fight between possibly 2,000 grain brokers, speculators and gamblers and more than 2,000,000 farmers who grow wheat, or is it a surrender of the farmers to the speculators?

At present it is the latter. No concerted movement has been made by the farmers to protect themselves. But UP-TO-DATE FARMING, ever the farmers' friend in need, comes to the rescue again as it has done so many times in the past. It will arouse the farmers to a sense of their danger, show them a plan of action and save to them the fruits of their honest toil in producing that on which the people of this country, and many in foreign countries must depend for existence.

The plan is set forth on pages 10 and 11 of this paper.

We will, through the advice and direction of this paper, oppose the farmers' power against the speculators' power and as the farmers have, first, what the others must have before they can possibly have any power, we certainly hope to win—we will if farmers want to win and deserve to win.

The present conditions favor the farmers in the fact that the visible supply in this country is e lowest it has been for may years at this season, being 25,444,000 bushels, and going down at the rate of about two million bushels weekly. The visible supplies in foreign countries are also small and mills and elevators at interior points are practically empty and awaiting the new crop to stock up.

The next three months is the critical time. **If farmers will not dump their crops and increase the visible supply materially, the price can be held to $1.00, or above it if deemed desirable.** Hence the problem is to prevent farmers from dumping. And this can be only be accomplished now by the plan of the Farmers' Pool.

This is a matter of enormous importance and should enlist the co-operation of every present reader of UP-TO-DATE FARMING to extend its circulation until it is read by every wheat grower in the country. Only by increasing the circulation of this paper can the pool be made successful. The present subscribers represent practically every community; therefore, if they will see their neighbors and get their subscriptions the work can be done quickly. Those who cannot do this, or who cannot see all their neighbors should send their addresses for sample copies and literature. We also have prepared a series of six Dumper Post Cards which will bring nearly every farmer to the pool who receives them. We will furnish these cards free, in sets of six, as many sets as you will use and will pay for mailing them. How many sets do you want?

The time is short, action must be prompt and then the victory will be decisive. The visible supply is now almost down to 25,000,000 bushels. All we ask is that it be kept there and even then the demand will take about one and three-quarter million bushels daily. This will absorb all the wheat the poor farmers must sell and all that the "Goose" dumpers dump. If each loyal farmer will now do something to make the dumpers as scarce as possible, the Farmers' Pool will be a complete success.

Won't it be grand when July, August and September come and the gamblers will have to pay $1.00 a bushel or more on basis of the Chicago market to fill their 85 cent contracts? It will be such a lesson to them that they will never attempt to force the price of good wheat below $1.00, which the largest crop that can be produced should sell for. Dollar wheat must be the farmers slogan and every issue of UP-TO-DATE FARMING will be an inspiration that will strengthen the old-time dumpers to become controllers of the supply to only meet the demand. "Readers of UP-TO-DATE FARMING are not dumpers," has come to be a farmers axiom.

WITH UP-TO-DATE'S PUBLISHER

Watch your label. Some subscriptions expire each issue and as the paper is stopped promptly you will miss some valuable numbers if you delay in renewing.

Farmers are very busy now but this is not a good excuse for not renewing their subscription nor for not getting others to subscribe. A large circulation of UP-TO-DATE will produce conditions in farming that will shorten farmers' hours of work and at the same time they will have more money. While if the mission of this paper cannot be acomplished farmers will always have to work long hours, without the ability to hire needed help, while the exploiters will reap the profit. These things are true.

Read pages 10 and 11. Since the pledging plan has not been continued by the people put in charge of the Grain Growers Department, this plan announced on these pages is the only alternative. And it is a good substitute and can be made much more effective on a short campaign, as is necessary with wheat than a pledging campaign.

We want a pooling brigade. We want a good man in every community to see all the farmers and have them join the pool. Write for terms. This is not confined to wheat alone but to all crops.

The publisher does not, as a rule, send a special acknowledgement of receipt of new subscribers or renewals. The date on your wrapper will be the acknowledgement.

SUPPLY TO MEET THE DEMAND

THEY MUST ALL ADMIT IT

The following article contains some flagrant errors, but we copy it entire because it is an editorial in a paper which has ever been the bitterest opponent Up-to-Date Farming and the Society of Equity ever had. Our contention is so reasonable, so truthful, and so entirely in consonance with the principles of right and justice that sensible men, whether broad minded or not are compelled to admit it, however they may disguise the surrender:

By the visible supply of grain is meant grain in elevators in city and country and that now in the course of transportation. By the invisible supply is meant the grain held in farmers' cribs and granaries. It is the visible supply in connection with the demand that determines the price on the markets. Whenever a farmer hauls his grain to town to the elevator it at once becomes a portion of the visible supply and has an effect on the markets. The grain on the farm is an unknown quantity and has no bearing whatever upon the markets except as it may be estimated by the government and by grain dealers. It is of course an impossible thing to furnish any accurate estimate of this invisible supply. The government furnishes it but once a year, and its estimates are at best but guesses and of little value except for purposes of comparison.

Farmers complain bitterly of the evils of speculation in grain on the various boards of trade, and many of them would like to see the stock exchanges wiped out altogether . We investigated this subject pretty thoroughly fifteen or twenty years ago, sympathizing fully with the popular belief, but came to the conclusion that, notwithstanding all their evils, none the less these exchanges are essential to the proper distribution of grain.

Two of the worst evils connected with them are the temptation they offer to farmers to get rich quick by "bucking the tiger" and "taking a flier on the board of trade," and they can do very much to relieve the country of these abuses by simply staying out. They have no business there, anyhow. We have never yet known a farmer to get rich by speculating on the board of trade; but we have known many old men and young men to lose all their spare money and some of them a good deal more than that. In fact, many of them have put a crimp in their lives which it took a good many years of hard work to straighten out.

The other great evil can be remedied also, if the farmers will simply hold their grain on their own farms, wherever it is possible, till the market suits them. We have never believed in the theory that farmers could make a combination or trust in order to force upward the price of grain, but we are firm believers in farmers holding their grain, where they are financially able to do so, until the market suits them. They can not hold cattle or hogs beyond a certain definite time with profit to another. Somebody must hold this grain between harvests. The place where it can be held at the least expense and without any injury to the farmer's interests is in his own bins. If those who have been striving so earnestly, sometimes wisely and sometimes unwisely, to organize a combination and cooperative marketing of grain will simply turn their grain in the crib until the farmer sells it acocrding to his own best judgment, they will, we think, make much greater progress than they have in times past.

In order to hold this grain it is necessary to stack it instead of threshing out of the shock. Grain threshed out of the shock must go to market because it will not keep. There is a large grain growing territory in the United States where it is practically necessary to thresh out of the shock. Therefore it is the more important that the farmers in the humid sections hold their grain off the market, and thus avoid glutting it, until such time as the world needs it.

The general holding of grain in granaries will make a corner in grain, which always results disastrously, absolutely impossible. By the small invisible supply farmers have been able to break every corner in grain that has ever yet been established; and as they become more forehanded and better able to hold their grain, corners will be a matter of history only.

In the above article is just about all Up-to-Date Farming ever contended for, and it concedes the contention of the Society of Equity. Hold the products on the farm until the demand is ready for them at an equitable price, a price in proportion to the general level of values. All else is mere detail. To accomplish that a national organization and general co-operation are necessary; an annual meeting representing all crops must be held to consider supply and demand, and determine minimum prices for that year's crops. We contend that the principle will apply to other crops as well as to grain. If not, relief can be no more than partial, and we do not agree that grain threshed from the shock cannot be held. The writer has held grain so threshed, and has seen others hold it. It is only a question of being prepared to store it. It is better, perhaps, to stack the grain and let it dry out in the stack, but it is not essential.

Neither do we agree that Exchange gambling in future prices is anything at any time but wicked and demoralizing. It belies both supply and demand, unsettles prices and demoralizes the market. The writer quoted says its worst feature is that farmers indulge in it to their ruin. Farmers very seldom indulge in it, and when they do, it is very apt to bring its own speedy punishment just as any other gambling on anybody else's game is almost sure to do. And if it is so bad for farmers, how can it be good for the general public?

But the editor from whom we quote has got one foot out of the mud. A few more prods from his awakened readers will induce such a lunge as will jerk the other foot out. Meanwhile we can reiterate what we have so often said to farmers: your hope is in steady and reasonable remunerative prices; a supply to properly meet the demand but not to ruinously exceed it; an organization to secure co-operation necessary to accomplish it, and that means the Society of Equity.

CROP SECRETS

A bill framed by the House committee on agriculture, making it a punishable offense for any government official or employe to divulge prematurely any government statistics, such as those relating to cotton and grain crops, was not long since favorably reported to Congress by the committee having it in charge. At this writing it has not yet been made a law, but by the time this paper is printed it may be.

So the government has crop secrets which must not be revealed "prematurely." In whose interest are those secrets or statistical "facts" collected? The Department of Agriculture is supposed to be maintained in the interest of agriculture and for the benefit of farmers. Whatever it does is paid for out of appropriations made ostensibly for the assistance and encouragement of farming. If the crop statistics it gathers is of benefit to farmers the quicker they get the information the better, and if any facts are gathered which it would be improper or harmful for farmers to know until a specified time, then it would certainly be as well not to gather that information at all. It is treating farmers as grown-ups treat children—it may do for them to know things after awhile, but not now.

But perhaps the purpose is to keep the information from somebody else. Though that cannot be, for the Department of Agriculture is working entirely for farmers, and is doing nothing for which anybody else cares only as all are incidentally interested in the success of farming.

That is the proper and natural view, and it ought to be the truthful one, but the fact is the crop information, the so-called statistics of crop conditions and probable yields, with visible supply, amount in farmers' hands, etc., is of no benefit at all to farmers, but it is of great benefit to speculators and gamblers in the prices of products, so much so that individual gamblers would give tremendous sums for the reports prematurely or ahead of the others, just as race track gamblers would give large sums to know before the betting ceased, what horse would certainly win. Crop gamblers have actually bought the Department's figures and created scandals in the Department of Agriculture, hence the benefit they are to the gamblers is not only an admitted, but a proven fact.

Indeed the proposed law is an open confession that evil may grow out of those reports; that some one may take advantage of the statistics furnished, and that it is somebody engaged in something evil that does so, else it would not be harmful for them to obtain the facts at any time. And the painful thing about the tacit confession and the proposed law is, that its object is not to eradicate the evil, or even to check it in its operation. Its sole purpose is to treat all engaged in the evil practice with impartiality, giving each an equal chance and equal benefits from this work of the Department of Agriculture.

And it is very clear that the parties who thus take advantage of and benefit by the statistics collected by the Department of Agriculture are not farmers, for there is no pretense that farmers are trying to get the information prematurely. It would neither harm nor benefit farmers if every individual report from which the statistics are compiled were published the moment it was received, nor would such publication enable the farmers to harm or benefit the rest of the world. Therefore the llaw is not aimed at farmers. Its only design is to secure impartial treatment of the evil doers, the market gambler.s

If the Department of Agriculture wishes to work for the good of the class in whose interest it was established, it can better do so in this regard, and at one stroke of the pen blot out the necessity for so humiliating a confession as the law implies, by withholding that upon which market gambling feeds—cut out entirely those demoralizing monthly crop reports, and issue only annual reports of actual production.

ONE BUYER FOR FOUR NATIONS

It developed in a recent investigation by a committee of the United States Senate that four nations—France, Austria, Spain and Italy—each holding tobacco as a government monopoly, purchased all the American tobacco going into those countries, through a single individual. That individual, said Secretary Wilson, fixed the price he would pay, and the growers had informed him that the prices thus made were so low they seldom got any profit on the tobacco they produced. Whereupon the Secretary said he advised the growers to organize and sell their tobacco through a single individual, and thus compel more satisfactory terms. This was done, the Secretary declared and the growers were now getting better prices.

This is the pooling plan of the Society of Equity, and the Secretary of Agriculture evidently got his inspiration from that. At all events, it is encouraging that the method receives such high endorsement, and every tobacco grower that resists the appeals of Equity, refuses to co-operate with his neighbors in so laudable a work for their own salvations, who still stands loyal to the single buyer for four foreign nations, and acts in concert with the American trust to keep prices down, is doing much as the Tories did when our Nation was fighting for independence. Such people should at once conquer their prejudices and unite with their neighbors for the common good.

Shall *the* Home Merchant be Patronized?

It is stated that two mail order houses in the city of Chicago did a business of $150,000,000 last year. This is another fair sample of monopoly swallowing up the business of the country. This monopoly is fostered almost entirely by members and non-members of trade unions, who buy their tools from such houses; by farmers who buy many articles that they use. Taking for granted, as a matter of argument, that perhaps at times, some small sum of money might be saved on a purchase for which the farmer or other buyer must pay before he sees the goods, can any members of any society or any in fact in the United States, afford to not patronize his local merchants?

In the building of any vast business, whether it be a tobacco trust, an oil trust, a beef trust, a railroad trust, or a merchandise trust, those who assist in the building of such vast aggregations of wealth by patronizing it, will find the day when that power is turned on them, and they will lose more than they had gained.

By sending the money away from home, the person who patronizes the mail order house impoverishes his local merchant; prevents his local merchant from bringing on well-assorted stocks or large stocks of merchandise; prevents the local merchant from employing more help, which usually comes from the ranks of his patrons; prevents his local merchant from assisting worthy local enterprises, either the church, lodge, factory or political movements, that are nearly always for the benefit of his community.

It prevents the growth of population in the community in which the patrons of the mail order houses live, and in that way reduces the value of land, in which the farmer in particular is interested. The greater number of people in the community, the better should be the price of land.

By patronizing the mail order houses, the person patronizing such houses is often deprived of the privilege of buying many articles that he needs immediately that would be of great benefit to him and whose cost could probably be saved many times over if he could but be supplied at once.

By refusing and failing to buy from his local dealer he loses the opportunity of buying goods that he actually needs, and which by comparison, he could pick out the best and the cheapest.

It is a well known fact that mail order houses get the most of their business based on low-priced goods. and when a low price is named, invariably, low ciass goods are furnished.

It is also a well known fact that mail order houses buy seconds and goods of low quality. As a rule, of course, they keep some standard goods that they offer at less than legitimate profit, which blinds the mail order house customer and makes him believe that everything the mail order house offers is good quality and low in price, which, of course, is not true.

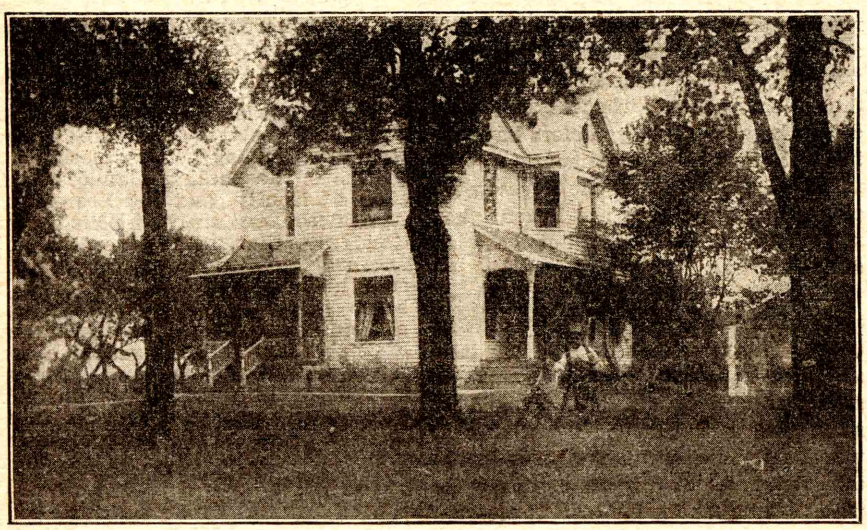
It behooves every person, whether he be farmer, mechanic, professional man or capitalist, to buy everything that he needs from his local merchant when it is possible to do it; to do everything that he can to encourage the local dealer and local manufacturers. The sympathy of your own people is a thing much to be desired and very much needed.

It is a fact, and can be proven, that many former successful merchants in communities that were prosperous previous to the advent of the mail order houses, have been bankrupted and reduced to poverty, and the people in such communities can get only the bare necessities, and have to make frequent trips to nearby towns in order to make selections that they formerly could obtain at home from their local merchants.

We appeal to all persons to patronize their local merchants always, and to never let the small difference in price on a few articles stand in the way of patronizing the local merchant, for if the communities in which the farmer in particular, as well as the mechanic, professional man, and capitalist reside, the value of real estate is reduced, and the price of butter, eggs, chickens, live stock, fruits and vegetables, the farmer will lose more by being deprived of a good market for such produce close to home than any small difference he might pay his local merchant or local manufacturer for their goods, wares or merchandise.

Is it consistent to undertake to fight the trusts with one hand, the trusts that have reduced the price of labor and farm products to such an extent that your calling is the poorest paid in the land and help form another trust with the other hand, because these trusts are willing to sell to you in some instances at a price slightly lower than your local merchant can sell the goods to you for and get a living profit?

CONSISTENCY.



AT HOME WITH OUR UP-TO-DATE PEOPLE

This illustration is of the home of Mr. E. W. Radcliff, near Monroeville, O., and Mr. Radcliff is seated on the lawn. He was born on this farm in 1844 and with the exception of 3 years spent in Colorado, has lived on and worked this farm of 110 acres. Mr. R. is one of Erie county's up-to-date farmers, and always takes a lively interest in public affairs of merit. In conversation with the representative of this paper he stated that he formerly considered the only reason for low prices was over production until he read the Third Power book. He now sees that the trouble came through lack of control of the crops and bad distribution. He is a member of Local Union 6013 of the Farmers Society of Equity, organized March 7, 1908, with 16 members and which now has 71 members.

Net and Gross Earnings

Many months ago when the two-cent passenger fare on the railroads went into effect in so many States, Up-to-Date Farming warned its readers that they might expect to pay higher freight rates on account of it. Our position was well taken. Freight rates have been advanced, and the officials of competing lines are still holding frequent conferences to consider still further advances. The fact that the reduced passenger fares and other restrictive laws that have been enacted have not reduced the gross earnings of the roads does not satisfy them. Their restiveness under restraint, and what seems to be an inordinate greed, prompts them to higher rates, that they may draw more heavily from the public and have more money to spend.

They admit that since the two-cent fare went into effect, and under the operation of the other restrictive laws, the gross earnings of almost all the roads have contantly increased, but they claim the net earnings have diminished. They do not seem to realize that the companies and not the public are responsible for the net earnings. The net earnings are the difference between the gross earnings and the expenditures. If, therefore, the gross earnings are greater and the net earnings less, the expenses must have been increased. With the increase of expenses the public has nothing at all to do. The employment of other officials, the increase of official salaries, etc., pertain entirely to the companies, and no matter what the gross earnings might be, these could be made to absorb it until the public might be taxed beyond endurance, and still the net earnings be kept below the figure set therefor.

The relation between gross and net earnings may well be considered by other institutions as well as by railroad companies. Too often law making and tax levying bodies, seeing the net revenues running low, consider no remedy except an increase of taxation, whereas the better remedy would be found in a reduction of expenses. The present session of Congress is a case strongly in point. Legislation actually demanded by the people, and that would have been of great public benefit, has been stubbornly held back or ignored, from cowardly fears that the action demanded might unfavorably affect the vote at the coming general election; but through it all appropriations have been made with a strange recklessness until expenditures have run well nigh to a billion, a sum inconceivable in ordinary transactions. Corporations and legislative bodies must learn to maintain the net earnings or savings by a proper holding in of expenses, instead of all the time by an increase of taxation or of charges.

Too Much Stuff

Dispatches from Pittsburg inform us that the Pennsylvania freight yards in that city have been glutted for several weeks at times, and the agent declares they are receiving too much stuff. The receipts are so heavy that the railroad for the first time in its history has been compelled to use tracks that were never designed for this service, but are kept entirely for a metal yard. Theses tracks this season been used to hold train loads of farm produce.

Pittsburg in this respect is but a reflex of almost all the other market cities, and it can mean but one of two things: either there is an under consumption of fruits and vegetables, or too much is being produced. The former contingency no doubt cuts an important figure in the situation, for the inexcusable panic created to force legislation, put so many people out of employment and compelled them to forego the use of these articles, that a surplus accumulates where, under better conditions, all would be taken. But it is quite apparent that there has been an excessive production.

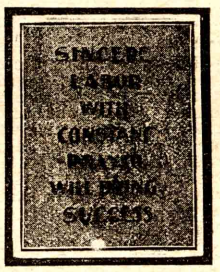
Disastrous as this is to the buyers and receivers of the fruits and vegetables in the cities, it is immeasurably more disastrous to the producers and shippers. Glutted markets make beggers' prices; and it is often true that instead of receiving checks in payment for the stuff, the shippers receive bills for freight balances the entire shipment failed to pay.

We do not wish to say anything to discourage growers; but we do wish to discourage the unbusiness ways of production and shipment. When enough is produced do not strain every nerve to produce more; and when the markets are glutted do not persist in throwing other carloads upon the rejected pile.

How are farmers to know these things? Just as other people know matters pertaining to their business interests. The mail, the telegraph and the telephone; the rural delivery and the press, are as accessible to farmers and orchardists as to anybody else. It is possible that, at the very time of which we write, there may have been markets less than a hundred miles from Pittsburg, possibly some that the shipments actually went through to get to Pittsburg, that would have eagerly taken the surplus had it been put within their reach. But year after year, such shipments had been made to Pittsburg, and to Pittsburg they must go.

If we could only reach the hearts of the growers and induce them to organize so they could co-operate with one another to acquire the information so necessary to successful business, and then ship where the stuff is in demand, what a relief it would be all around, and how much larger would be the profit to the growers!

IT BOTHERS US



The motto to left was reproduced from a farm paper and the question naturally arises: When?

With the old-time speculators and exploiters pricing farm crops and farm papers teaching only to work and pray, how long must the average farmer wait for success? Will some brother editor please reply?

THE FARMERS' MISSION

We have fed you all six thousand years,
For that was our doom, you know,
From the days when we sinned in the Garden pure,
To thes days that vex us so.
You have burdened our lives, and our babes and wives,
Which we're told is your lordly share,
And if sweat be the price of your greed and vice,
God knows we have paid it fair.

Adapted from Rudyard Kipling.

Just Between Us

There is something on pages 10 and 11 that will interest you.

Read it all very carefully—it will pay you big to do so.

When you have read it send a club of four or more and help to make the Farmers Pool a stupendous success.

THE RECLAMATION SERVICE

(Continued from page 2)

the country and of right belongs to the owners. Every acre of the western lands reclaimed at public expense, increases the supply of land without adding to the demand, and thus, according to the law so often quoted, takes from the value of the land already purchases, and deprives the owner of a portion of the wealth he had already acquired. And when it is understood that the government gives away the lands thus reclaimed at public cost, the competition with the purchased land in the older States is all the more marked.

This is a selfish view, we admit, and we cheerfully waive it for the general benefit and the good of the homeless, but it is a logical view based upon Right, and the fact that the ignoring of it by the law-makers is accepted without a murmur by the land owners in the older States, shows a self-sacrificing patriotism and love of humanity that is not given the praise it deserves.

But take another view of the situation that is just as cruelly ignored in these reclamation projects. There are scattered all over this country millions of farmers who are cultivating their own lands or who at an annual cost for rent are cultivating lands that belong to some one else. On these lands by dint of the most preserving industry, these farmers are producing crops every year; and they are producing an abundance to supply the needs of the world at prices which sometimes fail to pay for the labor devoted to their production. Every pound and bushel produced on the irrigated lands made productive by the general government, comes in direct competition with that produced without government aid by farmers of the non-irrigation States. Such competition necessarily cuts down the price or reduces the value of the products grown by the farmers already established in the States that, unaided, have heretofore fed the country. But who has ever ventured to suggest this fact in the halls of Congress or in the public press? Farmers are so accustomed to competition that they struggle on in spite of it, and like the patient mule whose driver's only notice is another lash, they do not expect relief therefrom. And yet such farmers are entitled to as much public consideration as are any other.

Note the paragraphs above quoted. The government waters the stock of these western farmers, besides furnishing them pastures where only sage-brush grew before. Nine-tenths of the farmers, those who have bought their farms and by their industry made the country great, must not only supply their stock with water at their own expense, but they must devote some of their best and broadest acres to their pasturage. Note further in the quoted paragraphs the leading beneficiaries of western irrigation. The "mineral and grazing wealth." "the water powers, forests, and other natural resources," "the railroad builder and the promoter of all kinds of enterprises," and "the interests." Pray where do the farmers of more than thirty States, who virtually pay for it all—where do they come in? They get their benefits (?) in the rival production of orchard and field, a government guaranteed production with which the natural farmer cannot complete.

Now, do not call us a croaker. We are not opposing the reclamation of the arid lands of the West. We are simply doing what nobody else seems to understand, or cares, or dares to do, calling atention to the real effects of this work upon the greatest class of our people, and those who do most of the paying. All the classes outside of agriculture seem to think whatever increases production is the thing to be shouted for, and the farmers themselves have learned to accept it, and bend themselves a little more to their task. Let us repeat what nobody else has dared to say: So long as farmers produce enough to supply the needs of the world at reasonable prices, there is neither justice nor fairness in increased production, and there is no reason for it either in business or economics.

Must these irrigation projects be abandoned then in the interest of the farmers of the great States who have only nature to depend upon for the increase? We say Nay! Go ahead with the work that is making such wonderful progress. Reclaim the arid lands and make the deserts blossom as the rose. Hold out the glorious prize of a prosperous home to the enterprising homeless everywhere. But while millions of the public funds are being expended for the direct benefit of a favored few, and to multiply the the markets of shop and mill and mine and carrier, do something of corresponding benefit to the great class of farmers that bear the most of the burden. There may not be so great need for irrigation in the rain blessed States, though we have heretofore contended that it might be profitably employed in many places that produce fairly well without it. But roads are needed everywhere. How gladly this spring would the farmers of all the States have given their interest in the irrigation dams and ditches of the West for good roads leading to their market towns, and how heartily would the business men, the manufacturers and the railroads have seconded the proposition. While the government is spending millions for irrigation in the rainless regions of the West., why not spend equal millions to build good roads for those who do not need irrigation?

And this can be done without a cent of taxation, or a dollar's increase of public revenue. When the flag and the Union were assailed, and the financial institutions hoarded the gold and the silver, the Nation issued paper money, to pay soldiers, to equip armies, to maintain war, and save the Union. That money did its work well—never once faltered or skulked, nor failed to perform its sacred and beneficent mission. When attacked by those who arrogantly claimed the right to furnish the money, the Supreme Court declared the government had the right under the constitution to issue it and make it a legal tender. If money may be thus created to hire men to kill people, how much more beneficent an act would it be to create like money to employ men to build roads to save those who feed the world from the mud incident to our soil and climate and enable them to get the food products to those who need them, and at any time when they are needed? Thus may irrigation go on in the West accompanied by road building in the States, and the whole country and all its interests be benefited except the selfish few who claim the supreme right to issue the money and to create panics whenever they can add to their hoards by doing so. Oh, for a Congress that could hear the voice of the people above the din made by the money changers!

WINNING FRIENDS

Real friends. We all need them. We may not have worldly goods but if we have friends we are rich indeed. The proverb says, "They are rich who have true friends." UP-TO-DATE FARMING is glad for the host of friends it has—how glad we cannot express. They are the subscribers who continued with us year after year, through adversity as well as through prosperity; through evil report as when reports are good—always with an unfaltering loyalty and undaunted confidence. Such friends are better than silver or gold.

And we are glad that we have been able to make the paper valuable to them, so helpful and to keep them so hopeful. We know we have not accomplished all we expected to to this time, but they and we know the reason and they know we have done as well as anybody could.

Now we want to win new friends. We want the circle of our UP-TO-DATE people to continue to grow bigger and then its strength will multiply to do good. Did you ever think seriously how that everything UP-TO-DATE does is for good? Our readers are different from the readers of any other paper and we believe they are better than any other equal lot of people in the country. It is wonderful how a paper influences its readers.

So we want a very great many more readers—friends. And we want our present known friends to introduce us to others so we can do them good also. As a means to do this please turn to pages 10 and 11 of this issue. Read them carefully. Present subscribers know that all we promise there can be aceomplished and the accomplishment means more for the American farmers than any other thing or things we can think of. Get all of YOUR friends into the pool and then they will be OUR friends, because we will do them good and WE WILL ALL WORK TOGETHER FOR THE GOOD OF EACH AND ALL.

This is the best opportunity that was ever offered for a million or more farmers to get acquainted with each other—All for a common object, directed by a common paper, giving the same advice about the same thing at the same time. In the Farmers Pool all will move as ONE MAN, all friends and helpers and each as powerful in demanding equity and fair prices as if he were multiplied a million times.

You must agree with all we have said because it is so plain and sound. So send us four names or more at once. Everybody will join the pool on request and you can make $1.00 for every four names if you want to. Do this and we will be glad, you will be glad, our new friends will be glad and we'll be glad altogether. The only people who won't be glad are the speculators, but they have been glad so many years that we need not grieve if they are forgotten for a long time.

"He, that is thy friend indeed,
He will help thee in thy need."

Editors of UP-TO-DATE FARMING

TO FORCE FARMERS

The produce dealers of New Orleans are discussing the question of organizing what they call an exchange, which is no more than a combination of the dealers so they may co-operate and act together in buying and price-making. The object is given in these very plain words: "By a general pooling of interest the Louisiana **farmers could be forced"** to comply with the requirements and accept the terms of the buyers.

Who can blame them? Everybody says business is business, and the more power one has over his business the more successful he is likely to be. Combination, co-operation, many working as one, increases power and enlarges profits. Why do not farmers take the cue? It is just as effective in their hands as in those of any others. It may be more so, for they are the producers and first owners of the stuff, and they necessarily have the first say as to its preparation and sale. And they are more helpless without such co-operation, because they are so widely scattered over the country, and act so independently of each other, though their farms may join. Let the New Orleans dealers organize, then, and do the very best they can for themselves; but let the farmers whom they are to "force," organize also, and see that all the business in this behalf is done in Equity, or, at least pool their interests as proposed by this paper.

THE FELLOW THAT'S DOING HIS BEST

There's a song for the man who is lucky and bold,
For the man who has fate on his side;
There are cheers for the folk that are jingling the gold
And are drifting along with the tide.
But the man who is striving to get to the land
And facing the hungry wave's crest,
We quite overlook, for we don't understand
The fellow that's doing his best.

But he has his rewards when the story is done,
Though we smile as he plods on his way,
For his own self-esteem is the prize he has won,
As obscurely he's stood in the fray.
And he knows the affections of home and of friends
And the pleasures of honest-earned rest;
There are peace and good-will, as the twilight descends,
For the fellow that's doing his best.

German Third Power

It is the English translated by an able German scholar. Ought to be read by every German farmer. Well printed, illustrated and cloth bound. Price by mail, postpaid, 50 cents. See that your German friends and neighbors read it.

J. A. EVERITT, Publisher, Indianapolis, Ind.

P&O POTATO DIGGER

One of the Most Useful of All Farm Implements.

You need the P. & O. Potato Digger not only as a matter of **economy**, but for **results.** The potato digging season comes when help is scarce and expensive, at a time when they leave the farm for the winter's work in the towns. Then is when you need labor-saving implements. At such times the **P. & O. Potato Digger,** on a fair-sized potato patch,

Will Pay for Itself In a Single Day.

One man with a team and this Digger will plow up **more potatoes** than a **dozen men with hoes,** and do it better, cleaner and more thoroughly. As this digger plows deep, it goes **right under the hill,** and turns up all the potatoes **without cutting, bruising or loss.**

The **truck** in front is adjustable either way, and holds the digger in line. The **revolving fender** prevents vines from clogging the beam. The **shaker** under the grate causes a continuous vibration that thoroughly sifts the potatoes from the soil, leaving them all exposed on the surface. The **runners** under the shaker carry the digger along evenly and smoothly, and prevents the jerking so common on other diggers, and makes them so hard to control. The P. & O. Potato Digger is the only one made with these runners. And last but not least, it is strong enough to **last a lifetime.**

It is a **low-priced** digger within the reach of every farmer, and you cannot afford to be without one. Now is the time to see about it. Ask you dealer for the **P. & O. Potato Digger,** and **insist on getting it.**

Write for **Beautifully Illustrated Pamphlet No. 41,** of interest to every farmer, and a **P. & O. Catalog,** which will be **Mailed Free.**

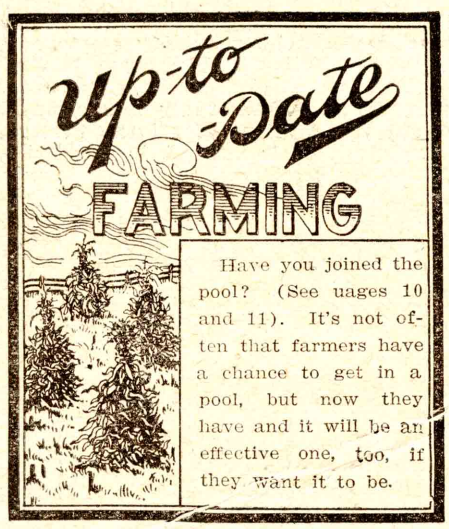
DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers



Have you joined the pool? (See uages 10 and 11). It's not often that farmers have a chance to get in a pool, but now they have and it will be an effective one, too, if they want it to be.

PRODUCTION

Behold the miracle! The clod so brown,
By farmer hand was deftly twirled,
And lo! It quick put on a crown,
And helped to feed a hungry world!

PASSING THOUGHTS

Few subjects are more vital to farmers than good roads. Passing from winter into spring brings this subject up with greater emphasis than orator or poet can do. A wheel clogged and a team floundering in the mud are understood without an interpreter. Are not good roads about as important here as irrigating ditches are in the desert?

* * *

Speaking of irrigation, we are reminded that there are some millions of acres in this country that are now worthless, but that could be made valuable lands by drainage. We may say in round numbers, that Florida has twenty million acres of such lands, Louisiana ten million acres, Arkansas five million acres, Mississippi five millions and so on, the country aggregating nearly one hundred million acres uninhabitable, but that drainage would make most productive and valuable lands. It would be pretty well in line with the conservation of our natural resources for the government to make some ditches to take water away from where it is not needed as well as to make ditches to take water where it is needed.

* * *

Hay makers need not be surprised if very low prices are offered for that commodity this year. There may not be much more hay made than usual, but the tail of the lobbyist's panic will still be dragging through the markets, and buyers will be slow to invest, and that will give speculation an excuse to beat prices down. Farmers need to be organized to protect themselves and control their own marketing.

* * *

The talk about the co-operation of farmers and merchants, or business men, is attracting quite a degree of attention. And why not? There are no other two classes whose interests are so interwoven, and who are naturally more kindly disposed toward each other, if a few mistaken theorists were not so constantly engaged in efforts to keep them at enmity. Logical friends should refuse to be made enemies.

* * *

When enough of anything is produced it is time to quit, isn't it? Whenever the price of anything goes below the legitimate cost of production and a living profit, there is too much of that thing on the market. There may not be too much made, but there is too much offered for sale at the time, and then farmers need controlled marketing—co-operation.

* * *

A good lesson for farmers to learn is that greater fertility is a better crop increaser than more acres. We want farmers to raise all they can until the demand is fully supplied, but we wish them to do it with the least but best directed labor and on the fewest acres. It is true that man must eat bread in the sweat of his face, but he was not required to do any extra sweating to enable somebody else to eat bread Hence it is only fair that he should have a reasonable price for what others eat.

* * *

Corn raisers ought to understand each other. So ought wheat raisers, hay makers, cotton planters, tobacco growers, and producers of all crops, so that all can co-operate together in justice and fairness. This is the essential doctrine of Equity. It may not have been so necessary years ago, but now that all other interests are combined so as to act in concert, no alternative is left farmers but to do the same. All these things can be brought about through this paper and the Farmers' Pool. See elsewhere.

POTATOES VERSUS TOBACCO

In order to reduce the over-supply of tobacco that seems to have been produced during recent years, the growers in Kentucky have determined to grow none or very little the present year, especially in the white Burley counties.

W. B. Hawkins is authority for the statement that potatoes will generally take the place of the tobacco heretofore grown. Mr. Hawkins himself usually grows 22 acres of tobacco. This year he will grow none, but instead is growing about 25 acres of potatoes.

Here the growers undoubtedly find potatoes a crop much easier to grow and get to market, and a single season will prove its adaptability to their soil, and whether or not it can be made remunerative. But it must be borne in mind that potatoes is a crop already extensively grown in the United States; that there are many quite large areas where it is as nearly the sole crop as tobacco has been in Kentucky; that the demand has been so well met that prices have never been excessive, but often so low as to yield but meager profits. However, considering transportation and the location of Kentucky compared with the potato areas, we can think of no crop less likely to injuriously compete with the original growers of the crop; and as this is but a temporary change to work off a surplus, we presume as little harm can result to other growers from the substitution of potatoes as any other crop that could have been chosen.

THE CONFERENCE AT WASHINGTON

President Roosevelt has set a new milestone on the line of national conferences in the conference of governors and prominent citizens called by him and held at the White House last month, to consider the conservation of the natural resources of the United States. Forty-four governors of States were present, and other distinguished citizens, educators and scientists. The President set a notable example in extending an invitation to the leading candidates for the presidency in opposition to his own party.

Just how close the distinguished conferrees stuck to the text is not a question of such great concern, nor need we consider how much or how little was accomplised by it, nor yet to inquire how well satisfied was the President with what was said and done, nor whether it was disappointing to him. It is enough that the conference was called, that the governors and others invited attended, that they spent two or three days together and talked of many things—all this is enough to make it a memorable assembly, and a fitting precedent to be followed by other administrations. Whether this conference accomplished much or not, such conferences, necessarily entirely non-partisan, may be made of unmistakable and immeasurable value, especially during the pending of particularly delicate national questions.

BETTER TANKS

The Middletown Manufacturing Co. of Middletown, Ohio, want us to ask our readers the following questions and report to them the replies:

1. Have you trouble with your tanks corroding or rusting out in a few years? Answer.... ...

2. Will a much beter grade of tanks, at a slightly higher cost and that will last much longer, be appreciated? Answer.....

These people say, if farmers want better tanks they can moke them and will make them on a large scale. Cut out this blank and send to us with questions answered.

Mr. Walker is a bright, well preserved old gentlman, but to his little granddaughter Mabel he seems old, indeed. She had been sitting on his knee and looking serious for some moments, when she said: "Grandpa, were you in the ark?"

"Why, no, my dear," gasped the old man.

Mabel's eyes grew large with amazement. "Then," she said in a voice full of surprise, "why weren't you drowned?"—Tit-bits.

BALES 15 TONS A DAY HAY

—often 18 and 20 tons. Such wonderful records are possible because our Gem Full Circle Steel Baler has a large feed opening, automatic brake device, small trip lever and long pitman travel. Either two or three stroke, and self-feed if desired. We will save you $25 or more in first cost and much more every year in repairs. Drop us a postal for prices and a free copy of our "Baler Book."

AMBITION TO BE SOMETHING

The writer of this has had much to do with boys and girls. Some he has found to be frank, open-hearted, and ambitious to be something. Others he has known that were secretive, sneaking, cunning, always ready to take advantage of very one they could beat. Some were anxious to work their way to an honorable position of usefulness, while others did not seem to care whether they ever accomplished anything or not. They were the human drones, the clods that everybody kicked.

It is easy to pick out the ones that won distinction. We want every boy and girl to be ambitious. The greatest failure on earth is a human life that accomplishes nothing. The boy must win his own credits; and he will do it not by jumping into great things, but by doing well the small things, each growing into greater. He cannot get above his fellows by holding himself aloof from them and sneering at them from a fancied height he himself has never attained, but by kindly sociability, always correcting his own faults by those he sees in others, and strengthening himself by what he sees of weakness in his associates. One may get ahead of his companions, but rolling stones back at them puts him no farther ahead.

Girls, too, must win their own victories. Society is too apt to make them believe the only thing they need to do is to win a husband, and in him they will have all other achievements. It is a mistake. The girl has a personal intellect to be cultivated, a soul to be expanded and enobled, and a life to be made individually useful, however it may be wrapped up in the welfare and happiness of another.

One thing is certain: Neither boy nor girl can make the world believe they are anything but what they are. The loud boast and silly pretense don't count. Society may be deceived for a little while, but it eventually applies the true measuring line, and sizes up each individual with unerring precision.

MICA
Axle Grease
Helps the horses.
Saves the wagon.
Pays the
teamster.

Mica Axle Grease has a long wearing quality, which makes it the most economical of all lubricants. Especially adapted to heavy wagons and hard teaming. Ask your dealer for Mica Axle Grease.

THE CORN SHOWS AND THEIR PURPOSE

Do not for a moment conclude that UP-TO-DATE FARMING is opposed to corn shows or great displays of agricultural products of any kind. We like for farmers to do their very best, else we would not have been during all these years laboring so assiduously to help them to do their best, And when they do their best we like to see the result brought together to show the world what may be brought from the soil, and how dependent that world is upon the clods so carelessly crushed beneath the thoughtless foot.

But we look deeper than the mere show of these displays. A contemporary, booming corn shows says: "When good crops are sold at fair prices, the necessities of life are freely purchased." And again: "There is both fascination and profit in producing larger yields." That seems to be the burden of the whole struggle—larger yields. The boast is made that the two states of Nebraska and Iowa have increased their corn crop more than fifty million bushels during the last three years. But is there no limit to the demand for corn? Does not its price depend upon the relation of the supply to the demand? If the supply is excessive must not the price be correspondingly reduced? Have not the farmers heretofore fairly met the demand for corn? The price is the measure of the relationship between the supply and the demand. If the ruling prices have been fair and reasonable then the supply has been adequate. If the prevailing prices have been excessive, then the supply has been insufficient and more corn ought to be produced. We may leave the answer to this question not to the farmers alone, but we may safely refer it to the promoters of the expositions, and even to those who are constantly urging increased production of corn. They admit that the prices paid for corn have never been excessive, often below the line of actual cost, but they ignore the fact that increased production when the demand is already supplied must inevitably lead to a reduction of price. They are therefore working not in the interest of farmers who produce the corn, but in the interest of those who buy the corn. There is where they and UP-TO-DATE FARMING differ.

A Fascinating Book on Outdoor Life

We were made happy the other day by finding in our mail a copy of "Guns and Gunning," written by Dan Beard, the noted outdoor writer.

The book has one chapter on the birds that frequent the beaches and marshes of our coasts and rivers, giving practical directions about boats and clothing. One whole chapter is on the rifle, how to shoot with it and care for it. Another is on the shotgun. Another is on markesmanship and the history of firearms. There is a chapter on water fowl, how to hunt them, the best decoys and blinds, the guns and ammunition best suited for shooting the different kinds, the best boats to use, the best clothes to wear. Grouse, woodcock, quail and prairie chicken shooting is the subject of still another chapter, while one whole section is devoted to camping and camp life, with practical suggestions on tents, bedding, cooking. camp duties, packing, and so on.

The book contains six full-page halftone illustrations of hunting scenes. It is handsomely printed on heavy paper and published by the Stevens Arms and Tools Co. There are two editions, one bound in green cloth boards for 30 cents; the other bound in paper with hunting scene in three colors, for 20 cents.

Every man who ever shot a gun or followed a dog will vastly enjoy the book and it ought to be in the hands of every boy. It will make him a better, brighter, more level-headed boy and a cooler-headed, better disciplined man. Send for the book, read it for yourself, and give it to the boy for his own. Write the J. Stevens Arms and Tool Co., 225 Front St., Chicopee, Falls, Mass.

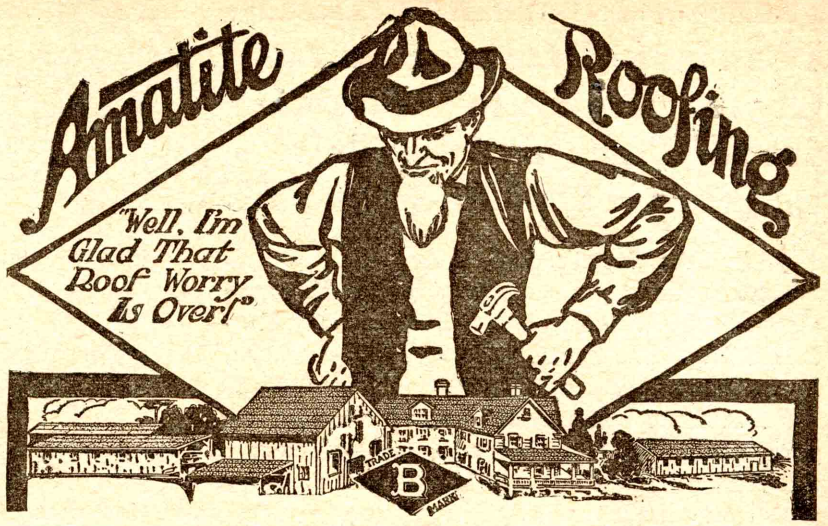
A LITTLE OF THE SAME

"You say you were in the saloon at the time of the assault referred to in the complaint?" questioned the lawyer.

"I was, sor," replied the witness.

"Did you take the cognizance of the bar keeper at the time?"

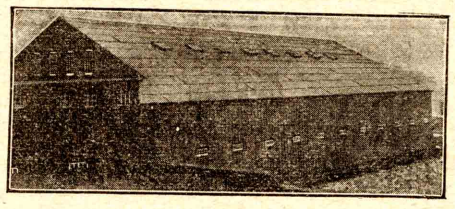
"I don't know what he called it, sor, but I took what the rest did."



PAINTING a roof is work, buying the paint is expensive. Both are needless if your roof is Amatite. No painting—no repairing. That's the story of Amatite.

It means a tight roof—an economical roof—a durable roof.

Do not confuse Amatite roofing with



STORAGE WAREHOUSE AT PITTSTON, PA. COVERED WITH AMATITE

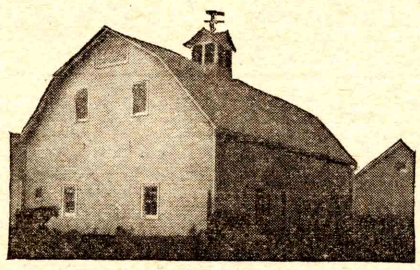
the ordinary smooth surfaced kind. It is in a class by itself.

Many so-called "ready roofings" are not "ready" until they get a special coat of paint, which you pay for extra,—if not at once, surely a year or two after they are laid.

Amatite needs no attention of this kind.

When you have finished nailing it on your roof it is a complete roof which needs no painting.

It has a top surface of **real mineral matter** — Amatite — which not only makes painting unnecessary but resists storms and snow better than paint or coating of any kind.



BARN AT PARK RIDGE, N. J., COVERED WITH AMATITE

Beneath this mineral surface are double layers of Felt and Coal Tar Pitch—the same waterproofing that is used by the United States Government at West Point, at some of the Navy Yards, at the New York Custom House, and many other such buildings.

It is the **greatest waterproofing material known,** and you are sure of getting it only when you buy Amatite.

Amatite is an excelent fire retardant.

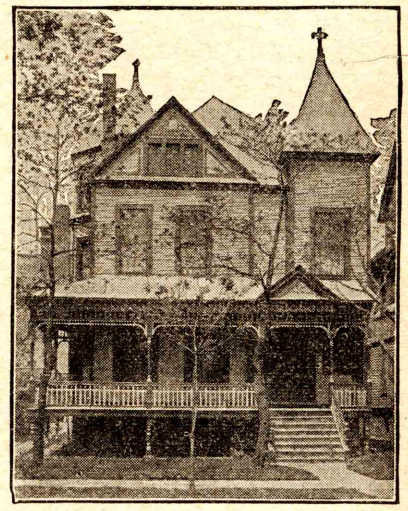
Another sourse of satisfaction in buying Amatite is that it can be put on by anyone.. No special tools or skilled labor required.

Amatite is easier to lay than ever this year. The liquid cement for the laps does not require heating before use.

A three-inch smooth margin is left at the edge of the sheet so that the laps will be tight fitting and easily cemented. The large headed nails which we furnish save fussing with caps, which rust easily.

You save both money and labor when you use Amatite.

When the roofing question comes up, ask yourself—Are the old methods good enough for me, or do I want something new and better?



AMATITE ON A COTTAGE ROOF

If you do this you will surely buy Amatite. No progressive man would do otherwise.

FREE SAMPLE

We should like to send you a Free Sample of Amatite.

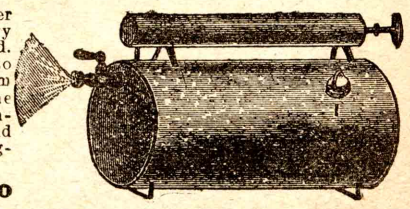
At the same time we will send you a handsome little booklet which shows many roofs where Amatite has been used with great success. Some of these may be right in your locality. Like the sample, this is sent without charge. Write today to our nearest office and you will learn something to your advantage.

BARRETT MANUFACTURING CO., New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Allegheny, Cincinnati, Kansas City, Minneapolis, New Orleans, London, Eng.

Lightning Compressed Air Sprayer, $1.50

Capacity 2 Gallons. Made of Heavy Galvanized Iron

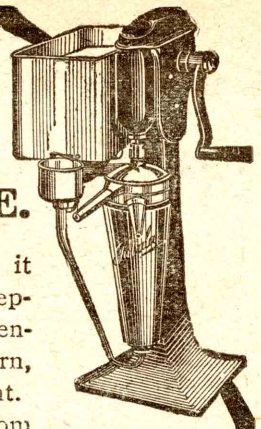
THE most convenient and handy compressed air sprayer on the market. Where a 4 gallon sprayer is too heavy to handle conveniently, this is just what you need. Well made, strong and durable. We can recommend it to our customers. Has a clean-out hole in bottom from which the valve can be oiled, which should always be done before putting it away after using. We furnish latest improved nozzle with each machine, for fine spraying and can be adjusted for tree spraying, washing windows, buggies, etc. Will throw a stream 15 feet high.



Regular dealer's price $2.00, **our price only $1.50**

O. K. SEED STORE, Indianapolis, Ind.

The Name "Tubular" on a Cream Separator Stands for the Same as "Sterling" on Silver—THE BEST MADE.



What the Tubular does in the dairy puts it foremost—twice as clean separating as other separators at Fairmont, Minn.; twice as clean at Kendall, Wis.; six to ten times as clean at Scotsburn, N. S.; fifteen times as clean at Gananoque, Ont.

But these competitions were far away from your home. Well, try it out in your own dairy, and see whether the Tubular is sterling, whether it will do better for you, with your own cows, than any other process or separator. No cost to you. Just write us you want to know what the Tubular can do for you. Ask first for Catalogue No. 136. It's a good introduction.

THE SHARPLES SEPARATOR COMPANY,
West Chester, Penna.

Toronto, Can. San Francisco, Calif. Chicago, Ill.

MORE MONEY
From Your Cows and Much Less Work In Getting It.

If you could see the Real "DIFFERENCE" between the NEW BUTTERFLY CREAM SEPARATOR and any other made—Difference in amount of the cream you get; Difference in the quality of cream; Difference in the way the machine runs. Difference in the number of times a minute you have to turn the crank; Difference in the way the milk is aerated and purified while being separated; Difference in the time and trouble it takes to clean the skimming device—you would say, as hundreds of others are saying today—"I'll get the NEW BUTTERFLY CREAM SEPARATOR."

If you could see how to make easily $10 to $15 more a year on each and every cow you keep, and still do it with less work for your wife and yourself, you'd say: "I'll get a Cream Separator."

OUR PATENTED ALUMINUM CORRUGATED SKIMMING DEVICE makes the New Butterfly Cream Separator **different** and **8 times as efficient** as any other machine. Every drop of milk that enters the bowl of the New Butterfly Cream Separator is actually put through the skimming process **8 times.** This guarantees complete separation, and you can't fail to get **ALL THE CREAM.** New Butterfly Cream Separators are sold as they ought to be. Not by agents, but direct from our factory to your farm. **Freight paid and on 365 days' trial.** Send today for illust'd catalog.

For average use, we recommend No. 4¼, capacity 450 to 500 lbs. of milk per hour. **PRICE** delivered at your town— **$39.80**

ALBAUGH-DOVER CO. Capital $1,000,000

If a colt and calf and lamb and pig,
Were taken from the farm today,
Farm incomes would not be so big,
And hunger drive feasting away.

CREAMERIES SUCCESS AND FAILURE

During the past few years, says a bulletin of the Department of Agriculture, there have been built in the United States several thousand creameries, many of which have been successful from the start, while others have failed after a few months operation, and some failed before starting up.

The cause of many of the failures was a lack of cows in the locality to supply a sufficient quantity of milk to keep the creameries running. The enterprise was undertaken without due consideration of the surroundings. Others in the line of co-operative creameries, failed for lack of proper organization—most likely from excessive cost of equipment. Agents representing the manufacturers worked up organizations to put in co-operative creameries, the main purpose being the sale of the equipment, the needs of the locality or its ability to supply and operate one profitably be very little considered. But there is a class of so-called promoters that are far the most dangerous in this respect. They buy the equipment on terms with the manufacturers to be delivered only on order after having been sold. They then make their own selling prices and are responsible to no one. A community that falls into the hands of these promoters is to be pitied. They are nothing less than sharks. Their only interest is forming the company and selling the outfit. They never consider the surroundings, do not hesitate to misrepresent the probabilities, and do not care who loses so they get their pay in cash or good paper, and usually at two or three prices.

As a protection against these swindles, (they can be called little less), the Department has issued a bulletin giving the approximate legitimate cost of creameries. A building say 28 by 48 feet should cost from $800 to $1,400, depending upon location, cost of material and labor. Such a building should consist of a main work room, engine and boiler room (including space for refrigerator machine), coal room, refrigerator, store-room, and office.

Machinery for a hand-separator plant, consisting of 15-horsepower boiler, 10-horsepower engine, combination churn with a capacity of 600 pounds of butter, and other necessary apparatus, will cost approximately $1,200. Machinery for a whole-milk plant will cost about $1,850. This equipment will handle from 1,000 to 1,200 pounds of butter per day. If a refrigerating machine is included the cost will be from $600 to $1,000 more.

The total cost of a creamery would therefore vary from $2,000 for a simple hand-separator plant without artificial refrigeration, where labor and material are cheap, to $4,250 for a whole-milk plant including artificial refrigeration and higher cost of labor and material.

The Department of Agriculture is prepared to furnish information for the proper organization of creameries and cheese factories, and upon request will supply plan of organization, list of machinery, and plan for creamery. Write to the Dairy Division, United States Department of Agriculture, Washington, D. C.

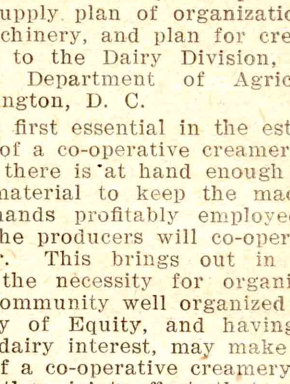
The first essential in the establishment of a co-operative creamery is to know there is at hand enough of the raw material to keep the machinery and hands profitably employed, and that the producers will co-operate together. This brings out in strong lines the necessity for organization. Any community well organized in the Society of Equity, and having sufficient dairy interest, may make a success of a co-operative creamery, as of any other joint effort that may be wisely undertaken.

WORKING THE MARE

The horse is conceded to be the most valuable animal on the farm; it is the animal indispensable to successful farming. And it is the one animal, too, whose value depends more upon its stamina—its perfection, than any other; and yet no animal is so abused in the bringing up. From the very nature of things on the average farm, the brood mare must do service. She is generally put to work when the colt is but a few days old. This may not be harmful nor a great hardship, if she is not worked too hard. But what is the effect on the colt? The usual practice is to take the colt to the field, where it follows the mare round after round, perhaps across a fifty-acre field, until it becomes so entirely exhausted that it drops at one end of

WHY DOES THE IMPROVED 1908 U. S. CREAM SEPARATOR Win So Many Laurels?

¶Because it has that solid, low frame; most simple yet efficient bowl, holding World's Record for cleanest skimming; so many conveniences; and the easiest running separator made.



¶If you have cows, you need a separator, you need the best separator. That one is the **U.S.**

¶Simply send for catologue "No. 187" read it carefully, and we leave it to you, which is best.

All dealers or sent direct, express prepaid. **Send for booklet.**

THE NEWTON REMEDY CO., Toledo, Ohio

the furrow, and lies until the mare returns, when it rises and again takes up its exhausting drag across the field. We have often been almost angered as we have seen a valuable colt, almost completely exhausted, dragging its weary feet across a plowed field, doing no good, but ruining itself. No one would permit a grown horse to be worked to such complete exhaustion, yet it is doing the colt more lasting injury than like exhaustion would do the horse.

Another exceedingly bad practice is, when the colt manifests hunger, it is allowed to suck, no matter how hot or tired the mare may be. We have seen tired colts permitted to fill their stomachs to excess with over-heated milk, and immediately resume their toilsome walks across the field. Isn't it a wonder that horses worth anything are grown from colts so treated? In the very beginning, bone and muscle and tendon are all strained, the "wind," the organs of respiration, are overtaxed, and the stomach, the digestion, is given shocks from which it can scarcely recover. Farm colt raisers know all this is true, and the stamina or vitality,, the qualities most valuable in a horse, must suffer. It is no wonder there is marked degeneration in farm horses.

What must be done? Correct these evils as far as possible. Give the mare all the time you can afford before putting her to work, for her sake, but more specially for the colt. Then do not take the colt to the field. Have a cool, clean stable to keep it in, and one in which there is nothing on which it might hurt itself. Let it suck fully and naturally before starting to the field. Bring the mare back midway between morning and noon, and also between noon and night, to let the colt suck. In coming in for this prpose, whether midway or at noon or night, see to it that the mare has become normally cool before getting to the colt. And then do not be in a hurry; let the colt suck naturally.

But, you say, that will take up all your time. What is the principal business of the mare during the summer, to work on the farm, or to raise that colt? Do you say both? No, that is not nature's way. One must be subordinate to the other. If she is to raise a fine colt, which is to grow into a valuable horse, she must have a chance to do that, and the work she does on the farm must be that much extra. And she may do a great deal of valuable work, but the value of the colt should not be sacrificed in order to get in a few more hours of work. As the colt grows older, the forenoon and afternoon may be abandoned, but don't be in too big a hurry about that. When the colt begins to eat will be time enough, and then some shelled or cracked corn and some cut grass should be left in its stall. At night the mare and colt should run together in a pasture.

PASTURES FOR MILK

Cornell University has proven that for the production of milk and fat there is no food as cheap as good pasture grass. It is the quality of the pastures that has brought pasturage into disrepute. An old field that has become unfit for cultivation is thrown into pasture, and the cows are turned into it. They do not do well, and the pasture is condemned, and even the country is declared no good for pasture. This is the experience and conclusion of many town anl village residents, who send their cows out to pasture. Such pastures often have nothing in them but wild or natural growths, and are most likely overstocked at that. Of course they get little value for their money, and are compelled to supplement the pasturage with other feed.

Pastures to be valuable must be land that will grow things, with nutritious grasses, so that the stock running on them may have full feed. Unless a farmer can afford that kind he should not depend upon pastures. Where acreage is an object, soiling is to be commended. Have a plot of ground sufficiently large and conveniently located, made as productive as it can be, and heavily seeded with the most nutritious forage plants. Clover, red-top, blue grass, etc., are good. Cut this and feed it to the cows. Cutting may begin by the time the grass is six inches high, and then it may be kept up all summer, that first cut soon being ready to cut again. A wonderful lot of feed may in this way be got from a small plot of ground.

A friend of ours residing in a village keeps a fine Jersey cow. He has but two lots, each 50 feet by 140. The lots lie end to end, an alley between them. On one lot a nice residence is located, as well as all the outbuildings. In the rear of the residence quite a space is devoted to garden, while in front and at the sides is seeded to blue grass and white clover, a good lawn mixture. The vacant lot across the alley is given to the cow. Instead of keeping the lawn cut with a lawn mower, the grass is permitted to grow four or five inches high when it is cut with a grass knife, a feed at a time, and given to the cow. And it affords her just about all the green feed she can take, and she amply pays for it in rich milk and yellow butter.

Many would not like this plan. They would prefer to keep the lawn cut close and smooth but it shows how much valuable feed may be produced on a small piece of ground. Save and manage, are simple but magic words.

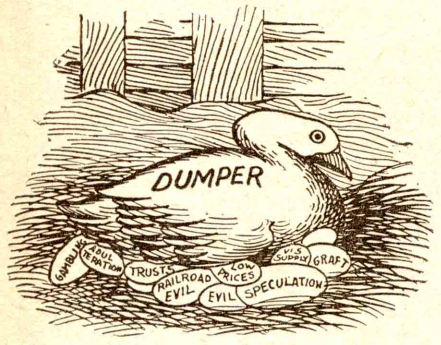
Our new low down, waist high separator is the finest, highest quality machine on the market; no other separator compares with it in close skimming, ease of cleaning, easy running, simplicity, strength or quality. Our own (the manufacturer's) guarantee protects you on every AMERICAN machine. We can ship immediately. Write for our great offer and handsome free catalogue on our new waist high model. Address, Box 1105,

AMERICAN SEPARATOR CO. BAINBRIDGE, N. Y.

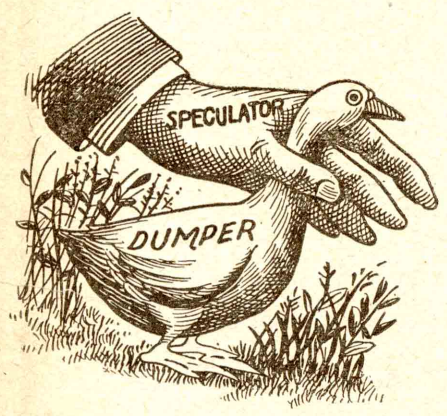
The Dumper's Fate

A Story That Applies to Many Farmers

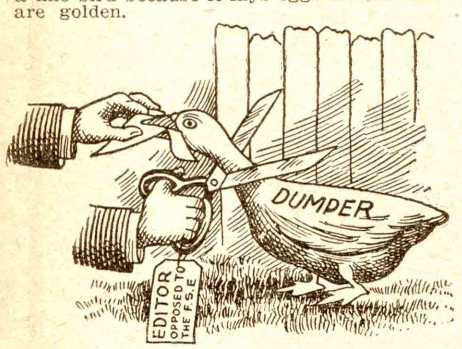
(NOTE—One of Webster's definitions of "goose" is "a silly creature, a simpleton." Therefore we have employed the picture of a goose to represent the silly farmer who dumps his crops before the real demand comes and we call him a "dumper.")



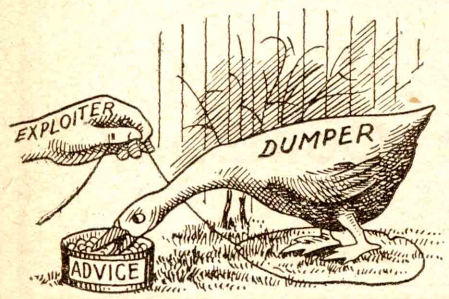
The dumper hatches all kinds of evils. Cure dumping of farm crops and farmers' troubles will disappear.



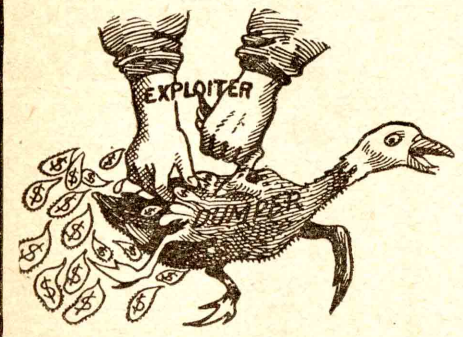
The speculator thinks the "dumper" is a fine bird because it lays eggs for him that are golden.



The paper that teaches you to produce all you can and leaves you to the mercy of the exploiter in marketing, gives it to you in the neck.



The exploiter feeds the dumper on bad advice and then will snare him.



The dumper hatches all of farmers' troubles; is held in the speculators hand; gets it in the neck; is snared with bad advice and is then plucked clean.

FARMERS' W

It is a sorry spectacle to see Farmers cowering before a few speculators who m methods are a stench in the nostrils of the public. This system is as entire Farmers can end it w

THE prospects for the 1908 wheat crop are excellent. In a few weeks the harvestors will be busy and in a few weeks more the speculators expect the Golden stream of wheat will be flowing from hundreds of thousands of farms into the mammoth elevators in Kansas City, Omaha, Minneapolis, Duluth, Chicago, St. Louis, Cincinnati, Buffalo, New York, etc.

Depending on the farmers being as silly as they have been in the past, the speculators are now selling and buying the coming crop at 85 cents a bushel and boast that they will buy it at 75 cents, while the present cash price is $1.00 for number 2 red wheat at Chicago.

The wheat that leaves the farms when the real demand does not need it, goes into the great elevators and is measured as VISIBLE SUPPLY. It is no longer owned by the farmers but by another set of people who raise no wheat, but gamble in it. This visible supply is the chief factor in making the price. **If it is small, the price will be up, no matter how much wheat the farms. If it is large, the price will be down and the larger the visible supply, the lower the price will be.**

To illustrate: A visible of 11,875,000 bushels in July 1905, made the price at Chicago $1.20. A visible supply of 25,000,000, as we write this (May 18, 1908) makes the price $1.00. A visible supply of 50,000,000 bushels in April 1907, made the price 75 cents, while a visible supply of 75,000,000 bushels in September, 1894, made the price 50 cents. These are authentic figures from the records of the Chicago markets.

If the visible supply can be kept at, or about 25,000,000 bushels all of the 1908 wheat crop can be sold at $1.00 a bushel. If, however, farmers will dump their crops and increase the visible supply to 50,000,000 bushels, the price will go down to about 75 cents.

We will suppose that some farmers will persist in dumping 25,000,000 bushels more than the real demand wants in the first three or four months of the crop year and force the price down 25 cents a bushel, it will affect the price on say 500,000,000 bushels that the other farmers still have to sell, making a loss of $125,000,000. In Ohio, with a crop of 40,000,000 bushels, it means $10,000,000. In Indiana with its crop of 35,000,000 bushels, $8,750,000. In Kansas, with its crop of 70,000,000 bushels, $17,500,000. In any county that produces 1,000,000 bushels, $250,000,00, etc..

The 1900 census gave about 2,000,000 farms growing wheat and the yield 490,000,000 bushels the same year. This is an average of 245 bushels per farm. If 102,041 farmers in the entire country who usually market their crop the first four months, will hold it, the visible supply will not be increased and the price can be maintained.

We can now see how an extra 25,000,000 bushels, representing about one twenty-sixth of a good crop, when in the hands of competitors, as speculators, gamblers and exploiters, can be used as a club to beat the price down on five hundred million bushels in the hands of the farmers.

Hence, the problem is to keep the VISIBLE SUPPLY low and this of itself will guarantee a profitable price on every bushel of the 1908 crop.

HOW TO DO THIS IS THE ALL IMPORTANT PROBLEM WITH EVERY WHEAT GROWER.

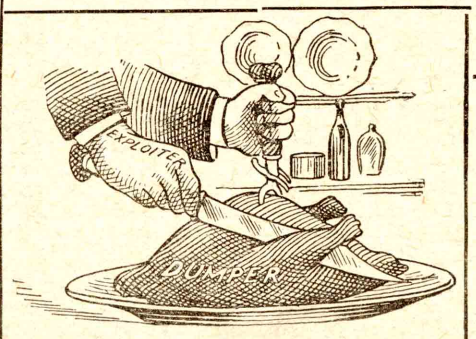
AND THE PROBLEM WILL BE SOLVED THOUGH THE FARMERS' POOL.

Boiled down, the details are like this:

FIRST. The Farmers' Pool is a multitude of wheat growers who want at least $1.00 per bushel for their wheat.

SECOND. UP-TO-DATE FARMING, a semi-monthly farm paper with nearly a quarter of a million readers already, will go to every member of the Pool and keep him advised. It will speak to every member on the 1st and 15th of each month and give news and advice about crops and crop prospects; advise about markets and marketing, prices and visible supply. All the members will have the same advice at the same time, about the same things, from an authentic head, which will be a great improvement over the blind guessing, or the false reports, or bad advice given them by crop exaggerators, market manipulators or ignorant advisors, as in former years.

All will thus be possessed of the same knowledge, influenced by the same motives and all may act as one man—in short, co-operate—for the purpose of guarding against increasing the visible supply and securing the agreed profitable price.



The dumper is at last a cooked goose and is carved for the benefit of the exploiter.

This plan can be adapted to any cro of all. Their crop has suffered most at Trade. It has truly been made the playt

WORTH MORE TO FARME

DEAR EDITOR:

Your paper, UP-TO-DATE FARMING, has done more for farmers than any other paper has done or ever will do. It has opened our eyes and shown us how shamefully we were being cheated, robbed and crushed by the exploiters, and it has taught us how to free ourselves from the tallons of these hawks. It has made it possible for farmers to say, "here are our products and they are worth so much. Pay the price or leave them."—Peter E. Orthman, Ramsey, N. J.

DEAR PUBLISHER:

The editor of UP-TO-DATE FARMING has espoused the cause of the exploited and unorganized producers of the country and is working with undaunted energy and untiring zeal to ameliorate their condition. While this is true he is not a disgruntled radicalist but accomplishes results through a sane fearlessness of the exploiters, deep thoughts and keen foresight that must ultimately bring farmers to the front.—V. H. Firth, Secretary, Lewiston, Minn.

THE SCOPE OF THE FARMERS' WHEAT POOL?

plan for you to follow now? Later you can organize de immediately effective to give you a profitable price ats, barley, corn, potatoes, cotton, etc., come on, pools

at once. Remember, it don't cost anything to come into o pay; you are your own boss; you can hold or sell, but we who must sell, and if a great many sell from pure stub- r UP-TO-DATE FARMING, which is engineering the pool, and get same time. As the advice will be sound and right, the people will act t right, the interest of the masses, and what makes the people money.

"If farmers will put a price on their wheat and not take less the betting in Chicago and elsewhere would stop for the gamblers would know that they could not settle except on terms made by the farmers. If farmer would control what is their own instead of dumping it and let others control it there would be no speculation. No man can buy until some other man will sell and if the wheat growers of the United States would not sell until they got their price they would surely get it. They can corner the supply much easier than any Chicago gambler can, simply by holding on to what is their own and the demand would soon come to the supply, the farmers, and meet their terms."—The Third Power.

The pool will add 20 to 25 cents to the price of every bushel of the 1908 crop over what the speculators want to pay. On a good crop this will be $150,000,000; on an average Kansas crop, $16,000,000; on an average Indiana crop, $10,000,000; on an average Minnesota crop, $15,000,000; on an average county's crop, about $200,000; on the average farm crop, about $150.00.

BROTHER WHEAT GROWERS, YOU CAN HAVE THIS EXTRA MONEY.

I repeat, farmers, you can make the price on the 1908 crop if you want to.

Will you do your share? It will cost you 25 cents or 50 cents **only.** Will you help just this little? Or, do you want the exploiters on your backs another year?

I am sure you will because its right, because it will be money to your bank account, because it will be a declaration of independence from the speculators, gamblers and exploiters, and because it will help to drive **the arrow into the heart of the gambling Boards of Trades, cotton exchanges, and bucket shops all over the country.**

Subscribe for UP-TO-DATE FARMING and get the all important advice about crops, markets, visible supply and prices. When to sell and when to hold, what price you should ask in Indiana, Ohio, Virginia, Missouri, Kansas, North Dakota, Michigan, or any other State on the basis of $1.00 at Chicago. Remember, points east of Chicago the price will be higher and points west, some lower.

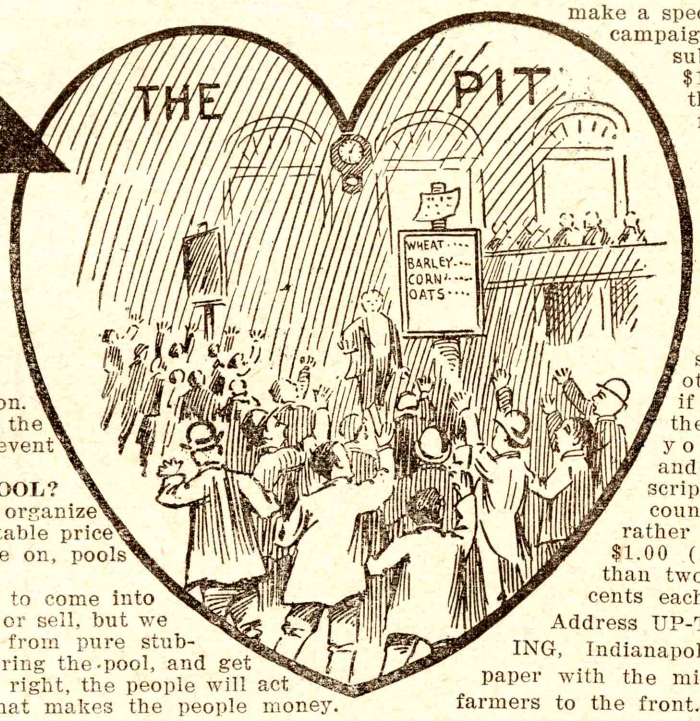
We cannot tell all the details here but the plan is complete and will work. In each issue of the paper it will be explained further. Also, subscribers are urged to ask questions which will be answered in the paper, and soon every doubt, if any exists, will be dispelled. Also advertisements like this will be printed in papers circulating in all important producing sections, thus compelling the success of the pool.

Don't let anybody frighten you about the bugaboo of the export surplus. It won't prevent the success of the Farmers' Wheat Pool. This paper will explain all and make all clear. In short, the education farmers will get who subscribe for UP-TO-DATE FARMING now can not be had for any money elsewhere, and is just what they have always lacked to make farming always successful from a financial viewpoint.

EVERYBODY JOIN THE FARMERS' POOL NOW.

TERMS TO JOIN THE FARMERS' POOL

The only requirement is that you subscribe for UP-TO-DATE FARMING—the paper that is directing it. The subscription price is 50 cents a year. We will make a special rate in this campaign of four (4) subscriptions for $1.00. Tens of thousands of farmers, wheat growers and others, should be so deeply interested in the success of this movement that they will take $1.00 from their pockets and send with three other names. But if not this way, then see three of your neighbors and get their subscriptions. Numbers count and we would rather have four for $1.00 (25 cents each) than two for $1.00 (50 cents each.)



Address UP-TO-DATE FARMING, Indianapolis, Ind. The paper with the mission to bring farmers to the front.

DEAR PUBLISHER:
UP-TO-DATE FARMING is indispensible to the success of the farming industry of the country. It has been a blessing to me and has had a great and beneficial influence on the farmers of the country.—W. L. Robison, R. R. 3, Springfield, O.

DEAR EDITOR:
UP-TO-DATE FARMING teaches more of value to farmers in one issue than all the other farm papers together.—Frank C. Matgousky, Brule, S. D.

DEAR EDITOR:
UP-TO-DATE FARMING has been a visitor in our family for more than five years and it has benefited farmers more than all other farm papers combined in getting profitable prices for their crops.—Jas. B. Motley, Chatham, Va.

DEAR EDITOR:
UP-TO-DATE FARMING has been and is now a true friend and safe guide for farmers to follow. It has been a great benefit to me and I do not exaggerate when I say that this paper has done more for the agricultural world than any other paper I ever saw.—J. K. Marshall, Franklin, Tenn.

DEAR PUBLISHER:
I think UP-TO-DATE FARMING has done more good for farmers than all the other farm papers combined.—John Busse, Glenburn, N. D.

DEAR EDITOR:
I have read UP-TO-DATE FARMING four years and would not give it for all the other papers in the United States. I know all the other farmers will think the same if they once begin to read it. It is the paper that started farmers to the front and this is one reason why all farmers should stand by UP-TO-DATE so farmers may always be in the front.—Ed Landwer, Gardena, N. D.

DEAR PUBLISHER:
It is impossible to compute the value of UP-TO-DATE FARMING. It is the only paper teaching the marketing end of farming and the millions made on the boards of trade represent the difference between what we get for our grain and what we ought to get. It is high time that we price our own stuff and the only way we can do this is through a paper like yours going to each farmer.—A. J. Smith, New Lathrop, Mich.

DEAR EDITOR:
The first copy of UP-TO-DATE FARMING showed me what I wouldn't sell for $1,000. to become a free man. I cannot tell how much it has been worth to me in dollars, but we are getting from 15c to 30c more per bushel for our crops because of its teachings.—W. H. Brown, Empire, Mich.

DEAR PUBLISHER:
The most intellectual and practical advice I ever got in the line of profitable price making on farm crops was from UP-TO-DATE FARMING. I think to try to farm without your paper would be like getting into a deep rut with a heavy load on my wagon—where one would never get out again. If the time ever comes when this paper does not exist, I believe farming as a business will end and we will work as laborers as the speculators and gamblers will have everything their own way. It gives me renewed courage and more energy to read UP-TO-DATE.—Fritz Schallert, Loose Creek, Mo.

DEAR EDITOR:
I believe if ever a man worked with soul and mind for the welfare of farmers, that man is you. UP-TO-DATE FARMING is worth all the other farm papers combined. —H. Beagley, Circleville, N. Y.

CUT THIS OUT AND USE AT ONCE.

Publisher Up-to-Date Farming,
Indianapolis, Ind.

Dear Sir: I, or we, the undersigned, desire to join the Farmers' Pool and oppose our forces against the speculators' pool, to secure a profitable price for the 1908 wheat crop (at least $1.00 per bushel). We want to stand shoulder to shoulder with our brother farmers which we can do when all read the same paper, get the same advice about crops, visible supply, markets, price, etc., and all at the same time; but in doing this we do not obligate ourselves except as appears to us is to our individual and collective best interests.

This is sent by:

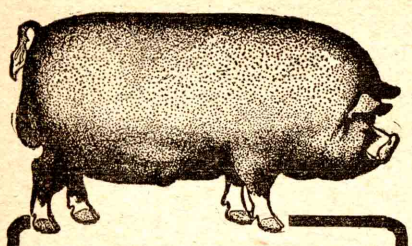
S THAN ALL OTHER PAPERS COMBINED

AR PUBLISHER:
UP-TO-DATE FARMING is the hardest hit- yet the fairest of any paper I ever d on reforms needed by the farmers. It hewn to the line of honest duty re- dless of where the chips flew. It has omplished more good in arousing farm- from lethergy than all other papers bined. Long may it and its able edi- survive to fight until victory perches n its banners.—H. A. Halbert, Cole- n, Texas.

DEAR PUBLISHER:
I want to say that since I have read UP-TO-DATE FARMING I have got the naked truth and facts, and these are what we farmers need. This paper has done more for the farmers already than all other papers combined. It is my hope that the teachings of this paper will reach all the farmers in America, so they may rise as one man and secure Justice and Equity, and fair return for honest toil.—Fred Lamb, O'Keene, Okla.

DEAR EDITOR:
I believe UP-TO-DATE FARMING, because of its teachings for five years, is entitled to credit for the change that has come over farmers in their plan of marketing and I believe it will be more powerful in the future. In view of the fact that there are about three hundred papers that teach how to produce crops and only yours to teach the correct way to market them, it is the duty of every farmer to subscribe for it and thus help to establish profitable prices and maintain them.—A. S. Huns, Heatton, N. D.



GIVEN AWAY
200 PIGS

Do you want one? You can have your choice of the following breeds: Duroc-Jersey, Poland-China, Chester White or Berkshire. These pigs are from 8 to 10 weeks old at the time of shipment. To obtain one of these fine pigs without cost to you, all you have to do is to dispose of some of my beautiful art pictures by a new plan which is very easily worked. If you want a fine pig of one of the above breeds this is the greatest opportunity you ever had. Write to me today for further particulars of my plan and for ten of my beautiful art pictures, which I will send you by return mail, so that you can test my plan fully. Address

Something's doing 'mongst the poultry,
Lively times in coop and yard;
Hens are laying, chickens scratching,
Lordly Chanty standing guard.

LOOKING AROUND

The lawn mower is almost a necessity in a grass-grown poultry yard. Chicks like to range early in the morning and immediately after showers, and the "drabblings" they get are almost certainly fatal. The grass is all right. A grassy lot is their very best feeding ground. But the grass must be kept close, as close as it can be cut or nipped. So if you prefer not to use the lawn mower, keep the lot pastured very close. And it is safer to have the young chicks out while the cattle, horses or sheep are in.

And now comes the tussle with the lice and mites. Movable perches are one of the very best helps in this struggle. Have one set of perches out in the weather while the other set is in use, and change every two or three days.

Clean the poultry house often, using time freely. So soon as the brood comes off empty the nest box, burn the old nest, sprinkle lime in the box and put in entirely new nesting. Yes, it is trouble, and takes time, but the business in hand just now is to raise chicks, not to save trouble and time.

Don't worry much about scaley legs. It is an annoying and unsightly trouble, and it is contagious though that is hardly the correct word, but it seldom makes much headway where house and perches are kejt clean. It is the result of parasites that live beneath the scales on the legs, and if the parasites become numerous, they may pass from one fowl to another. Rub the legs well a few times with a mixture of lard and coal oil; and if many of the fowls are affected, grease the perches with the same mixture.

One ought to be able to recognize the males when the chicks are from ten to fifteen weeks old, and it is wasteful to keep the males any longer than a satisfactory market can be obtained for them. Much poultry profit is frittered away in feeding flocks of big, awkward, bony roosters.

The orchard is the ideal poultry range, but the grass and weeds must be kept down some way. The orchard is a great breeding place for insects, nearly all of which are injurious to the trees and fruit. Fowls are great insect eaters, and the insects furnish food elements necessary to the welfare and health of the fowls. In the orchard and poultry creation made an excellent fit.

Whenever a setting hen shows a disposition to abandon her nest, there is a strong presumption that both the hen and the nest are infested with lice. Dust both hen and nest with lime, or, what is better, make her a new nest, but dust with lime anyway.

Quiet gentleness tells in the poultry yard, as well as elsewhere. Broods with gentle mother hens are much more easily handled and cared for.

The poultry product of the United States last year were estimated by the Department of Agriculture at $600,000,000. This is $100,000,000 more than the wheat crop of that year, and it is a million dollars more than the oats, potatoes, rye and flax were worth. Corn, hay and cotton are the only crops that beat poultry. The hen has a right to cackle and the rooster strut and feel proud.

See that there are no hungry cats about the poultry premises. Young chicks make choice cat feed, and it is "dead easy" for a hungry cat. Well fed cats are not likely to take to the poultry, but hungry ones are almost sure to, and one should then be seized with strong impulse to attend a cat funeral. Bad luck to kill a cat? We don't know about that, but we know it is bad luck to let such a cat live.

Roosting coops should have floors upon which the coops set without being fastened to them, so that it is an easy matter to remove the coops and clean the floors. This should be done every day in wet weather. Remove the cops and let the floors have the sunshine every day.

No matter what variety if poultry you have, the early pullets are to be the winter layers. It is a fact also that the laying season shortens as the hens grow in years. It is very seldom that a hen three or more years old is profitable.

Don't neglect shade and water—fresh, clean water. Many young chicks die for want of these, whose deaths are charged to other things, and other remedies are sought and applied.

A hen that has been laying regularly and stops for three or four days, and then lays an egg, will not have one as fresh as when she was laying regularly. You will find on close examination that there is the sign of the floater there, caused by the heat of the body. The eggs are in the first stages of incubation, and if put immediately in an incubator or under a sitting hen would hatch before other eggs, as it has already started ahead of the others. This has been proved by actual experiments.

Eggs laid in the grass in hot weather may become bad inside of 48 hours. For instance, an egg laid in the morning in the grass where the sun will strike it lies there all that day and at night the dew falls on it, and in the morning when the sun strikes it and it commences to dry up, you will find that it dries from the top down to the side that lies on the ground, that it draws the yolk to the ground side and it will stick to that side that has come in contact with the ground. That part will be jet black, the yolk will be firm, yet it is set to the shell and discolored.

POULTRY AND INSECTS

Farmers complain more and more of the increase and destructiveness of insect pests. A purpose of nature in the creation of insects seems to have been to provide a most suitable food for birds; but man, restless and meddlesome creature that he is, disturbed the equilibrium nature had established, by cutting away the forests and destroying the homes of the birds, so they can no longer keep pace with the insects. whose rapid multiplication punishes the destroyer of their enemies.

A partial remedy may be found in the poultry, every variety of which, like the little singers whose place they take, is an insect eater. They cannot search the trees for insects as the birds do, but they make short work of those that "inhabit the earth," and most insects do that in some period of their existence.

And a strange provision of nature is that different kinds of poultry make a specialty of different insects. The common barnyard fowl is omniverous, and gives a free pass inward to any stingless insect that comes in its way.

The duck is omniverous also, but it is up and after what the chicken fails to find. Very early in the morning it is out and hunting for slugs and worms that choose the night for their movements "because their deeds are evil." The turkeys get beyond the line of the more domestic fowls, and woe unto the farmer's claim in the fields. The geese? Well, they hang around the ponds and sloughs, and help the ducks catch the crawfish (we suppose), the goslings eat the tadpoles and—die. But—geese grow feathers.

LATE HATCHES

The bulk of the chicks that will make the crop of 1908 are already hatched, though June and July hatched broods may be raised, and August and early September hatches are often quite successful. To. raise summer broods requires more care than earlier ones. Insect pests must be more vigilantly fought, more lime and disinfectants must be used, and greater care must be exercised in furnishing plenty of fresh water. But one of the most important matters is to protect the young chicks from the heat. They cannot stand much of the direct summer sunshine. So unless you have plenty of shade and convenient cool nooks, the midsummer hatches will not pay.

WINTER LAYERS

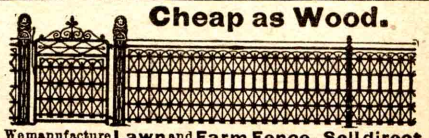
No matter what your variety of poultry, now is the time to produce the winter layers. The early pullets are the dependence for winter eggs, and all farm poultry raisers wish winter eggs. Watch the young pullets as they develop, and save the finest and those that mature earliest.

Free Samples of Amatite

It is so difficult to convince the average farmer that it is really possible to make a roofing which does not have to be painted or coated, that the Barrett Manufacturing Company takes elaborate pains to supply every inquirer with a Free Sample of Amatite, in order to show what the famous mineral surface is like.

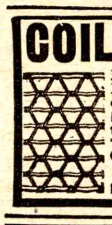
This real mineral surface is firmly embeded into the top surface of the roofing and is, of course, practically indestructible. Paint or coating is not needed for Amatite and the manufacturers do not manufacture anything in the way of paint for use upon it. An Amatite roof, once laid in position upon a house or barn, will stay there indefinitely without further care or attention of any kind. This is a vast improvement over the roofings which require a new coat of paint every two or three years; and if Amatite cost more than the other roofings it would still be worth while for this reason alone. Amatite, however, does not, in fact, cost as much as other roofings, and farmers who are preparing to roof any any of their buildings should investigate it.

The manufacturers are always ready to send a free sample on request. Address the Barrett Manufacturng Company, New York, Chicago, Philadelphia, St. Louis, Cleveland, Allegheny, Cincinnati, Kansas City, Minneapolis, New Orleans, Boston.



We manufacture Lawn and Farm Fence. Sell direct shipping to users only, at manufacturers' prices. No agents. Our catalog is Free. Write for it today.
UP-TO-DATE MFG. CO. 973 10th St., Terre Haute, Ind.

COIL SPRING FENCE



Made of high carbon Steel Wire Horse-high, Bull-strong, Chicken-tight. Sold direct to the Farmer at lowest manufacturers prices on 30 Days Free Trial, freight prepaid. 100 page Catalogue and price-list free.

FLOWER-LANGUAGE POST CARDS, A SET OF 12 FREE

Do you know the "Language of the Flowers?" If you will send 10c for a six months' trial subscription to our large paper, The Epitomist, we will send to you, free, a set of twelve beautiful flower post cards. Each is different and represents the natural colors of the flowers and every card has the language of the flowers, portrayed in verse. These cards are strictly HIGH-CLASS and are not like any you have seen, for they are entirely new.

Write today and we will lose no time in sending them to you. Ask about the surprise which we are sure will interest you. We have only a limited supply of these beautiful cards, so send today if you want them. Address The Epitomist, 44 Main St., Spencer, Ind.

GRANDMOTHER'S GARDEN

In grandmother's garden grew old-fashioned flowers;
There were Pinks and Sweet Williams and Hollyhocks tall,
Four o'clocks drowsily counting the hours,
And Bluebells and Daffies up close to the wall.

There were langourous Lilies with down-drooping heads,
And fragrant Blush Roses, dew-laden and sweet,
There were gay, flaunting Poppies with bonnets or red
And shy little Daisies with parasols neat.

E. C. HARDY.

FARM FLOWERS

Farmers usually think they cannot give much time to raising flowers, and when we begin to enumerate the wild flowers that grow all about the farm we may be inclined to excuse them. But still the women folks like to have flowers of their own, and UP-TO-DATE FARMING stands with them in that. There are many of the old favorites that so nearly grow themselves, making bright spots about the place and speaking so plainly to the old home and mother, that there is no reason why everybody should not have them. The Asters are perfectly hardy and always pretty, and so are the Dahlias and the beautiful double Balsoms, the Touch-me-nots of the old days educated out of themselves. And for climbers, what can beat the old Cypress vine with its delicate foliage and glittering four-pointed stars? The Cosmos is a fine, showy plant and an abundant bloomer, but it is too easily broken by the wind. The great big double Hollyhock, though, is subject to no objection. We scarcely need mention the old Cock's Comb or Princess Feather (Celosia now), the Marigolds, the Stocks and the Zinnia; they are known and cherished everywhere. But as a porch climber the blue Passion Flower is one of the prettiest vines for such a place we ever saw.

Oh, yes; keep the flowers growing on the farm.

THE TOMATOES

No farm garden is complete until a good portion of it is devoted to the tomato. We believe in the free use of fruits of almost all kinds. Fruits seem to be peculiarly healthful for the human family. But as a system regulator and health preserver, we believe the tomato discounts them all. And it is so easily grown, may be had in such endless variety, and lasts until the garden is closed for the season and goes into winter quarters. One can scarcely miss a happy selection, but the Iowa Seed Company thinks the Majestic stands almost without a rival. It is of the very largest size, of a rosy color, ripens evenly all over, has few and small seed cells, flesh tender, fine grained and of a delicate sub-acid. But no one need be confined to any one variety. Have plenty, and make the tomato, sliced, cooked or pickled, a part of the regular diet.

ONIONS AND MITES

Mites and lice are the bane of farm poultry. A very simple and ever present remedy is given by a person of extensive experience. It is to put small pieces of onions or onion peelinges in the nests, coops or roosting places. It seems the little pests can't stand the onion odor, and places so treated, as well as the chickens that occupy them, will not be infested by lice or mites.

PROFIT IN ONIONS

There is profit in onions, and the demand is not over supplied. The onion, like the potato, has a wide range of adaptability. It is grown quite extensively in Texas, and it is claimed that 500 bushels per acre have been grown in Iowa. Onions must have ground that has been made rich with thoroughly rotted manure—ground that has been worked and manured for years. Unfertilized ground cannot be taken and fertilized sufficiently for onions the first year, and a good crop grown thereon. The manure must be thoroughly incorporated and made a part of the soil. It costs more, of course, acre for acre, to raise onions than to raise corn or wheat, but when the crop is marketed the return is greater even in proportion to cost. Write the Department of Agriculture, Washington, D. C., for Farmers' Bulletin 39, "Onion Culture." It contains entirely reliable information.

THE MELON

The melon is a farm luxury that should not be neglected. Of course, melons will grow better in some places and some kinds of soil than in others, but they will grow on any farm enough to supply the home demand, with enough for an occasional treat for visiting neighbors. Of water melons Cole's Early is a very early sort, and will mature far to the north. The Improved Triumph, with dark red, solid flesh or good quality, is one of the largest. McIver's Sugar is one of the sweetest. It is also of large size, light red flesh, entirely stringless, tender, juicy and luscious.

Of musk melons the Emerald Gem is of the earliest, and also one of the best. The Thoroughbred Rocky Ford is the most extensively shipped musk melon grown. It is the right size for table use, and is all that could be desired.

Money in Cider

There are a few surplus crops on the farm as easily turned into money as apples. Gather them up, sort them over and run through the cider mill. Then you have a delicious, healthful drink either for home use or for sale at a good clear profit.

It is important, of course, to have a satisfactory mill—one that is always ready for use, simple in construction and easily cared for. Such a mill is made by the Boomer & Boschert Press Company, of 474 West Water St., Syracuse, N. Y., who have had thirty-five years experience in making cider machinery, and know pretty well what is required. In fact their products are really considered the standard, and it will pay anyone interested to write for their free catalogue of custom and merchant cider mills. It would be a good plan to get it now and be ready in advance for the cider season.

This year the Aspinwall people are putting out a new Double Cylinder High-Pressure Two-Horse Sprayer, which promises to be another winner. It gave excellent satisfaction in thorough tests in the great potato fields or Aroostook County, Maine, last season. It is expected to make a great record this year.

The Aspinwall Mfg. Co. are the pioneer builders of potato machinery. Mr. Aspinwall, President of the Company, has given his whole life to the work. It is the aim of himself and his company not only to keep abreast of the times, but always to be just a little ahead of other manufacturers. Anyone interested in potato machinery should write the Aspinwall Company at 313 Sabin St., Jackson, Michigan, for their 1908 catalogue describing the whole Aspinwall line. Better do it now before the potato season is on.

"Mom, won't yer gim me some candy now?"

"Didn't Oi tell ye to kape still?"

"Yes'm, but—"

"Oi tell ye th longer ye kape still the sooner ye'll git it."

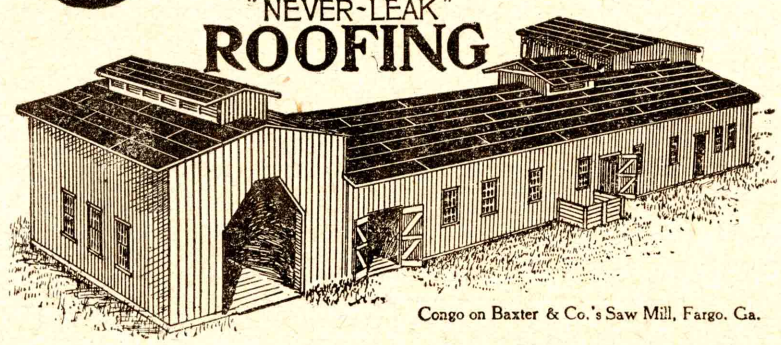
O. K. SEED STORE, Indianapolis

CONGO
"NEVER-LEAK"
ROOFING



Congo on Baxter & Co.'s Saw Mill, Fargo, Ga.

CONGO ROOFING is made for all weathers. An unusually severe storm won't hurt it. An extraordinary hot spell won't hurt it. An extra long cold snap won't hurt it. It will stand *any kind of exposure.* It is the *"Never-leak-roof"*—the kind that stays tight after it gets old as well as when it is new.

CONGO ROOFING is a *real protection* to any building. Some roofings are nothing but paper that will take a layer of paint or coating. In that case the paint is your real roof, and when it wears off, the roof is ruined. It is an actual fact that many so-called roofings will dissolve under the action of water if not protected by the paint or coating.

Congo Roofing is a different proposotion. The weather finds no way in which to attack it.

RAIN can't damage it because there is nothing in it that is affected by water in any way. If Congo Roofing were put at the bottom of a pond, the water would never disintegrate it.

AIR can't damage it because there is nothing in it that is volatile—nothing that will evaporate. If Congo Roofing were hung out like a flag for years, so that air could get at both sides of it, it would stay just as pliable and elastic as when new.

CLIMATE can't change it because there is nothing in it that is affected by either heat or cold. The heat on roofs in summer is often terrific, and in winter the snow thaws and freezes there for weeks, but Congo has never shown any effects of such exposure.

IT can't *rot* because there is nothing in it that can decompose. It is because we know the nature of the material we use that we venture to say that Congo Roofing is *practically indestructible.*

PEOPLE who buy Congo Roofing for a building once, don't buy any more in after years—for that building—because it is *there to stay,* although the roof costs but little. They do buy more for their *other* roofs. Everyone who tries Congo is soon a convert, and he becomes more enthusiastic the longer he waits for the roof to wear out.

EVERY foot of Congo Roofing is carefully inspected as it comes off the machine. No imperfect rolls are allowed to leave the factory. Every pound of the material that enters into the composition is *carefully tested* before being used, and strictly held to standard. Should it fail in the slightest way, it is imediately discarded.

Congo Roofing is handsome in appearance, being of a uniform slate-gray color.

CONGO ROOFING is put up in rolls 36 inches wide. Each roll contains 108 square feet, sufficient to cover 100 square feet and allow for a two--inch lap.

The rolls are finished with an attractive wrapper and label, and are capped with a special metal cap to protect the ends of the roofing. A steel rod runs through the center to hold the caps and cement securely in place.

SUFFICIENT Congo cement, nails and tin caps for applying are neatly packed in the center of each roll, so that you pay nothing for extras.

CONGO ROOFING is easy to apply. Skilled labor is not necessary. You don't have to hire an expert to help. If you can drive a nail you can do all the work that is necessary.

FREE SAMPLE

Don't buy roofing until you examine a sample of Congo; and remember, Congo samples are not special pieces prepared for the purpose, but are cut from our regular stoc

We mention this because Congo is so attractive looking, so tough and pliable, that people sometimes think the samples must be especially prepared.

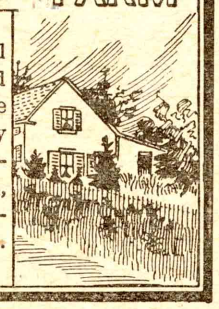
No 2 alike. Everyone astonished, delighted. Value can't be beat. Catalog free. UNITED SPECIALTY CO., Dept. 206 CHICAGO.

Up-to-Date HOME ON THE FARM



"A cheerful temper joined with innocence will make beauty attractive, knowledge delightful, and wit good natured."—Addison.

TO LIGHTEN CARE

When things in the world about you
Seem someway going wrong,
And clouds shut out life's sunshine,
Then sing some cheerful song,
Some blithsome and happy measure
Will lighten life of care,
And give us strength for the burdens
That all of us have to bear.

—SELECTED.

WITH OUR UP-TO-DATE PEOPLE

The tenderest place in the heart of UP-TO-DATE FARMING is for the home on the farm. About it clusters all the interests for which we have struggled during all the long years of bitter strife that has fallen to our lot. We know much of the trials of the family in the home on the farm—the too frequent disappointments of the husband and father, the deferred hopes of the wife and mother, and the unsatisfied longings of the children. If the principles of Equity, free from the schemes and designs of selfish men, could be made a part of the reality of life how different would that life become. No class would be better paid, no families have greater privileges, no children greater opportunities, and no homes more pleasures.

It is not so now, we have to confess, but still life is worth the living. There are clouds sometimes, but the sun shines beyond the darkest of them. There are failures but success crowds in upon them. There are sorrows, but joys cover them up. There are abandoned hopes, but hopes realized rob them of their sting. Then—

"Who is to blame if you by worry
Fill each waking hour with dread?
Does the fault belong to others?
Isn't it your own instead?

"Might as well be bright and smiling,
All depends upon your mind;
Might as well enjoy the melon
As to only eat the rind."

So it goes. It is a happy pair of eyes that see only the light, and yet are not dazzled by its glitter, a glad heart that passes the trials lightly, and—

"Jes' go 'long good natured,
Dat's de safes' way;
Sun goes on a-beaming
An' a-smilin' all de day,
Keep de crops a-growin'
And de blossoms still a bloomin'."

The cheerful life is the happy life, whether on the farm or in the town, and when we cannot count our blessings they far exceed the things we cannot recognize as such. We would not allay the ambition to be something and do something. The aspiration for more than one has and for the attainment of a higher station, is the mainspring of advancement, but an inordinate desire for wealth mars much of human enjoyment. Those are happiest and best who can keep the desire subordinated to a love of humanity, for—

"Wealth and power shall perish,
Nations rise and wane;
Love of others only
Steadfast will remain."

There are many things that are better than gold, and they lie loose around the home on the farm, where every member of the family may assist in picking them up. Let Father Ryan, the poet priest, tell of some of them:

Better than grandeur, better than gold,
Than rank and duties a thousandfold,
Is a healthy body and mind at ease,
And simple pleasures that always please.
A heart that can feel for another's woe,
With sympathies large enough to enfold
All men as brothers, is better than gold.

Better than gold is a conscience clear,
Though toiling for bread in an humble sphere;
Doubly blessed with content and health,
Untried by the lusts and cares of wealth;
Lowly living and lofty thought
Adorn and enoble a poor man's cot;
For mind and morals in nature's plan,
Are the genuine tests of a gentleman.

Better than gold is a thinking mind,
That in the realm of books can find
A treasure surpassing Australian ore,
And live with the great and good of yore.
The sage's lore and the poet's lay,
The glories of empires passed away;
The world's great dream will thus unfold
And yield a pleasure better than gold.

Better than gold is a peaceful home,
Where all the fireside characters come—
The shrine of love the heaven of life,
Hallowed by mother, or sister, or wife,
However humble the home may be
Or tried with sorrow by heaven's decree,
The blessings that never were bought or sold
And center there, are better than gold.

Who would sigh for gold when all these are attainable, and they are more easily found on the farm than anywhere else.

But when we think of the home on the farm our sympathies are always for the tired farm wife. We know that many cares are hers, but still she is in the midst of surroundings for which the great and noble in worldly station have sighed in vain.

A warm, sweet scent comes from the field,
New-plowed wild flowers their incense yield.
A southern zephyr sweetly blows,
And whispers of the coming rose;
The bluebird calls in song so clear;
"Come out-of-doors,
Our God is here."

Only on the farm can such a picture be drawn, and we would have our good friends live more in the open. Farm wives too often make slaves of themselves. They feel that this thing and that thing must be done, and by the time all is finished the day is gone, and too frequently part of the night. Such persons have learned and like to quote—

"If you in the morning
Throw minutes away,
You can't pick them up
In the course of the day.
You may hurry and scurry,
And flurry and worry.
You've lost them forever,
Forever and aye."

In every home there are minutes to spare, the only trouble is to know them when they come, to greet them with a smile, and use them it may be in something useful, but be careful to see that it is restful as well.

"Oh, what will you do with the minute to spare,
The gay little, stray little minute to spare?
That comes from the clime
Of old 'Plenty-of-Time,'
With never a worry, and never a care.

"Oh, what shall we do with the minute to spare?
The dear little, queer little minute to spare?
Who's only content,
So long as he's spent,
No matter, however, whenever, or where.

We'd better take care of that minute to spare,
The wee little, free little minute to spare;
And never refuse
That minute to use;
It always brings rest for the tired to share."

There is every reason why the house wife should save her energies and preserve herself for hers is the greatest mission of any mortal on earth:

A man can build a mansion,
And furnish it throughout;
A man can build a palace,
With lofty walls and stout;
And man can build a temple,
With high and spacious dome,
But no man in all the world can build
That precious thing—a Home!

No, 'tis our happy privilege,
Oh, woman, far and wide,
To turn a cot or palace
Into something else beside,
Where brothers, sons and husbands
With willing footsteps come—
A place of rest, where love abounds,
A perfect kingdom—Home!

The patient mother, though, the true home maker, has cares that others cannot know, for—

Little by little the children grow
Taller and taller, and then
Little by little they change, and lo!
They turn to women and men!

Only a mother knows how quickly the children "turn to women and men," and how lonesome the home is after they have gone out into the world to fill a mission of their own. And to the boys and girls who have gone from the old home, we would commend the following:

"I would be true, for there are those who trust me;
I would be pure, for there are those who care;
I would be strong, for there is much to suffer;
I would be brave, for there is much to dare.

"I would be a friend to all—the foe—the friendless;
I would be giving and forget the gift;
I would be humble, for I know my weakness;
I would look up, and laugh, as mother did, and love, and lift."

Above all, look on the good and not the bad. Of all men we pity most the chronic "knocker:"

Why go knocking, knocking, knocking, all the time and everywhere?
Don't you know that men will doubt you if your words are never fair?
Why insist that Smith has never done a thing to merit praise?
Why point to the faults of Adams or Vantorkley's foolish ways?
Why not dwell sometimes on subjects of a cheerful, hopeful kind?
Why keep hunting for the troubles those who search may always find?
Why go knocking, knocking, knocking, when you often, if you would,
Might discover fair excuses to be saying something good?
Don't you know that other people, soon or late, must think that you,
If you see no good in others, lack the manly virtues, too?
Why refer to others always in a sneering, snapping way?
Why not be discreetly silent if there's nothing good to say?
Don't criticise your neighbor's faults, no matter what they do.
Don't ridicule the masses, or malign the chosen few.
Don't think yourself a censor for the silly human flock,
And just remember as you go that any fool can knock.

Amid all of life's worries, shortcomings, disappointments, and failures—

"Get all the good there is today;
Don't fret about tomorrow.
There's trouble 'round us all the time,
What need is there to borrow?
The wise man gets what joy he can,
And leaves the fool to his folly.
He knows too much to waste his life
In gloom and melancholy."

And thus be prosperous and happy in the home on the farm. This is what we earnestly desire for all Our Up-to-Date People.

WEDDINGS AND FUNERALS

Farmers may spend money more freely now than they dared to do a few years ago, and the only reason they have not more money to spend than any other class is because they do not apply the same rules in selling their products that other people do. But there are two events in life—events liable to come in every home—that habit has made too expensive: Weddings and funerals.

Home weddings are considered glad and gay occasions, as they ought to be, but it is thought respect for the child going out of the family and honor

BOOKS of All Kinds on CREDIT
FROM THE LARGEST MAIL ORDER BOOK HOUSE IN THE WORLD
Established 1860 THE FRANKLIN-TURNER CO., Atlanta, Ga.

We all know that knowledge is power; but most of us are unable to buy books to acquire knowledge from.

However, we have solved the problem, and are now prepared to give you, direct from our factory, the benefit of our many years of thought and labor.

Every home needs a good library. By our plan you can buy one, two or three books, or a large collection of books, ON CREDIT.

HOW TO GET OUR PLAN

Mark X by the book or books you are interested in, cut out this advertisement and mail to us, and we will send you, without further obligation on your part, a full description of what you want, as well as fully outline our plan. Be sure to mention this paper. 124

"A YARD OF ROSES" FREE

THIS BEAUTIFUL PICTURE, "Yard of Roses" is one of the grandest flower pictures ever offered, 1 yard long, on heavy copper plate paper, in ten beautiful colors; a handsome ornament for any home that you will always be proud of. To introduce our splendid farm magazine which has a half million readers, we mail this grand work of art, all charges paid to anyone sending 10 cts. for trial subscription to Valley Farmer. We also have other "Yard" subjects, comprising Violets, Puppies, Kittens, Little Chicks, Pansies. We send 3 pictures and one year's subscription to our popular magazine for 30c, or all six for 50c. Send at once before they are gone. Address
Valley Farmer Picture Dept., 546 Jackson St., Topeka, Kans.

to the one coming in, requires that a display shall be made; and often money is expended on mere show that would be far more useful if given to the young couple in cash as an addition to the new firm's capital stock. They are thoughtless and light-hearted young people wro would not prefer to have it so.

Funerals are seldom occasions, heartrending affairs, and the bereaved, to be in the fashion set by others and following custom, believe their neighbors will not comprehend their grief unless it is seen through a costly funeral. Often the finest suit of clothes the deceased ever wore is the ones bought for him to be worn only for a day, and then to be hidden with him forever. Coffins and caskets, too, are usually more costly articles than were ever enjoyed in life. And we may here remark that the price of coffins and caskets is far above the general level of values. Any article of furniture, for instance, in which was no better material, and upon which was bestowed no better workmanship,would scarcely sell at any price, and yet these articles sell at prices more than double what fine furniture costs.

It is all right to give a good send-off to those who are just setting out to make their own way in life; and it is all right, too, to honor the dead—to do well for the loved ones the last service that may be rendered them. But the living should be regarded, and their needs should not be encroached upon in their dark hour, as it sometimes is. The dead would not have it so, and the mere following of extravagant custom is not good.

and all flies and insects leave. It is harmless to man and beast. Cures sores. Good for horses—lice on poultry, fleas on dogs, etc. Easily applied with sprayer or cloth.
Free With first order for a gallon we mail a 50c Electric Sprayer---best made. Quart 35c, gallon $1.00. 5 gallon can $4.00. Made by
O. K. SEED STORE
Box A, Indianapolis, Ind.
Dealers write for prices.
"I used Fly-Fuma on 50 cows in dairy with perfect success. Man with sprayer will go over the herd in ten minutes. I use on horses with fine results. It is fine for sore shoulders and harness galls. I used Fly-Fuma on dogs for fleas and on chickens for lice with perfect results." F. McGAVOCK, Nashville, Tenn.

SOME FOOD SUBSTITUTES

Try onions and prunes for canned stuff and bleached dried fruit.
Dates for candy.
Beans for pork.
Milk or cream for pork in baked beans.
Milk or cream for pork in baked
Lemons for vinegar.
Olive oil for lard.
Nuts for butter.
Nuts for too much meat.

JUST BETWEEN OURSELVES

There is something on pages 10 and 11 that will interest you.

Read it all very carefully—it will pay you big to do so.

When you have read it send a club of four and help to make the Farmers' Pool a stupendous success. Remember, this paper is going to get profitable prices for farm crops. This is the only practical way now so help to make it successful.

A SMILE IS A TONIC

"I don't see why they worry so much about civil engineers," said the old lady on her first trip out. "Folks never see the engineers. Civil conductors and brakemen are what is needed."

"Do you really love me, Susan?"
"Yes, Harry, and I want to love you always."
"Then why don't you marry me?"
"That's why."

"Fine clothes don't make a man, do they?"
"No, but they often make a fool or a dude."

"You bad boy, why did you kick that poor dog?"
"He's mad."
"How do you know he's mad?"
"Cause I kicked 'im. I'd be mad if anybody kicked me."

PRIZE WINNERS OF MAY 1

The hidden picture puzzle brought hundreds of replies from our subscribers, and it was difficult to choose the best articles from those contesting, altho we believe our decision as given below is just, and decided wholly on the merits of the case. Many still send answers, but neglect to send the article required. Of course these have to be cast aside.

The following are the prize winners:

First prize, $1.50—Miss Fannie Fry, Lakeland, Ky.
Second prize, $1.00—J. G. Clark, Coyle, Oklahoma.
Third prize, 50 cents—Milton Brown, R. R. No. 1, Box 67, Waverly, O.
Fourth prize, 50 cents—Mrs. John Murray, Sisseton, S. D.

HONORARY MENTION

1st. Edna M. Hardesty, Sedley, Ind.
2nd. Augie M. Slate, Gordon Wis.
3rd. Harry L. Murray, Liverpool, W. Va.
4th. Mrs. Chas. H. Wright, Lowesville,Va,
5th. Mae Edgecomb, Traverse City, Mich.
6th. Mabel Mach, Onaga, Kansas.
7th. Chas. Baver, Smyrna, Lela.
8th. Hallie Knecht, Newberg, Ore.
9th. Joseph Harrison, White Pigeon, Mich.
10th. Roy M. McNeill, St. Johns, Mich.

We hope the winners and losers, too, will all come back again. Do your best and you will win a prize. We only regret we can't give a prize to every one who answers.

"The Proof of the Pudding, Etc."

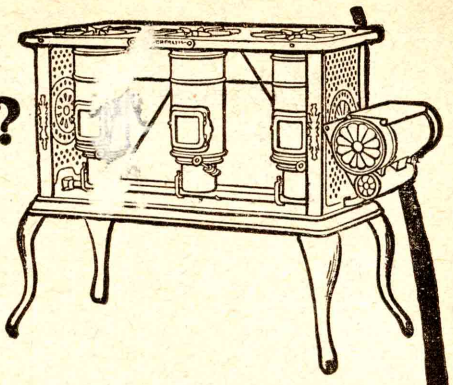
It is interesting to note the large advertisement of De Laval Separators in this issue; especially is it so when we read the list of prominent men who use their separators. Among the prominent personage we find the names of J. Pierpont Morgan, Andrew Carnegie, Alton B. Parker, John D. Rockefeller, Wm. K. Vanderbilt, Thos. W. Lawson, Levi P. Morton, E. H. Harriman, Whitelaw Reid, August Belmont, Helen Gould, and several score of others. They are all great business men and know the value of money and how to save it; they know that the best is always the cheapest, particularly when the best can be bought at a moderat price.

You should have their catologue. Look up their ad and send for it. All is free.

Faith and purpose constitute the motive-power of Life. There is nothing that a strong faith and an unflinching purpose may not accomplish. By the daily exercise of silent faith, the thought forces are gathered together, and by the daily strengthening of silent purpose, those forces are directed toward the object of accomplishment.—JAMES ALLEN.

"Children Teething"
Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

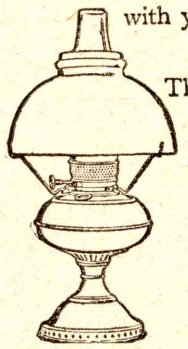
What Stove for Summer?



Nothing adds to kitchen convenience in summer weather like a New Perfection Wick Blue Flame Oil Cook-Stove. Anything that any stove can do the "New Perfection" will do, and *do it better.* Bakes, roasts, boils, toasts; heats the wash water and the sad irons, and does it without dissipating its heat through the room to *your* discomfort. The

NEW PERFECTION
Wick Blue Flame Oil Cook-Stove

actually keeps the kitchen cool—actually makes it comfortable for you while doing the family cooking, because, unlike the coal range, its heat is directed to one point *only*—right under the kettle. Made in three sizes, fully warranted. If not with your dealer, write our nearest agency.



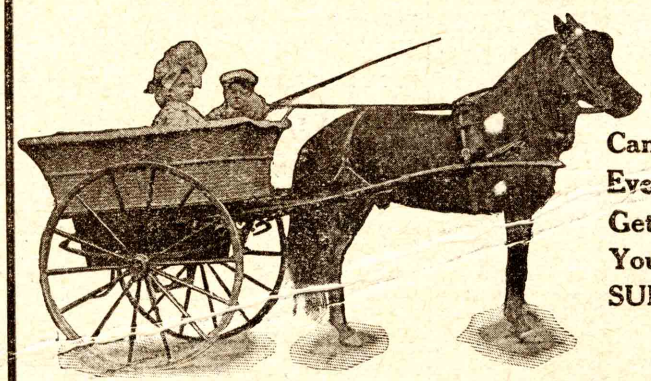
The **Rayo LAMP** affords a mellow light that is very grateful to tired eyes—a perfect student or family lamp. Brass, nickel plated, hence more durable than other lamps.

If not with your dealer, write our nearest agency.

STANDARD OIL COMPANY
(Incorporated)

You Can Get This Pony!

"Duke" is his name, and he is to be given away to some boy or girl in July—just a few weeks off. You can get him!



Any Boy or Girl Can Be a Winner
Every Contestant Gets a Prize
You Will Get One SURE!

It is Easy to Win "Duke"

The contest is just starting and he will be given away in just a few weeks, so it will take you only a short time to get him. That is why it is so easy! Whoever wins him, with his dandy cart and harness, as pictured above, will be the luckiest boy or girl in this whole land. Just think of having such a beautiful pony and such a superb turnout—all **your very own** to drive around in all summer! Besides "Duke," there is still another pony for some other boy or girl, and plenty of prizes and cash commissions for everybody. We **guarantee every contestant a valuable prize,** and a **cash commission** for every subscription, besides. **You can't possibly lose.** Don't let any one tell you you can't get him, for you can if you hustle!

This is All You Have to Do

This is Howard Laidlaw, of Walton, N.Y., who won first prize in our last contest. What this boy did, you can do.

Send me a letter or a postal card to-day and say, "Dear Pony Man, I want to win 'Duke.' Please tell me all about how to win him and the other Grand Prizes." Then sign your name and address in full. My address is Pony Man, Dept. 28, FARM AND FIRESIDE, Springfield, Ohio. I will not only tell you how you can win "Duke" and the other fine prizes, but will also send you some handsome pictures of them, and lots of other things, besides—all free. Remember, "Duke" is soon to be given away, so there is no time to lose. If you want to make sure of a prize, don't wait for my letter, but start right in and get ten subscribers to FARM AND FIRESIDE at 25 cents each. Then you will be a prize winner sure, and you can keep five cents from each of the ten subscriptions for yourself.

THE PONY MAN, Dept. 28
FARM AND FIRESIDE Springfield, Ohio

This is Viva McNutt, of Vandergrift, Pa., who was also a pony winner! You can win a pony, too!

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

SOME ORGANIZERS OF F. S. OF E.

If you want an organizer, write to one of the following, who may be the most convenient to your place:

Barryton, Mich., Feb. 19, 1908.

Mr. Everitt.

Dear Sir—I see that you want more organizers now. Send me your terms, please, for I have been watching to see how the other faction was coming out. I was in hopes that it could be settled with but little trouble, but I am glad to see that you have stood for the right. I am glad that our State stands on the old plan and that Up-to-Date is our official paper. I believe that when the storm is over that we will have fairer weather than we had before and the society will grow faster.

A. K. FINEHOUT,
Former State Organizer of A. S. of E.

ARKANSAS

Levi Gatlin, Brookland.

MEETINGS

Send the dates of your meetings. Organizers are especially urged to make their dates sufficiently in advance so that they can be published in this paper one or more times. Also send us names to whom we will send sample copies free. We can help you very much. Use this paper. Forms close ten days before date of issue.

Mr. C. A. Patterson, 1111 7th St. South, Minneapolis, Minn., wants to hear from local or county unions that want to hold a rallying meeting in May or June with the view of helping them. Write to him as above.

OSCEOLA COUNTY, MICHIGAN. The next quarterly county convention of the A. S. of E. will be held in Evarton, Friday, June 12th, 1908, at 10 a. m. Every union should send delegates to this convention.—G. G. Schlegel, County Secretary.

TO WHOM IT MAY CONCERN:

I wish to congratulate Mr. Everitt on the result of the recent trials of his detractors at Chicago. Going, as he did, into the enemies stronghold, where they had every opportunity for defense, and then convicting them of criminal libel is a triumph, indeed. And this should satisfy every farmer member of the society of the fact that he has been the victim of a shameful conspiracy that was planned and skillfully carried out by designing and desperate men, who aspired to control the organization he had built up, or, failing in this way, they would wreck it and build another, on its ruins.

They well nigh succeeded in the first part of their program, for it is said that a fool can ask questions that a wise man cannot answer and a lout can despoil in a moment a model that has taken an artist years to mould. In other words, it is easier to tear down than to build up.

I believe that no delegate to the late convention at Indianapolis had a better opportunity than the writer hereof to know all of the work that brought about the results of the late convention.

As State secretary of Kansas, I was in correspondence with the officers of the late National Union, and during the summer of 1907, I received leters containing insinuations that led me to believe that a conspiracy was brewing, the object of which was the capture of the organization.

I gave no warning of this to Mr. Everitt for I presumed that at least a part of the insinuations would prove to be realities. I was determined, however, to remain neutral so as to learn the whole truth and to shield no one.

As a delegate to the National Convention I reached Indianapolis October 16th, about a week before the Convention, in order to serve as a member of the committee on revision of the constitution and by-laws.

I proceeded at once to national headquarters and also to the office of UP-TO-DATE FARMING. At the latter office, I was given a mass of correspondence (more than one hundred letters) with a request that I take them to my hotel and read them at my leisure. I did so. sitting up most of two nights. During the previous summer certain of the national officers promised that upon my arrival at Indianapolis, I should be given documentary evidence that would convince me of Mr. Everitt's dishonesty. The officers did not refer to this on the first day of my arrival, nor on the second day. But on the second day I reminded them of their promise. They claimed that the evidence was not at hand but finally promised that I should have it next day. On the following day I again called on them and requested the documents. I did not get any. They were much discomforted by my persistency for seeing what they had agreed to furnish and I saw plainly that they had been trying to deceive me. It was then that I went to Mr. Everitt and told him of the situation as it appeared to me. If I had taken their statements without proof, as most of the delegates did, I should have been against him as some other delegatere were.

But even then I did not realize the enormity of the conspiracy, and in fact did not fully realize it for a month after the convention. Although I was on the ground a week before the convention and had every opportunity to know, yet I could not fully comprehend the enormity of the conspiracy, until after the convention had passed and the results gradually appeared.

Some say that the trusts have wrought this havoc and encompassed our ruin. This is doubtful, but of a certainty, if a band of men, the shrewdest men in the country, could have been prevailed upon to overthrow our society, they could not have improved on the methods of the late conspirators.

To recapitulate for the benefit of others, Kansas City was first selected as the place to hold the convention, but was changed to Indianapolis. The Denison Hotel was announced as headquarters. But by a private understanding most of the delegates were steered to the Lorraine Hotel, where a band of insurgents conveyed to them their first intelligence that Mr. Everitt would be, and must be, ousted.

A large suitable hall had been secured at the Denison Hotel, for the sessions of the convention, but on Tuesday night it became apparent that only a part of the crowd were present, and at 8:30 some loyal soul came in and asked why we were not attending the convention at the Linden Hotel?

We all went to that hotel, at once, and sure enough a room but half large enough for the whole convention was packed and the chief conspirator was chairman and they were flaying Mr. Everitt to their full capacity. Mr. Everitt had publicly asked for an investigation, but they preferred to do this before their own crowd and in their own way. As there was not standing room for all present, they were finally prevailed upon to adjourn to the Denison Hotel hall.

Also the committee on Rules and Order of Business had reported the usual routine in such conventions, namely: Reading minutes of last meeting, reports of the various officers. &c, and on Friday, election of the officers. This report was unanimously adopted by the convention, but on the second day of the convention, without any reconsideration, the election of officers was insisted on, and this was done. But under protest.

Union Labor, that at first was only permitted to sit as fraternal delegates, were now becoming active, and in fact the dominant element.

Was it not plain that our organization had been kidnapped? That our craft had left its moorings and was drifting about aimlessly, without lights, compass or rudder? Was it not now time to think about the interests of those we were sent to represent? The Kansas membership had previously voted nay on most of the measures that were being adopted and had gone to the bow-wows. A conference was called and it was attended by as loyal members of the American Society of Equity as breath today. Men who were not disgruntled; men who had no desire for office, but men who had the good of the society at heart; men who would stand loyal even if the majority went wrong; men who would make any sacrifice to save the society; men who had the nerve and back-bone to do what in all probability would be unpopular. Because not fully understood. "Only a few have the courage to publicly disagree with a majority." The real majority, was at home, we represented them and executed their will.

This was their program: The headquarters of the society and the department were to be taken to Chicago where an official paper was to be published and where an Equity Exchange had been exploited largely with A. S. of E. funds. As the membership in Kansas had just voted against these radical departures, the Kansas delegates were in duty bound to follow their instructions. The Kansas membership are strongly committed to the accomplishment of price-making by the producer before taking up other issues, and are also intensely loyal to UP-TO-DATE FARMING, hence they would not submit to its overthrow and the establisment of another official paper until the society repaid Mr. Everitt for funds advanced and justly due him according to the secretary's report, and which advance by Mr. Everitt had contributed largely to the building and growth of the society.

I believed that the Kansas delegation was right at the time, and now, after mature reflection, I am certain that the first convention went wrong. I have been cordially commended for the course the Kansas delegates took at the late convention by a host host of the Kansas membership and have never been criticised in one instance.

A part of one local union, only, went to Equity Farm Journal and they base their stand on the fact that Mr. Everitt did not appear at the investigation (?) Friday night,convention week. I feel it a duty to explain, in defense of Mr. Everitt, that he was in attendance at the second convention when he learned that an investigation was at last to be had. He seemed delighted, took his hat, asked to be excused, and started to leave the room. Everyone present protested. One took him by the arm, another held the door. Mr. Everitt said he thought it was a mistake to evade the investigation, even if it came on the last day and after all the busness had been transacted.

I now concede that he was right. This is a second instance of where a majority went wrong. If he had appeared, it is probable that no investigation would have been had. The minutes of that convention show that Mr. Hall claimed that nine-tenths of the evidence produced was false. Who will claim that the other tenth was better? The investigation was said to be a farce.

I believed that we were right then and now I am certain that the first convention went wrong. No one will sacrifice more, or concede more, than the writer, to bring about conditions as thew existed eighteen months ago. True, the arch conspirators were promptly kicked out but their successors who are carrying out their policies are equally guilty and in fact, conditions were made worse.

It seems that all the developments since the late convention have contributed to the vindication of Mr. Everitt. No tainted person could have stood in the searchlight as he has and come out without a blemish.

That a shameful ,selfish conspiracy was concocted and carried out by a portion of the officers of the society, without the knowledge of the membership, is so plain that no one can deny it.

The development promised by the conspirators, has not been realized. Where progress in development was before, stagnation now is.

A remedy for all the mistakes of the past can only be had in another national convention—a real convention inspired by the highest sense of Justice and Equity and where Justice will rule and Equity be done Therefore, let the farmers of America once more meet in national convention at Indianapolis, Ind., on next October 19th, as the call has gone out, and restore conditions as they existed in 1906. Then, and not till then, will our society, with the only practical plan for farmers' true and beneficial co-operation win.

C. W. PECKHAM, Haven, Kan-

Your Opportunity

BY WALTER MOODY IN THE BUSINESS PHILOSOPHER

[In view of the opportunty that is offered to farmers in this issue on pages 10 and 11 we deem it fortunate that we have the inspiring words of Mr. Moody to spur on our readers on to embrace their opportunities. If farmers now display the physical grit and courage necessary; if they will get on board the ship directed by UP-TO-DATE FARMING which has weathered all storms they will never go down, but will at last reach the part of success freighted with a cargo of incalculable wealth. Read this article very carefully.—Ed.]

HOW shall I live? How shall I make the most of life and put it to the best use?

How shall I become a man and do a man's work?

These are the all-important questions.

Life is opportunity, and therefore its whole circumstance may be made to serve the purpose of those who are bent on self-improvement—on making themselves capable of doing thorough work.

Opportunity is a word which, like so many others that are excellent, we get from the Romans.

It means near port—close to haven.

It is a favorable ocassion, time or place for learning, seeing or doing a thing.

It is an invitation to seek safety and refreshment; an appeal to make escape for what is low; to take refuge in high thoughts, in worthy deeds, from which flow increase of strength, joy, and harmony.

Life and opportunities of becoming and doing good are constantly with us. Each succeeding day presents a new oportunity for doing more and better work.

Our house, our desk, in the office or on the sales-floor, in the city or on the road, our business or our profession, the people who love us and those who hate, they who help and they who oppose,—What are all these but opportunity?

Wherever we are, there is opportunity of turning to good the dust of daily happenings.

To know that life is good, one must be conscious that he is helping to make it good for a few.

"He sits uneasy at the feast who has no thought for the starving; he is not comfortable at his own fireside who remembers those who have none."

The man is to be pitied who lives like a sponge, absorbing everything and giving out nothing.

He who gives what he has gets more —he who withholds loses what he tries to keep.

Opportunism means doing the best possible with actual conditions as they exist. What a great thing it is to master that truth.

He is wise who finds a teacher in every happening, for whom nothing is useless or vain.

If we have but the right mind, all things, even those that hurt, help us.

Let a man but have an aim, a purpose, and opportunities to attain his end shall start forth like buds at the kiss of spring.

If we do not know what we want, how shall anything be made to serve us?

The world is composed for the most part of two classes, optimists and pessimists.

David Forgan, while introducing James B. Hill at the annual dinner of the Chicago Commercial Association. said, "A pessimist is a man, who, having many opportunities, takes advantage of none, and therefore an optimist is a man,who having many opportunities, takes advantage of them all."

The heedless walk through deserts in which the observant find the most preclous things.

Two young men, John and Henry, were wending their way slowly and tortuously across the Great Western desert.

John lagged behind, protesting he could not go another foot. Henry strode resolutely forward with head up and eyes set on the horizon.

John was full of despair, complaints, and bitter mumblings; Henry was filled with hope, born of a desperate courage.

John cried out, "I must have water or I shall die. Why did I ever leave home and enter this God-forsaken wilderness?"

Henry said, "Oh, cheer up, John, and come on. Look! See that tree yonder. We are sure to find water where there is vegetation."

John said, "What is the use? We shall both die. There is no water anywhere." Doubting and stumbling along, he continued to bring up the rear.

At last, they arrived at the tree and found there a sparkling pool of deliciously cool spring water. "Thank God," exclaimed Henry, "our lives are saved," and he sank reverently in the sand, burying his face deep in the refreshing pool. John, without a word of thanksgiving, sank by his side, and when he had drunk his fill, arose and exclaimed, There, I knew I would get my knees wet."

What an object of ingratitude!

The grandest of all American characteristics, and the one we admire most in mn, is physical courage.

Pure, unadulterated grit constitutes one of the prime features in the life of every successful business man. It does not fall to the lot of the average man to have more hard knocks than he can bear. If he has pure grit and a sound heart, there is always open to him an avenue of escape from the knock-out blow that puts him down and out for good.

If he does lie down, there is a streak of yellow in him somewhere.

The journey over the flinty pathway of life is not unlike a ride in a lumber wagon over a roadway strewn with boulders in the wilderness of a mountainous country. There is a constant jolting and danger of being thrown from the seat; axles creak and groan as you rattle on over bogs and rocks; now and then a precipitous plunge into one of Nature's ditches shivers the staunch vehicle from stem to stem, but all goes well until a sharp turn in the road brings you face to face with a large boulder square in your path.

Before you can rein up and put on brakes, snap goes an axle. You climb to examine the break, and with an exclamation of dismay you wonder what you are going to do next. Looking about in your perplexity, you see a blacksmith coming toward you in the form of a genie, Pure Grit.

You failed to notice him, his little hillside shop having been hidden from view by the turn in the road.

The damage repaired, with a smile of encouragement, the good genie sends you on your way rejoicing, cautioning you to drive more carefully.

Everything goes well for a time, but the journey grows tiresome and you relapse into carelessuess, with a light grip on the rein, or, seeing a smooth strip ahead, you whip up at reckless pace, unmindful of the deep gully just beyond, until suddenly and without warning, snap goes something else.

This time the break is more serious. The realization is forced upon you that you are a long way from home, darkness is coming on, and there is no shelter for either man or beast.

With many a missgiving, you set about making repairs alone; it is hard work and the experience new and rough. You scarcely know how and where to begin; the task seems a hopeless one. Just as the last hope is giving away, you look up and perceive standing in the doorway of his little shop the good genie, Pure Grit. You wonder why you had not noticed him before . Once more he comes to the rescue and repairs the break, cautioning you the meanwhile to drive more carefully.

You mount the seat more confident than ever that the road can hold forth no more terrors, but the good genie knows the way better than you do, and, not trusting you to drive alone this time, he climbs up on the seat by your side and ride along until he is convinced that you are determined to keep a sharp lookout to the end of of the journey.

There is a natural tendency in the business world, when big successes are made, to suppose that they are peculiar to some distant or especially favored locality, but that the golden harvest is not for us. Those failing to see the advantages at home and feeling disposed to seek the gold at the rainbow's end may well ponder the story of the old Persian who sold h's little hillside farm and wandered far over land and sea in a vain search for diamonds. Finally he died a pauper in a strange land. A stranger, watering his flock on the little farm found a peculiar pebble glittering in the brook, which proved to be the first of the wealth of gems such as the old man had gone to seek.

"It's a good thing for the man who looks at the corns in his hands ot remember that on Easy Street the corns are on the heart."

William Mathews, one time Professor of English in Chicago University speaking from the subject, "Self-Reliance" said, "A lobster, when left high and dry among the rocks, has not instict and energy enough to work his way back to sea, but waits for the sea to come to him. If it does not come he remains where he is and dies, although the slightest effort would enable him to reach the waves, which are perhaps tosing and tumbling within a yard of him."

The world is full of men stranded on rocks of lost business opportunity, who, instead of putting forth their own energies, are waiting for some billow of good fortune to set them afloat.

These are many young men of vivid imaginations, who, instead of carrying their burdens, are always dreaming of some Hercules coming to give tthem a lift.

Good hard work is one of the richest privileges God has given man.

Sheldon quotes a practical psychologist in one of his lectures which most of us have read, but will bear repeating, for it is perhaps one of the grandest thoughts in all the universe.

"Did you ever say 'I can' and 'I will' with the strong feeling that you spoke the truth? If so, you then felt within you the thrill which seems to cause every atom of your being to vibrate in harmony with some grand note on the scale of life which has been sounded by the I-am-the-real-self. If so, you caught a momentary glimpse of the inner light; heard a note of the song of the soul; were conscious for a moment of yourself, and in that moment you

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues will not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say; "I saw it advertised in Up-to-Date Farming."

Agents Wanted

Agents Automatic Curry Comb, postpaid 40c. Over $5.00 daily or sample returnable. Particulars free. Clean Comb Co. [B] Racine, Wis.

Permanent, profitable employment. Really good opportunity for salesman or farmer. Seed Wheat,, Rye, Silos and Specialties, Necessities, great demand. Lake Erie Seed Co., Bufialo, N. Y.

$90 A MONTH for men to put out Merchandise and Groc'y Catalogs. M.O. House. **Blew Bros., Chicago**

Dogs and Pet Stock

For sale, Collie pups and a few dogs, broken on cattle; also trained ferrets. Write for prices. H. R. Miller, Lowell, Ohio.

Farm Lands

Farm Catalog free. Fidelity Reality Syndicate, Baltimore, Md.

Farms for sale to Catholics on easy terms; half-mile from church, two miles from railroad. Write T. A. McKittrick, owner, McCracken, Kansas.

Farms fairly improved, well laying, ten to twenty dollars per acre; timbered lands, choice for range, corn, clover, fruit, from four dollars up per acre. Our productive soils, excellent markets, good water, mild climate, healthy location, no negro population, attract wide-awake buyers. Investigate now. For price lists and booklet, write A. M. Knobel, Doniphan, Missouri.

Sacramento Valley, California, is the greatest agricultural valley in America. It It is the "Land of Opportunity" for the farmer. A family may be independent on twenty acres. Write Sacramento Valley Development Association, Sacramento, California. We have nothing to sell.

Gates and Fencing

Plans for building the best movable fence. Can set one rod in one minute. Cheap. Easily made. Write Mad River Fence Co., West Liberty, Ohio.

Live Stock and Dairy Supplies

For Sale Angus cattle of either sex. Wm. Noonan, Hartford City, Ind.

Free Price List. Shorthorns, Southdowns, fox hounds, setters. pointers. I buy and sell foxes. J. D. Stodghill, Shelbyville, Ky.

Registered Poland Chinas, choice breeding. fine individuals, large variety to select from. Satisfaction or no sale. Write me your wants. S. H. Taylor, Mottville. Mich.

Speeded horses: Octoroon, Chieftain, King Leer. For sale by J. B. McCullough, Newbern. Tenn.

Machinery

Why not buy a gasoline engine to do your hard work? It is the cheapest help you can hire, An air-cooled engine is the best and cheapest. Built in four sizes, 1½, 2½, 5 and 10 H. P. Write for prices The Air-Cooled Motor Company, Lansing, Mich.

Patent Attorneys

Advice and book relative Patents sent on request. Beeler & Robb, Patent Lawyers, 60-62 Baltic Bldg., Washington, D. C.

Poultry and Supplies

Baby Chicks $5,000 World's best Rhode Island Red baby chicks 15c each, $15 per 100. We own Chicago King, the most valuable male in the world. Eggs, breeders, exhibition birds. 10,000 Barred Rock, Brown Leghorn and Black Minorca chicks 10c each, $10 per 100. Buff Orpingtons 25c. Chicks safely delivered 1500 miles. Dahlias 25 for $1.00, postpaid. Gladiolus, $1.00 for 100. Send for catalog. J. L. Moore, Northboro, Mass.

Tobacco For Sale

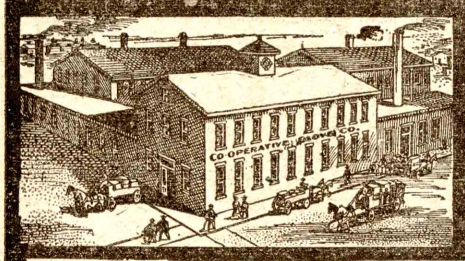
For Sale 20,000 pounds best leaf tobacco. Send for samples and price. Anton Wavrin. R. R, 5, Franklin, Ky.

$60,000 Value Given Away

THE RACYCLE has 27½ less pressure on its crank hanger, ¼ less strain on chain, it runs and climbs hills easier than other bicycles. Is the largest selling high-grade wheel in the world. Will last a lifetime. We make no cheap RACYCLES but you can get yours **AT FACTORY PRICES** by securing us an agent. Catalog and pamphlet sent FREE. It tells about the RACYCLE and how to get the $60,000.

THE RACYCLE MANUFACTORY, MIDDLETOWN, O.

You Can Own A Factory Like This



WE START YOU In A Business Of YOUR OWN Right In Your Home Town

We will start you in the canvas glove business, show you how to develop it into a hale, hearty business, make its product, sell its goods and bring its profit to you, and last, but not least, make one dollar grow rapidly into two.

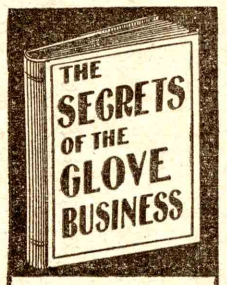
Never before in history of business has help like this been offered to ambitious men.

Here is brought to your home and placed in your very hands the accumulated wisdom, the priceless experience and proven plans of the glove business. Here is spread before you the vivid drawings and information, the actual working details needed in the glove business.

We are making you this offer, we want you to start a factory, to become prosperous. We want to show you how this can be done on little capital (from $30 to $145), with the possibility of making thousands of dollars.

We do all this for you, start your factory, simply with the understanding that you buy supplies and goods from us so long as our prices are as low or lower than you can get elsewhere.

This is not a speculation in any sense of the word. It is a sound, permanent and highly profitable business. The money to be invested is spent entirely for the necessities of the business; there is no waste material, no dead stock—every yard of cloth can be turned back into cash at a moment's notice.



This valuable book contains a great deal of information about the secrets of the glove business and how any one with a capital of from $30 to $145 can make money, right from the start. Send for it right now, today.

WE WILL SEND FULL INFORMATION

about the business and how we will assist you to successfully start a factory. If you would like this information it will cost you only one cent (a postal card) to get it.

There is no class of goods for which there has been such an unsatisfying demand as there has been for cloth gloves and mittens. Everybody uses them—the farmer, the mechanic, doctor, lawyer and the merchant in all sections of the country.

We want to prove to you that those in the Glove Business are successful and build up a large business. Those who have had the nerve to start and have thrown their brains and energy into the work get along well and have factories in two or three years.

Write us today, start now, do not let the golden opportunity slip by. We will help you to success, help you in every little detail; help you to succeed. Don't miss this opportunity even if you have to borrow the money to start with; in three months' time you should pay it back and have money of your own to do business on.

We Expect to Start Only a Few of These Factories

One can be started in any spare room at home or small store room and be enlarged as the business requires

This is simply an opportunity to go into the manufacturing business, which, with a reasonable amount of work and attention to business will make a man or woman a prosperous factory owner in a reasonable time.

We Can Give You a Start where you can make thousands of dollars a year, and not blister your hands with a pickax either.

We expect to start a few of these factories, protect their interests, and give them our valuable assistance. We hope to make our profit from the cloth we sell, and if our prices are not as low or lower than others, we do not even ask you to buy from us. By this arrangement we'll get a small profit and a few people will get a start in a manufacturing business that in time should be a huge manufacturing plant employing many people.

The two brothers of The McCreery Manufacturing Company started only a few years ago absolutely broke, actually borrowed $100.00 to start with. At first only had two girls working and have risen to be worth thousands of dollars, do an enormous business, own their own large factory and have valuable interests in others, all in a remarkably short time. If a factory will do this for us, it will do the same for you. Don't miss this offer. First come, first served. Write today for free book and full information.

THE McCREERY MANUFACTURING CO., 630 Dorr St., Toledo, O.

knew that untold power and possibilities were yours. You felt somehow that you were in touch with the sources of all strength, knowledge, happiness and peace;—you felt that you were equal to any task—capable of executing any undertaking. All the universe seemed to vibrate in the same key with your thoughts."

To make the most of every business opportunity, we must comply with certain conditions.

You might ask me, "What do you mean by conditions?"

Railroads haul passengers, for instance, on certain conditions. I know of but two,—one is—get your ticket; the other—get aboard,—and just as soon as we comply with these conditions, then all the speed in that engine and all the comfort of that coach is ours to our destination.

I start to cross the Atlantic in a paper box, and as soon as my box gets wet, it comes to pieces, and down it goes, and I go with it. If I start in one of those grand steamers, then all the strength in her hull, and all the power in her boilers, and all the skill of her officers is mine, and I will never go down until she does.

If we commit ourselves to our own weaknesses, we are stronger than the thing we commit ourselves to; but if we commit ourselves to the best there is in our alotted duties and the best there is in our house—our temple,—we'll never go down until it goes down; and, dear reader, with bright energetic men pumping a constant stream of new life into it, its course is surely onward, increasing business profits all the way.

PROFITABLE MERCY

There are on the farms of the United States many millions of horses. Effectiveness of their labor means profit. Loss of effective labor from even a part of this great army of producers means the needless loss of much money.

It is the constant effort of progressive farmers to make this labor more effective; better implements and vehicles are introduced for this purpose. The equipment to which the team is attached has undergone a great tarnsformation during the past half century. Strange enough, however, says the Southern Ruralist, the horses pulling a modern disc polw wear essentially the same harness worn by the teams which pull the modern mouldboard plow of a hundred years ago.

Probably no single farm appliance has been so little improved during this age of improvement as the harness of our work horses. Even when change has been attempted one feature has remained stationary. The padded collar about the neck has remained practically unchanged for centuries.

It is time for us to realize that the common work harness is as antiquated, and relatively as ineffective, as the scythe or spinning wheel.

It may be urged in opposition that so long as the horse pulls his full load his harness is effective.

We admit that this is essentially true. The harness which enables the team to work to its full capacity is satisfactory. That the common harness horse does not do this is our complaint.

Collar galls and sore shoulders are frequent experience on every farm. Tortured horse flesh is a regular incident of spring and summer work. Sentiments of humanity alone should effect a reform. Yet on too many farms the poor tortured beast pulls steadily in his cruel collar long after the humane society in any town would have protected him and punished his driver.

Pity may fail to prevent abuse. When it is shown, however, that profit is equally involved, reform is in sight.

Seven millions of horses and mules are at work on southern farms. There are few farms where the collar-galled horse is unknown. Often for weeks at a time animals are useless and idle because of inability to wear the collar, and ignorant of any remedy but rest. Partial incapacity is even more common. The loss of a single day in a year for each horse means an aggregate loss of $7,000,000 to the farmers of the South. Yet this enormous pecuniary loss and the dumb suffering incidental to it, are wholly unnecessary—may be cheaply and effectually prevented.

Ignorance rather than heartlessness is responsible for this misery to beast and loss to owner.

Ill-fitting collars are the primary cause. Collars fit badly because they are made on the wrong principle. The collar may fit fairly well when new or with the beginning of the season. It is, however, a soft padded mass. The strain of work pulls it out of shape, and the animal loses flesh with work and hot weather. The misshappen collar is padded to fill in some spaces. The strain is evenly distributed by the yielding collar. Pads are inserted to relieve the pressure on exposed places. The soft, absorbent pads become sweat soaked; the skin beneath is kept hot and wet, it breaks under the pressure, and the very condition sought to be prevented is actually produced. Sore shoulders, pain, misery, suffering and loss are the inevitable result of stuffed horse collars and soft pads.

In a way the source of this trouble may be found in animal sweat. In the season when sweating is least, galls are fewest. Collars which produce most sweat result in most sore shoulders.

Sores are result of germs. To cure sores it is necesary to kill germs. Sweat is a breeding place for germs; therefore, the kind of collar and collar bads causing most sweat on the shoulders produce the sorest shoulders.

The first application of this fact is the throwing away of pads which cause and absorb sweat. If sores actually start, the surest and simplest remedy is the mere washing of collars in soap suds as soon as removed from the wearer. Sweat, the source of infection, is thus removed, and the condition for recovery is secured. In hot weather wash the horse collar when it is taken off and burn the pad before it is put on.

This is emergency action. It is a good thing as far as it goes. Positive prevention is what is desired. Fortunately, even, this seems within reach. Success, however, demands radical departure from common horse collar construction.

The sewing machine was impossible so long as inventors clung to the uses of centuries—the needle with eye in the blunt end. Something revolutionary was necesasry. It came with the simple change of the eye to the point of the needle.

For centuries the horse has been worked, and has suffered, in the flexible stuffed collar; suffering and loss have been the result. Radical change from old methods of colar construction was needed. It came with the introduction fo the rigid, light, smooth steel collar, which gives no cause for heat, no place for sweat retention, and evenly distributes the pressure over the entire surface covered.

These are its fundamental qualities. Incidentally it offers freedom from much of the inconveniences of the stuffed collar. It needs no hames, as the whole collar is a pulling surface. It opens with a hinge and requires no forcing over the head. It closes and locks with a bolt, without straps or buckles. It is as easily kept clean as any other piece of polished metal.

These advantages are so apparent that they need no comment. The question arises, are they really available? Does this form of horse collar actually do these things? It is only

necessary to affirm that thousands of such collars are in actual daily use. Each one of them is a practical demonstration of the correctness of these assertions.

The old belief in the necessity of the pad to relieve pressure is so strong that mere assertion if often sufficient to satisfy many of error. Argument, however logical or strong, must be supported by stronger evidence. People demand to be shown. Fortunately, all that is claimed for the steel collar, the rigid, padless, hard-pulling surface, has been shown for centuries.

Sore shoulders, collar galls and fistulated withers are constant evidence of ill-fitting, improperly made collars. Who has not seen a sore-shouldered horse? Who ever saw a sore-shouldered ox?

One pulls his load from a soft, yielding sweat-saturated collar. The other draws from a hard, rigid, dry yoke. Is there any difference in the two animals or their work to account for the suffering of one and the immunity if the other?

The steel horse collar is simply a modern application of the practical principal of the wooden yoke and bow. It brings mercy to the horse and saves loss to the owner. These facts come within the experience of every farmer. His own observation shows their truth.

"The merciful man is merciful to his beast." Even the unmerciful man can offord mercy if he prevents loss by so doing.

The steel horse collar makes mercy profitable. Write to the Johnson-Slocum Co., Caro, Mich., if you are interested—and all our readers should be.

THE OLD FARM

When the busy day is over with its
anxious hopes and fears,
And the telephone stops ringing
and the last clerk disappears,
With a sigh I lean back weary in my
swinging office chair,
And the row of shining milkpans sunning
hood and the old farm that is
there.

I can see the dear old homestead,
broad and low beneath the trees,
And the row of shining wilkpans sunning
in the fresh sweet breeze;
I can see the barn and horses, and the
orchard on the hill
Where we gathered golden apples for
the old straw cider mill.

I can see the upland pastures dotted o'er
with grazing sheep.
And the wheat field waving golden, ready
for the men to reap.
I can see the old stone fences where the
chipmunks used to play
And the cornfield, and the meadow with its
piles of fragrant hay.

I can see the cattle standing 'neath the
willows of the brook
Where I used to fish for minnows with
a bent pin for a hook;
And the pond where grew the lilies
that my mother used to prize—
Ah, the light of heaven's shining now
within those dear old eyes.

And I sigh while fancy fingers o'er
each well-known pleasant scene
Of the happy days of boyhood thrown
by memory on the screen;
And I'd give all I have gained since, all
my wealth and treasures rare.
To go back again to childhood and the
old farm that is there.
— From Maxwell's Talesman.

REQUIRED SAND TO DO IT

A man bought five pounds of sugar of a grocer, and when he got home discovered that there was three pounds of sand in it. He published a card in the local paper announcing: "I have bought of a certain grocer in this town five pounds of sugar which contained three pounds of sand. If the grocer don't send me five pounds of sugar immediately I will publish his name." In the morning he found five packages containing five pounds of sugar. There were just five grocers in the town.—New Era Monthly.

How to Dig Potatoes

Every farmer tries to produce as many potatoes per acre as his land is capable of producing, and he takes great care in selecting seed potatoes, follows the plants carefully through the cultivating season, watching for insects and other blighting influences. But all the care of the season is partially nullified if he neglects to dig them out in the fall in such a manner as to insure a full crop. If some of them are cut or bruised, or worse still, left in the ground, his yield is reduced in size as well as in quality. A potato digger that will get right down under the hill and turn up every potato, sifting them thoroughly from the soil is the kind needed, if it can be purchased at the right price low enough to warrant a farmer with an ordinary potato crop in getting one.

Such a digger is the one made by the Parlin & Orendorff Co., Canton, Ill., and our readers are referred to the advertisement of the P. & O. Potato Digger in this issue. This digger, with a man and a team can do as much work as a dozen men with hoes, and with absolute certainty of exposing all the potatoes to the surface without loss. Write for Book 41.

"Business Dairying," a new book just issued, will be found to be of great value to every farmer and dairyman. Various chapters are headed: How to Feed; Caring for Milk; Caring for Cream; Butter Making; Churning, Working and Packing; Use of Skimmed Milk; Origin of Separators, and the Points to Note in Their Selection; What a Good Dairy Cow Will Do; Increasing the Selling Value of Cream; Stable Hints and Suggestions; Breeds of Cattle, and many other subjects too numerous to mention. Suffice it to say every reader should have a copy, especially so since they are entirely free. It is labelled book No. 186. Address Sharples Separator Co., West Chester, Pa., and mention UP-TO-DATE.

SMILING

When the weather suits you not,
Try smiling.
When your coffee isn't hot,
Try smiling.
When your neighbor don't do right
Or your relatives all fight,
Sure it's hard, but then you might
Try smiling.
Doesn't change the things, of course,
Try smiling.

But it cannot make them worse—
Just smiling.
And it seems to help your case,
Brightens up a gloomy place;
Then it sort o' rests your face—
Just smiling.
—YOUTH'S WORLD.

THE MYSTERY OF THE OLD MILL

A STORY OF A MISER AND HIS GOLD

In the dark recesses of a little valley in Virginia lived and toiled years ago an old miller, whose mill, situated at the falls of a gurgling montain stream had ground out a livelihood for him ever since the oldest inhabitant of that country could remember.

Rich and miserly, he had lived there all alone for years and years. He was without relation as far as was known except a nephew who lived with a neighboring farmer until the time of the miller's death. However, he possessed somewhere in hidden crannies or buried vault, a vast quantity of golden coin. No other currency was accepted by him in his business, and each new piece added to his yellow store was jealously guarded and hoarded.

While he was a close man to deal with, yet he was strictly honest, and had many customers who came from far and near to exchange their wheat for flour, and each patron left him a richer miller than before.

One morning in early August one of his customers was greatly surprised to find the mill door barred, and his loudest knocking failed to bring response. He and a passing neighbor, becoming frightened lest some ill fate had overtaken the miller. burst in the doors. But notwithstanding a thorough search, both high and low, he was not to be found. The surrounding country took up the search, but without the slightest result, except that in the center of the old mill wheel was found a leather bag containing several thousand dollars. The old miller appeared to have completely disappeared.

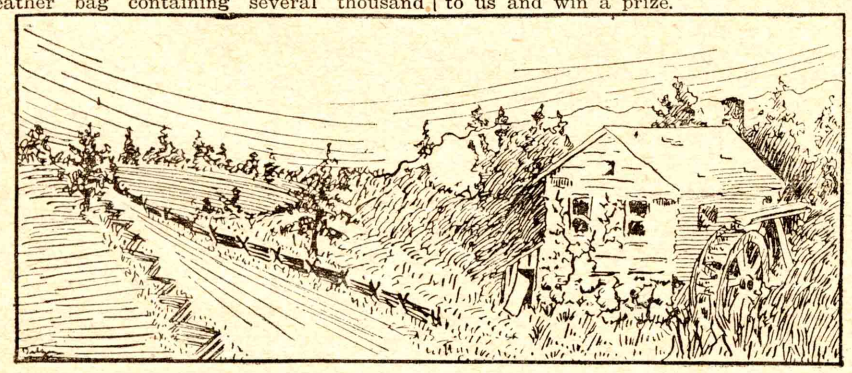
Then the question was, who should get the money, whether it should be given to charity or to the State, but a greater question was still unsolved—was the miller really dead?

At this point there appeared a young man, who claimed to be the nephew of the miller and told a strange tale. Years ago, according to his narration, he was out hunting and as he returned home late at night, near the old mill, he heard loud and angry voices. He listened and heard several men threaten the old miller with his life unless he told them where his money was hidden. Upon his refusal, they shot him dead. They then carried his body out and buried it, during which act they discovered the boy. They made him swear never to tell of the crime, upon penalty of death. Frightened, he ran home, and shortly afterward he and the people he lived with left the country.

Strange as the tale was some believed it, and promised to let him have the money provided he would take them to the place where the old miller was buried. This he agreed to do, and they found the body, exactly as he had described it. Thereupon, he was declared the legal heir, and received the money.

Below we give a picture of the old mill, and we want our readers to find the old miller. He is very plain if you look close.

Cut out the picture, mark his head, send to us and win a prize.



READ THE FOLLOWING CONDITIONS:

As a part of this contest it is necessary that you tell us which advertisement in this issue appeals to you most and give some reasons why it does. The advertisement you write about must not be signed by Up-to-Date Farming, J. A. Everitt, or Farmers Society of Equity. Letters not containing such an article, of course cannot compete for the prizes.

If more than four send correct answers, then the ones who wrote the best articles will be given the prize.

For the best colution and article we receive on of before June 15, we will give a prize of $1.50 in cash. The next best will receive $1.00, and the two next best 50 cents each.

Try your skill, as you stand an equal chance with any of our readers.

Winners will be announced in the issue of July 1 and prize money forwarded immediately. Address all answers to

SHOE BOILS
Are Hard to Cure, yet
ABSORBINE

will remove them and leave no blemish. **Does not blister** or remove the hair. Cures any puff or swelling. **Horse can** be worked. $2.00 per bottle, delivered. Book 6-C Free.
ABSORBINE, JR. for mankind, $1.00 per bottle. Cures Boils, Bruises, Old Sores, Swellings, Varicose Veins. Varicocele, Hydrocele. Allays Pain
W.F. YOUNG, P.D.F. 102 Monmouth St. Springfield, Mass

PILLING CATTLE INSTRUMENTS
Pilling Milk Fever Outfit for air treatment recommended by U. S. Agricultural Dept., price $3.00. Silver Milk Tubes 50c; Teat Bistoury $1.50; Teat Opener 75c; Cattle Trocar for Bloat $1.50; Capon Tools, Poultry Instruments, Horse and Cattle Syringes. All Pilling instruments are of fine quality—none better. Full directions. Write today for free book, "Cow Troubles."
EASY TO USE.
G. P. PILLING & SON CO., 2256 Arch St., Philadelphia, Pa.

A-Corn Salve gives instant relief while it takes the corn out by the roots. No risk from cutting or poison. 15c at druggists or by mail.
Giant Chemical Co., Philadelphia

OLD SORES CURED
Allen's Ulcerine Salve cures Chronic Ulcers, Bone Ulcers, Scrofulous Ulcers, Varicose Ulcers, Indolent Ulcers, Mercurial Ulcers, White Swelling, Milk Leg, Fever Sores, all old sores. Positively no failure. By mail 50c. J. P. ALLEN, Dept. 55 St. Paul, Minn.

Cure RHEUMATISM
Anti-Rheumatism Rings. Positive cure; write for testimonials from bankers, farmers, merchants, etc.
Don't Suffer. JOE A. HARRIS, Mfgr.
298 K. Elm St., Dallas, Texas.

25 COLORED VIEW POST CARDS 10c
Beautiful views of New York, New England, Niagara Falls, Washington, Chicago, Yellowstone Park, California, Battleships, Scenery, etc.; no two alike; each worth 2 to 5c; with big catalog (illustrated) and list of 1000 card exchangers, all sent prepaid for only 10c. ELLIS ART CO., Dept. 518, 321 Lawndale Ave., CHICAGO.

ECZEMA

Itch and Skin Disease
Treatment Worth $1.00 FREE
To Try We have the greatest Eczema and Skin Disease treatment in the world and want to prove it to you. Send your name and address, we will send a complete treatment by return mail. Use it according to directions and if it benefits, send us $1.00. Thousands have already been cured. It heals the unsightly sores, stops the itching and removes every trace of the trouble. No matter what you have already tried, or how many years you have suffered, grasp this opportunity. Write today; if any of your neighbors and friends are afflicted, tell them to write.
Address
Grace Medical Co.
223 Phillips Blk., Des Moines, Iowa

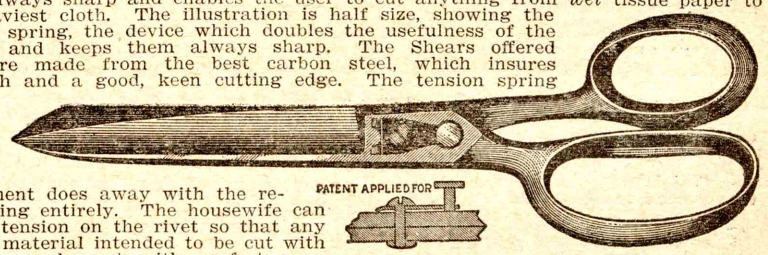
DROPSY Cured; quick relief; removes all swelling in 8 to 20 days; 30 to 60 days effects permanent cure. Trial treatment given free to sufferers; nothing fairer. **Dr. H. H. Green's Sons, Box K, Atlanta, Georgia**

AGENTS—$75 monthly. Combination Rolling Pin. Nine Articles Combined. Lightning seller. Sample Free. **Forshee Mfg. Co., D 106 Dayton, O.**

Ever-Sharp Shears Free

Dear to the heart of every woman—a pair of finest steel shears that are always sharp. You can get a pair free.

A first-class 8-inch pair of Shears, equipped with simple attachment that keeps them always sharp and enables the user to cut anything from *wet* tissue paper to the heaviest cloth. The illustration is half size, showing the tension spring, the device which doubles the usefulness of the Shears and keeps them always sharp. The Shears offered here are made from the best carbon steel, which insures strength and a good, keen cutting edge. The tension spring attachment does away with the resharpening entirely. The housewife can set the tension on the rivet so that any kind of material intended to be cut with shears may be cut with perfect ease, without tiring the hand. The tension spring takes up all the wear on the rivet, making the Shears practically indestructible, with no wear-out to them. A simple turn of the little thumb-screw tightens up the blades as closely as may be desired. Any woman who has had the exasperating experience of trying to use a dull pair of shears can readily appreciate the value of the new invention, *which keeps this pair of shears always sharp* and in perfect cutting condition. No matter how many pairs of shears or scissors you may have around the house, you need this pair with the tension spring, and when you get and use it once, you will use it in preference to any other you may have. These shears are 8 inches in length, perfectly finished and heavily nickel plated.



Guaranteed 5 Years

We guarantee the quality of the material and workmanship in this pair of shears to be first-class; that the tension spring device doubles the usefulness of the shears and does away with the need of resharpening, and, furthermore, the manufacturer's certificate accompanies every pair, agreeing that "if this pair of shears breaks or in any way becomes defective within five years from date of purchase, it will be replaced with a new pair without cost."

Our Offer One pair of Ever-sharp Shears will be given to each person who sends 50 cents for a new yearly subscription to UP-TO-DATE FARMING. Money refunded if not satisfactory.

SHUT YOUR MOUTH

A wise man declared a great many years ago that there is nothing new under the sun, but every day or two something comes up that is different if it is not new. The Southern Cotton Journal quotes the following as having recently appeared in an editorial in a leading paper published in a milling center of the South, where more cotton is bought than is produced:

'The average farmer has been farming all his life. He knows his business both theoretically and practically, and if he isn't able to take care of himself it is his own fault. Besides there is not one man in ten who essays to give advice that would know a bull-tongue scooter from a wing-sweep. The average man who gives advice to farmers would scarcely know how to hitch a horse to a plow. Let the farmers alone. Let them run their own business to suit themselves. If they fail they have only themselves to blame, and if they succeed they are entitled to the credit of their success."

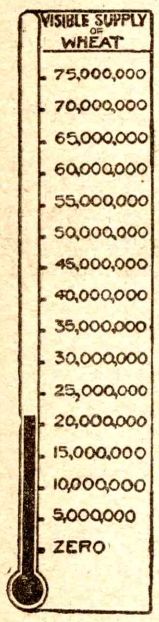
For unadulterated gall and selfish egotism that certainly "takes the cake." It is equal to saying, "Shut your mouth. Let the farmers alone. They are doing just as we want them to do. If they let us fleece them it is none of your business. Shut your mouth."

Selfish people do not care what is said to farmers or any body else, so long as nothing is said which interferes

(Continued on page 7)

THE FARMERS' POOLS

The harvesters are now busy in the southern wheat producing states, and for four to six weeks the march will be northward until the winter wheat harvest is completed.



Notwithstanding the visible supply of wheat has decreased nearly 4 million bushels since our last report, three weeks ago, and is now only 21,261,000 bushels the specultators have pounded the cash price down from over a dollar a bushel to 95 cents at Chicago. This is entirely on the strength of the excellent crop prospects and is not based on the present supply, demand or merit. The 1908 wheat crop will not be known definitely until next September or October when the spring wheat crop is harvested and estimated. Oftentimes when there is a large winter wheat crop there is a small crop of spring wheat and an average total crop.

VISIBLE SUPPLY

June 8,.....	21,267,000 bu.
May 30,.....	22,820,000 bu.
May 16,.....	25,444,000 bu.
May 9,.....	26,979,000 bu.
May 2,.....	28,344,000 bu.
April 25,....	30,968,000 bu
April 18,....	30,528,000 bu.
May 18,'07,	54,109,000 bu.

Growers of winter wheat should not countenance a reduction of price below one dollar. They should decide that they will not dump their wheat and put the suppply into the hands of the speculators to fill their contracts made at and around 85 cents. We know this sentiment largely prevails among farmers and we believe, as far as this paper circulates, it will be the practice.

But UP-TO-DATE FARMING does not reach all the wheat growers. The job would be easy if it did. Here is a work for every present subscriber to see that the paper is taken by his neighbors. The Farmers' Pools furnish the excuse to see them and every farmer who is not dead to his own interest and completely in the hands of the exploiters will subscribe at once. Also we have another way for those who have not the time to personally see their friends. These should send for the Dumper Post Cards. We supply them free. They can be used to an almost limitless extent, they will return an income to the users and, we believe, will accomplish the end of converting the dumpers and making the Farmers' Pools successful.

Wheat raisers never had a better opportunity to start the new crop at $1.00 and starting it there the price can be maintained. The country is practically "sold out" of wheat and the buyers are looking anxiously for the new crop to move, at their price. But suppose the Farmers' Wheat Pool is completed and the new crop does not "move" as fast as expected—fast enough to equal the demand which is accumulating every day and which, for the first weeks will not be less than 3,000,000 bushels daily—what will happen? Only one thing can happen if farmers are holding the wheat for $1.00 on the basis of Chicago market. If the demand is not met at the speculators prices, then the farmers' price will be paid. **Demand is insistent.** It is more a matter of meeting it than of price at which it will be met.

And it will not be necessary to have all the wheat growers in the Wheat Pool. The first demand, when the new crop begins to move, will be for about three million bushels daily. If only one million bushels is offered at the speculators price the market is bound to advance. Hence the problem is not to control all the supply, but to control as much of it as is possible. Already an immense number of farm-

(Concluded on page 18.)

Dumper Post Cards

THEY ARE FREE!

These cards are designed to increase the circulation of UP-TO-DATE FARMING and the membership of the Farmers Pools.

THEY ARE FREE to every subscriber to UP-TO-DATE FARMING who will use them. How many sets will you mail? We want each subscriber to mail at least five sets to five friends.

Send the coupon below. When you receive the cards mail No. 1, the one where the Dumper hatches all our troubles. Follow in two or three days with No. 2, where the Dumper is held in the speculator's hand and continue two a week—the Dumper "gets it in the neck," " gets snared," is "plucked clean," and finally is a "cooked goose." By or before your friend reads the six cards he will be converted and will be a subscriber.

For each card we receive back with your name on we will send you 25 cents. If five cards are returned you will get $1.25 while your expense will have been 30 cents for postage—profit 95 cents. All your friends may not subscribe, again you may get more than one subscriber from a set. If the cards are sent to names judiciously selected, it is sure to be very profitable in cash returns besides this is the way to make the Farmers' Pools successful.

We will send cards to the new subscribers secured from your cards and more cards to the subscribers received from your friends' cards and so on. You can now figure the possibilities of increasing the circulation of UP-TO-DATE FARMING by this plan, consequently its power and influence in securing profitable prices for the 1908 crops.

How many shall we send you?

GOVERNMENT CROP REPORTS

ARE THEY BENEFICIAL TO THE FARMERS

UP-TO-DATE FARMING has often protested against the monthly crop reports as issued by the Department of Agriculture, and we have declared them an injury rather than a benefit to farmers. These protests have brought a response from the Department, and the Crop Reporter for May contains an article on the subject, which we copy entire, as we wish to treat the Department with the utmost fairness. Besides, if the reports we have condemned are of benefit to the farmers we wish to withdraw our objection, and there certainly can be none better qualified to speak in their defense than the Department itself. The article, headed "Benefit of Government Crop Reports to Farmers," is as follows:

Are Government crop reports a benefit to farmers? This question is occasionally asked by some of our correspondents, and others.

The Government crop reports are especially valuable and beneficial to farmers, who are benefited by them both directly and indirectly. All farmers benefit by them in an indirect way, but only those who read these reports and "keep posted" by them are benefited in a direct way.

It is well known that speculators and large dealers in farm products do not depend entirely upon Government reports for information concerning crop conditions. They have traveling agents and correspondents (usually local buyers) throughout the United States, who keep them posted; and the large buyer or speculator, in return, gives to these local buyers or correspondents information in regard to general conditions. These local buyers know the conditions of crops in their vicinity better as a rule than the average farmer, because it is their business to keep well informed. The farmer cannot, by refusing to report for his locality the condition of crops, prevent buyers or speculators from knowing the condition of the crop. But how about the farmer, if Government crop reports, which are made up largely by and for him, should be discontinued? He may know very well the condition of crops in his own locality, but he must depend upon reports of others, in the newspapers or otherwise, for the conditions of the entire crop. Prices in his local market are influenced as a rule more by the condition of the whole crop than by local conditions. The entire wheat crop of his county may be destroyed and prices be low, if the entire crop is large, or his county may have a bumper crop and prices be very high, if the entire crop be short.

Some private crop reports published in newspapers are honestly prepared and more or less reliable; on the other hand, misleading crop reports are frequently sent throughout the country to affect prices in the interest of speculators. Does the average farmer know which reports are reliable and which are not sent out to mislead? The Government reports are intended to enable farmers to keep themselves informed as to the general conditions. The question then resolves itself to this. Does it benefit the farmer to "keep posted?" If comments upon this question are desired it may be disucssed in a future article.

But even those farmers who do not keep posted are indirectly benefited by the publication of Government reports, for these reports check and lessen the injurious effects of false reports sent out in the interest of speculators. As a police and constable force tends to check but not entirely prevent crime, so Government reports check but not entirely prevent the circulation of false and injurious reports.

The more certainty there is as to the supply of and demand for a crop the less hazard or speculation there is in the business of distributing the crop, to the benefit, in the long run, of both producer and consumer.

Large manufacturing firms, agricultural implement or hardware companies, who neither buy nor sell farm products, are much interested in the prospects and conditions of crops. This knowledge enables them to distribute more economically their wares, sending much to sections where crops are good and farmers have the power to buy, and less to sections of crop shortage, and therefore with less buying power. Few farmers realize how much is saved by the even distribution of wares which they buy, which is secured from a knowledge of crop prospects. In this saving, farmers in the long run are benefited.

Many farmers in the west know by sad experience how they may lose many dollars by a decline in the price for their grain because railroads had not furnished sufficient cars to haul the grain away. It is important to railroads to know the probable size of crops in the country in order to provide sufficient cars to ship the grain. The more nearly they can learn the size of the crops the better able are they to move it economically. Here, again, in the long run, farmers are indirectly benefited by the cheaper distribution of the crop due to better information of crop conditions.

The first contention is that all farmers are benefited by the reports in an indirect way, but it is admitted that only such farmers as read them are directly benefited. But how are these reports "specially valuable and beneficial" even to the farmers who read them? It is admitted that price is governed by quantity as compared with the demand, and that, if the crop is to be extra large the price will be low. This has time and again proven so true that the largest crops have brought less in the aggregate than smaller crops have brought. If these reports came in time to warn the farmers against excessive production so that they could hold in their crops and avoid the losses they have so often suffered from excessive crops, the Department might justly claim that the farmers had received benefits thereby. But they do not come until the crops are all planted and cultivation has begun. It is too late then to avoid the threatened evil unless by a destruction of a part of the growing crops, which would take a braver spirit than men generally possess to do. The Department has never recommended such a course, and we imagine it will not very soon do so. No one need doubt our assertion that crops may be so large as to be worth less, not in price only but in the aggregate, than smaller ones, for we have the figures of the Department of Agriculture for it. So reports showing a probable excess come too late to benefit the farmers.

But how about the dealers in "futures" and speculators? Such reports are just what they most desire. When reports of probable big yields come, down go the prices made by them, and this fall in price applies to crops of the previous year farmers may still have on hand. Hence the report, while is is powerless to save farmers from pending loss on the growing crop, compels them to suffer loss on what they still have of the crop produced the year before.

On the other hand, suppose the report should show a probable shortage, and indicate that a larger product would be taken at a fair price. That cannot benefit the farmers, for the information comes too late for them to hold what they already sold, too late to plant a larger acreage, too late for them to apply fertilizers to encourage a heavier yield, and too late to enable them to substitute better cultivation, for they are doing the best they can in that regard anyway.

But again the speculators. These have in store all they could obtain of the previous crop, and up goes the price. Such reports have made speculators hundreds of millions of dollars, and have cost consumers the same millions by being compelled to pay higher prices. This class of reports may benefit farmers who have held their crops. But it is a fact, as the above article itself admits, that the speculators have their own sources of information, and they know of the threatened shortage in advance of the government report, and they are active in buying up all the commodity that can possibly be reached. But the price does not materially advance until after the government report, and then the speculators become price-making sellers, and the consumers suffer.

There is another admission, in the third paragraph, that should condemn these reports. It is that the local buyers know the conditions of crops in their vicinity better than do the farmers themselves; the local buyers furnish the speculators with their information, the farmers furnish the Department; therefore the Department reports are not so reliable as is the private information, but the Department or less reliable facts are what govern the markets because they are official and are made public. That is another matter for the department to put in its pipe and smoke awhile. Its own admission, third paragraph in above article condemns the reports.

The indirect benefit to farmers is just as difficult to find. The first claim is that the government reports hold in check the evil effect of false speculative reports. Admitting all that is claimed here, how can it benefit farmers? They have nothing to do with the making of prices. Suppose they know there is much or little, that the reports are true or false, the prices are made by the exchanges, and the farmers have nothing to do but to accept the prices and deliver the goods. Yes, the more certainty there is as to the supply and demand, the less opportunity there is for speculation. But the department admits its information comes from those who know less about the crops than does that of the speculators, and the department does not pretend to give any report as to the demand. If the department would report that "there is an indicated yield of so much, with an indicated demand for so much; hence, on a normal basis, the price should be so much, and farmers are advised not to sell for less." Reports like that might benefit farmers. But, Oh my! What an explosion there would be in the "Pits," and the department itself would go into a dead faint.

We are not much interested in the benefits these reports are to the manufacturers. We have not noticed that this valuable information given them by the department of agriculture ever made the prices of farm implements less. If it saves money it saves it for somebody other than farmers. Besides the information which guides implement makers where to send the bulk of their goods, guides every "pluck-me" concern the devil ever invented, and fully acounts for how it is that localities having good crops are always crowded with swindlers and swindling devices, even before the farmers themselves know they are producing a good crop. In this regard the department is like a great searchlight tower showing every speculating concern, honest or dishonest, where their best fields are, for "where the carcass is there will the vultures be gathered to gether." So far as the benefits to the railroads are concerned, when farmers manage their own business they will not need a flood of cars at any one point to remove their crops all at once.

A knowledge of the condition of crops and probable yields is of value only to those who make the prices of the crops, and farmers under the system recognized and supported by the Department of Agriculture, have nothing to do with making the price. A knowledge of the actual yield of the preceding crop and the amount of the product on hand, showing the probable relation of the supply to the demand, would be of advantage to the farmers in selling the current crops, and this information is the legitimate work of an annual report; and such reports should include demand and consumption as well as production.

We close our case, and willingly let it go to the jury on the department's own testimony. Are government monthly crop reports of benefit to the farmers? The public constitute the jury. Will the Department abide by the verdict?

ARE TWO HEADS BETTER THAN ONE?

The old saying is: "Two heads are better than one." But when it comes to wheat heads it all depends on whether the farmers or the speculators make the price. Make the wheat pool sucessful.

A Commission *of* Co-operative Service

We take it for granted that a great many foolish things done in Congress are "meant well." Our acquaintance with the men who do them sometimes, convinces us of that fact. But the fact that a thing done is meant well, though it may be taken as an "extenuating circumstance," so far as the actor is concerned, does not make the thing itself any better for the general public, nor does it warrant the public in endorsing the act and making it a part of their institutions.

As such we must characterize a bill recently introduced in the United States Senate, providing for what it calls a commission of Co-operative Service. Everything under the crontrol of a commission. The nation is rapidly being commissionized. Were we to enumerate all the commissions that have been created or proposed the list alone would make this article too long. Whenever Congress proposes to do something the "system" does not favor, those for it are persuaded to place it in the hands of a commission. If the courts are inclined to break the old traces and jump out of the ruts worn during the ages, the new matters must be referred to a commission. If to the President the great body of the people look as big as the self-appointed ruling few, the resort is to a commission. We must have a tariff commission, a currency commission, and now is proposed a commission of co-operative service. Why not have a presidential commission to tell the President what he must do or say; a congressional commission to tell Tilman what to do with his pitchfork; Jeff. Davis, when to say it or not to say it; Lilly, when to bloom or keep his petal folded; Joe Cannon, whether or not he is really the only one to fire off in the House, etc. Yes, and there might be a commission to inform New York that it could go out into any of its wheat fields and cabbage patches and select heads that would more honestly represent the State than it is now represented in the Senate; or to whisper to Aldrich that while the farmers turn the clods of the great agricultural States, they study the currency schemes of the three-ball crowd of Wall Street.

There is a great deal for commissions to do. But this particular Commission of Co-operative Service; what is it to do? "To promote such co-operative enterprises as it may deem wise," and, of course, to put its 23-skidoo on such co-operative enterprises as it may not deem wise. And the public is to pay fifty thousand dollars a year for this concentrated quint-essence of wisdom. The general public, especially the farming public, is not expected to know what co-operative movement is wise, and a fatherly commission of five is to tell them for fifty thousand dollars a year. What a paternal care the Congress would throw around the erratic tillers of the soil!

But who is to appoint this kindly benevolent, or benevolently kind commission? The President is to appoint one- the favorites of most executives being politicians as far removed from farming as can be found in an agricultural country. One is to be appointed by the American Association of Agricultural Colleges and Experiment Stations, than whom it would be difficult to find a less progressive body of people without going up or down—in the regular lines of surface travel they could not be found. These people are great on studying bugs and bogs, but when it comes to striking out in new lines for a general agricultural uplift, their weight is always on the wrong side of the balances. The Patrons of Husbandry is to appoint one. We love the Grange. It was born when farmers were plodders, and saw little beyond their old worm fences. It warmed their hearts, taught them to look into each others homes, awakened aspirations in the breasts of their children, and gave them a longing for something better. But it never taught farmers a BUSINESS lesson. Their selling was to be done in the same old way. Prices made by the manipulated Exchange tickers were the prices ordained by fate, and must be accepted without question lest the "gods" be offended. As buyers they were taught to be "knockers." What the speculating gamblers robbed them of they were to get back by beating down the merchants, and if the merchants would not go low enough then they would make merchants of some of their "smart Alecks," and go up into the air on the first business breeze that struck them. The American Breeders' Association is to appoint another. Good people these. but they study Shorthorns and Jerseys, Holsteins and Angus, the bulls of their flocks and baby beef, much more than they study the bulls and bears of the market. The last members of the commission is to be appointed by the National Farmers' Congress. This is a body made up of the appointees of governors, who boost that they may be boosted; and it is just about as far from the living interests and needs of agriculture as an icicle is from the steam jet that moves a locomotive. It would be difficult to get in one place dynamite enough to bust its shell.

There is the proposed National Commission of Co-operative Service, that is to determine what co-operative movements among farmers are wise and what are not, a service for which the "fool" farmers are to pay them fifty thousand dollars a year. But the commission was left unpardonally weak. It should have been composed of seven members instead of five. Then one could have been appointed by the Exchange gamblers in farm products, and the other by the Wall street gamblers in stocks, bonds, and money. It would have then been an easy matter to shut off such aggressive co-operative farm organizations as the Society of Equity and the Farmers' Union, the only ones that pretend to lead out in independent business lines, and propose to bring farmers to the front, where they belong.

COTTON ACREAGE AND CONDITION

The Crop Reporting Board of the Bureau of Statistics of the Department of Agriculture finds, from reports of correspondents and agents of the Bureau, that the area planted to cotton in the United States this season (1908) including that already planted and expected to be planted, is about one-tenth of one per cent (.01) greater than the area planted to cotton last year (1907), thus indicating an area of 32,081,000 acres as compared with 32,060,000 acres planted last year, an increase of 21,000 acres.

The condition of the growing crop on May 25 was 79.5 per cent of a normal, as compared with 70.5 and 84.6 per cent at corresponding dates in 1907 and 1906, respectively, and 82.3 per cent, the average of the condition on May 25 of the past ten years.

Increased Power to Issue Currency

The money panic of October, 1907, or, rather the holding up of the money of the country at that time, resulting in a great deal of needless suffering and the loss of millions to the industrial interests of the country, was to compel congress to increase the power of the banks to issue paper money. Under the present national banking law, bank notes can be issued only as they are based, dollar for dollar, on United States bonds, which must be deposited with the United States treasurer. The Aldrich bill, to force the adoption of which the panic was created, provided that the banks might issue paper money on various other bonds and securities. But for once, thank God-congress withstood the power and demands of the national banks.

But these financial institutions are resourceful. No small amount of government bonds are held by private persons, and are not for sale. Hence the banks cannot issue currency upon them. They have adopted this plan, however, to get possession of these privately owned bonds. They will accept them the same as cash deposits, agreeing to return to the depositors or owners on demand after sixty days, the same or bonds exactly like the ones deposited. The owners of the bonds draw the interest the government pays, and the banks agree to pay an additional interest of two per cent while the bonds are on deposit.

So soon as the bank gets possession of the bonds, they are deposited with the United States treasurer, who returns to the bank depositing them national bank notes to the full amount of the face of the bonds. These notes are loaned out by the banks, or used in any way as cash deposits are used.

This is not violation either of the letter or spirit of the national banking law, and we see no objection to it, only as we object to the law itself. It costs the government no more than if the banks owned the bonds; it gives the bond owners an additional two per cent interest, and it enables the banks to issue that much more money to loan to borrowers at whatever per cent their needs may compel them to pay.

But when the owners thus deposit their bonds, the government is no longer responsible to them for the bonds. Thenceforth they have only the bank for it the same as if they had deposited cash. Should the bank fail the government will hold the bonds for the redemption of the bank notes issued upon them.

We regret very much to state that, since the above was written, congress did yield after all to the demands of the financial institutions, and adopted the Aldrich bill, in slightly modified form, but the Aldrich bill all the same. These institutions control the law making bodies of the nation; they control the business interests of the country, and can make panics when they please. In this respect they can play with the fortunes and even the comforts of the masses of the people as the cruel cat plays with the mouse it has caught but is not yet ready to devour. They control the political parties and thus control the government, and we shudder to say that it can hardly be denied that they control the courts. We seek not to create prejudices, nor to stir up animosities. We desire the whole country to live in harmony, enjoy like privileges and share a common prosperity but when dangerous powers develop, and selfishness, dominating the ruling classes, fosters, builds up and strengthens special privilege, the watchman on the tower of observation does not do his duty if he fail to sound the alarm.

DIRECT SHIPMENT TO ENGLAND

There is being organized in Oklahoma what is called the Producers' Mercantile Company, the ostensible object being to ship farm products, especially grain, direct to England. It would seem that this is practical in the great grain producing centers, but as the scheme carries with it a capital stock of half a million, divided into shares of ten dollars each, we advise our friends to investigate thoroughly before they invest. Few great enterprises can be carried on without capital and there are many ways in which farmers may get more directly to the market, but there are so many capital stock concerns that are purely "pluck-me" affairs, that we cannot help advising farmers to be cautious.

The Farmers' Pools Will Solve Farmers Price *and* Marketing Problems

MANIFESTLY it will be impossible for farmers to co-operate unless they are kept thoroughly informed on what is going on in every part of the country. It would be foolish, to take a simple case, to attempt to fix and maintain a price on farm produce unless each member knew what the price was. This information, at least, must be regularly furnished. It will be conveyed to members (of the pool) through the official paper, which is a part of the plan. * * * With the knowledge obtained from the paper, concert of action will be easy. For then every member will have the same price and the same advice about the same crop at the same time, and feeling sure that purchasers can not get those products from anyone else for less than they can get them from him, he will be under no temptation to sell for less himself. Without this knowledge it would be impossible to make the plan work.—The Third Power, page 148, English edition; page 127, German edition.

Catalogue Houses Unamerican

BY M. L. COREY, IN THE GRAND RAPIDS FURNITURE RECORD.

There is not one square, honest, logical, reasonable reason for the existence of a catalogue house, except that of price. All their arguments, appeals and advertisements are based upon price. Cheap service, cheap labor. The claim is deceiving, un-American. Deceiving because it can be shown by actual, expert value comparisons that the price cutting is generally on goods of inferior quality, or as a bait to draw trade to other profitable items. The "money-back" offer is easy when they have the cash in their hands, when distance protects them against complaints and when people are not well posted on merit and quality.

The policy of "protecting the interests of the greatest number" has never been figured in the United States on a small and doubtful price saving basis.

National and States laws all denounce the foreign laborer who sells his service for less than it is worth, child labor, sweat shops, Chinese and even the quick-witted Japs have been denounced, condemned and legislated against on account of threatening the standard of wages we have established.

The protective tariff, upheld in our elections time and again, declares that the buying privileges of our people are not to be compared to the advantages of home made goods, well paid labor and protected home markets. The giant trusts that drive their weak competitors into bankruptcy are denounced even though they lower the price of their own product. The professional man that bases his services upon cheapness is regarded as undesirable. The farmers unite and pledge not to sell their crops until the speculator comes to their terms.

All down the line cheapness and cut prices are discredited until you reach the merchants. Here the catalogue houses aided by a certain portion of the press that is evidently influenced by advertising preferments, is preaching the doctrine of cheapness, of unprofitable conditions, of driving out of business thousands of men and women that a few cents may be saved in buying merchandise.

Catalogue houses **do save** on a few items. We admit that. They **save** paying their share of taxes. One catalogue house in Chicago claims sales of $40,000,000 annually. Investigations will show that comparing a number of small merchants whose sales aggregate an equal amount, pay 1,000 times more to support our government. Catalogue houses **save** contributions to church and charitable institutions. Local merchants pay 10,000 times more to make our people better and alleviate the distress of unfortunate humanity. Catalogue houses **save** any donation or assistance in any way towards good roads, local enterprises, or community development. Records in every country town show that the merchant is the promoter of local progress and improvement.

The clerks in the country stores are men of families, they establish homes, and are therefore desirable citizens. Compare them as a class with the cheap, under paid, over tempted, loose moraled, unmarried catalogue house helpers. Which system is to be preferred? Which will prove most loyal supporters of American institutions and American ideas?

Catalogue houses shut the doors of opportunity against the small individual business ventures. The success of this system means concentration of trade in a few wealthy corporations and the smothering of every independent mercantile ambition. What do they offer in exchange for all these evils? Lying misrepresentation of price advantages, a distorted saving of a few cents here and there which will neither make nor break any customer.

They have been declaring for years that their premium system made it possible for them to sell cheaper. Now they say they discarded it because it prevents low prices. Did they just find it out? Absurd, they worked it beyond the limit and when people begin to get wise they jump to some other scheme. They once asked fifty cents for their catalogue, claiming no catalogue house could furnish them for fifteen cents and sell goods at a reasonable price, but when the people would not buy their advertising, they not only gave their books away but sent them to agents and paid them ten cents each for distributing them.

The tried to bribe postmasters to write money orders in their favor. They offered premiums to rural route carriers that would violate the rules of the service. The advertised standard makes of sewing machines they never handled and never inteded to try to furnish. They are selling second qualities for the best and warranting paint that is twenty-four per cent water to cover double surface and last twice as long as any other make. **Their list of misleads would stamp any established business house as a dishonest trickster in the eyes of the people of that locality.**

We all know that the above statements are true and yet we have some manufacturers who claim they are honest and worthy, and some trade papers that call them legitimate and honorable competitors.

ENGAGED IN RURAL PURSUITS

It is interesting to know how many people are engaged in farming and other rural occupations, and how the number now compares with that of other years. In the main the number has increased from year to year but not in so great a ratio as have those of other callings. In 1870 those classed as agricultural laborers numbered 2,855,996; in 1880, 3,323,876; in 1890 3,004,061; in 1900, 4,410,877. Those denominated farmers, planters and overseers were: In 1870, 2,981,320; in 1880, 4,229,051; in 1890, 5,281,557; in 1900, 5,674,875. Those classed as dairymen and dairy women were: In 1870, 3,550; in 1880, 8,948; in 1890, 17,895; in 1900, 10,875. Gardeners, florists, nurserymen, etc., were: In 1870, 33,632; in 1880, 56,032; in 1890, 72,601; in 1900, 61,788. Stock raisers, herders and drovers were: In 1870, 15,359; in 1880, 44,075; in 1890, 70,729; in 1900, 84,988. Total engaged in rural pursuits: In 1870, 5,919,857; in 1880, 7,661,982; in 1890, 8,446,843; in 1900, 10,243,403. The total population of the United States at the same periods was: In 1870, 38,558,371; in 1880, 50,155,783; in 1890, 62,622,250; in 1900, 75,994,575.

From 1870 to 1900 there was a falling off in the number of agricultural laborers, but each ten years showed an increase in the number of other farmers, the number almost doubling during the thirty years. From 1880 to 1890 there was a great increase of those engaged in dairying, but the following ten years shows a heavy falling off. And the same phenomenon appears regarding those engaged in gardening, etc. The greatest and unbroken increase is in those engaged in stock raising, the increase during the thirty years being five and a half times.

But it is a significant fact that, while the general population of the country lacked but little more than a million of doubling during the thirty years, those engaged in rural pursuits lacked more than a million and a half of doubling. This is undoubtedly because those engaged in other pursuits control their own business, and, therefore, have alteractive advantages, while farmers are only taught to produce and leave their business management entirely to others. When farmers take the business end of their calling into their own hands the results shown will be very different.

BARGAIN SALES

Among manufacturers and merchants we frequently hear of "bargain sales" or "closing out sales." These mean that they were long on supply and to move the goods they reduce the price. Such sales always occur at the end of a season when the actual condition is known and sacrifices are sometimes made to make place for the new stocks.

We don't intend to present any argument for or against bargain or closing out sales in merchandise, but commend the merchant and manufacturer for waiting until the legitimate demand has been supplied before cutting prices. Our object is to show that farmers have quite a different method.

Reports from all parts of the country show that grain growers have sold out and the visible supply is now so low that we may say the country is practically "sold out" of grain. This is a happy situation to be in and proves that the demand for farm produce is fully equal to the demand. Farmers don't need to announce any "closing out sales" or "bargain sales" because they are "sold out." But here is the strange thing. The farmers have their bargain sales the beginning of their season, before they know they have an over supply. And strange too, they don't announce the bargain sales nor decide the price.

Weeks or months before the harvests the speculators arrange for the farmers' bargain sales. They fix the prices and when the crops are harvested and threshed the farmers are expected to rush up like silly geese and dump the cream of their crops. And on the other side of the bargain counter are the people who announced the bargain sale and who fixed the price, ready to take all that is offered.

And when the bargain sale is over—when all the dumpers have dumped—prices advance. It has always been this way since so many farmers have been taught to control their crops and those who hold get their prices.

Farmers need not allow this system to continue longer than they want to. When they learn the visible supply and keep it low, ask the agreed price and not sell for less, they will not have any bargain sales because, we claim, the real demand must have all they produce.

But if the time ever comes that there is a surplus, the merchants system of having his bargain sales after the regular season for selling is the better one.

AN ANOMALOUS BUSINESS CONDITION

This country for some time has been in a singularly anomalous situation. It is actually bursting with prosperous basic-conditions, enterprise, promoting affairs, general desire to hustle in order to be up and doing; with a vast population anxious and crying aloud for the privilege of buying anything and everything their family needs; with natural manufacturing and farming resources and wealth unmatched in the world; yet with all this inherently vast stimulus to trade of every kind the whole business is heavily handicapped to do these things.

A millstone is upon the neck of progress. Who wil remove it?

The whole throuble lies in our system, which practically says: "So far may you go, but no farther."

However, if anybody imagines for a moment that this great American nation is going to knuckle down to and kiss the foot of that system that rests upon their necks, he will get most prodigiously left.

For progress, sound healthy commercial progress, "will out itself." It will smash all oposition in the long run. That is surer than fate, for it is the record of all history. There is nothing that can stop or check the will of the people.

They will out. So opponents may as well take a back seat now as at any time.

Some say that the presidential election will bring the commercial ice or deadlock, name it what you choose. But good times will come, and surely come, election or no election, President or no President.

For the simple reason the whole people will have it so.

Our point is: You can't stop a prosperity that has been once tasted. For the people have been educated up to business prosperity in once having it. You can't suppress an educated people. If any seek to try, they will be crushed and trampled upon by the natural growth of human effort.

If the referred-to "system" is wise, it will join in with the procession of onward march of common sense and enthusiastic commercial progress, and not commit suicide by getting in its track tryng to head it off.

You can't stop good healthy growth.

If anyone tries to, it at once becomes the gravest act of self-destruction known to man.

Such is all history.

When you stop progress, you destroy man's hope of attaining that upon which he has set his heart.

Attempt it, then man fights for his life, fights for commissary, fights for the bread and butter that sustains that life.

It is a dangerous game to try.—Model Magazine.

HOW TO LIVE JOLLILY

Let no pleasures tempt thee, no profit allure thee, no ambition corrupt thee, pursuasion move thee to do anything which thou knowest to be evil; so shalt thou live jollily, for a good conscience is a continual Christmas.

—Franklin.

THE LAST LOAD OF HAY

"Talk about your automobiles,
And your reckless rides today—
Guess you never raced a rain-cloud
On a slashin' load of hay.

"When a youngster, I jest liked it—
Startin' from the fardest side
Of the forty-acre medder
With the last load high and wide.

"Pap bareheaded an' a drivin'
Like a jockey at the Fair—
Horses down to a dead gallop—
Hay-straws flyin' thru the air.

"And us boys, our bare shins buried
In the middle of the load,
Holdin' to the pitchfork handles—
Wonderin' if we'll make the road.

"Lightnin' flashin', thunder boomin'—
Nancy! how that old load reeled
When we struck the big dead furrow
In the middle of the field.

"Thru the gap and down the turnpike,
Horses with their ears laid back—
Pap with one eye on the rain cloud
And the other on the track.

"And us boys a-clingin' breathless,
Git a mighty healthy scare,
When pap, drivin' at a gallop,
Clears the gate-post by a hair.

"Right into the barn we clatter,
And the horses snort and rear,
As a mighty clap o' thunder
Shakes the roof and lifts our hair.

"When the rain comes down in rivers,
We ain't carin' a consarn,
For our supper's on the table,
And the last load's in the barn."

WILDER'S "WHIRLWIND" SILO FILLER

Will fill your Silo with any Power from 4 H-Pup. Will cut or shred green or dry fodder and cut hay or straw. Our catalog explains why Whirlwinds succeed where others fail. Carried in stock at principal transfer points. Pamphlet,—"How and Why to Fill a Silo," sent free.

Weber Implement Co., 415 N. Main st., St. Louis, Mo.

Farmers complained of the backward season for planting corn. May not a kind providence have so ordered it to prevent over planting because of the high price?

GOD'S SIMPLE PLAN

A furrow plowed by honest farmer,
A seed dropped in the fertile mold,
A little rain, a bit of sunshine,
A quiet rest in night's warm fold—
This is all God's plan requireth
To feed the millions of the world.

MORE THAN CULTIVATION

Since the days of serfdom it has been the custom of the eaters to flatter those who furnished food. Such flattery has become a confirmed habit, and it is practiced yet, with increased ability to flatter, so long as those who furnish the food do so at the eaters' price. But whenever the food furnishers demur, and begin to talk about having prices of their own for what they have produced, and what until it is sold is absolutely their property, "the fat is in the fire." It is amazing how quickly fulsome flattery turns into rebuke and condemnation when the profits cease to come to those who all the years have gathered them in.

We repeat what we have often said to farmers, that there is more in farming than planting, cultivation and harvesting—there is something more than production. The creation of value is in the growing, but the realization of profits is in the selling; and so long as the grower sells at prices fixed by the buyer, it is folly to expect profits or even income other than that which the very nature of the goods compels. So many want and must have the products, that hunger itself compels the payment of something. Otherwise; that is, if the world could do without farm products, or if they were so abundant that no one had fears that his share might be taken by some one else, and when he was hungry he might be unable to obtain food, those products, however valuable intrinsically, would have no price, because no one would want to buy.

Hence, we care not what others may say, or what the schools and the press may teach, the farmers' work is less than half done when his crops are produced. When he has studied production and knows it to perfection, it is then up to him to study marketing; to learn supply and demand; to have a definite idea of price, and, in conjunction with his fellow farmers, to determine what that price shall be; to know when to sell and when to withhold from the market; to know how much or how little to produce to justily and properly meet the demand without glutting or stagnating the markets and destroying price and profits.

Here is outlined a course of study that is no little thing, and that it has so long been neglected makes it seem all the more formidable; but its accomplishment is entirely feasible, though it will take intelligent co-operation to do it. We earnestly appeal to farmers to give this matter serious thought. The independence and profits of their business depend upon it. They can never share the advantages of other callings until they do it.

PATTEN, ARMOUR, AND CORN

Several weeks ago UP-TO-DATE FARMING told its readers that the corn market was in the hands of two boards of trade gamblers, James A. Patten on one side and J. Ogden Armour on the other, and we declared then that Patten would beat the hitherto unconquered Armour. The Chicago market papers for May 20 had such headlines as the following: "Armour on his knees.". "Forced down by Jim Patten who is now the man of the hour." "Pit in board of trade scene of greatest squeeze ever known in Chicago." We quote from the Drovers' Journal the following description of the scene:

The corn pit was in the wildest confusion all Tuesday morning. The quadrangular steps were crushed with fevered men fighting to buy the little grain that was offered.

Shrieks rose above shrieks as the men fought for foothold to make their bids.

The air was rent with gesticulating fingers.

It was a scene in the greatest corn "squeeze" ever known in the Chicago market—a "mere incident" in the James A. Patten corner on that cereal.

A din that was deafening resounded through the great Board of Trade when in walked a fat man with a $30 suit and laughing blue eyes, a big, heavy black cigar was in one side of his mouth, a quantity of chewing gum in the other, says Warren McIntire, a Chicago American reporter.

This was the "Jim" Patten who is putting J. Ogden Armour on his knees, forcing old-time grain men to dance to his tune and making millions at every advance.

That is but one of the many such scenes that have been displayed on the Chicago board of trade, and that is the way the market and prices of the leading farm products are made and controlled; and it is the way the toil and the wants of the masses of the world's people are played with by conscienceless speculation. Early in the season Armour ran a corner in wheat, and in it he pinched Patten pretty severely. Then Patten took corn and began a battle royal with Armour. The procedure is like this: Patten believed he could buy more corn than it would be possible to deliver in May, and thus be able to force the price up and compel the sellers to settle on a high margin. Armour did not believe he could do so, and he was therefore a free seller, selling thousands of bushels he did not own, but that he believed he could buy at lower price, or compel Patten to settle on a lower margin, in which case Armour would make millions off of Patten. In the other case Patten would make millions off of Armour. And it was not at all necessary to the transaction that a grain of corn should change hands. On this deal and the result of the strife between these two millionaire gamblers all through April and May, depended the price of the more than two billion bushels of corn produced by the American farmers during 1907.

Patten continued to buy and Armour to sell, and prices continued to climb as Patten increased his bids, until as the time of delivery approached the offerings became less and less. It then became apparent that as May went out there would be no corn to sell, and Armour and his crowd became alarmed and rushed into the market to buy so as to cover their deliveries. Patten had all the corn bought that was for sale, and the Armour crowd had nothing to do but to settle up at Patten's prices, or go broke.

Will any one venture to say that these prices were made in accordance with any law, or that actual supply and demand had anything to do with it? It was simply a question as to which could get control of the corn, the Patten crowd or the Armour crowd.

Some may say that this deal made the price higher, and that farmers ought not to complain. But farmers are not gamblers. They want steady, equitable prices. They do not want prices up one day and down another when there is no reason for the change beyond the uncertain result of a game of chance. And yet this is the system the commercial powers of the country sustain, that the Department of Agriculture fosters and encourages by its monthly reports, and that both producers and consumers are compelled to pay for. We demand that the government put an end to such immoral transactions, but that demand will never be heard until it comes from the united farmers.

RETARDING CONSUMPTION

Whatever retards consumption curtails the demand, and not only denies the benefits of the comodities to those who would use them, but makes it easier to glut the markets and ruin the prices. Mr. P. M. Kiely, of St. Louis, an authority on produce marketing, and who has but recently been on a tour of investigation through the South, deplores the probability of exceedingly low prices for producers of fruit on account of a prospective large crop. Mr. Kiely says:

"Crops will be so heavy they can't be marketed. If retail prices were put down commensurately with low wholesale prices, the great big crops would be all right. But it is never done. The consumer has to pay the same, old, high prices. No matter how near to being given away are the crops, so far as growers are concerned."

That brief paragraph describes a situation greatly to be deplored. Though there may be a large crop, if retail prices to consumers were made in equitable proportion to the prices paid producers, there would be so much more consumed that it would be difficult to glut the markets. But so

long as retail prices are kept at the same high figures, the slightest surplus gluts the markets, and producers are ruined, without benefiting either consumer or handlers. Such a mistaken policy ought to be corrected, and we know of no power that could so effectively correct it as could the organized producers. Each class must protect itself. That is the result of the selfish methods which now prevail in the commercial world; and if producers would take this matter, of such great importance to them, into their own hands, and see to it that their products reached consumers at equitable prices, they would secure to themselves just profits, and place better living in the reach of millions, while in the same proportions they would enlarge their own markets.

PLANT FOODS

Farmers' Opportunity to Save on the Fertilizer Bill

BY R. J. DAVIDSON, VIRGINIA EXPERIMENT STATION.

The elements necessary to the growth of plants may be divided into the following groups:

First.—Those that are furnished in abundance from air and water.

Second.—Those which are furnished in aundance from the soil.

Third.—Those that are not usually furnished in abundance in an available form from air, water or soil, as nitrogen, phosphorus and potassium.

Nitrogen is found in large quantities, chiefly in the uncombined or free state. It constitutes about four-fifths of our atmosphere. In this form it is only available to leguminous plants, such as peas, beans, clover, alfalfa, etc., through the influence of micro-organisms found in soils and living in nodules on the roots of plants of this family. In the case of all other plants the nitrogen is taken in only in combination with other elements. Combined with hydrogen it form ammonia, which may be taken up in small quantities. With oxygen it forms nitric acid, and this combined with some elements in soil forms nitrates. These are readily taken up by plants and form the principal source of the plant's nitrogen.

Nitrogen is the most expensive element the farmer has to purchase. It costs at least three times as much as the phosphorus or potassium. It is also the element most likely to be deficient in the soil, as it is readily converted into soluble nitrates and in addition to being used up by the plants is sometimes leached out of the soil. There is a large quantity of free nitrogen in the air. By growing leguminous crops we can obtain a portion of this nitrogen and store it up in the soil in fixed and available forms in the roots and stubble or in the whole crop turned under. We can thus repair in large measure the loss to the soil of this element without any cost and in addition obtain an excellent food for stock in the form of clover hay, alfalfa hay, etc. It will thus be seen how important it is for the farmer to grow one or more of these nitrogen gathering crops on his land as often as his system of rotation will permit and thus save purchasing this most expensive element of plant food. It is poor economy to buy what we can have for the taking, especially when the taking costs nothing.

HOLDING CORN IN ILLINOIS

A dispatch from Shelbyville, Ill., says the farmers who held their corn crop for better prices are reaping the reward of their business system. Corn during the middle of May sold at private sale in that town for 70 cents per bushel, and the elevators were offering 68 cents. Many are still holding, and expect even higher prices.

It would be easy for farmers to get equitable prices every year, if they would only introduce into their business common, every day business principles. But it must be remembered that farmers are organized for equitable prices, not excessive ones. When such prices are offered it is time to sell, when they are not it is time to hold.

"SHUT YOUR MOUTH"

(Concluded from page 1.)

with their plans. The manufacturers of cigarettes don't like for people to talk against smoking them. The British manufacturers of opium induced the British government to go to war with China because the government of that nation forbids the use of opium in that kingdom.. "If they want to keep at it, leave them alone. Shut your mouth!" they practically say.

The same could be said concerning every evil in the land. People are free. If they want to do wrong, it is their business. Let them alone. Shut your mouth. Had that been the rule of the human race since Cain successfully asked the Lord, "Am I my brother's keeper?" mankind would have been in a pitiable condition today, if indeed the entire race had not long since been swept from the earth.

But the idea expressed in the above quoted paragraph, and in all other like references, is a purely selfish one. It is not that the parties care for the restricted liberty of the subjects, or that they be made wiser or more ignorant. The welfare and happiness of the subject has nothing to do with it. It is simply a question of whether the opponent's business shall be interfered with. So long as farmers dump their products, whether it be cotton, grain or live stock, on the first offers, speculators reap a harvest, and it is that easy harvest they do not like to give up. They care not what is taught, whether by those competent to teach or incompetent, provided farmers are not taught a different way to sell their surplus.

The builder of the old ox wagons could have said the same thing to the inventor of the steam engine; or the makers of the old reap hooks to the manufacturers of the modern reapers. "Farmers have always used the reap hook; they know nothing better and are satisfied with it. Let them alone. If they are taught to use a better instrument it will ruin my business." Precisely the same, "If farmers are taught a better system of marketing their stuff; if they make prices themselves and sell only as the goods are needed at the price, what will become of us speculators, those of us who have been in the habit of taking the goods at whatever we pleased to give?"

Read the above extract and see if it is not about the plainest screech you ever heard. And then remember that cute saying of Sam Jones, "The hound that is hit is the one that howls!"

A TRUE STORY

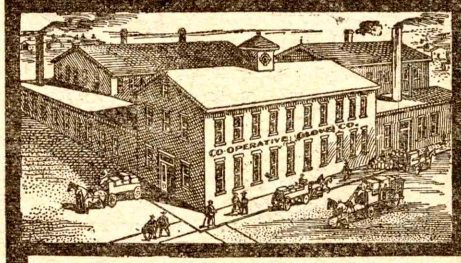
It's a long recognized fact that hand cream separators are the best and quickest method to secure all the cream from the milk of three or more cows.

There are many different makes and styles in the United States and Canadaa which have their good and their bad features.

The first thing that a person thinks of in the purchase of any article is, "which is going to bring me the most returns?" In the dairying business, "most returns" means the greatest possible amount of butter fat from a given quantity of milk, nd this is what every owner of cows is looking for.

All makes of separators claim to be the best, natural enough, but it was proven at the Pan-American Exposition which was the last public, international test, which was really the best separator by actual tests.

You Can Own A Factory Like This



WE START YOU In A Business Of YOUR OWN Right In Your Home Town

We will start you in the canvas glove business, show you how to develop it into a hale, hearty business, make its product, sell its goods and bring its profit to you, and last, but not least, make one dollar grow rapidly into two.

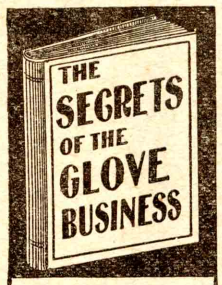
Never before in history of business has help like this been offered to ambitious men.

Here is brought to your home and placed in your very hands the accumulated wisdom, the priceless experience and proven plans of the glove business. Here is spread before you the vivid drawings and information, the actual working details needed in the glove business.

We are making you this offer, we want you to start a factory, to become prosperous. We want to show you how this can be done on little capital (from $30 to $145), with the possibility of making thousands of dollars.

We do all this for you, start your factory, simply with the understanding that you buy supplies and goods from us so long as our prices are as low or lower than you can get elsewhere.

This is not a speculation in any sense of the word. It is a sound, permanent and highly profitable business. The money to be invested is spent entirely for the necessities of the business; there is no waste material, no dead stock—every yard of cloth can be turned back into cash at a moment's notice.



This valuable book contains a great deal of information about the secrets of the glove business and how any one with a capital of from $30 to $145 can make money, right from the start. Send for it right now, today.

WE WILL SEND FULL INFORMATION

about the business and how we will assist you to successfully start a factory. If you would like this information it will cost you only one cent (a postal card) to get it.

There is no class of goods for which there has been such an unsatisfying demand as there has been for cloth gloves and mittens. Everybody uses them—the farmer, the mechanic, doctor, lawyer and the merchant in all sections of the country.

We want to prove to you that those in the Glove Business are successful and build up a large business. Those who have had the nerve to start and have thrown their brains and energy into the work get along well and have factories in two or three years.

Write us today, **start now, do not let the golden opportunity slip by. We will help you to success, help you in every little detail; help you to succeed.** Don't miss this opportunity even if you have to borrow the money to start with; in three months' time you should pay it back and have money of your own to do business on.

We Expect to Start Only a Few of These Factories

One can be started in any spare room at home or small store room and be enlarged as the business requires

This is simply an opportunity to go into the manufacturing business, which, with a reasonable amount of work and attention to business will make a man or woman a prosperous factory owner in a reasonable time.

We Can Give You a Start where you can make thousands of dollars a year, and not blister your hands with a pickax either.

We expect to start a few of these factories, protect their interests, and give them our valuable assistance. We hope to make our profit from the cloth we sell, and if our prices are not as low or lower than others, we do not even ask you to buy from us. By this arrangement we'll get a small profit and a few people will get a start in a manufacturing business that in time should be a huge manufacturing plant employing many people.

The two brothers of The McCreery Manufacturing Company started only a few years ago absolutely broke, actually borrowed $100.00 to start with. At first only had two girls working and have risen to be worth thousands of dollars, do an enormous business, own their own large factory and have valuable interests in others, all in a remarkably short time. If a factory will do this for us, it will do the same for you. Don't miss this offer. First come, first served. Write today for free book and full information.

THE McCREERY MANUFACTURING CO., 630 Dorr St., Toledo, O.

In competition with all other makes of separators exhibited, the U. S. Cream Separator made the record breaking showing, of skimming the milk of about a dozen different breeds of cows in fifty consecutive tests with an average of .0138 butter fat left in the skim milk.

This remarkable record has never been approached by any other make of cream separator.

Notwithstanding the splendid character of the work of earlier models of the United States Separator, the improvements made in the 1908 U. S. makes this separator even more attractive to dairy farmers, who quickly recognize the sterling merits of this marvelour cream producer. For the Improved United States, as proved at the Pan-American Exposition, is the best Cream Separator on the market.

A beautiful catalogue No. 187 can be obtained by addressing The Vermont Farm Machine Company, Bellows Falls, Vermont.

"Two Irishmen were talking about the Standard Oil Co. One named Pat said to the other, 'Mike, do you think John D. Rockefeller's money is tainted?'

"'Yes, I do, Pat. It has two taints on it —'taint your'n and 'taint mine.'"

What the Name "Elkhart" Signifies to Vehicle and Harness Buyers

The man who cannot pick out a buggy or other vehicle to his liking from the great catalog of the Elkhart Carriage and Harness Mfg. Company, of Elkhart, Ind., is a hard man to please.

Their 1908 book is an eye-opener—a handsome book of over 250 pages, every one of which contains a fine illustration and accurate discription of some of their numberless styles of sterling vehicles and harness. You wil find in it about every kind of rig you ever saw. The same is true of harness. The pictures are so large and the descriptions so full that you will know very nearly as much about the purchase you are about to make as if you actually saw it.

The Elkhart Carriage and Harness Mfg. Company is the kind of institution we like to recommend to our readers. A great big concern, thoroughly reliable and dealing in high class goods. We san say unhesitatingly that anyone who has need for a vehicle or harness should send for the great catalog, see the prices and then judge for himself.

I Am the Paint Man

2 Full Gallons Free to Try—3 Months Time to Pay

You Pay No Freight to Try My Paint

I Have a new way of manufacturing and selling house paint that's unique—that's better.

Before my plan Paint was sold in two ways—either ready-made—or mixed by a local painter.

Both these ways are at fault.

Ready-Made Paint settles hard in cans—and mineral pigments and chemical acting driers in ready-made paint eat the life out of Linseed Oil—which is the LIFE of all paint.

Painter-Made Paint can never be properly made by a painter—because of lack of heavy mixing and grinding machinery.

My Paint is **ready to use**—but not **ready-made.** My Paint is **made to order**—after the order is received—packed in hermetically sealed cans—(extra size to insure a full gallon) and dated the day the Paint is made.

Pure Linseed Oil and pure, **fresh paint ingredients** are used in my Paint. Such materials, found at local stores, are usually adulterated.

I sell my Paint **direct from factory to user**—at very low factory prices.

I pay freight on six-gallon orders or over.

When the order of six gallons or over is received, use two full gallons to test it—and if you are not perfectly **satisfied,** in every particular, return the balance of the order to me—and the two gallons you have used shan't cost you a penny.

No other paintmaker offers such a liberal proposition. My Paint is sold to responsible people on three months' time, if desired. I make three brands of Paint to suit the requirements of my immense trade.

My strictly Pure All White Lead Paint is absolutely the best paint in the world. My 40-60 Brand Zinc and Lead Paint is the best paint in its class on the market. My Durability Paint has an immense sale everywhere, and is sold under five-year iron-clad guarantee. The Purity of my Paint is guaranteed under a forfeit of $100.00 in gold.

Send for my beautiful Paint Book and big Color Cards to select from—best Book—largest Cards ever published. They are FREE. With the Paint Book I send Free Book of all kinds of Painters' Supplies, sold at **Direct-to-you Prices.** Write TODAY. My Plan insures you Satisfaction and lowest prices on Paint.

O. L. CHASE, THE PAINTMAN, DEPT. D51, ST. LOUIS, MISSOURI

WHY DOES THE IMPROVED 1908

U. S.

CREAM SEPARATOR Win So Many Laurels?

¶Because it has that solid, low frame; most simple yet efficient bowl, holding World's Record for cleanest skimming; so many conveniences; and the easiest running separator made.

¶If you have cows, you need a separator, you need the best separator. That one is the U.S.

¶Simply send for catalogue "No. 187" read it carefully, and we leave it to you, which is best.

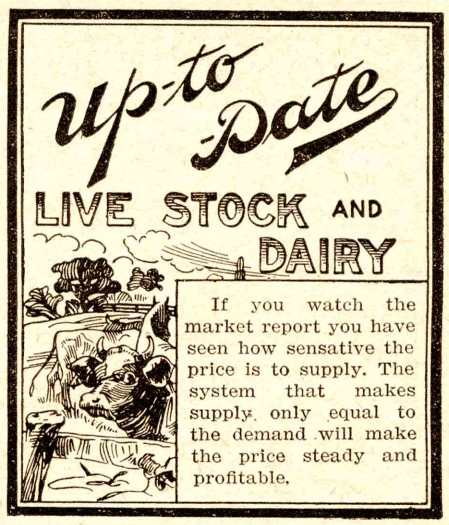
Coiled Spring Fence Co. Box 418 Winchester, Ind.



If you watch the market report you have seen how sensative the price is to supply. The system that makes supply only equal to the demand will make the price steady and profitable.

MASTERS OF PRICE

No matter how the herd may grow,
And thrive in the lot or pasture,
A profit comes only to those
Who of prices are the master.

STOCKMEN ARE STUBBORN

Stockmen are really intelligent and progressive people, and they are not slow to organize. Not only every species of livestock has its organization, but almost every variety of every species. In cattle we have the Short Horn Breeders' Association, the Holstein Breeders' Association, the Jersey Breders' Association, and so on through a long list of varieties. It is the same with hogs and sheep, and even with poultry. But the associations are for the maintenance of the purity of breeds and for the improvement of varieties.

And these breders are not backward in making prices when breeding stock is concerned, nor or they nigardly, choice specimens often bringing fabulous prices. But no attempt is made to influence general market prices to regulate shipments or to control marketing. The doctrine that has so long prevailed concerning price-making and selling products retains its hold upon stockmen with wonderful tenacity. And yet there are few lines of producers that suffer more from prevailing methods than do livestock men. Commission men and buyers themselves protest against the unwise and irregular shipments—some days everything full, sales slow and dull, and prices unremunerative; other days the pens almost empty, the demand eager and unsatisfied, and prices inordinately high. Buyers themselves would rather have a steady supply, just enough and not too much, and consumers would also prefer that condition, which would insure to them as well as the stock raisers, a constant market and steady prices.

Another conceded and regretable evil, which bears heavily upon the sellers, is that, whether the supply is meager or excessive, the buyers know the quantity each requires, and no one interferes with another in bidding for the stuff on sale. This is commendable courtesy between those of the same calling, but it often leaves the producers of the raw material without profits or increase. Scarcely any class of persons engaged in rural pursuits would be more benefited by a mutual understanding as to supply and demand, as to price and shipments, than would those who raise livestock for market, and none are better situated to thus co-operate together if they would. Their experience in organization and the special practical organizations they already maintain, eminently qualify them to take the one additional step needed to make them masters of their business,—of selling as well as producing. We are surprised they are so slow to take this matter up in the only practical way—in Equity and jointly with all other producers.

HOGS IN THE CORN FIELD

A great many feeders are now practicing and advocating the turning of hogs into the cornfields and allowing them to feed themselves. This saves the cost of the gathering and feeding at least, and that is no small item in these days of scarce farm labor. One writer turns in when the corn is just passing from the roasting ear state—is beginning to dent, as it is called. Hogs should not be turned into corn, however, off the pasture. If they have not been fed corn all the time, corn should be fed them several days before turning in. Begin with light feeds, and increase gradually to full feed.

Another writer counted splendid gains on 100 50-pound pigs that he turned into the field when the corn was still in the milk state. He gave them 100 acres of corn, but by the aid of woven wire fencing, he gave them only three acres at a time. It required only half a day to so move the fence as to add three acres of fresh pasture whenever he wished. He thus made April pigs weigh 225 pounds in November, and he had only the fence moving to balance against the time usually required to gather the corn and feed the hogs. He is generally prepared with a bunch of smaller pigs to follow the fattening ones, in that case an additional fence is required, to shut off the eaten lot from the fresh lot, but after the first move only one is necessary to effect the changs—move the back fence beyond the front one. This encloses a new strip for the fattening hogs, and adds the one last eaten off by them to the general pasture for the sows and pigs that follow.

Some writers recommend sowing rape seed at the time of the last plowing, among corn that is to be thus hogged off. Treating thus 101 pigs that weighed 7,980 pounds, beginning September 5, they weighed 18,080 pounds October 24, seven acres being the size of the field so used. The hogs were worth at the time of beginning, $398.95. At the close of the experiment they sold for $876.88, which was a gain of $69.56 per acre.

It is but fair to say, however, that during the above experiment conditions were peculiarly favorable, and the yield of corn on the seven acres was very large—perhaps 80 to 90 bushels per acre.

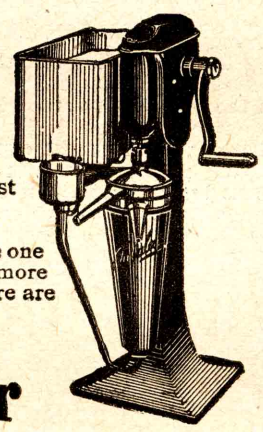
DRAFT HORSES NOT FARMERS

The draft horse, say of sixteen hundred pounds, is not the best for the farm. The single team of heavy drafters is giving place on the farm to two teams of lighter, general purpose animals weighing perhaps twelve or thirteen hundred. When extra work is required, which is not so very often, all four of the lighter horses may be used, or three of them. All four of the light horses are not worth much more than the two heavy drafts, and it requires not much more feed to keep them; and when we estimate their greater usefulness and adaptability to the different lines of farm work, there is no comparison between their farm value or their desirability on the farm.

THE TEAM AT WORK IN HOT WEATHER

Many experienced farmers mistreat their teams, especially in hot weather. The working team should never be allowed a full drink when heated as a team usually is at noon or night. A few swallows of water and then a few minutes in which to cool off; then the animals may drink until satisfied. Ten more minutes and the team is ready for its noon or evening feed. Never feed a horse before its thirst has been satisfied. Some feed and water afterwards, a very bad practice, as the water so eargerly swallowed is liable to wash the undigested food into the intestines and cause irritation, often colic. It is all right to give the horse that has

The Greatest in the World



Are you attracted by big buildings and a vast throng of busy workmen?

Stands for something, don't it?

No separator factory in the world is so big as the one where the Tubular is made; there are no employes more skillful than those who build the Tubular; nowhere are there so many people making separators.

More than one complete

Tubular Separator

in every three minutes, is turned out from our West Chester factory alone. We own another complete factory at Harburg, Germany, from which we supply the European trade. Another factory at Toronto, makes the machines for Canadian dairymen. Bigness alone don't make the finest separator in the world, but the finest separator in the world made the bigness and number of factories, and made it necessary to have the vast number of workmen. If you haven't one of the world's best separators you are losing dairy money.

Let us tell you more. Write for Catalog No. 136.

THE SHARPLES SEPARATOR COMPANY, West Chester, Penna.

Choose Your Cream Separator

From The EMPIRE Line

Different Types—Different Prices, with a Full Range of Sizes and Capacities in Each Style.

You don't have to take one man's idea or "hobby" when you come to headquarters. Different styles of separators, different separating methods, have been added to the Empire Line so that you may take your choice, not only of size and capacity, but also of type, design and price.

And back of every separator in the Empire Line is the EMPIRE Guaranty and Reputation—because all are made in the Empire factory, the best equipped separator factory in the world.

No matter which Empire you choose you can't miss it on quality. You'll get the benefit of Empire inventions, Empire designs, Empire construction, materials and "know-how."

Don't buy th separator that some one wants to push on you—Get the type that suits your requirements and fits your pocketbook.

You will find that it is some one of the Empire Line that will

Make The Most Dollars For You

Get the Empire Book and Prices. The fairest and most impartial separator book ever published. It will help you select the separator you want. Write for it today.

Empire Cream Separator Company

Western Branch: Chicago, Ill. Bloomfield, N. J.

been watered as above suggested, a few swallows of water when starting back to the field, after the horse has been done eating for some time.

A mistake is made too in feeding the horse too much at noon. The noon feed should be a light one. When a horse is given, in addition to its feed of grain, hay enough for it to be eating all through the noon hour, its stomach will be full, and it is in the very worst condition for hard work. The result is short wind, poor digestion and imperfect assimilation of the food—deficient nutrition—the condition most to be avoided. Hay may be fed with impunity at the night feed, as the animal then has the entire night in which to rest and digest its feed.

MIXING BREEDS

Often a cross of showy breeds makes very satisfactory results, but if such crosses are repeated, that is, breeding these crosses upon like crosses, degeneration soon sets in. Varieties or breeds, as they are caled, are built up by careful selection, adhering to a type until that type is well established and perpetuates itself. But it is a long line of ancestral traits, that are at any time liable to assert themselves—we had almost said that were seeking oportunities to assert themselves. Whenever two of these varieties are crossed, the dominant element is broken, and though the first result may show increased vigor, possibly increased size, a continuation of the cross, opens the way to the manifestation of ancestral traits, and very soon a scrub is the product.

DEVELOPING DAIRY STOCK

The beef breeds are more desirable on the farms than are the dairy breeds. Many of them are very fair milkers and reasonably good butter makers—sufficient in both of these respects to well answer all ordinary farm purposes, and the fact that they stand out strong as sellers in the beef stock market, make them much the most desirable for the farm. But occasionally there is a farmer who would like to improve his milkers without buying regular dairy stock. To do that select as a basis a cow or two that have acquitted themselves best both as milk and butter producers, and that have the best defined dairy points. Select a large, long and round body, widely spaced and well curved ribs, head rather long, with a long, slim neck, limbs small and short; but above all note the udder, capacious with abundant and large milk veins. If you wish to cross into a dairy breed, select a male for his ancestry—the milk record that has preceded him, then adhere to the same strain in future breeding.

But if you do not wish to cross, but desire to develop some better milkers in the breed you have, be guided in the selection of a male by the same rules. There are many males of the beef breeds that can point back to an enviable milk record in their ancestry. If you can get in such a line, and adhere to it from year to year, good dairy cows may be produced in almost any breed. But such development, increasing the milk and butter capacity, will weaken the beef type points and strengthen or make more manifest the dairy points.

VEALING CALVES

It is a pity that the price paid for veal values is so attractive as it usually is. It is seriously cutting into the supply of beef cattle. Those up for the beef market, find them scarce and high, and the result is that the general supply is falling below the general demand. Equity does not ask for a scarcity and a high price in any line. We seek an adequate supply and an equitable price. When that is provided and secured the consumers have nothing of which to complain and farmers have all they have a right to demand.

Just enough
Of all our stuff
To give the world a plenty
At fair reward—
That is the word
While UP-TO-DATE is Sentry.

The Test of Time

Year in and year out the International Harvester Company of America continues to do business and in distributing more McCormick, Champion, Deering, Milwaukee, Osborne, and Plano harvesting machines than ever before.

While the various machines are all made up by the one company, or rather by the respective divisions of the one company, they are sold by different agents throughout the country and the line not only includes harvesters, but mowers, rakes, corn harvesters, wagons, binder twine, gasoline engines, and practically everything in the line of agricultural implements. It is always a part of good judgment to order things before you actually need them so as to have them ready and thus avoid delay in getting your order filled at the busy season. Be sure to read the advertisement of the International Harvester Company of America in this issue, and if you would like to secure a catalogue of any one of the machines, or all of them for that matter, go to the local International Harvester dealer—he will supply you and answer all questions cheerfully.

Before You Buy Your New Buggy

Write to The Ohio Carriage Mfg. Co., for their new 1908 192-page Vehicle and Harness Catalogue.

A good buyer always looks the market over before he makes up his mind. This large catalogue will quote you the prices at which buggies should be sold—that is, the rock-bottom, wholesale manufacturer's price to you, without any middleman's profit between—the prices that will save you from 33 1-3 to 50 per cent.

It can do no harm and will only cost you a penny for a postal or a two-cent stamp to write for this catalogue. You can place your order anywhere you please and get the best value for your money, but be fair to yourself and post yourself on all prices before you do buy.

Address THE OHIO CARRIAGE MFG. CO., H. C. Phelps, Pres., Station 99, Columbus, Ohio.

How to Prevent Leaks in the Roof

A little puddle on the floor inside the building does not necessarily mean a leak directly overhead, but it does mean a leak somewhere. Often such leaks are very difficult to trace because the water will follow the roof boards under the roofing for a considerable distance before it comes through.

The best way to avoid such troubles is to adopt a roofing which is very pliable, as such a roofing is much easier to cut and fold in the small corners.

Congo Roofing, for instance, is both pliable and easy to handle. The natural result is that a Congo Roof is invariably tight, whereas other roofings which may be just as good in their waterproofing qualities will be frequently extremely difficult to get tight the first time owing to their stiffness and difficulty in laying same.

A Free Sample of Congo may be had by sending a postal card to the manufacturers, the United Roofing and Mfg. Co., 584 West End Trust Bldg., Philadelphia, Chicago, or San Francisco.

WORKING DAY AND NIGHT MANUFACTURING DE LAVAL CREAM SEPARATORS

That's what the De Laval shops have been doing since early in February, from seven o'clock in the morning until nine o'clock at night, with every available man, and new tools being added every week; while the material supplying shops have been running double force all day and all night.

That's the record of the De Laval shops in the effort to meet the doubled demand from every section for the new Improved 1908 DE LAVAL machines.

That's the showing which stands out alone and by itself, against every shop and every industry in America for 1908.

There's certainly a very good reason for it, and if you need a separator—either the first one or a good one in place of a poor one—it's up to you to find it.

The improved machine itself tells the story best—a catalogue to be had for the asking is the next best thing.

THE DE LAVAL SEPARATOR CO.

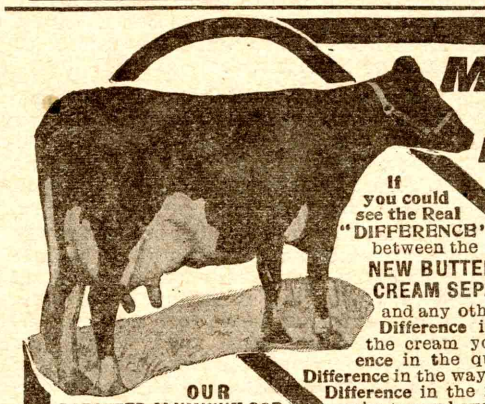
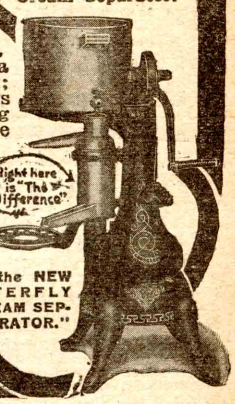
107 First Street, PORTLAND OREG.



MORE MONEY From Your Cows and Much Less Work In Getting It.

If you could see the Real "DIFFERENCE" between the NEW BUTTERFLY CREAM SEPARATOR and any other made—Difference in amount of the cream you get; Difference in the quality of cream; Difference in the way the machine runs. Difference in the number of times a minute you have to turn the crank; Difference in the way the milk is aerated and purified while being separated; Difference in the time and trouble it takes to clean the skimming device—you would say, as hundreds of others are saying today—"I'll get the NEW BUTTERFLY CREAM SEPARATOR."

If you could see how to make easily $10 to $15 more a year on each and every cow you keep, and still do it with less work for your wife and yourself, you'd say: "I'll get a Cream Separator."



OUR PATENTED ALUMINUM CORRUGATED SKIMMING DEVICE makes the New Butterfly Cream Separator different and 6 times as efficient as any other machine. Every drop of milk that enters the bowl of the New Butterfly Cream Separator is actually put through the skimming process 6 times. This guarantees complete separation, and you can't fail to get ALL THE CREAM. New Butterfly Cream Separators are sold as they ought to be. Not by agents, but direct from our factory to your farm. Freight paid and on 365 days' trial. Send today for illust'd catalog.

For average use, we recommend No. 4½, capacity 450 to 500 lbs. of milk per hour. PRICE delivered at your town— **$39.80**

ALBAUGH-DOVER CO. Capital $1,000,000
925-937 Marshall Boulevard, CHICAGO, ILL.

A Wonderful Musical Novelty

Nothing affords so much pleasure and harmless amusement as the Musical Zobo. It is a wonderful musical novelty. Anyone can play it in a minute without practice. The latest "hits" rendered on a Zobo are delightful. Can be used in the house around the fire or in street parades. It furnishes good dance music; can be used for amateur theatricals or any place where music is desired. Boys and girls, young and old are delighted with a Zobo for home music or for entertainments. The Zobo is made of strong material and is not liable to injury. The Zobo is six inches long.

BOYS' ZOBO BAND

Boys, organize a Zobo Band. Costs but a few pennies apiece. Just think of the fun serenading the girls and the "grown-ups." A costly instrument requires practice to learn and an expert to make beautiful music. With a Zobo a novice can make pleasing music from the start. Send for one on my recommendation. If it don't suit return and get your dime.

Price: Sent post-paid 10c each; $1.00 a dozen. Send dollar bill for a box.

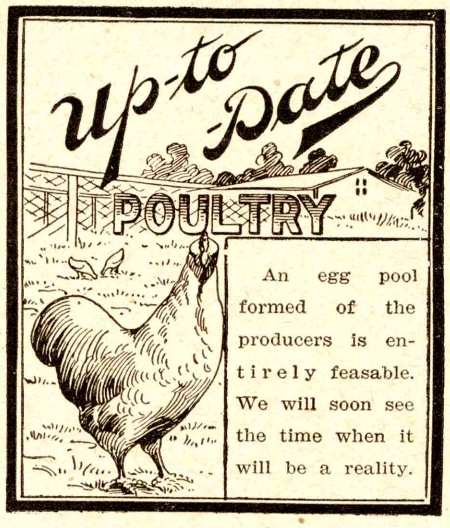
EASY TO USE.

G. P. PILLING & SON CO.,
2256 Arch St., Philadelphia, Pa.



An egg pool formed of the producers is entirely feasable. We will soon see the time when it will be a reality.

THE MORNING CALL

Get up! Get up! says Chanticleer,
Light in the east is breaking;
The call to work is ringing clear,
'Tis time to be a-waking.

MERE OBSERVATIONS

Some recommend burning sulphur in the poultry house to destroy the mites. It will destroy all that the fumes reach, but it is not a pleasant job, and man and woman, beast and bird, must be kept out of the house during the process. As a result, it is seldom very effectively done, and we do not recommend it.

Dusting the brood hen under the wings and in the feathers generally, with insect powders, or even with ashes in which a little sulphur has been mixed, will keep the chicks free from lice.

Never give the chicks slopy feed. It is unnatural and sure to result in harm. Finely crumbed corn bread is an excellent feed for very young chicks. Then cracked corn or wheat comes in good rotation. Don't neglect to give the chicks plenty of clean, fresh water, and place it before them in such a way that they cannot get into the water. Even little chicks must have access to sand or find gravel.

Shade is essential in the poultry yard. During the hot days of summer fowls seek the cool, shady corner, and young chicks must have such places to resort to or they cannot be expected to do well.

Some flocks of poultry become roupy every winter, while others are seldom affected. There is such a thing as heredity in the tendency to disease. Clean out such flocks root and branch, and build up again from flocks that were never known to have the roup, or to have been subject to any other disease.

Poultrymen waste much space in the persistent recommendation of mash feeds for the hens. We like mashes as a morning winter feed, but nine times out of ten the mashes are made too wet, and injury results. The nutritive apparatus is specially arranged for dry feed, and that kind of feed, accompanied by plenty of fresh water and grit or gravel, is the safest bill of fare.

How many eggs do you get in proportion to the hens you keep? This is a question whose answer should be known even on the farms. Profit is the one element of success in business. We have known scarcely two dozen eggs gathered where a hundred hens were kept. There is no money in that. We have also known seven dozen or more gathered daily from 100 hens. That is the other extreme. Sixty per cent, or six eggs to ten hens is about the minimum of profitable production. Keep a record of the months, and know how many eggs the hens produce each month.

If living near a city or large town, and producing eggs extensively, it is a good plan to have a contract to supply one or more hotels and ship the eggs yourself. Many hotels use one or two cases a week. In doing that kind of business it is well to have a dating rubber stamp, and stamp on each egg the date when it was gathered, being sure to gather the eggs carefully every day. If three cases a week be shipped, to as many hotels or all to one, no egg need be more than two days old at date of shipment. If two cases, then no egg need be more than three days old. Be sure that the stamp tells the truth. In this way a better price may usually be secured—at all events a steady price may be had. Hotel keepers are always willing to pay a premium for eggs guaranteed fresh.

CREATING NEW VARIETIES

Away back in Solomon's day that wise man said, "Of the making of books there is no end." Some modern poultry Solomon, might with equal truth, and in the same tone of discouragement, exclaim, "of the creation of new varieties of poultry there is no end." Old fanciers remember when less than a dozen breeds or varieties were found at the shows. The distinct breeds then as now were the Asiatics, the Mediterraneans, the French and Spanish. Then came our home pride, the Plymouth Rocks and Wyandottes, created varieties, rather than distinct, certainly not original, breeds.

Now we have White Leghorns, Brown Leghorns, Black Leghorns, single and rose comb; black white and partridge Cochins; barred and white Plymouth Rocks, silver laced, white and Columbian Wyandottes, etc. To show how these numerous varieties originate, we may give the origin of the Columbian Wyandotte. This was the work of Mr. B. M. Briggs, and he began by crossing White Wyandottes and Barred Plymouth Rocks. Later Light Brahma blood was introduced, and there is a hint of a touch of the Rhode Island Red.

We doubt if this multiplication of varieties is desirable. It gives variety to the shows, of course, and increases the opportunity to offer premiums. But to maintain the merits and distinctness of the varieties requires constant watchfulness on the part of breeders. Nature is fond of playing tricks, and at the most unexpected times is liable to get back to the original, or to bring out original traits in such prominence as to mar the new type. We remember years ago when there were no Wyandottes, but the Silver-laced, in spite of the most careful breeding of that favorite bird, we had to discard perhaps half of the young chicks on account of their too successful struggle to get back to the originals. It was so also for many years, with the Plymouth Rocks, and even yet culls are sometimes so numerous as to make one fear there had been an accidental cross. It is the same way with all the originated varieties. The breeder must always be on the watch, and select his breeding stock with the utmost care. Perhaps it is this very necessity for watchfulness, and the oportunity for excelling in preservation or development of points that makes the new varieties so popular. Pride and self-confidence make people like to do what others must struggle to accomplish.

POULTRY RAISING THE BIGGEST BUSINESS

The Missouri State agricultural college recently completed statistics which show that 53,000,000 dozen eggs were shipped from that State to other parts of the United States during the year, and those figures do not include the thousands of dozens of eggs used for hatching and consumed within the State. To show the profits, the following account of a single hen is given: Food for one year, 80 cents; product (per average hen) 240 eggs; selling value, $4.80; net profit per average hen, $4.00 per year.

We canont say that Missouri excels other States in poultry production, but a description of a single poultry farm in that State is interesting. It comprises 150 acres, and belongs to Ernest Kellerstrass. The hatching pens are heated by natural gas and lighted by electricity. There are steam heated chicken coops on rubber tired wheels that are pushed around over the farm. The fine hens are all provided with trap nests, and every egg is automatically stamped with the time and date it is laid, and when hatched out a careful register is kept of the growth of the young chicken. Its weight and measurements are taken at regular intervals, and if by the time the chick has reached the age of six months it is found to contain well defined points, it is put in with the fancy chickens; if not, it goes to the "common herd."

On the farm there are six or eight thousand chickens, among which are two hundred or more hens and roosters that are valued at from $250 to $5,000. An order for a thousand dollar bird is an ordinary business transaction with Mr. Kellerstrass.

The above sounds like a fairy tale, but we give it on the authority of a leading St. Louis paper.

INCOME FROM POULTRY

Two of our neighbors, ordinary farmers, who do not make a specialty of poultry, but only one of the usual farm incidents, receive a dollar a day as the income from the poultry yard. This is the cash income, and does not include the increased value of the growing chicks and other birds. What other one line of the average farm will exceed or equal that? Not many farmers beat it with hogs, cattle or horses.

Of course these people take reasonable care of their poultry, but not more than they bestow upon the animals mentioned; and they keep a good many fowls, but there is not as much capital in them as there is in the stock that does not yield nearly so large an income.

Farmers who neglect the poultry as something less than the livestock, are really failing to work the gold mine while bestowing all their efforts upon the copper, iron and coal—the things of less value.

GEESE FOR PROFIT

April is the beginning of the breeding season.

Geese eggs hatch fairly well in the incubator, but hens are best.

About five eggs are all that an ordinary hen can cover at a sitting.

Geese are great grass eaters, and from the first should have all they can eat.

After 48 hours, goslings will eat a little green grass, lettuce, or anything green and tender.

Grit and water should be constantly within reach of the young.

Goslings are very dainty at first, scarcely touching anything, but as soon as nature demands it they will partake of food.

Do not allow the young to become wet, and see that the floor of their pen is not damp.

After about two weeks old, it is safe to allow the young to have range.

Until the breasts are well feathered the young birds must not be allowed to swim.

The old-fashioned goose, like the wild goose, never hurts herself laying many eggs.

When the goose eggs pip, do not hurry them out of the shell. Like in the case of the duck it takes about 24 hours to get out after the first opening in the shell is made.

It is not safe to feed sour milk nor cornmeal to goslings under six weeks of age.

Allow the gander to remain with the young, as he is a most affectionate and watchful father, and will keep them from harm.

During breeding season the gander becomes very cross, and no one should be allowed to tease him, or he will do some bodily harm. They make vicious attacks upon their supposed enemy, and have been known to break an arm by a vigorous blow with their wings.

NEW INVENTION!

NOTHING ELSE LIKE IT.

Ohioan's New Method of Cleaning Clothes

Causing Great Excitement Where Exhibited.

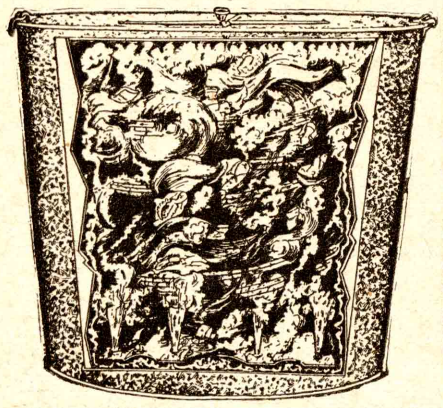
UNLIKE ANYTHING YOU'VE SEEN OR HEARD OF

Cleans Family Wash In 30 to 50 Minutes.

No Rubbing—No Chemicals—No Motors
No Washboard—No Wash Machine.

Over 35,000 Already Sold—Ladies Delighted

SEE HOW SIMPLE, different, easy. Put on stove—add water, then soap, then clothes—that's all. In 5 to 8 minutes clothes clean. Laundries clean clothes without rubbing—the EASY WAY does the same at your home. Dirt removed automatically except to move knob occasionally.



The EASY WAY, in one operation does the combined work of wash boiler, wash board and washing machine—less time, almost no labor—no injury to clothes.

The EASY WAY developes energy by mechanical manipulation, associated with hot water, soapsuds, superheated steam, and scalding vapor, utilized as a compound force, all confined in a closed metal compartment. Special operating arrangements.

Cleans woolens, flannels, blankets, or colored clothes, as well as white goods, finest laces, curtains, bedclothes. Saves time, fuel, labor, clothes, buttons, strength, looks, health and money.

EASY WAY IN 30 TO 50 MINUTES CLEANS WASHING WHICH BEFORE TOOK THE ENTIRE DAY.

NO RUBBING, wear, tear or injury. No soggy, bad smelling, heavy wood—but all metal, strong, durable, sanitary, light in weight. Easily used, cleaned, handled—always ready. Child can use it—no experiment. NO MOTORS. Saves 52 days' drudgery yearly.

THOUSANDS PRAISE IT.

J. McGee, Tenn., writes:—"One young lady cleaned DAY'S WASHING by old method in ONE HOUR with Easy Way—another in 45 MINUTES." Mrs. T. Bullen, Canada, writes:—"I washed BEDDING, HEAVY QUILTS, CURTAINS, Etc., WITHOUT RUBBING, and in a very SHORT TIME." Lauretta Mitchell, O., writes:—"Done a BIG WASHING IN 45 MINUTES—SOLD THREE ALREADY." A. D. Poppleton, N. Y.:—"Gives perfect satisfaction. Washed bed quilts, GREASY OVERALLS and fine clothes. Greatest thing on earth." Walter M. Glenn, O:—"Easy Way far superior to any other method—cleans clothes perfectly." J. H. Barrett, Ark., after ordering 38 Easy Ways, says:—"You have the grandest invention I ever heard of." J. W. Meyers, Ga., says:—"Find check for 12 Easy Ways. Greatest invention to womanhood, forever abolishing miserable washday. SELLS ITSELF."

HARRISON MANUFACTURING CO.,
701 Harrison Building, Cincinnati, O.

BARRELS of AIR BURNED as FUEL

New, Remarkable Stove---Ohioan's Great Invention---Consumes 395 Barrels of Air to One Gallon of Common Kerosene oil, making oil-gas---the New Fuel that looks and burns like gas!

Wood, coal and oil all cost money. **ONLY FREE FUEL IS AIR!** Unlimited supply—no trust in control. Air belongs to rich and poor alike. We cannot burn air alone but see here! **Our wonderful gas stove burns air and gas—very little gas—principally air. Takes its fuel almost entirely from the atmosphere.**

A miniature gas works—**penny fuel for every family**—save ⅓ to ½ on cost—save dirt and drudgery—no more coal or wood to carry—ashes unknown—absolute safety.

SEE HOW SIMPLE! TURN A KNOB--TOUCH A MATCH--FIRE IS ON. TURN AGAIN--FIRE IS OFF! THAT'S ALL.

Astonishing but true—time tested—proven facts—circulars give startling details—overwhelming evidence.

NO SUCH STOVES SOLD IN STORES—UNLIKE ANYTHING YOU'VE SEEN OR HEARD OF.

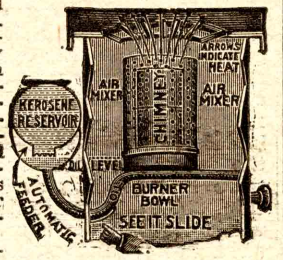
A genius of Cincinnati has invented a new, scientific oil-gas generator that is proving a blessing to women folks, enabling them to cook with gas—relieving them of drudgery. Makes cooking and housework a delight and at the same time often saves one-third to one-half in cost of fuel.

How often have many of our lady readers remarked that they would give anything to get rid of the drudgery of using the dirty coal and wood stoves—also the smoky oil wick stoves and their gasoline stoves which are so dangerous and liable to cause explosions or fire at any time?

Well, that day has arrived and a fine substitute has been discovered and every family can now have gas fuel for cooking, baking and heating and not have their kitchens a hot, fiery furnace in summer, and be carrying out coal and ashes—ruining their looks and health.

Thousands a Week.

Upon calling at the factory we found that this invention has caused a remarkable excitement all over the U. S.—that the factory is already rushed with thousands of orders and evidently the Company's representatives and agents are making big profits as they offer splendid inducements.



Sectional Cut of Generator

As will be noticed from the engraving, this OIL-GAS GENERATOR is entirely different from any other stove—although its construction is very simple and is built on the latest scientific principles, having no valves, which is a marked improvement, as all valves are liable to leak, carbonize, clog up or overflow.

By simply moving a knob the oil is automatically fed to a small steel burner bowl or retort where it is instantly changed into gas, which is drawn upwards between two red-hot perforated steel chimneys, thoroughly mixed with air and consumed, giving a bright blue flame—hottest gas fire, similar in color and heating power to natural gas.

This invention has been fully protected in the U. S. Patent Office and is known as the HARRISON VALVELESS, WICKLESS, AUTOMATIC OIL-GAS GENERATOR—the only one yet discovered that consumes the carbon and by-products of the oil.

The extremely small amount of Kerosene Oil that is needed to produce so large a volume of gas make it one of the most economical fuels on earth, and the reason for the great success of this Generator is based on the well-known fact of the enormous expansiveness of oil-gas when mixed with oxygen or common air.

Oil-gas is proving so cheap that 15c to 30c a week should furnish fuel gas for cooking for a small family.

Kerosene oil, from which oil-gas is made, may be purchased in every grocery—is cheap, and a gallon of it will furnish a hot blue flame gas fire in the burner for about 18 hours; and as a stove is only used 3 or 4 hours a day in most families for cooking, the expense of operating would be but little.

In addition to its cheapness is added the comfort, cleanliness—absence of soot, coal, dirt, ashes, etc.

What pleasure to just turn on the oil—light the gas—a hot fire ready to cook. When through, turn it off. Just thnik; a little kerosene oil—one match—light—a beautiful blue gas flame—hottest fire—always ready—quick meals—a gas stove in your home.

It generates the gas only as needed—is not complicated, but simple—easily operated and another feature is its PERFECT SAFETY.

NOT DANGEROUS LIKE GASOLINE.

and liable to explode and cause fire at any moment. This stove is so safe that you could *drop a match in the oil tank and it would go out.*

This Oil-Gas Stove does any kind of cooking that a coal or gas range will do—invaluable for the kitchen, laundry—summer cottage—washing—ironing—camping, etc. Splendid for canning fruit—with a portable oven ploced over the burner splendid baking can be done.

Another Important Feature.

is the invention of a small Radiator Attachment which if placed over the burner makes a desirable heating stove during the fall and winter so that the old cook stove may be done away with entirely.

While at the factory in Cincinnati the writer was shown thousands of letters from customers who were using this wonderful oil-gas stove, showing that it is not an experiment but a positive success and giving splendid satisfaction and as a few extracts may be interesting to our readers we produce them:

L. S. Norris, of Vt., writes:—"The Harrison Oil-Gas Generators are wonderful savers of fuel—at least 50 per cent to 75 per cent. over wood and coal."

Mr. H. Howe, of N. Y., writes:—"I find the Harrison is the first and only perfect oil-gas stove I have ever seen—so simple anyone can safely use it. It is what I have wanted for years. Certainly a blessing to human kind."

Mr. E. D. Arnold, of Nebr., writes:—"*That he saved* $4.25 *a month for fuel* by using the Harrison Oil-Gas Stove. That his gas range cost him $5.50 per month and the Harrison only cost $1.25 per month."

J. A. Shafer, of Pa., writes:—"The Harrison Oil-Gas Stove makes an intense heat from a small quantity of oil—entirely free from smoke and smell—great improvement over any other oil stove. Has a perfect arrangement for combustion—can scarcely be distinguished from a natural gas fire."

Mr. H. B. Thompson, of Ohio, writes:—"I congratulate you on such a grand invention to aid the poor in this time of high fuel. The mechanism is so simple—easily operated—no danger. The color of the gas flame is beautiful dark blue, and so hot seems almost double as powerful as gasoline."

Mrs. J. L. Hamilton writes:—"Am delighted—Oil-Gas Stove's so much nicer and cheaper than others—no wood, coal, ashes, smoke, no pipe, no wick, cannot explode."

Hon. Ira Eble, J. P., of Wis., writes:—"Well pleased with the Harrison—far ahead of gasoline. No smoke or dirt—no trouble. Is perfectly safe—no danger of explosion like gasoline."

HEATER AND COOKER, OR HEATING EXCLUSIVELY. ALL SIZES.

Chas. L. Bendeke, of N. Y., writes:—"it is a pleasure to be the owner of your wonderful Oil-Gas Stove—no coal yard, plumbing—ashes or dust. One match lights the stove and in ten minutes breakfast is ready. No danger from an explosion—no smoke—no dirt—simply turn it off and expense ceases. For cheapness it has no equal."

Agents are doing fine—Making big money.

WONDERFUL QUICK SELLER.

Geo. Robertson, of Maine, writes:—"Am delighted with Oil-Gas, so are my friends—took 12 orders in 3 days."

A. B. Slimp, of Texas, writes:—"I want the agency—in a day and a half took over a dozen orders."

Edward Wilson, of Mo., writes:—"The Harrison very satisfactory—sold 5 stoves first day I had mine.,,

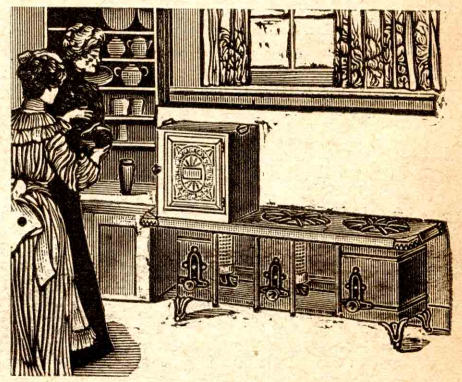
J. H. Halman, of Tenn., writes:—"Already have 70 orders."

This is certainly a good chance for our readers to make money this summer.

Hundreds of other prominent people highly endorse and recommend oil-gas fuel and there certainly seems to be no doubt that it is a wonderful improvement over other stoves.

The writer personally saw these Oil-Gas Stoves in operation—in fact, uses one in his own home—is delighted with its working and after a thorough investigation can say to our readers that this Harrison Oil-Gas Stove made by the Cincinnati firm is the only perfect burner of its kind.

It is made in three sizes, 1, 2 or 3 generators to a stove. They are made of steel throughout—thoroughly tested before shipping—sent out complete—ready for use as soon as received—nicely finished with nickel trimmings, and as there seems to be nothing about it to wear out, they should last for years. They seem to satisfy and delight every user and the makers fully guarantee them."



HOW TO GET ONE.

All our lady readers who want to enjoy the pleasures of a gas stove—the cheapest, cleanest and safest fuel—save one-third to one-half on fuel bills and do their cooking, baking, ironing and canning fruit at small expense should have one of thes remarkable stoves.

Space prevents a more detailed description, but these oil-gas stoves will bear out the most exacting demand for durability and satisfactory properties.

If you will write to the only makers,

THE WORLD MFG. CO., 6950 World Bldg.
Cincinnati, Ohio, and ask for their illustrated pamphlet describing this invention and also letters from hundreds of delighted users you will receive much valuable information.

The price of thes Stoves is remarkably low, only $3.25 up. And it is indeed difficult to imagine where that amount of money could be invested in anything else that would bring such saving in fuel bills, so much good health and satisfaction to our wives.

DON'T FAIL TO WRITE TODAY

for full information regarding this splendid invention.

The World Mfg. Co. is composed of prominent business men of Cincinnati, are perfectly responsible and reliable capital $100,000.00 and will do just as they agree. The stoves are just as represented and fully warranted.

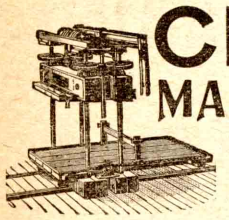
Don't fail to write for Catalogue.

$40.00 Weekly and Expenses.

The firm offers splendid inducements to agents, and an energetic man or woman having spare time can get a good position, paying big wages by writing at once and mentioning this paper.

A wonderful wave of excitement has swept over the country, for where shown these Oil-Gas Stoves have caused great excitement. Oil-Gas fuel is so economical and delightful that the sales of these Stoves last month were enormous and the factory is rushed with thousands of orders.

Many of our readers have spare time, or are out of employment and others are not making a great deal of money, and we advise them to write to the firm and secure an agency for this invention. Exhibit this stove before 8 or 10 people and you excite their curiosity and should be able to sell 5 or 8 and make $10.00 to $15.00 a day. Why should people live in penury or suffer hardships for the want of plenty of money when an opportunity of this sort is open?



CIDER MACHINERY

We have had 35 years' experience in furnishing outfits for both Custom and Merchant Cider Mills.

DAVENPORT, IOWA.

Millions of quarts of cherries will waste on the trees because of "no market." But with a good system of distribution there would not be enough to supply all who want them

PROFIT IN THE SELLING

Tree and vine and shrub may blossom,
And abundant product grow;
But in selling is the profit—
Knowing where the fruit should go.

TIMELY TOPICS

It would be just as easy for UP-TO-DATE FARMING to go on in the ruts worn by other farm papers, and fill these departments with stale homilies on how to grow stuff, but production for the season, planting and cultivation, is about over, and the important proposition now to consider is to so market the products as to realize a profit therefrom. Hence we are more inclined to devote our energies to subjects of that character. In so doing we are sure we are giving our readers fresher thoughts on more timely topics,—thoughts that will crystalize into what will be of more permanent and material benefit than anything we or any one else could say on what to plant and how to plant it.

There are no more successful producers than are the farmers or orchardists of the United States, and yet there are few who personally receive more indefinite, uncertain and meager rewards. If American farmers were as good price-makers and sellers as they are producers, farmers and not speculators in securities and products, would be the millionaires of the country. Hence we have no apology for devoting more time to selling than we do to producing.

THE QUESTION OF DISTRIBUTION

It is gratifying to UP-TO- DATE FARMING that the question of distribution is receiving such wide-spread and practical attention. A large meeting of peach growers was recently held in Georgia to consider this question, at which were present representatives of several of the leading commission firms of the eastern cities. The peach crop of Georgia promises to be a bumper one and the producers are anxious to get out of the dumper column. Several plans were proposed, none of which met such hearty approval as what was practically the Equity plan. Several of the commission houses agreed to maintain representatives of the growers in the market c ters, and to provide direct telegraph service to keep the growers informed as to where and when to ship.

Farmers once awakened to proper selling and distribution, have the best business on earth, and a reasonable minimum price made by themselves, coupled with the knowledge of when to ship from day to day, makes them the leaders, not the followers, of the industrial world.

PRODUCTION AND SELLING

Farmers who have so long studied and practiced production, are awakening to the importance of selling right. Sending shipments to glutted markets and receiving in return bills for unpaid freight, are more convincing than any arguments we can present. California truckers have what they call a vegetable Union, imperfectly on the Equity plan, which enables shippers to know and avoid glutted markets, and convert what would many times be losses into gains.

The eastern celery and lettuce growers, under the leadership of W. H. Armstrong, are adopting a similar plan, and will no doubt be greatly benefited thereby. The greatest losses in these lines of production are the result of shipping to markets already supplied. Often central markets cannot take another ounce of stuff, when minor markets nearby are actually in need of the very articles rejected in the central. The needed reform is to know these conditions, and instead of shipping to the glutted centrals, ship to the accessable side markets when the stuff may be in demand. This seems simple enough, but old ruts, worn by the practice of years, are difficult to climb out of. Why cannot farmers all over the country and of all lines of production, unite on the one plan—the Equity—that unmistakably solves all these problems? They will by-and-by.

FLORIDA AND POTATOES

Florida is becoming quite a factor in potato production, but as such, of course, it figures only in the marketing of early potatoes for immediate use. The season is well over by first of June, and Hastings alone this year shipped 85,000 barrels. Elkton and Orange Mills nearby shiped 15,000 barrels, totaling for that vicinity a shipment of 100,000 barrels.

But coupled with the report comes the same old story of unfortunate shipments and low prices, some of the growers not getting enough out of the crop to pay expenses. The main cause of the low prices and unsatisfactory returns, said Frank Nix, a New York handler, who attended a meeting of the growers to consider the situation, were bad grading and poor distribution. Certain markets were glutted while others were bare. Mr. Nix urged a better understanding abong the shipers and a wider and wiser distribution of the crop.

It is so everywhere, and with all crops, especially the perishable ones. A surplus of these products is absolutely worthless unless it can be marketed in its season; to do which profitably a knowledge of market conditions is absolutely necessary and to have such knowledge there must be representatives in the market centers. The Equity plan again. How beautifully this plan fits in, the same machinery taking care of all crops.

THEY ARE ORGANIZED

Word comes from the Grand Traverse region, Michigan, that the potato growers there have received a much larger sum for their product of last year than usual. Papers published in that locality tell us "farmers used more brains in their marketing operations last year than ever before; that last fall a large number of the growers agreed to hold their stock for 50 cents a bushel, and not to sell except at that figure or above it; when the price fell below that marketing ceased, and the buyers were enabled to work off their surplus, keeping the markets fresh and the product in demand."

The Society of Equity is strongly organized in that part of Michigan, and farmers are learning that whatever money is made in farming is made on the selling end of the industry, and not on the producing end. Commenting on this, the Traverse Bay Eagle says: "As farmers become beter posted regarding markets, know more about selling their products at a profit, and better understand the business side of their industry, they will advance in financial standing, and be able to express their prosperity in figures with the dollar sign before them." That is what the teachings of UP-TO-DATE FARMING bring to every agricultural community that studies those teachings and observes them.

"IN SOME MANNER"

The unrest observable among fruit and vegetable growers is encouraging, in that it must lead to better conditions. Whenever people realize that the prevalent ways of doing things are not the best, their own intelligent resourcefulness will evolve better methods. A large meeting of fruit growers was recently held in Western Tennessee at which able speeches were made reciting the weaknesses of the marketing systems and suggesting changes hoped to be for the better. It is painfully surprising, though, after the experiences of the past few years, how indefinite are the propositions for improvement. Finally a federation was proposed to arrange things, IN SOME MANNER, so that uniform quotations may be given so as to do away with cutting of prices and glutting of markets. Another meeting is to be held and a permanent organization effected.

Any meeting of intelligent producers of any crop ought to be able to eliminate the "in some manner" proposition, for there is but one way to effect the desired result, and that is the universal co-operation of the growers of all crops and the intelligent directors of shipments by representatievs at the market centers, so that determined equitable prices may be secured for all shipments. So long as producers of single crops in restricted localities struggle with the proposition of doubtful markets, unknown demands, and forced sales at auction prices, returns will be unsatisfactory and profits uncertain.

Surely Ned
Went quick to bed,
Because his fruit sold badly;
But at his gate,
With UP-TO-DATE,
Stood jolly Joseph Hadley,
And read aloud
The facts there found,
To which Ned listened gladly;
And better sales
Were next day's sales;
Thanks to UP-TO-DATE and Hadley.

I WANT MY SCALE ON EVERY FARM

And I want to tell you why you should own a scale and do no more guessing. I want you to feed your stock by weight. I want you to buy and sell by weight. I also want you to have my offer before buying. For fighting the scale trust. I was the first man to **sell to the** and to ask no pay until my scale was tested. I was the first payments. I was the first to **pay the freight.** I am today makes a **reliable,** high grade, warranted Pitless Wagon price, **on free trial** and **easy terms.** Write me for my **Should Buy a 'JONES' Scale."** I will send it free.

and loan everything by 43 years I have been **farmer on trial,** man to sell on easy the only man who Scale, sold at a low **"Reasons Why I**

"JONES, He Pays the Freight"
Box 1531 Binghamton, N. Y.

KILL THE BUGS AND SAVE THE PLANTS

Farmers and Gardeners! It's easy to kill the bugs and worms that eat your plants. An inexpensive and easily applied powder will do the work. It is harmless to man and beast.

Ferto-Insectono Positively Kills

Potato Bugs, Squash Bugs, Pumpkin Bugs, Melon Bugs, Currant Worms, Cabbage Worms, Etc. It will kill all creeping things that eat the leaves. Besides being a perfect insecticide,

It Will Fertilize Your Ground

That which falls off the leaves will make an excellent fertilizer by combiningwith the ammonia of the air. Especially valuable in dry seasons as it attracts moisture.

PRICE—10 lbs. 35c; 50 lbs $1.25; 100 lbs. $2.00. $35.00 per ton; 500 lbs. at ton rate.

Ferto-Insectono is easily applied but we recommend especially our None-Such Sifter. Use it for applying all powders and plaster. Price 50 cents.

Ferto-Insectono is certainly great. It saved me a fine crop of cucumbers from the ravages of the insects, and cabbages from the green worms.
ISAAC A. MOORE,
Haddenville, Pa.

THE FARMERS' POOLS

Only 25 or 50 Cents to Get a Profitable Price for all Your Crops.

NATURALLY the question arises with every reader, "what are the Farmers' Pools?" Everybody has heard of the speculators' wheat pools, corn pools, oats pools, potato pools, apple pools, cotton pools, egg and poultry pools, etc., but who ever heard of Farmers' Pools before? Read all of this advertisement and learn of the new power to be placed in the hands of farmers. *Never before in the history of American agriculture has an opportunity like this been offered to them.* Through the Farmers' Pools farmers will have absolute power to make the price on every pound, dozen, bushel bale or ton of farm produce sold and it will always be a profitable price. They can take price-making out of the hands of speculators and gamblers on boards of trade forever.

This is not a boast in any sense. What we claim has been done for some crops and can be done for all. The Farmers' Pools will be a great multitude of farmers who want steady and profitable prices instead of the fluctuating and often unprofitable prices made by a clique of speculators. . In the past farmers had little or nothing to say about the price of their own products while every other producer and even the laborers and professional men set the price on their goods and services. The farmer who worked harder and longer hours than any of them and produced what the life and comforts of other people and domestic animals depend upon, simply hauled his produce to market and meekly asked people who would starve, if it were not for the farmers' crops, "what will you give for it?" and accepted what was offered.

THE ONE THING

There was just one thing that made farmers so helpless and put all power in the hands of the speculators. The one thing was the *VISIBLE SUPPLY.* This is the temporary surplus in the big elevators controlled by people who produce no crops, but handle them. To illustrate: It takes a year to consume each crop. But a crop matures all at one time or nearly so. Therefore, farmers have all the *supply* of a crop at one time but the *demand* wants only one-twelfth of it any month. This inequality in the immediate supply and demand made the opportunity for the speculators. The farmers did not understand the problem, but the others did, and they saw their opportunity and built great elevators to hold the grain and warehouses to hold the potatoes, hay, broom corn, cotton, etc., and cold storage houses for meat, fruit, eggs, poultry, etc. that the farmers would not hold themselves. Then it came about that a few thousand people who produced nothing got hold of such a large portion of each crop the first few weeks after the harvest that they made the price on all the crops of about 8,000,000 farmers. The problem is to keep the visible supply small or in other words keep the crops out of the hands of speculators and they cannot compete with farmers in making prices. We will illustrate the problem with the wheat crop which is the first one to need relief:

THE 1908 WHEAT CROP

The prospects for the 1908 wheat crop are excellent and the speculators expect a great golden stream of wheat to soon flow from hundreds of thousands of farms into their great elevators in Chicago, Minneapolis, St. Louis, Kansas City, Omaha, Cincinnati, Buffalo, New York, etc.

They depend on the farmers being as silly as geese and that they will *dump* their wheat as formerly, consequently they are buying and selling the new crop (before it is harvested) at 85 cents a bushel and they say they will buy it for 75 cents a bushel, although no crop of wheat should sell for less than $1.00, considering the prices farmers pay for what they buy, and for labor, taxes, etc.

The *visible supply* is now low, being 25,000,000 bushels and the cash price is $1.00 a bushel and above. When the visible supply is 50,000,000 bushels the price will be about 75 cents and the higher the visible the lower the price. In 1894 the visible supply reached 75,000,000 bushels and the price went to 50 cents a bushel. The *visible supply* must be kept low. This is the only way to defeat the gamblers and put price-making in the hands of farmers. Keep the *visible supply* of wheat low and we will defeat the speculators' wheat pool and make the Farmers' Wheat Pool successful.

FARMERS CAN WIN

But did somebody say, "Farmers can't do it?" They must market at once. We say they can do it. Very few farmers must sell *all* their wheat as soon as threshed and those who must let them sell. The demand needs about one and three-quarter million bushels every twenty-four hours. This will absorb all the poor farmers' wheat and some from those who can hold. This demand must be supplied or the price would go to $2.00 a bushel or more.

All that wheat growers need to do is to watch the visible and sell when the market is right. This is a simple matter if they are in the Farmers' Wheat Pool and it will be the same for all other crops.

Farmers will be in the Pools if they are subscribers to UP-TO-DATE FARMING, the paper that teaches the only correct and practical plan for marketing farm crops to compel profitable prices, and the official paper of the Farmers, or American Society of Equity. UP-TO-DATE FARMING has about a quarter of a million circulation already. But it should go to every farm home in the country. The greater its circulation the stronger will be the Farmers'Pools. Every subscriber to the paper is a member of the Pools for as many crops as he grows and through the advice of the paper is instantly ready to act with his brother porducers when the visible supply is in danger of becoming too large or when the price goes below the minimum.

A GREAT IMPROVEMENT

The paper, going to each farmer in the Pool gives each member the latest news about crops gathered from members everywhere and indispensible advice about markets and marketing; prices, visible supply, etc. All the members will have the same advice and direction, at the same time, about the same thing. This will be a great improvement over blind guesses or false reports and advice of market manipulators, as heretofore.

No Cost. No Dues, No Fees.

The subscription price is 25 cents or 50 cents as explained below. This is very low as every reader considers this paper is worth more than all other papers combined. It don't cost anything to join the Pool and get all the benefits. You pay no fee and there are no dues. You are not asked to make any pledge. You will be your own boss to sell or hold and *every member is a free agent to do what is to his best interest.*

$1.00 a Bushel For Wheat

That's it! We know every farmer wants at least $1.00 a bushel for wheat and profitable prices for all other crops. Therefore, when we put them in condition to simply reach out their hands, as it were, and get the prices they can be trusted to do the things that are to their interest and make them money.

Now honestly, is it worth 25 or 50 cents to get at least $1.00 a bushel for your wheat, and corresponding prices for all other crops? Is it worth 25 of 50 cents to be free from your old-time exploiters and price-makers? Is it worth 25 or 50 cents to assert your manhood instead of cowering before a few speculators who make the price on your crops months before the harvests and whose methods are stenches in the nostrils of the public? Is it worth 25 or 50 cents to uphold your brother producer in prices and be upheld by a million of them, rather than be a goose of a dumper to break their prices down? Members of the Farmers' Pools are not dumpers.

This Is the Only Way

Through the Farmers' Pools is the only way to beat the speculators for this year's crops. Later, farmers may organize more solidly, but this simple plan can be made effective on all this year's crops. Every producer should be interested at once. The Farmers' Wheat Pool, if made succesful, will add about 20 to 25 cents to the price over what the speculators expect to pay. On a good average crop, this will be $150,000,000; on a Kansas crop about $15,000,000; on an Indiana crop about $9,000,000, etc. On many county crops about $250,000 and on an average farm crop about $150.00.

A book that should be read by every farmer in America. It shows how farmers are coming to the front and how they will be the greatest power of all. 320 pages, cloth bound. 25 cents post paid.

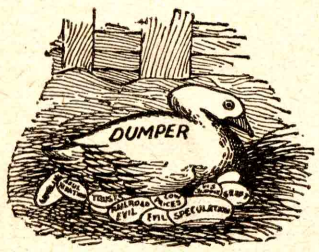
☞The Third Power book is not sold for profit, but to help farmers. Send orders to UP-to-Date Farming, Indianapolis, Indiana.

BROTHER WHEAT GROWERS YOU CAN HAVE THIS EXTRA MONEY.

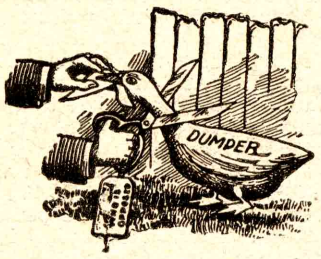
We repeat, farmers, you can make the price on the 1908 crops if you want to. Will you do your litle share—25 or 50 cents—or do you prefer the exploiters on your backs another year? Send $1.00 for four subscripers (25 cents each) or 50 cents for UP-TO-DATE FARMING today and you will be a member of the Farmers' Wheat Pool at once and of the pools for other crops you raise as necessity for them arises. Also you will get the all important information about crops, visible supply, markets, and price, when to hold and when to sell, what price to ask in Dakota, Kansas, Illinois, Indiana, Pennsylvania, Virginia, etc., on the basis of the central market and which information makes UP-TO-DATE FARMING indispensible to every farmer because it cannot be gotten elsewhere. Use coupon to right.

The Dumper's Fate

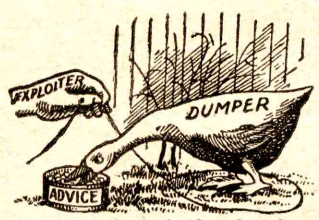
(NOTE:—*One of Webster's definition of "goose" is a "silly creature, a simpleton." Therefore we have employed the picture of a goose to represent the silly farmer who dumps his crops before the real demand comes and we call him a "dumper."*)



The dumper hatches all kinds of evils.



The speculator who feeds you on false crop reports gives it to you in the neck.



The exploiter feeds the dumper on bad advice and then will snare him.

The dumper hatches all of farmers' troubles; gets it in the neck; is snared with bad advice and then is plucked clean.

The dumper is at last a cooked goose and is carved for the benefit of the exploiter.

Worth More to Farmers Than All Other Papers Combined

Your paper, Up-to-Date Farming, has done more for farmers than any other paper has done or ever will do.. It has opened our eyes and shown us how shamefully we were being cheated, robbed and crushed by the expoilters, and it has taught us how to free ourselves from the tallons of these hawks.—Peter E. Orthman, Ramsey, N. J.

Up-to-Date Farming is indispensible to the success of the farming industry of the country.—W. L. Robinson, R. R. 3, Springfield, O.

Up-to-Date Farming teaches more of value to farmers in one issue than all the other farm papers together. — Frank C. Matgousky, Brule, S. D.

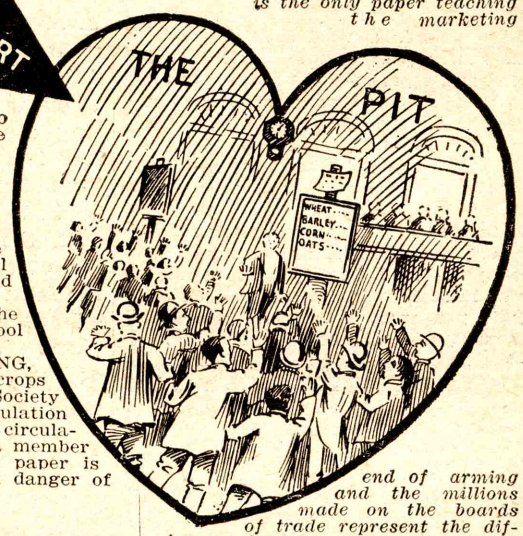
Up-to-Date Farming has benefited farmers more than all other farm papers combined in getting profitable prices for their crops.—Jas. B. Motley, Chatham, Va.

I do not exaggerate when I say that this paper has done more for the agricultural world than any other paper I ever saw.—J. K. Marshall, Franklin, Tenn.

I think Up-to-Date Farming has done more good for farmers than all the other farm papers combined. —John Busse, Glenburn, N. D.

I would not give it for all other papers in the United States, I know all the other farmers will think the same if they once begin to read it. —Ed Landwer, Gardena, N. D.

It is impossible to compute the value of Up-to-Date Farming. It is the only paper teaching the marketing end of arming and the millions made on the boards of trade represent the difference between what we get for our grain and what we ought to get.—A. J. Smith, New Lathrop, Mich.



The most intellectual and practical advice I ever got in the line of profitable price-making on farm crops was from Up-to-Date Farming. I think to try to farm without your paper would be like getting into a deep rut with a heavy load on my wagon—where one would never get out again.—Fritz Schallert, Loose Creek, Mo.

CUT THIS OUT AND USE AT ONCE

Publisher Up-to-Date Farming,
Indianapolis, Ind..

Dear Sir: I, or we, the undersigned, desire to join the Farmers' Pool and oppose our force against the speculators' pool, to secure profitable prices for our crops. We want to stand shoulder to shoulder with our brother farmers which we can do when all read the same paper, get the same advice about crops, visible supply, markets, price, etc., and all at the same time.

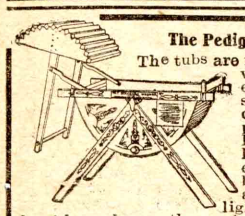
FLOWER-LANGUAGE POST CARDS, A SET OF 12 FREE

Do you know the "Language of the Flowers?" If you will send 10c for a six months' trial subscription to our large paper, The Epitomist, we will send to you, free, a set of twelve beautiful flower post cards. Each is different and represents the natural colors of the flowers and every card has the language of the flowers, portrayed in verse. These cards are strictly HIGH-CLASS and are not like any you have seen, for they are entirely new.

Write today and we will lose no time in sending them to you. Ask about the surprise which we are sure will interest you. We have only a limited supply of these beautiful cards, so send today if you want them. Address The Epitomist, 44 Main St., Spencer, Ind.



The Pedigo Peroection Washer

The tubs are made of beft quality galvanized steel, put together with bolts, rivets and solder. The rub is made of hard maple. The side pieces, wringer bar and legs are of oak or other hard wood, nicely finished. All are firmly united by malleable castings and bolts. It makes the lightest, strongest and most durable washer on the market. Pay more for a fancy washer if you want to. Remember "perpetual motion" has not been discovered. Pedigo washers have no "nick-nacks" to get out of order. And the price is only $3.00. You can't beat it anywhere.

Cooner & Fortune Co., Indianapolis, Ind.

You can't get rid of corns by cutting. Take them out by the roots with A-Corn Salve without pain, delay or danger of blood-poisoning. 15 cents at druggists or by mail. GIANT CHEMICAL CO., Philadelphia.

OLD SORES CURED

Allen's Ulcerine Salve cures Chronic Ulcers, Bone Ulcers, Scrofulous Ulcers, Varicose Ulcers, Indolent Ulcers, Mercurial Ulcers, White Swelling, Milk Leg, Fever Sores, all old sores. Positively no failure. By mail 50c. J. P. ALLEN, Dept. 55 St. Paul, Minn.

DROPSY Cured; quick relief; removes all swelling in 8 to 20 days; 30 to 60 days effects permanent cure. Trial treatment given free to sufferers; nothing fairer. Dr. H. H. Green's Sons, Box K, Atlanta, Georgia

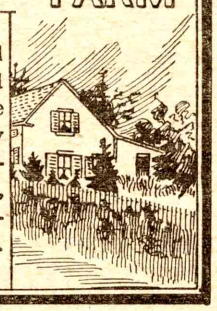
Up-to-Date HOME ON THE FARM

"A cheerful temper joined with innocence will make beauty attractive, knowledge delightful, and wit good natured."—Addison.



THE HOME

The little resting spots of men
That creep along Time's wall,
Like shadows in the noonday glare,
Are kindest, after all;
When wearied by the morn of toil,
Burned with ambition's Yame,
'Tis sweet to seek the humble spot
Where someone breathes your name.
—Selected.

It may be that the home on the farm looks prettier when seen across the turmoil of the busy city streets than it does to those who are in it, but those who were brought up there, and subsequently drifted to the city, no matter what their successes or their failures, know that it is a place where Nature smiles most sweetly, where the sun shines brightest, where the flowers bloom most profusely, where the birds sing most gleefully—a place where love is and the soul is constantly going out after something better. More laudable ambitions have grown up with the farm crops than amid the din of any other industry, and from the farm the aspiring mind has reached out farther than from any other place. We join in that quaint song of M. B. Hamsey:

There is somethin' sort o' queer about the
spring time o' the year,
An' the way it strikes a feller when the
sky is bright an' clear,
An' the medders an' the woodlans' all their
fresh new garments wear,
There's a sort o' halleluyer feelin' in the
old farm air.

When you wake up in the mornin' with the
bird songs in yer ears,
An' you see the sparklin' dewdrops drippin'
—nature's happy tears,
You feel mighty close to heaven, most for-
git that you ain't there,
It's that halleluyer feelin' in the old farm
air.

Then you feel you want to stop right there
an' start yer life anew,
An' you want to live it better than you did
the old one, too;
You don't want to be a blot upon Dame
Nature's picture fair—
With that halleluyer feelin' in the old farm
air.

O, the old farm, though seen away off,
makes yer blood course free agin,
An' you love it more than ever, this old
world yer livin' in.
All the years of trouble vanish, an' you bid
farewell to care,
With that halleluyer gladness in the old
farm air.

Besides, it is the place where mother is, and—

Old-fashioned flowers, with fragrance sweet,
Bloom where mother is;
Life's a psalm—a song replete
With joy—where mother is.
There all woes and sorrows cease;
Naught but rest and heavenly peace
Dwells where mother is.

The jostling crowd, the wearing din,
Are not where mother is;
The flaunting rags of shame and sin
Reach not where mother is.
Heart-sick, brain-sick, nerve-sick soul,
Before thy tear-dimmed eyes a goal
Exists where mother is.

All grief and doubt and unbelief
Flee where mother is;
Hope and faith and sweet relief
Come where mother is;
Mother, mother! name most sweet,
Heaven guide my weary feet
Home, where mother is.

It is too often the case, though, even in the homes on the farm, that mother is not fully appreciated until she is gone; and then—

Our home is in a hush profound,
Each room the shadows fill;
How can the household wheels go 'round
When her warm hands are still?
A happiness from life has passed
That nevermore can be:
We've lost our first friend, and the best
That e'er can love as she.

Already all around us bears
An unfamiliar guise;
For it, alas! no longer wears
The love-light of her eyes.
Our lives have changed; darkness of woe
Has dimmed its shining grace;
For no one shall we ever know
To take a mother's place.

But it is not our purpose to preach a funeral or to suggest sad thoughts. Trials will come and troubles will assail. Those who can stand the trials with greatest equanimity, and bear the troubles most lightly, are the ones around whom clusters the most sunshine. Especially in the homes on the farm do we want happiness—the happiness that makes health, lifts up to better things and invites prosperity. The Poet Whittier understood about as well as any one else what it took to brighten the home—care makes but bloom for breakers:

A dreary place would be this earth
Were there no little people in it;
The song of life would lose its mirth
Were there no children to begin it.

No little forms, like buds to grow,
And make the admiring heart surrender;
No little hands, on breast and brow,
To keep the thrilling love-chords tender.
No babe within our arms to leap,
No little feet toward slumber tending;
No little knee in prayer to bend,
Our loving lips the sweet words lending.

Life's song, indeed, would lose its charm,
Were there no babies to begin it;
A doleful place this world would be,
Were there no little people in it.

But with the children comes the greatest responsibility that devolves upon mortals. Children not only inherit the features and characteristics of their parents, but they inherit (or copy) their habits. We wish the "baby" line of treatment be outlined. A babyish man or woman is a sadly ridiculous thing, but a manly or womanly baby is admired by even the most unlearned or least advanced. We would have the little ones treated like sensible, growing up humans, gently given to understand that there are things to be done and things not to be done; but some people earnestly trying to bring up their children in that way, make a very great botch of it. It is hard to teach anybody how to bring up a child. If the natural tact and judgment are wanting it is difficult to supply them. We may urge parents, though, to always mean what they say to children, and when yes or no is said, see to it that yes or no is adhered to unless a very good reason that the child can understand, may be given to justify the change. The first act of disobedience, the first disregard of a parent's wishes, the first rude word, are what lead to the evils to follow.

YOUTHFUL WANTS

Never want anything merely for show. As a rule, each person must work out his own destiny. To cultivate a love of display leads one steadily away from self, from truth, and from success. Always strive to appear well, and eagerly seek whatever you can use to advantage, whatever will lift you upward, and make you wiser and better, and as you can afford it, whatever will aid you in the performance of your tasks. But keep ever in mind the needs and duties that may come later, and prepare for them rather than devote all to present whims or wishes.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

For Rheumatism

Nothing gives such quick and permanent relief as

Sloan's Liniment

It quickens the circulation, relieves congestion and inflammation, and gives elasticity to the muscles and joints. Use it for Neuralgia, Sciatica, Lumbago, Pleurisy and any Stiffness. *Price, 25c., 50c., and $1.00.*

Send for free book on care of Horses, Cattle, Hogs and Poultry.

Grand Baseball Outfit Free to Boys

This grand outfit contains 7 full size pieces. The ash bat is 32 in. long. The mask is made of heavy wire, full size. The catcher's mitt is thick and heavy and finely made. The ball is strongly stitched and finely finished. The cap is well made. A tanned leather fielder's glove and adjustable fancy baseball belt complete this dandy outfit. I will give you this splendid seven-piece outfit for a little easy work. Just write me to-day and I will tell you how you can get this great outfit.

A. M. PIPER, SECRETARY, 418 POPULAR BUILDING, DES MOINES, IOWA

USEFUL HINTS

The following hints are gleaned from an accepted authority:

Yellow vaseline is said to be a reliable cure for falling hair, especially if the trouble is the result of a dry scalp.

Buttermilk two days old is mentioned as a splendid face wash. Apply at night, and let the milk dry on the face; then wash with warm water. It removes tan, but a face so treated is more liable to tan afterwards.

The white of an egg beaten to a froth, with two tablespoonfuls of lemon juice added, makes a simple but good lotion for whitening the neck and arms. Apply with the hands and rub well into the skin. As it begins to dry, rub gently with a solf, smooth towel. It will not be sticky, but leaves the arms and neck nice, smooth and white.

Sleep comes naturally after a very hot bath, but persons taking such a bath should retire at once, as a hot bath is exhausting, and thus induces restful sleep.

Cream or milk in hot coffee or tea is not easily digested. Cream especially forms a leathery scum on the tea or coffee, which is almost indigestible.

A teaspoonful of common table salt dissolved in half a glass of water, makes a good mouth wash that hardens the gums and whitens the teeth.

A small onion eaten at night will often induce sleep that would otherwise be slow to come. The onion has a soothing effect upon the nerves without any of the ill effects that sometimes follow the taking of drugs.

AN OCCASIONAL SMILE

DID NOTHING

There are a few busier people than housekeepers, but the world don't seem to know it. Mrs. Decker, one of the busiest women in America, relates the following experience with a census taker. After taking her name, residence, etc., the census man asked:

"What is your occupation?"

"I am a housekeeper," replied Mrs. Decker.

"That ain't no occupation," said the census taker.

"Well, I collect my rents, pay my bills, am both father and mother to my child, and take care of my home," said Mrs. Decker.

"Have you an office down town?" asked the man.

"No, I do all my work here at home," replied Mrs. Decker.

"Well, that don't count," asserted the man.

"But I am president of the general federation of woman's clubs, which has a membership of 800,000 women, and I am on several national committees," continued Mrs. Decker.

"Well, that's no business," persisted the census man, "and I'll put you down as having no occupation." And that is the way it appears in the census.

ALEXANDER

A chap once owned a store,
And often wished it grander;
He sold his goods to all who came—
His name was Alexander.

He mixed things with a cunning hand;
He was a skillful blender;
And since his sugar was half sand,
They called him Alex Sander.

He had a sweet heart, pretty girl;
Admiringly he scanned her;
And asked if she would change her name
A ring did Alex hand her.

"Oh, yes," she said, and sweetly smiled,
"If I may be commander."
And thus they former a partnership;
The firm was Alex and her.

WHAT HUMORISTS SAY

"Walter, this steak is so tough that I can hardly cut it with this knife." "Yes, sah; just a minute, sah. I'll get you a sharper knife."—Milwaukee Sentinel.

"Did you attend Mrs. Skimmerhorn's miscellaneous shower the other night?" "Yes," "How was it?" "Complete success. It rained cats and dogs the whole evening."—Chicago Tribune.

"I should think young Roxleigh would die of sheer ennui." "What's the matter with him?" "Why he's dead tired of doing nothing, and he's too blamed lazy to do anything."—Cleveland Leader.

"Dear, O! dear," sighed Mr. Sallowday, "I wish I knew some good way to acquire an appetite." "Nonsense," exclaimed his wife, "what do you want with an appetite? It would only give you more dispepsia."—Philadelphia Press.

"I never knew what to do with my feet when I am in a parlor," remarked the bashful young man, as the conversation lagged. "Did it ever occur to you," rejoined the matter-of-fact maid, "that you might steer them toward home?"—Chicago Dealy News.

"Your speech sounds fine," said the attentive listener, "but do you know, I can't remember half a dozen words of it." "That's good," answered Senator Sorghum, "the art of speechmaking consists in pleasing the ear without furnishing any data for subsequent contradction."—Washington Star.

THE OLD WOMAN'S FAULT

"What got you into the penitentiary?" said the Chicago jail visitor to the convict.

"I married a new woman," answered the convict.

"And she was so advanced in her ways that she drove you to the pen, did she?"

"No, the old woman found it out, and had me up for bigamy. It was the old woman, not the new one, that got me here."

ONLY HIS HANDS

He had never been at sea before, and he suffered the usual consequences. "Can't you keep anything on your stomach?" asked the doctor.

"Nothing but my hands, doctor, nothing but my hands, and I keep them on the outside, or they'd go up, too."

THE LAST THING

The fastidious Colonel to an old farmer cutting weeds in the fence corner: "I hear poor Harvey has committed suicide. It was the last thing I expected him to do." Old Farmer: "Well, it was. He's never done nothin' since."

THEY GOT TOGETHER

"Father, you were born in California, you say?"

"Yes, my son, I was born in California."

"And mother was born in New York?"

"Yes, in New York."

"And I was born in Indiana?"

"Yes; but why do you ask?"

"Well, father, don't it beat the Dickens how we all three got together?"

POLITE FORGIVENESS

A little girl who had been naughty was told by her mother to go in the next room and kneel and ask God to forgive her, and not to come out until He did so. Presently she appeared, her face wreathed in smiles, at which her mother asked her if she had done as she told her. The little one replied: "Yes, I told him' and he said, 'Don't mention it, Miss Jones.' "—Judge's Library.

FLOWER IN THE CRANNIED WALL

I pluck you out of the crannies:—
Hold you here, root and all in my hand,
Little flower—but if I could understand
What you are, root and all, and all and all,
I should know what God and man is.

TENNYSON.

LIFE AND DEATH

So he died for his faith. That is fine—
More than most of us do.
But say, can you add to that line
That he lived for it, too?
In his death he bore witness at last
As a martyr to truth.
Did his life do the same in the past
From the days of his youth?
It is easy to die. Men have died
For a wish or whim—
From bravado or passion or pride,
Was it harder for him?
But to live—every day to live out
All the truth that he dreamt,
While his friends met his conduct with doubt
And the world with contempt.
Was it thus that he plodded ahead,
Never turning aside?
Then we'll talk of the life that he lived.
Never mind how he died.

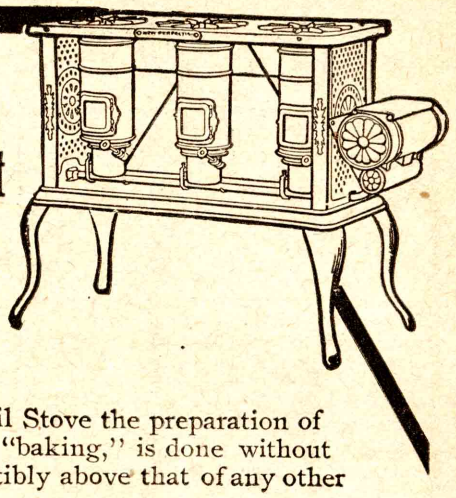
POST CARDS FREE

Big Package Sent to All of Our Readers Who Write at once.

To any reader of this paper who writes immediately and encloses 2 stamps we will mail a set of three of the most beautiful post cards you ever saw; ten cards, all different, in artistic and exquisite colors, beautifully embossed, etc., and send you our big farm paper 3 months, 10 cts.; 3 full sets, 30 cards all different, and one year's subscription, 25 cents. Address Valley Farmer Postcard Dept., 530 Jackson St., Topeka, Kan.

Plan for Summer Comfort



Don't add the heat of a kitchen fire to the sufficient discomfort of hot weather.

Use a New Perfection Wick Blue Flame Oil Cook-Stove and cook in comfort.

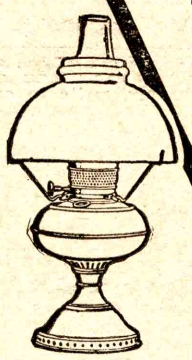
With a "New Perfection" Oil Stove the preparation of daily meals, or the big weekly "baking," is done without raising the temperature perceptibly above that of any other room in the house.

If you once have experience with the

NEW PERFECTION
Wick Blue Flame Oil Cook-Stove

you will be amazed at the restful way in which it enables you to do work that has heretofore overheated the kitchen and yourself.

The "New Perfection" Stove is ideal for summer use. Made in three sizes and all warranted. If not at your dealer's, write our nearest agency.



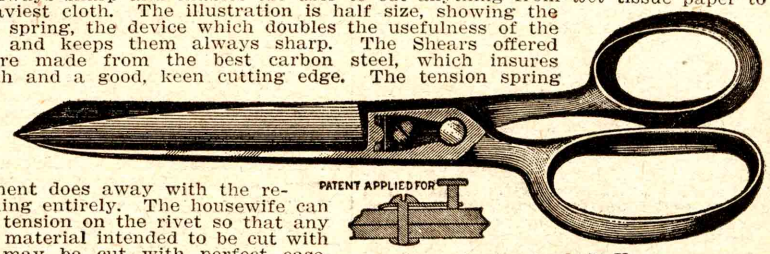
The **Rayo Lamp** gives perfect combustion whether high or low— is therefore free from disagreeable odor and cannot smoke. Safe, convenient, ornamental—the ideal light. If not at your dealer's, write our nearest agency.

STANDARD OIL COMPANY
(INCORPORATED)

Ever-Sharp Shears Free

Dear to the heart of every woman—a pair of finest steel shears that are always sharp. You can get a pair free.

A first-class 8-inch pair of Shears, equipped with simple attachment that keeps them always sharp and enables the user to cut anything from *wet* tissue paper to the heaviest cloth. The illustration is half size, showing the tension spring, the device which doubles the usefulness of the Shears and keeps them always sharp. The Shears offered here are made from the best carbon steel, which insures strength and a good, keen cutting edge. The tension spring



attachment does away with the resharpening entirely. The housewife can set the tension on the rivet so that any kind of material intended to be cut with shears may be cut with perfect ease, without tiring the hand. The tension spring takes up all the wear on the rivet, making the Shears practically indestructible, with no wear-out to them. A simple turn of the little thumb-screw tightens up the blades as closely as may be desired. Any woman who has had the exasperating experience of trying to use a dull pair of shears can readily appreciate the value of the new invention, *which keeps this pair of shears always sharp* and in perfect cutting condition. No matter how many pairs of shears or scissors you may have around the house, you need this pair with the tension spring, and when you get and use it once, you will use it in preference to any other you may have. These shears are 8 inches in length, perfectly finished and heavily nickel plated.

Guaranteed 5 Years

We guarantee the quality of the material and workmanship in this pair of shears to be first-class; that the tension spring device doubles the usefulness of the shears and does away with the need of resharpening, and, furthermore, the manufacturer's certificate accompanies every pair, agreeing that "if this pair of shears breaks or in any way becomes defective within five years from date of purchase, it will be replaced with a new pair without cost."

Our Offer One pair of Ever-sharp Shears will be given to each person who sends 50 cents for a new yearly subscription to UP-TO-DATE FARMING. Money refunded if not satisfactory.

UP-TO-DATE FARMING, Indianapolis, Ind.

Harrow While You Plow

Make one job out of the two, and get your ground in finest condition by harrowing when th[illegible] up.

KRA[illegible] Rotary Harrow Plow Attachment

enables you to do this. [illegible]lar rotary harrow which attaches to any gang or sulky plow. It levels, pulverizes and makes a mulch of the "moist soil" that is not possible after the ground dries and "sets." Draft only slightly heavier—you'll be surprised to see how little. Everybody needs this great time and labor saver. Write for circular No. 40

THE E. M. KRAMER CO., Paxton, Illinois

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

SOME ORGANIZERS OF F. S. OF E.

If you want an organizer, write to one of the following, who may be the most convenient to your place:

Barryton, Mich., Feb. 19, 1908.

Mr. Everitt.

Dear Sir—I see that you want more organizers now. Send me your terms, please, for I have been watching to see how the other faction was coming out. I was in hopes that it could be settled with but little trouble, but I am glad to see that you have stood for the right. I am glad that our State stands on the old plan and that Up-to-Date is our official paper. I believe that when the storm is over that we will have fairer weather than we had before and the society will grow faster.

A. K. FINEHOUT,
Former State Organizer of A. S. of E.

Mr. H. F. Shipley, Hampden, N. D., will be pleased to arrange to assist at meetings or rallies. Write to him at address given for terms, dates, etc.

Watch the visible.

Cash and speculative prices of wheat are going down.

Is another "bargain sale" being prepared for farmers?

What would you think of a merchant beginning his seasons business with a "bargain sale" on his new goods?

The Farmers' Pools will defeat the speculators pools every time, because the former have the stuff first.

The new wheat crop looks like 75 cents to the speculators, but like ONE DOLLAR to the man who grew it. Are we not correct?

The Fourth comes on Saturday this year. A splendid time for a great rally for profitable prices for the 1908 crops. How many will get up a club on that day for UP-TO-DATE and the Farmers' Pools? Remember you keep half. One hundred subscribers will make you $25.00 on our limited specitl offer.

Report meetings and rallies and celebrations to us and we will advertise them free. UP-TO-DATE circulates everywhere.

Hon. H. B. Sherman is now at his home in Greensburg, Ind., and he asked us to announce that he will be glad to speak during the next three months wherever a good crowd can be secured to hear the doctrine of Equity. Write him direct for terms.

When we advocate home trade it must be understood that such trade must be on a basis of fairness and equity. The merchant who exacts unfairly high prices is not entitled to patronage and will in time see the error of his way. "Equity in all the business relations of life" should be the motto of merchants as we want it to be the motto of farmers.

The tobacco crop in the Burley district in Kentucky has been nearly cut out for this year and the pooled crops are selling at farmers prices. The normal acreage is about 135,000 acres and the yield about 135,000,000 pounds. This year the estimate for the district is 5,000 acres with an estimated yield of 5,000,000 pounds. This is an example of what a farmers pool will do, but in no other crop do we expect it will be necessary to reduce acreage or cut the crop out. But the beauty of it is, farmers can do this when they get together, if it is necessary to get profitable prices.

Here is the point: Farmers better sell one crop at a profitable prices and make money than to raise two crops, sell at a loss and make millionaires of the handlers.

Don't quibble over details. Look to the big esentials and the big results. If a million farmers get together and decide to do a certain thing nothing can prevent them. And such will be the power of the Farmers' Pools in control of the crops.

"The price of corn, and oats, and wheat are good and we don't need a Farmers' Pool", so said one of our correspondents who does not remember back farther than last week, who don't look beyond today and can not see farther than the line fence dividing his farm from his neighbors'. "In time of peace prepare for war," is a good motto, and when prices are good is the very best time to act to keep them good. Procrastinate now and until the visible suply of wheat reaches 50,000,000 bushels and farmers will have a terribly heavy club over their heads during the crop year.

Every member of the Farmers' Pool strengthens every other member and don't forget that the individual, even the new member, imediately becomes as strong as the whole multitude as a solid body. Remember the story of breaking the sticks singly.

Our big Equity press and our wonderful Auto Mailers can print and send a million copies of UP-TO-DATE every issue as easily as they can do a fraction of the number, and just think what it will mean to multiply the farmers' power for controlled marketing.

The time will come when the dumper will be a despised person in every neighborhood and deservedly so..

We want the farmers, stockmen fruit men to know their power. They do a business running into the many hundreds of millions each year and are 8,000,000 individuals strong. yet they have allowed a few hundred people to dictate their prices, consequently fix their wages and profits. They can quickly know their power through the Farmers' Pools.

Remember the 1908 National Convention, October 19th, 1908.

INSURANCE IN MONTANA

PUBLISNER UP-TO-DATE FARMING,

Please announce that the F. S. of E. of this county has organized an insurance association. As we are incorporated under the Montana laws we can not insure any but members of the society. This will naturally build up the society to get advantage of the insurance feature. Mr. B. F. Gordon of Strawn and myself have been appointed agents for the insurance association. We are now sendi g out representatives to solicit property to insure and build up the Farmers Society of Equity.

Fraternally yours,
C. A. DRINKARD, Co. Sec.
Garnell, Mont.

(This move by Fergus County, Montana, is both permissable activity within the scope of the plan and commendable as an independent act. Insurance is one of the original objects of the society and this object has only been held in abeyance awaiting the development of the society in membership. Where it is now properly undertaken, as seems to be the case in this county in Montana, it will serve a two-fold purpose—to increase the membership of the society and secure insurance at a moderate cost.—Ed.)

MICHIGAN LADIES SOCIETY OF EQUITY

Officers—President, Mrs. James Howey, E. Jordon; vice-president, Mrs. C. A. Masten, Sherwood; secretary, Miss Julia Ball, Hamburg; treasurer, Mrs. Matthew Hamilton, Williamsburg.

The Michigan Ladies Society of Equity has been called upon to part with one of its members. For the first time since our organization death has entered our ranks and has taken away one of our bright young members, Miss Olive Button, whose death came like a flash of lightning from a clear sky—and she was gone.

We will miss her many times. No more will we hear her voice in recitation or song, where she was ever ready to help. In the bright springtime of youth, our Olive has closed her eyes on the beautiful springtime when the earth is fragrant with flowers and bright with sunshine. To us it seems as mystery, but let us try to be resigned to God's will and say, "Thy will be done, Oh, Lord, not mine."

Oh, fair and cloudless seemed the sky,
A bright and happy day.
When with a blast, pale death went past,
And bore a soul away.
E'en as a thief he came and went
In search of priceless flowers;
He saw a gem—he broke the stem
And flew to heavenly bowers.

(These lines were writen in behalf of the State Union M. L. S. of E., by their president, who was a warm friend of the deceased.)

This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

QUESTION: *In your last Up-to-Date Farming we read of the Farmers' Wheat Pool. It looks good to us for the wheat growers. But what are we potato growers in Michigan and other States to do? The potato kings, big and little, just take the first run of potatoes from the dumper at their own prices and then they make faces at us who hold for a fair price and make us hold until they have supplied the demand for several months. This will continue until there are not many dumpers.—*

ANSWER: The above question is a sample of many that have reached us from po-

tato producing sections. In due time a potato pool will be organized also if necessity arises. The necessity will be determined by the crop prospects. If a dry season to make a short crop, prices may be high enough without a pool. In the meantime join the pool and get others to join so as to be ready for immediate action when necessary. Every subscriber to UP-TO-DATE FARMING is in the pools for all the crops he raises without any extra charges.

Q. I have 75 acres of good land in a good agricultural section of Indiana. I am not strong enough to farm the land and I have been figuring how I can get enough income out of it to keep me comfortably, but find it a difficult, if not an unsolvable, problem. Land rents here for cash at $3.00 to $6.00 an acre. At $4.50 an acre, it would give me in income of $337.50 a year or less than $1.00 a day to live on, while the chances are the land would be running down in fertility until it would finally not rent for so much. What shall I do? Please don't print my name. ———, *Madison, Co., Ind.*

A. Your problem is a difficult one and betrays a condition that should not exist. Under the system that allows other people than the producers to fix prices on farm produce you cannot make definite calculations on the income from the land, either as a sharer in the crops or on the basis of cash rental. It appears to me that you must choose between the two plans—share of crops or cash rent and take what you can get even through it may not fully support you. Or, an alternative will be to sell the land, when you will again be confronted with the problem of investing the money safely, also the income, as interest will fall short of supporting you. When the Society of Equity is established as originally planned, your problem, and thousands of other farmers' in the same position, will be solved.

WITH UP-TO-DATE'S PUBLISHER

There is probably no publisher who gets so few requests to "stop the paper because I take so many I cannot read them all" as we do. The reason is that there is no other paper to fill the place UP-TO-DATE does. Hnce no matter how many papers are taken this one is indispensible.

It's a little strange that some advertisers in farm papers discontinue their advertising during the summer and fall months—the farmers' busy seasons. During this time farmers sell much of their crops, have money and buy most of their machinery, seeds, fertilizers, fencing, etc., etc. We account for it by the general belief that farmers read less and write less in the summer. But this should not justify a suspension of advertising. On the contrary the announcements should be larger and more persistent. Since farmers write less in the busy season it follows that they will buy more from their home dealer and are more apt to buy the particular article they saw advertised in their last farm paper, than the one that was advertised there last winter. This view of the case is worth the consideration of the manufacturers who sell through the retailers.

UP-TO-DATE FARMING is the farmers true paper. It helps its readers in a positive way, a way that can be appreciated and measured. Help the paper so it can help you more.

There never was a farm paper before of which its subscribers so unanimously declare "it is worth more than all other farm papers combined". There must be a reason for this and the reason is in the fact that profitable selling of the produce of the farms is more important than production, in all that makes up *successful* farming.

Watch your wrapper and when you see that your time is nearly up send in a renewal without waiting for the request. *When sending your renewal try to send a club of four or more for* $1.00. This is a special offer we are making for a short time.

The Farmers' Pools mean the farmers quick freedom from the gambling boards of trade in pricing farm products. Join them and help to build them up. See full explanation in this number.

Mar. '08 **If this date, or an earlier date is on your wrapper you will not receive another copy of Up-to-Date Farming after JUNE unless you renew now. Renewal rate 50 cents to any subscriber or 4 for $1.00 for a short time.**

CONGRATULATORY

MR. S. F. EVERITT, Adv. Mgr.:

My Dear Sir: I have read with much interest the story of your father's triumph over his enemies, as I folowed the case pretty closely. I am immensely pleased with the outcome.

Along the same lines, I am sure you will be glad to learn that Mr. Lewis was this morning acquitted of the charges of fraud in connection with the organization of the Peoples United States Bank. The victory was an overwhelming one. Federal Judge Riner instructed the jury to acquit—in other words, he took the matter out of their hands, which made the victory all the more sweeping.

CARL J. MCCARTHY,
Adv. Mgr. Lewis Pub. Co.,
St. Louis, Mo.

MR. EVERITT:

We had a great rejoicing in our family when we read the result of the Chicago trial. I said all along that you would triumph over your enemies because right will prevail. Christ was crucified, but he rose again and the victory was His. Fear not, I believe you will win completely. Three cheers for UP-TO-DATE FARMING and I wish it a long, prosperous career—B. F. Hill, Kirkmanville, Ky.

FRIEND EVERITT:

I congratulate you on the result of the Chicago trial. This ought to make three less to print and tell lies and deceive us farmers. Yours for Equity,—W. O. Reiter, Sec., Plainview, Minn.

MR. EVERITT:

I was very glad to note your victory over the triumvirate and I congratulate you most heartily. With the press enjoying greater liberty and license for stretching the truth and publishing falsehood than ever before, a conviction for libel is full vindication. Yours truly,—W. A. Harding, Winnebago, Minn.

Hearty congratulations, friend Everitt. My only regret is in not seeing the name of the Honorable (?)——— among those to get a life sentence or hang. Yours truly,—H. B. S., St. Louis, Mo.

MR. J. A. EVERITT:

We have just heard of the veridct "Guilty" in the Equity Farm Journal case and hasten to extend our congratulations and best wishes. Yours very truly,—H. H. Chares, White's Class Advertising Co., Chicago, Ill.

UP-TO-DATE FARMING:

I am a poor letter writer, but when I saw that Mr. Everitt had brought those sharks to terms for their slanderous and nefarious publications, I could not help but write a few line to let him know how some of the Wisconsin farmers appreciate the good work he has done for them. I know that some of our members have been badly deceived and led, as it were, around by the nose. I want the next convention held in October and not in December after the dumpers have dumped.—M. A. Rustad, Amherst Jc., Wisconsin.

MR. J. A. EVERITT:

I congratulate you on the victory at Chicago. My heart leaped with joy as I read the account of it. I have told the people that the other party were a set of rascals and were trying to ruin you and the society. Now I can back up my statements with proof. UP-TO-DATE FARMING is the only paper for members to tie to and its editor is truly desrving of farmers confidence. He is the first, and really the only man that has shown farmers the cause of their troubles and furnished a remedy. Now Mr. Everitt, I want to say once more, "I am feeling Oh, so glod, that you have been so grandly vindicated and you stand a living monument to truth and Equity.—Frank Moore, Hayes, Kan.

MR. EVERITT:

Congratulations! You are completely vindicated. You have broken the devil's snout short off. I hope you will do the same to the others. Yours truly,—T. L. Mitchell, McDonald, Tenn.

DEAR EDITOR:

I thank you with all my heart for working out the plan to bless all the farmers of the country. UP-TO-DATE FARMING has opened the eyes of not only the farmers but of the world at large. I believe you are editing the soundest and most valuable paper in the United States for farmers and it is the duty of farmers to subscribe for it in preference to all others.—S. B. Keesee, Riceville, Va.

DEAR EDITOR:

I am happy to say that UP-TO-DATE FARMING is the most valuable paper for farmers ever printed in this country. It has been worth more to me than I can tell. I tell all farmers I talk to "UP-TO-DATE is our friend and to fall in line with us and march shoulder to shoulder to victory." I have taken your paper for five years and will take it always.—N .H. Herbison, Nelson, Okla.

DEAR EDITOR:

You are a father to the farmers. I have not read UP-TO-DATE FARMING very long but in that time I have found it to be the best paper published in the interest of American agriculture. You have promoted a great and good idea for farmers to follow and it will give them their industrial freedom and independence.—Joel Schoonmaker, Meshoppen, Pa.

DEAR EDITOR:

I consider UP-TO-DATE FARMING the Moses of the Twentieth century inspired to liberate God's children from a bondage more galling than was that of the children of Israel who were compelled to "make bricks without straw. Farmers have been at the mercy of heartless exploiters who have their grip firmly on their throats and the farmers position has come to be insufferable. This paper is the only one that has pointed the way to a remedy. It has already been such a benefit that it cannot be estimated.—F. M. Crawford, Falmouth, Kansas.

DEAR EDITOR:

I am unable to express my appreciation of UP-TO-DATE FARMING. I have read its articles for many years and not one thought has been expressed but has had a hearty echo in my heart. May God Bless you for the good you have done and give you many more years to continue your noble work.—R. J. Martin, Lockport, Ky.

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. ONE OF THE BEST AGENT'S ARTICLES ON EARTH!
Price Reduced to Agents

Best because they please your customers and are needed on every set of work harness. Big demand—quick sale. Do away with strap hame fasteners. They are out of date, troublesome in summer and an abomination in winter, when you wear gloves. No bother if you use our patent fasteners. "Fastened in a twinkle." One pair will outwear the harness and can be removed to new ones. Adjustable to dif-

ferent sizes. If you once use FERRY'S HANDY HAME FASTENERS, you will never try to get along without them. Mr. H. A. Carter, Franklin, Ky., writes: *"I bought a Handy Hame Fastener four years ago and have used it ever since. It is the thing."*

200% to Agents Sample mailed for 25c. Dozen $2.25 by express not prepaid. Money refunded promptly if not entirely satisfactory. Write for new agents' prices. One agent sells 24 dozen a week easily. You can do better. Order a sample.

Cooner & Fortune Co., Indianapolis.

25c FERRY'S HANDY HAME FASTENERS 25c

THE FARMERS' POOLS

(Concluded from page 2.)

ers have learned the lesson and the duty of each of these is to spread the knowledge—increase the circulation of this paper—strengthen the Farmers' Wheat Pool.

All other crops will receive attention as the season progresses and as necessity arises. The visible supply of corn on May 30 was only 6,529,000 bushels with present price at 70 cents or above; of oats, 10,972,000 bushels and present price 52 cents.

The government crop report issued on June 8th gave the estimated spring wheat crop sown at 17,710,000 acres, which is 631,000 acres more than last year; condition of winter wheat June 1, 86 per cent against 77.4 per cent a year ago. The report was considered bearish by the speculators and we quote from a daily paper market report: "Market construes statistics as Bearish and Bottom falls out of prices near close." Although the report was not made public until fifteen minutes before the close, the price dropped about 2 cents on wheat. Corn also lost about 1c and oats 1 3-4 cents on the same day.

A FLORAL SCRAP

"Did you ever hear of all the trouble in the flower circus?"

"No; what was it?"

"Well, to begin with, the tiger-lilies boasted of the superiority of their tricks over the dandy-lions, and these cat-tales were brought to the elephant's ears, and it was very natural that the dogwood tell them where the cow-slips would repeat them. That Foxglove was on hand, although cock's comb gossip was ahead. Then everybody was inclined to linger to admire the parrot's-feather, till they heard the cro-cuss like a trooper, and all hands got a fatherly lecture from the poppy-flower."—Washington Herald.

Mrs. Stubbubs—"Oh, John, I'm so sorry the new cook has spoilt your coffee, but she is so young and inexperienced. So you must be satisfied with a kiss instead this evening, dear."

John—"Right, O! Call her in."—Pick-Me-Up.

They had evidently been quarreling before entering the Sutter street car at the ferry, says the San Francisco Chronicle.

"I would thank you, Mr. Johnson, not to sit by me!" she said, icily.

"Oh, Lucy, I'll never go with her again—never, never, dearie!"

Gradually the harsh tones melted to soft, endearing phrases. The car had become very crowded. It stopped at Van Ness.

The conductor, wedged among passengers midway of the aisles, could not see the rear steps. With his hand on the bell he suddenly yelled:

"How is it back there now?"

"It's all right, we've made up again," impulsively responded the young man.

"Oh, Willard, he didn't mean us!"

The New Dress Goods

Have you seen the new dress fabrics that are enjoying such vogue just now? They are fine dress ginghams made by an entirely new process, and are destined to be in even greater demand as the season advances.

One of their chief features is their attractive sign. Those who have already used them say that they make up beautifully and are among the most desirable of the summer dress goods, regardless of cost. They are the Simpson-Eddystone Zephyrette Ginghams, made by the Eddystone Manufacturing Co., Philadelphia. This company has put fine dress ginghams within the reach of moderate means.

Another element of economy is their splendid wearing-quality. They are all of fast colors and will stand repeated washing. In fact, washing seems to brighten them, and make them more attractive.

The thrifty woman will be glad to know that most dealers carry these Zephyrette Ginghams in stock already, and others are rapidly securing them to meet the large demand. You will probably have no difficulty in securing them from any dry goods merchant. Even if you do, the manufacturers could undoubtedly tell you where you can secure these goods in your locality.

Against Worms of All Nature in Horses

The best remedy to destroy worms in horses is "Kisulf," most conveniently given in capsules. After administering this remedy the lifeless worms appear in 16 to 20 hours and leave the horse entirely within 24 hours.

On many occasions the departure of from 500 to 600 worms from one horse was observed. The price is $1.00 per box, a small expense for so valuable a treatment; will be mailed to any address with full directions. The remedy is guaranteed under the Pure Food and Drugs Act. Manufactured only by Rather Chemical Co., Appleton, Wis. Write for circulars, mentioning UP-TO-DATE.

HE KNEW THE TRIBE

A short time ago the government inspector was visiting the regimental schools at Aldershot, and was questioning a class of small boys on scripture history, when the following conversation took place:

Inspector—"Where did John the Baptist live?"

Small boy—"In the desert."

Inspector—"Quite right. Now, what do we call people who live in the desert?"

Small boy — "Deserters, sir!"—Dundee

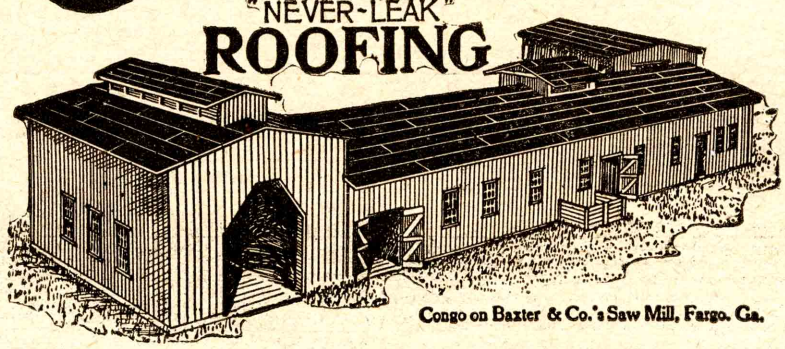
CONGO
"NEVER-LEAK"
ROOFING



Congo on Baxter & Co.'s Saw Mill, Fargo, Ga.

CONGO ROOFING is made for all weathers. An unusually severe storm won't hurt it. An extraordinary hot spell won't hurt it. An extra long cold snap won't hurt it. It will stand *any kind of exposure.* It is the *"Never-leak-roof"*—the kind that stays tight after it gets old as well as when it is new.

CONGO ROOFING is a *real protection* to any building. Some roofings are nothing but paper that will take a layer of paint or coating. In that case the paint is your real roof, and when it wears off, the roof is ruined. It is an actual fact that many so-called roofings will dissolve under the action of water if not protected by the paint or coating.

Congo Roofing is a different proposotion. The weather finds no way in which to attack it.

RAIN can't damage it because there is nothing in it that is affected by water in any way. If Congo Roofing were put at the bottom of a pond, the water would never disintegrate it.

AIR can't damage it because there is nothing in it that is volatile—nothing that will evaporate. If Congo Roofing were hung out like a flag for years, so that air could get at both sides of it, it would stay just as pliable and elastic as when new.

CLIMATE can't change it because there is nothing in it that is affected by either heat or cold. The heat on roofs in summer is often terrific, and in winter the snow thaws and freezes there for weeks, but Congo has never shown any effects of such exposure.

IT can't *rot* because there is nothing in it that can decompose. It is because we know the nature of the material we use that we venture to say that Congo Roofing is *practically indestructible.*

PEOPLE who buy Congo Roofing for a building once, don't buy any more in after years—for that building—because it is *there to stay,* although the roof costs but little. They do buy more for their *other* roofs. Everyone who tries Congo is soon a convert, and he becomes more enthusiastic the longer he waits for the roof to wear out.

EVERY foot of Congo Roofing is carefully inspected as it comes off the machine. No imperfect rolls are allowed to leave the factory. Every pound of the material that enters into the composition is *carefully tested* before being used, and strictly held to standard. Should it fail in the slightest way, it is imediately discarded.

Congo Roofing is handsome in appearance, being of a uniform slate-gray color.

CONGO ROOFING is put up in rolls 36 inches wide. Each roll contains 108 square feet, sufficient to cover 100 square feet and allow for a two--inch lap.

The rolls are finished with an attractive wrapper and label, and are capped with a special metal cap to protect the ends of the roofing. A steel rod runs through the center to hold the caps and cement securely in place.

SUFFICIENT Congo cement, nails and tin caps for applying are neatly packed in the center of each roll, so that you pay nothing for extras.

CONGO ROOFING is easy to apply. Skilled labor is not necessary. You don't have to hire an expert to help. If you can drive a nail you can do all the work that is necessary.

FREE SAMPLE

Don't buy roofing until you examine a sample of Congo; and remember, Congo samples are not special pieces prepared for the purpose, but are cut from our regular stock.

We mention this because Congo is so attractive looking, so tough and pliable, that people sometimes think the samples must be especially prepared.

I WANT TO TALK PERSONALLY

To Every Reader of Up-to-Date Farming

My Topic is Baldwin County, Alabama, where Almost Perfect Conditions Exist to Give its Citizens Health, Wealth and Happiness.

We may as well start at the beginning. Nearly everyone I talk to about Baldwin County brings up first the matter of health, and rightly too. This is of all importance. Health is the first essential for happiness and for success in business, for without it we must fail.

Baldwin County is situated on the Gulf of Mexico. On the west is the famous Mobile Bay and on the east Perdido Bay. The land is high and cool breezes in summer make it a delightful place to live. In winter while Northern farmers are shivering indoors burning up summer profits and feeding the summer crops our farmers are enjoying spring-like weather. There is work out of doors the year around and money crops maturing practically every month.

The water in Baldwin County is as fine as anywhere else in the United States. It is actually bottled and sent to Chicago and other large cities on account of its purity. Many flowing springs on our lands. Boating, bathing, fishing and hunting are sports the year around for Baldwin County people. I might go on indefinitely, almost, with facts about our delightful and healthful climate. But these statements will start you to thinking. Come on one of our excursions and see the proposition I am talking about—that is all I ask.

The opportunities for making money by intelligent farming are no better anywhere else in the country. I know this. I have investigated the claims of every section and I say to you that BALDWIN COUNTY LEADS IN ADVANTAGES.

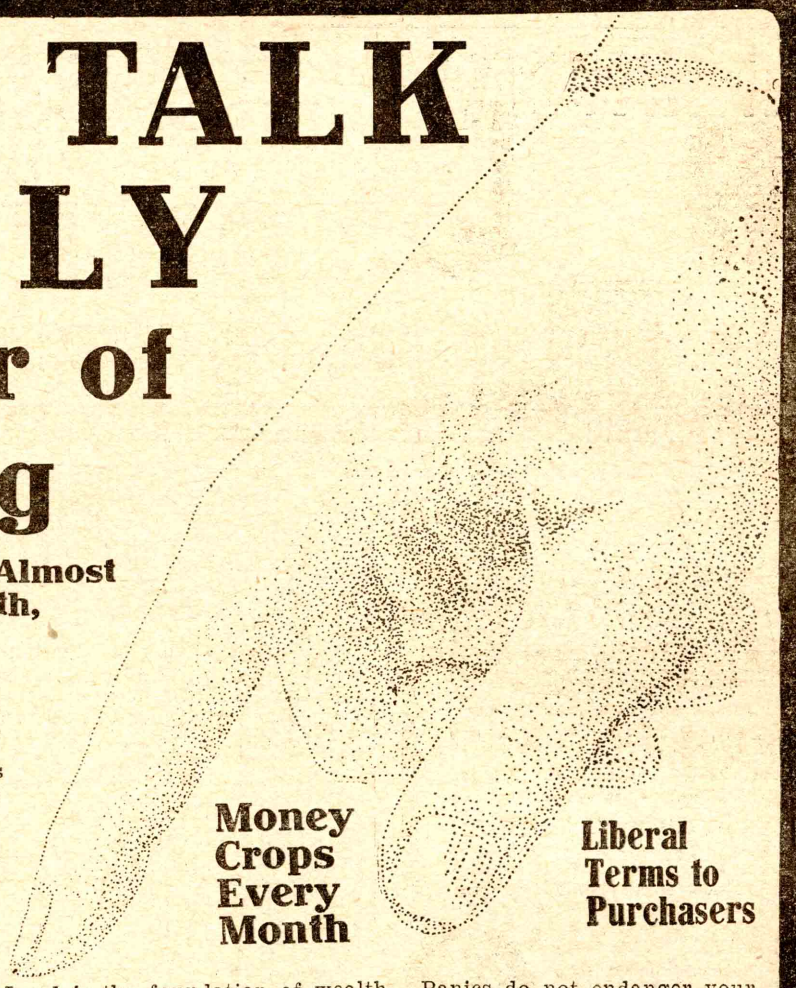
The soil is adapted to general farming and live stock raising. Rain fall plentiful and well distributed. Any farmer putting forth honest effort can do well in these lines. But it is our special crops like Trucking, Fruit-growing and Shade-grown Tobacco that make from $100 to $1,000 per acre yearly.

Celery lands in Florida are selling for as high as $1000 per acre and experts have declared Baldwin County has soil equally as good, or better, and other conditions right. I have seen shade-grown tobacco lands in Florida sell for $125 per acre that I would not trade acre for acre for ours. Our land only needs development and it will be worth ten times the price asked for it today.

Baldwin County produces fruits and vegetables about the same as California—just as early. At the same time it is a thousand miles nearer principle markets like Chicago, New York, Philadelphia and the scores of smaller cities. This means a good price and a big margin on account of low freight.

For general farming Baldwin County is all that can be desired. Work goes forward every month in the year. No cold winter to burn up profits. Plenty of good cheap building material. Good towns. Good railroads.

I have not overdrawn our proposition in a single statement.. Our customers always say the property is better than we represent. I want just this condition to exist. The truth is we could hardly exaggerate the facts about Baldwin County—there is SO MUCH GOOD TO TELL.



Land is the foundation of wealth. Panics do not endanger your wealth if invested in Baldwin County farms. Bankers cannot control it. Baldwin County farms make lots of money for Baldwin County farmers. All our land needs is development when it will easily be worth five to ten times the price we sell for. Are you willing to come here and reap this increase?

Our Baldwin County lands in farms of 40 acres or more I am selling for $20 per acre. Only $2.50 per acre cash; balance on easy payments. As little as 20 cents per acre a month, without interest, if wanted. We pay the taxes the year you buy and the year following. $100 is the first payment on 40 acres. Can you equal this proposition? Also, if land is half paid for and the purchaser dies, we will deed the property to his heirs without further payment. How is this for life insurance? What I want to give every settler is a "square deal". Investigate us and our property—then you will buy.

MAIL ORDERS.—If you desire to purchase a farm for investment, or cannot go now to select, leave it to me. I will select the best unsold piece for you. Later, if desired, you may change to another. No beter way to save your money. It only requires a small payment and easy monthly payments.

SEND FOR PROSPECTUS.—I will gladly send literature, maps and full information about Baldwin County on request. Ask any questions.

I am going to Baldwin County on the first and third Tuesdays of each month. These are excursion days. Come, join me on one of these trips. You will enjoy it and see a mighty fine country. I only want to show you what our company has to offer. The proposition will speak for itself, and if you want Wealth, Health and Happiness, you will buy a Baldwin County farm. Also, to every purchaser of 40 acres or more I will refund your railroad fare up to $30, the round trip from Chicago. I want to hear from every reader of Up-to-Date Farming who is not satisfied with his present condition, or who wants more opportunity and the co-operation of climate and location to help him in his business.

Bring your wife and go along. I don't ask you to buy without investigating and the more you investigate the better you will like it, because it all the more insures your liking Baldwin County.

Write for rates and full information. Feel free to ask questions and advise me when you would like to go down. Write me today..

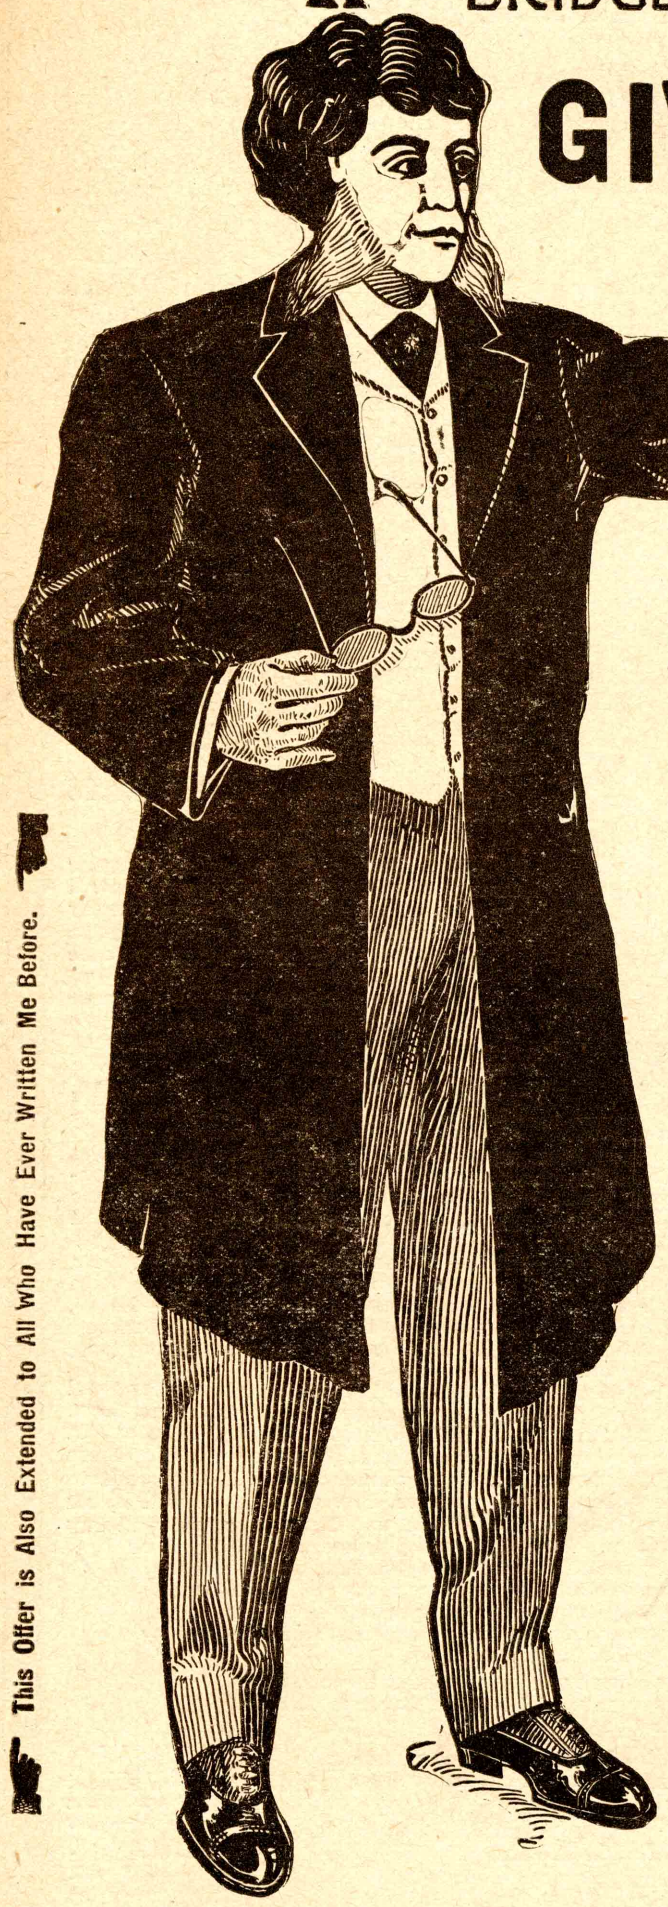
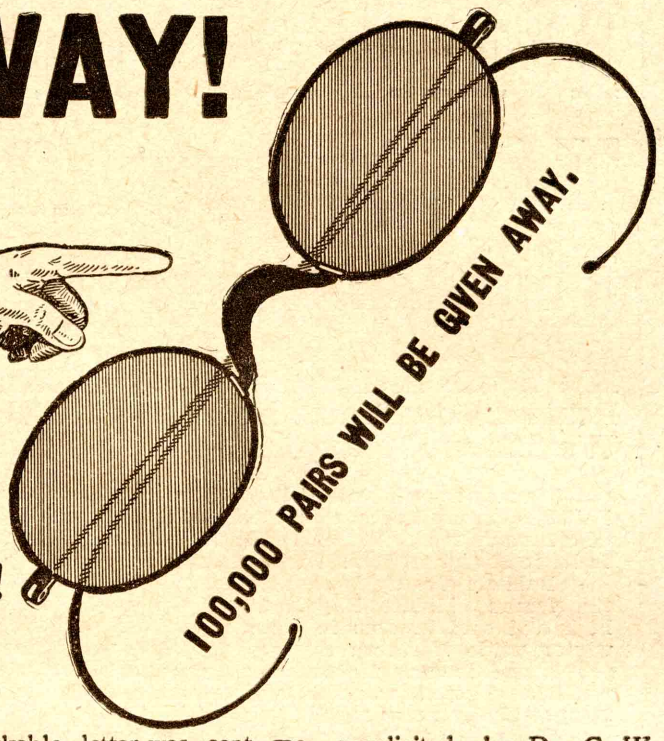
TEN KARAT ROLLED GOLD BRIDGE Spectacles GIVEN AWAY!





Spectacle-Wearers! Listen!

The following very remarkable letter was sent me, unsolicited, by Dr. G. W. Smith, the County Health Officer of Ottawa County, and one of the most prominent physicians in the State of Kansas. Read his exact words:

MY DEAR DR. HAUX:

If anyone were to offer me fifty dollars spot cash for the pair of Perfect Vision Spectacles which you fitted to my eyes by mail, I would absolutely refuse to accept it—if I knew positively I could not get another pair like them. Your Spectacles are certainly wonderful.

(Signed), Dr. G. W. Smith

Now I would like to get this kind of a testimonial from you, too—and that is the reason why I am making a very special, extraordinary, but honest proposition, whereby you can (for a short time only) obtain a handsome, perfect-fitting pair of Dr. Haux Perfect Vision ten karat ROLLED GOLD BRIDGE Spectacles without one cent of cost.

Don't Send Me One Penny

Just write me your name and address and I will mail you at once my Free Home Eye Tester and full particulars how to obtain a pair of my handsome ten karat ROLLED GOLD BRIDGE Spectacles without one cent of cost.

You see, I want to prove to every spectacle-wearer on earth that the Dr. Haux famous Perfect Vision Spectacles are really and truly ever so much better than any you have ever worn before—and I am going to give away at least one-hundred-thousand pairs of the Dr. Haux famous Perfect Vision ten karat ROLLED GOLD BRIDGE Spectacles in the next few weeks, in order to introduce my wonderful glasses to the largest number of spectacle-wearers in the shortest possible time.

These famous Perfect Vision Spectacles of mine will enable the very weakest eyes to see to thread the finest needle and read the smallest print, both day and night, just as well as you ever did before—and this even if your eyes are so very weak now that you cannot see the largest print in this paper.

I hereby also agree to cheerfully return you even the postage-stamp you use in answering this announcement, if you yourself don't find my wonderful glasses more perfect, clearer and better than any you have ever worn before, and you yourself are to be the sole judge. Can anything be fairer?

Write today for my Free Home Eye Tester and ten karat ROLLED GOLD BRIDGE Spectacle offer. Address:—

DR. HAUX SPECTACLE CO., Room 203, Haux Building, St. Louis, Mo.

I ALSO WANT A FEW AGENTS

And any man or woman not earning at least $50.00 weekly should ask for my SPECIAL AGENT'S TERMS at once.

NOTE.—The Above is the Largest Mail Order Spectacle House in the World, and Perfectly Reliable.

This Offer is Also Extended to All Who Have Ever Written Me Before.

SIGNIFICANT RISE IN THE PRICE OF MEAT

DAILY MARKET REPORTS

FURTHER DROP IN HOGS.

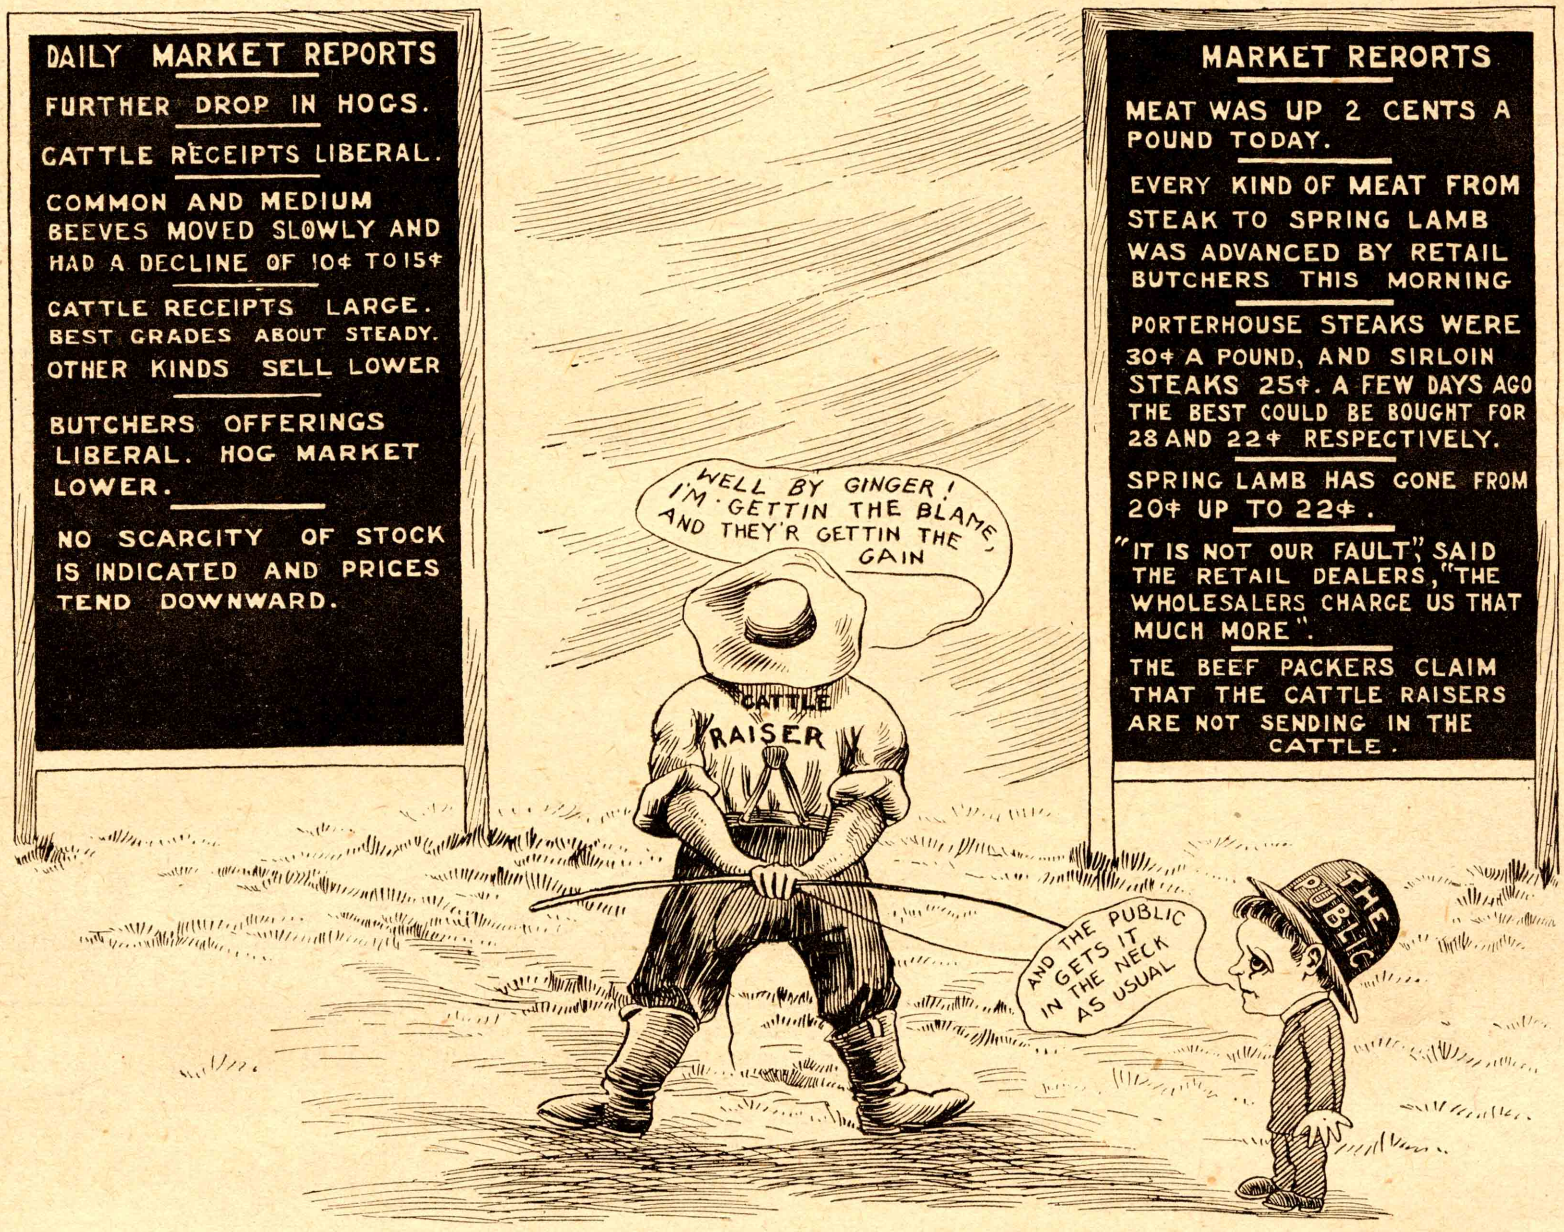
CATTLE RECEIPTS LIBERAL.

COMMON AND MEDIUM BEEVES MOVED SLOWLY AND HAD A DECLINE OF 10¢ TO 15¢

CATTLE RECEIPTS LARGE. BEST GRADES ABOUT STEADY. OTHER KINDS SELL LOWER

BUTCHERS OFFERINGS LIBERAL. HOG MARKET LOWER.

NO SCARCITY OF STOCK IS INDICATED AND PRICES TEND DOWNWARD.



MARKET RERORTS

MEAT WAS UP 2 CENTS A POUND TODAY.

EVERY KIND OF MEAT FROM STEAK TO SPRING LAMB WAS ADVANCED BY RETAIL BUTCHERS THIS MORNING

PORTERHOUSE STEAKS WERE 30¢ A POUND, AND SIRLOIN STEAKS 25¢. A FEW DAYS AGO THE BEST COULD BE BOUGHT FOR 28 AND 22¢ RESPECTIVELY.

SPRING LAMB HAS GONE FROM 20¢ UP TO 22¢.

"IT IS NOT OUR FAULT," SAID THE RETAIL DEALERS, "THE WHOLESALERS CHARGE US THAT MUCH MORE".

THE BEEF PACKERS CLAIM THAT THE CATTLE RAISERS ARE NOT SENDING IN THE CATTLE.

Once more the price of meat has taken a jump upward with no good reason for it either in supply or demand. The following press dispatch from New York, June 10, is about all the explanation vouched to the public:

Meat was up 2 cents a pound today. Notwithstanding the hard times and the decreased demand of the hot weather season, the charge of every kind of meat from steak to spring lamb was advanced by the retail butchers this morning.

Porterhouse steaks were 30 cents a pound and sirloin steaks 25 cents a pound. A few days ago the best could be bought for 28 and 22 cents respectively. Spring lamb has gone from 20 to 22 cents.

"It is not our fault," said the retail dealers; "the wholesalers charge us that much more." The wholesale merchants and the beef packers passed the blame along to the cattle drovers.

"They are not sending in the cattle," it was explained. "Besides, we are suffering from an aftermath of the panic. When the buyers started out to get cattle there was very little money available and now we are feeling the effect of it."

That is one of those peculiar explanations which does not explain. On the same day when the above dispatch appeared, the following headings of the market colums were noted: "Further drop in hogs." "Cattle re-

(Continued on Page 3)

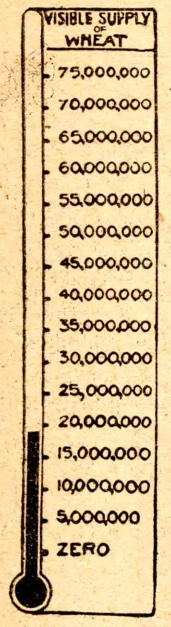
"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

THE FARMERS' POOLS

The call to readers of UP-TO-DATE FARMING to get their neighbors in the Farmers' Pools has not met with the response it should.

We fear farmers are trusting too much that good prices will be maintained without further thought or effort on their part.

We can only say, and past experience has proven it, that they are making a grave mistake. True, the farmers who have learned the lesson of control of crops to compel profitable prices will continue to be a great power; but they **are not sufficient.**



There never was a more favorable opportunity than this year for wheat growers to put themselves in a position to get $1.00 a bushel the year around and we feel like saying **ACT! ACT! ACT! ACT QUICKLY.**

If wheat growers won't act quickly, then the fine crop that is being harvested will be dumped into the hungry maw of the speculators and low prices will prevail all the year.

What does this mean? We will suppose the 1908 wheat crop will be 700,000,000 bushels. (But understand no person knows yet and cannot know for two months or more when the spring wheat crop can be estimated). This will mean about 600,000,000 bushels for sale. If the crop sells on the basis of 85 cents a bushel instead of $1.00, it means a loss of $90,000,000 to the growers just as truly as though this amount was taken from them. If it sells for 80 cents their loss will be $120,000,000 on the part sold, or $140,000,000 considering the whole crop.

VISIBLE SUPPLY

June 13,	19,232,000 bu.
June 6,	21,718,000 bu.
May 30,	22,820,000 bu.
May 16,	25,444,000 bu.
May 9,	26,979,000 bu.
May 2,	28,344,000 bu.
April 25,	30,968,000 bu
April 18,	30,528,000 bu.
June 15,'07,	48,249,000 bu.

But these comparisons in print should not be necessary. Any intelligent person can make them and others for himself. It does seem a shame, however, to see this great sum lost to the people who need it more than any others do and to have it repeated every year. The smallest sum named would be sufficient to establish a scientific system of marketing for all the crops of the country and maintain it for 100 years, if the farmers were willing to accept it.

Will wheat growers be warned and will they take the advice in this paper and **ACT NOW?**

Since our last report, June 6th, to June 13th, the visible supply of wheat decreased two and a half million bushels and was on above date about nineteen millions. Notwithstanding this small supply the price dropped to a lower level and No. 2 cash wheat sold in Chicago on June 20th at 90 cents, with September future at 85 cents. The buyers are depending on a free movement soon, otherwise the price could not have been forced down.

The visible suply of wheat in Canada a year ago was 19,355,000 bushels; corresponding date this year, 5,856,000 bushels. The aggregate in U. S. and Canada last year was 67,604,000 bushels and this year is 25,088,000 bushels, a decrease of 42,516,000 bushels.

The visible supply of corn on June 13 was 5,121,000 bushels. A year ago, 13,992,000 bushels. Present cash price is 73 cents against 53 cents a year ago. December future corn is quoted at 59 cents.

The visible supply of oats on June 13 was 7,855,000 bushels. A year ago 12,461,000 bushels. Present cash price 51c@52c, against 44⅞c a year ago.

Notwithstanding the very busy time

(Concluded on page 14.)

Dumper Post Cards

THEY ARE FREE!

These cards are designed to increase the circulation of UP-TO-DATE FARMING and the membership of the Farmers Pools.

THEY ARE FREE to every subscriber to UP-TO-DATE FARMING who will use them. How many sets will you mail? We want each subscriber to mail at least five sets to five friends.

Send the coupon below. When you receive the cards mail No. 1, the one where the Dumper hatches all our troubles. Follow in two or three days with No. 2, where the Dumper is held in the speculator's hand and continue two a week—the Dumper "gets it in the neck," " gets snared," is "plucked clean," and finally is a "cooked goose." By or before your friend reads the six cards he will be converted and will be a subscriber.

For each card we receive back with your name on we will send you 25 cents. If five cards are returned you will get $1.25 while your expense will have been 30 cents for postage—profit 95 cents. All your friends may not subscribe, again you may get more than one subscriber from a set. If the cards are sent to names judiciously selected, it is sure to be very profitable in cash returns besides this is the way to make the Farmers' Pools successful.

We will send cards to the new subscribers secured from your cards and more cards to the subscribers received from your friends' cards and so on. You can now figure the possibilities of increasing the circulation of UP-TO-DATE FARMING by this plan, consequently its power and influence in securing profitable prices for the 1908 crops.

How many shall we send you?

UP-TO-DATE FARMING, Indianapolis, Indiana

EDITORIAL

SIGNIFICANT RISE IN THE PRICE OF MEAT

(Continued from page 1)

ceipts liberal and prices very irregular." "Désirable grades rule strong while other kinds sell steady to a shade lower." "Common and medium beeves moved slowly and had a decline of 10 to 15 cents." "Another liberal supply of caked steers and grassers arrived." The preceding day the following headlines were conspicuous: "Cattle receipts large." "Best grades about steady, other kinds sell lower." "Butcher offerings liberal, hog market again lower."

It would require a microscope to see in any of these headlines a reason for a jump in the price of meats, or a justification of the causes given in the above dispatch. No scarcity of stock is indicated and prices tend downward. Besides the panic, if it affected the matter at all, would have lowered prices by reducing the demand.

But every once in a while something of unusual significance crops out in the papers. Of that character is the following which appeared on the same day with the above, under these headlines: "Butchers blame high duty;" "Tariff on cattle makes meat prices soar:"

Following statements by a score of men that the Federal Government, as influenced by the standpatters, is the chief contributor to the causes creating high prices on meat, the New York State Butchers' Association convention here yesterday passed a resolution declaring against the tariff on cattle and meat products.

The resolution, a copy of which will be sent to President Roosevelt, declares that scarcity causes enormous advances in prices of meats, and is reputed to be owing to the demand of meats being greater than the supply. The tariff on livestock shuts out our source of supply, therefore the duty on livestock should be removed.

The market headlines quoted above, taken from the same paper and papers of the same date, show that there is not a scarcity of cattle, and that the prices paid are not higher than usual. Farmers and stockraisers who have cattle and hogs ready for market know that the demand for their stock is not inordinate, and that they are offered prices that are scarcely remunerative. The claim of panic effects and scarcity of stock are but transparent subterfuges. The real reason is seen in the above clipping.

The financial institutions have just succeeded in forcing congressional action. They have long chafed under the legal restrictions which prevented them from absolutely controlling the currency, and with it the business of the country. So they decided to bring on a panic and compel congress to increase their special privileges and powers. For a time it seemed like they would fail, and we even congratulated the people and congress on the opposition to the measure in that august body and what seemed to be the defeat of the money power. But that whole thing was by-play to tickle the public ear. Aldrich in the Senate and Cannon in the House had their hands upon these bodies, and knew the music they played would be danced to at the proper time. And it was. The banks got their law; and it cost them nothing, but it cost the industrial and business interests of the country millions of dollars. And it will cost these interests millions more before they are done with it. This is a prediction we do not hesitate to make, for no corporation or combination ever voluntarily surrendered an acquired power, and whoever controls the money of a country controls the industry, enterprise and business of the country, if not its freedom.

Now the packing house monopoly proposes to play the same game. They have long controlled the prices to be paid the growers for livestock as well as the prices charged the consumers for meats. There is just one thorn in their flesh—they cannot import livestock and compel growers to accept still lower prices without first paying an import duty thereon. The purpose now is to force the repeal of that duty. Time was when special interests desired special legislation, they bought it from the legislators; but the people got "wise," and made that risky. Now they compel public sentiment. The bankers did it by running the business of the country, and claiming that it was all for lack of a certain law. The packers put starvation prices on meats, and say it is because American livestock is protected, though very slightly indeed, from foreign competition. Thus they propose to starve meat consumers into demanding a repeal of that protection so as to open the floodgates of the world against those who raise livestock in the United States.

What is to be done? We give this modest note of warning. The matter is sprung too late to much affect the presidential convention, but the principal aim is at the congressional elections. Would that the people interested, the rural masses, were so organized that they could co-operate on all such questions. What a blessing it would be to them and American institutions generally. We hope these warnings and appeals may not fall upon deaf ears. There is too much involved to pass them lightly.

THE FENCE POST BILL

An annual fence post bill of more than $1,250,000 is one item in the expense account of the farmers of a single agricultural state. It is estimated that the farmers of Iowa use posts having a value exceeding this enormous sum each year to maintain the fences on the 25,000,000 acres of improved land in the state.

In making these estimates, H. P. Baker, formerly professor of forestry in the Iowa State Agricultural College at Ames, and now occupying the chair if forestry at Pennsylvania State College, figured that the farms of the state required 78,000,000 posts for fences, or 2,000 to the square mile. Placing the value of the posts at 15 cents each, the cost of renewals every eight or nine years, which is the life of the post, is $11,718,000, making an annual bill for renewals of $1,465,000.

Like many other farming states, Iowa has a lack of fence post material, but there is little excuse for this condition according to the foresters who have made studies in the state. A properly managed forest plantation will produce, when the trees have reached post size, 3,500 posts, 3 to 5 inches in diameter per acre; thus, it would take 22,350 acres about every 10 years to grow the necessary posts to supply the state. Iowa is said to have 200,000 acres of planted timber, and get the fence post supply is insufficient. If properly cared for, many of these plantations can be made to produce more timber, and thus insure the future post supply.

These 200,000 acres are not at present furnishing the posts which it is estimated can actually be grown on 22,350 acres of properly handled forest land. This in itself is an astonishing statement, but there are several reasons for such a condition. They have been summed up under the three following heads:

1. Failure to select species specially suited to the region and the land to be planted.

2. No protection against stock. It is impossible to make land produce both first-class stock and first-class trees at the same time. The animals eat the terminal buds of young trees, and pack the soil so that it will not take up the rain, and break and bruise the trees, opening them to the attack of insects and fungi. The trees shade out the grass and reduce its forage value.

3. Lack of protection against fire. Many fine plantations have been ruiner by permitting surface fires to run through them. Fire protection, which is often given by plowing two or three furrows about the plantation, is especially important after the trees have reached such a size that they no longer receive cultivation, as the litter and brush form dangerous fire risk.

Owners of planted woodlots often say that the land is too valuable to be used for growing wood, yet it is seen that if a little more than 10 per cent of the present area of planted timber were properly cared for, protected both against fire and stock, the remainder of the land could be thrown profitably into pasture or farms. As it is now the farmers of Iowa have to buy many of their fence posts from other states, which seem like a burdensome and unnecessary exneuse to those who have studied the possibility for tree growing in the state.

Foresters say that under proper management there are many trees which can be grown in the state. The best species for post production are black locust, chestnut, catalpa, Osage orange, Russian mulberry, and European larch. Since these trees should be used only within their economic planting range and on soils adapted to their growth, the number for planting in Iowa is reduced, for the greater part of the state, by one-half. There are other trees which produce good post material, but it always pays to grow the best. This means the kinds which are most durable in contact with the soil, and have the most growth.

Black locust is subject to the attack of the borer to such an extent as to make its cultivation in Iowa a rather doubtful proposition. In the southern part of the state the trees, once established, make very rapid second growth, and it is possible that under these conditions, with short rotations, small post size will be reached by the trees before the borer has done any serious damage. Black locust thrives on fairly good sandy or gravelly land.

Chestnut is not so suited to Iowa conditions and Osago orange is subject to winter killing north of a line drawn east and west through Des Moines. Osage orange makes a very long-lived post; its only drawback is a tendency to split under the staple. It grows to best advantage on a deep, rich soil with plenty of moisture, but will do well on a variety of soils.

European larch, though not so rapid a grower as black locust, is suited to fairly good hilly lands. Unlike its relative, tamarack, it will not thrive in wet places. It produces good post and pole timber and makes good lumber.

Russian mulberry is a rather low dense tree with strong tendency to branch and form crooked stems. For windbreak purposes around orchards and plantations of young hardwood it is especially valuable. Birds are very fond of its fruit and because of this fact the tree is frequently planted near cherry orchards to prevent birds making ravages on the cherries. Is grows on a variety of sites and may be used where better trees canot be grown.

On suitable sites, hardy catalpa is one of the very best post trees for the Iowa planter. The George S. Waller grove in Humboldt County is an excellent example of what may be expected on fairly good lands which are not hilly. At 20 years of age the value of the 10 acre grove for posts and pole purposes exceed $2,800. In addition, Mr. Waller was furnished fuel and protection, the thinnings more than paying for themselves in firewood.

The trees were planted around his farm in a corn field. When the corn germinated the plants were removed from every other hill in every other row and replaced by a catalpa seedling. This made the spacing about 7x7 feet. The field received the same cultivation as though it had been all corn. In this way a half crop of corn was produced by the soil for two years, the trees meanwhile receiving the best cultivation. Seedlings of this species can be raised very cheaply and as easily as garden vegetables.

The United States Forest Service has made a number of tree studies in Iowa and will gladly give advice on planting to those desiring it. A letter to the Forester at Washington will bring the information.

INSURING BANK DEPOSITS

Companies to insure bank deposits! "You insure your property; why not insure your money in the bank?" is a part of a notice soliciting such insurance. It occurs to us that is just about reaching the limit. You put your money in a bank, and then you pay another company a premium to guarantee that you will get it back again! The bank should be its security. If the depositor must look to some other source to secure his deposits, he had better do something else with his money. How easy it would be for the bank to be its own insurance company, and it would then get the free use of the money and a fee for using it.

EVENTS VERSUS ARGUMENT

Events often impel people to act when argument would not affect them. Such events are coming swift and strong to farmers, it seems to us. The Aldrich financial bill, giving the money of the country almost entirely into the control of the banks, and the recent grain corner in Chicago, must impress farmers that it is time for them to co-operate in shaping events more along lines of Equity and fairness. So long as farmers are divided, each hoeing his own row and throwing clods at his neighbors, the opposing interests may be expected to get in their work.

E. G. LEWIS AND THE POSTAL DEPARTMENT

What has become one of the most noted cases connected with the United States government is the case of E. G. Lewis of St. Louis. The Lewis Publishing Company, and the Peoples United States Bank. A few years ago Mr. Lewis appeared, unheralded, in the midst of the business interests of St. Louis, organized the Lewis Publishing Company, and began the publication of the Woman's Magazine, The Woman's Farm Journal, and, a little later, The Woman's National Daily, subsequently acquiring The Journal of Agriculture. These were, and are, all clean, meritorious publications; but Mr. Lewis so entirely ignored precedent, and went about his work in such startling original ways, and the papers sprang into popularity and attained a tremendous circulation so suddenly as to take away the breath of ordinary, old fashioned publishers, and soon a horde of postal department sleuths were dogging his every step.

Mr. Lewis evidently has a wonderful talent for bringing men together and organizing great enterprises. He and those associated with him secured a valuable tract of land in the suberbs of St. Louis, which they at once began to improve and build up, erecting magnificent buildings as homes for their various enterprises. The place was incorporated as University City. The People's United States Bank was founded to do a banking business by mail. In this enterprise Mr. Lewis associated with him some of the most prominent public and business men of the City and State, and in an incredibly short time The People's Bank loomed up as one of the great financial institutions of the country, with stockholders in almost every State in the Union. This, or influences brought to bear upon them from some source, seems to have raised the temperature of the postal authorities to a degree unknown to the ordinary thermometer, and, as appears to be the custom of the department at such times, secret spies were set to work not necessarily to find and report facts, but to report impressions made upon minds that were out for the sole purpose of being "impressed" as those above them had already been. It is a sad commentary on a great and free government that such methods can be employed by any of its departments, but this case demonstrates that they can be and are. The Woman's Magazine and The Woman's Farm Journal were denied the privileges of the United States mails, an order was issued by the department declaring E. G. Lewis and The People's United States Bank a fraud, and E. G. Lewis himself was indicted charged with using the mails to defraud. Mr. Lewis time and again demanded to be heard, but not a word in his defense could he get before the authorities. The "impressions of the spies," as reported by them, the reports themselves being kept secret, were all the department would consider or receive.

After tedious waiting and expensive proceedings that, it looks like, would have destroyed any business on earth, Mr. Lewis got into court on the criminal indictment. Here the government exhausted its powers to effect a conviction and justify its former proceedings, but the best it could do was to secure a disagreement of the jury, a majority, it is said, standing for acquittal. The case then went over for another long and exhausting wait, but recently Mr. Lewis once more got into court where he, as well as his opponents, could be heard. Again was the government permitted to present all the evidence it could possibly procure to sustain itself, but when the testimony was all in, the court peremptorily ordered the jury to return a verdict of "Not guilty" without retiring from their seats, as the government had signally failed to make a case against Mr. Lewis.

This is a serious matter, but it is only one of the natural fruits of a secret spy system, whether in a democracy, a republic, or an autocracy. By it any business may be destroyed and any reputation ruined. But the most remarkable part of this peculiar drama of arbitrary rule is the last part of it. After Mr. Lewis' triumphant vindication in the courts, followed by an unprecedented testimonial tendered him by his fellow-citizens and public men of St. Louis, he asked that the fraud order, which he had so clearly proven was ill-founded and wrong, be removed. This the department refused to do, notwithstanding it had twice failed in open court to prove that either Lewis or his enterprises were frauds or even fraudulent. The Lewis Company's publications have been restored to mailing privileges, and are even surpassing their former successes; University City, of which Mr. Lewis is mayor, is growing in magnificence, beauty and wealth; Mr. Lewis himself stands vindicated before the world, and has received the plaudits of his sympathising and appreciative fellow-citizens, but the fraud order still stands!

We are not finding fault with the United States government, nor even with the postal department. We concede that it is easier to criticize than it is to govern. But the right to own and to do, the right to be protected in the privileges of American citizenship, the right when accused to an opportunity to refute the accusation and to the benefit of such refutation when effected, the right to maintain one's honor and good name—these are all sacred rights, and any department of government which denies, restricts or assails them, is tyrannical, no matter what its name, purpose or excuse. Our government is not to blame for it. Our laws do not provide for or require it. Its justification can be found only in orders, rules and administration. Hence the temporary administrators are the responsible parties, and since these as individuals cannot be reached by the governing public, and since for governing purposes the people array themselves into political parties, and since the individual temporary administrators are the creatures of the parties, such abuses can only be reached and prevented by holding to account the parties responsible therefor at the polls.

CROPS AND PRICE

We clip the following from the daily press as a special dispatch from Washington, bearing date of June 12:

The crop reporting experts of the Department of Agriculture have issued a report that is bound to make glad the heart of housewives all over the land, and cause a great comotion in the pantry shelves and washing up of pantry jars.

Briefly, the reports estimate that the great American farmer is going to put on the market this summer and fall more fruit of all kinds than the country has known for a long time. Apples, peaches, blackberries, raspberries, cantaloupes, water melons, and such lowly other fruits as the cabbage and the onion this year show an overflowing abundance. Nature has smiled on the crops, and there's going to be many a table under loads of luscious fruit.

Take peaches, for instance. Last year only 37.4 of the whole crop survived. In this year of prosperity, 73 per cent is going to reach the market. There is a 15 per cent increase in apples. A bumper crop of blackberries is assured—a whole 94 per cent seems certain, and those delicious red raspberries look now like 91 per cent good eating. Last year there was only 83 per cent of good blackberries and only 78 per cent of raspberries.

An increase of 11 per cent in watermelons is bound to bring a toothy smile to the African face.

Ninety-two per cent of good onions will blush modestly for the salad, and bring tears with their very goodness, where only 87 per cent bloomed modestly last year.

The cabbage snake story of last summer will have to be revived surely with the big jump in yield this year—90 per cent, against 84 last year. The saccharine sweetness of both sugar cane and beet sugar is also on the increase.

The flippant writer of that dispatch thought he was doing a clever thing, and the "crop reporting experts" who it is claimed, authorized it, thought they were showing knowledge akin to that of the Almighty. Neither of them realized that what they were saying would cost the hardest worked people on earth and the poorest rewarded, millions of dollars. The crop experts gave out the "information" lightly, and the reporters did not care to inquire whether or not it was true, while the publishers thoughtlessly, if not recklessly, gave it display heads like this: "Fruits in Abundance." "Government Experts Report Yields Biggest in Many Years." "Peaches Show Increase and 73 per cent will reach Market."

Whether true or untrue, there could be but one result. Coming out just at the beginning of the marketing season, such a report could not but knock the prices to the very lowest, even before the stuff reached the market, and, of course, it will be used to keep the price down all through the marketing season, whether shipments be excessive or not; and it will thus cost the producers millions of dollars, without benefiting consumers scarcely a cent, because retail prices, controlled by the Exchanges, are seldom reduced.

Reliable advices indicate that the yield of most of the commodities mentioned, is not excessive. On the contrary, that it is meager. Apples and peaches we know to be almost a failure in some large sections of the fruit belt, and we do not believe the aggregate can be as above stated.

It is absolutely cruel, to use no stronger term, to thus cut down the reward of an industrious and deserving people, and with no hope of benefiting any other class except the speculators. Reporters and press are to blame for recklessly making such statements, and what shall be said of the Agricultural Department official, under pay of the general public, for authorizing them? We trust, for the sake of official integrity, the Department may be able to deny the authorization of the above, that the responsibility may be thrown upon irresponsible parties.

TARIFF AND FARMING

Tariff revision will soon be a leading political question, possibly during the rapidly approaching presidential campaign. The need of a tariff to sustain "infant industries" is no longer an admissable argument, because almost all of our manufacturing enterprises are now controlled by trusts and have become so strong that they can send their goods abroad in competition with foreign manufacturers and sell them at prices below what they charge their own people. But tariff for revenue, and even for protection, is another question, perhaps a debatable one, and one which we do not care to discuss in this article.

As the tariff schedules have been arranged, however, and as they have been construed, they are of doubtful benefit to agriculture. Import duties have not been placed on many farm products, and most of those that have been so favored are products that we export rather than import—products that would not or could not be imported even if there was no duty upon them.

One duty, though, that we now have in mind is in the line of farm protection as other duties protect manufacturers. We refer to the duty on wheat, which prevents the importation of Canadian wheat into this country until a duty is paid which adds the amount of the duty to the price of home grown wheat before the foreign wheat can be brought in competition with it. This duty the mills near the border are making a strenuous effort to have repealed. Indeed Mr. Shaw, several years ago while Sesretary of the Treasury, virtually suspended that duty by ruling that the mills might import Canadian wheat provided they would export what they made from it. We can see no justification for the order unless there was not enough American wheat to keep the mills employed, and that was never the case. The excuse given was that the price of American wheat was higher than that of the Canadian wheat, and if the mills could get Canadian wheat without paying the tariff, they could do a better export business, and as the product was not consumed in this country, it did not compete with American farmers. But if the mills could not have got the Canadian wheat they would have used American wheat instead, thus increasing the demand for American wheat. Hence the Canadian wheat thus imported free of duty, did compete with American wheat, diminished the demand and reduced the price, the very thing it is claimed a tariff is designed to prevent.

When the question of revision is up, therefore it is important that American farmers be on the alert. We are not arguing for or against the tariff. That question is not involved in this disucssion. But if other interests are benefited by it, the farmer should have his share of those benefits. At least he should see to it that the little benefits accorded him be not taken away while the aid to other interests is retained. That is the trend of things, and will likely be the result if the whole matter is left to others. We stand for equity.

THE GAMBLER'S OPPORTUNITY

If the price of wheat was agreed on by the farmers—the people who first possess all of it—and if none was to be had for less than their price, gambling in wheat would be at an end. And it is the same way with every other crop whether grain, livestock, forage, fruit, vegetables, cotton, poultry, or eggs. If the producers of hogs agreed that the price shall be 6 cents at Chicago and if they would not market any except when they were bringing this price, the whole country would quickly adjust itself to the price and the price would prevail as long as the producers held to their resolves.

If farmers would do this one thing, then adverse or favorable crop reports could not affect the price of the farmers' supply because the price is agreed upon and all of the crops can be had at the prices. Also they could not affect the prices of the growing crops because a price will be agreed upon when the crop is known and this price will not be based on the future sales by speculators, but on actual supply and demand, to hold all through the crop year.

True, speculators may buy the crops at farmers' prices and gamble in them. But if this were tried the government would be forced to intefere because then it would be a plain case of gambling in the necessaries of life at a higher level than the producers are willing to feed the world.

The Society of Equity will accomplish all that is referred to in this article and destroy the gamblers' opportunity to speculate in farm crops. But it will require a considerable time to organize enough farmers to accomplish the full results. In the meantime the Farmers'Pools will give nearly as definite results and it is possible to apply them to the 1908 crops if farmers want to.

SAVE THE PEOPLE

"When wilt thou save the people?
O God of mercy, when?
Not kings or lords but nations,
Not thrones and crowns, but men!
Flowers of thy heart, O God, are they;
Let them not pass, like weeds, away,
God save the people!

"Shall crime bring crime forever,
Strength aiding still the strong?
Is it thy will, O Father,
That man shall toil for wrong?
'No,' say thy mountains; 'No,' thy skies;
Man's clouded sun shall brightly rise,
And songs ascend instead of sighs:
God save the people!

"When wilt thou save the people?
O God of mercy, when?
The people, Lord, the people,
Not thrones and crowns, but men;
God save the people! thine they are,
Thy children, as angels fair,—
From vice, oppression, and despair,
God save the people!"

(We reply to the question and say that God has endowed the people with intelligence and he expects them to make the effort to save themselves. He will then help them. If any class of people remain passive and expect God to save them by working a miracle they are doomed to disappointment.—ED.)

THE DISTILLERY FALLACY

UP-TO-DATE FARMING has no disposition to meddle with what does not concern us, but whatever is of importance to farmers is of importance to us, and we are opposed to anything that is deceptive or misleading.

Since the anti-saloon wave has attained such tremendous proportions, the whisky interests have inaugurated a campaign among farmers, hoping to win that powerful and conservative class to their support. The advocates of saloons and the liquor traffic have a right to do that just as the anti-saloon people have a right to solicit the same support, and if they made an honorable and truthful presentation of their side we would not have a word to say in the controversy. But the saloon men's arguments, or what they call arguments, are not only deceptive and misleading, they are fallacious. One of the strong arguments made, and that the farming regions are posted with, is, that farmers will suffer from a decrease in the use of intoxicants because, they contend, it will reduce the demand for corn and injuriously affect the price. This argument cannot be sustained, because the corn used in distillation is not consumed, and, therefore, it is not taken from competition with that which remains in farmers' hands. The distilleries buy only one bushel in about 150 bushels of the product, a small item at most, and from that they merely extract the alcoholic principle, leaving all the nutritive portion of the corn or barley to be fed to stock and thus brought into competition not only with the corn growers, but with the stock raisers as well. In almost every stock market report may be found expressions like this: Many distillery fed steers were marketed at—usually about the top figures. These steers were fattened on the corn the distilleries claim to have taken out of the supply, whereas, after the extraction of the alcohol, it was used to satisfy a demand entirely apart from distillation, the same as if it had never passed through the distilleries. If every distillery were closed today the corn taken by them would be consumed in the feed lots of the stockmen instead of in the pens behind the distilleries, and the place in the market now supplied by "many distillery fed steers," would be supplied by the honest cattlemen of the farms and ranches.

The effect of distillation, therefore, on the demand for or the price of corn does not enter into the question at all; but the effect of the use of intoxicating liquors upon the morals and general prosperity of the country, and the increased taxes it compels farmers to pay, is quite a different proposition. If all who waste their money for drink were to use it in the purchase of food and clothing they and their families actually need, the difference in the farmers' markets would be material, and his income would be vastly increased. The millions annually spent in drink, and that go to make distilleries, breweries and liquor selling profitable, and those engaged in them rich, would be divided among farmers, who furnish the raw material for all these things, to the great benefit of all honorable industries.

RESPONSIBILITY OF BANKS FOR DEPOSITS

The financial legislation most needed in this country is a provision of law making banks responsible for the deposits they receive, and providing means to guarantee that responsibility. There is no reason why people should deposit their money in banks without a guarantee that the money will be honestly returned according to the agreement between the bank and the depositor: It is unbusiness like. It is contrary to the business prudence of the American people. They do not do business that way with each other, nor with any other institution. When we surrender possession of our money it is our custom to require the safest and surest of security. Our mortgage laws, real and chattel, are but expressions of that prudence. And when banks furnish money to individuals, or companies, or municipalities, they require that security; but when individuals, companies or municipalities place money in banks, no security at all is required, and the law affords none. Provisions to effect this have been suggested, but they have not been much discussed, nor have they received much publicity, because the banks prefer to be "let alone." They are satisfied as it is.

Another striking object lesson is afforded in the failure not long since of the Owensboro, Ky., Savings Bank and Trust Company. This was considered among the safe institutions of the State, and people put their money in it freely. When the crash came, legal proceedings brought out the fact that certain families, those of the officers and related to them, had systematically looted the bank for years; that as fast as unsuspecting persons put their money therein it went into the insatiable maws of these looters, so that the depositors and stockholders will receive back barely fifteen cents to the dollar they confidently trusted to the bank.

To establish their own integrity and to secure stability of business, the banks themselves should favor some system of guaranteeing deposits. That is one measure the public could force, and they could do it by refusing to put money in unguaranteed banks. The situation suggests the chain of rural banks several times suggested in these columns,—all under one general management, all responsible for the investments of each, and every deposit guaranteed.

TOBACCO GROWERS STILL TRIUMPHANT

A late Kentucky paper informs us that every day now counts big things for the Equity Society in the Burley district. Storage houses in Louisville and Cincinnati were at that time working over time to accommodate buyers with orders for Equity tobacco. All tobacco of the 1906 pool under fourteen cents per pound has been sold, and rumor has it that the entire pool will soon be disposed of. The American has concluded a deal with the Society for the immediate purchase of 400,000 pounds of pooled tobacco at the price fixed by the Society.

A prominent feature of this successful control of the tobacco crop, is steadiness of price, and this could be effected with every crop grown. Farmers are masters of their business if they would only exercise their rights and their power. If ignorance prevents their doing it, the schools as well as themselves are at fault. If selfish prejudices are in their way, the churches, the press and themselves are to blame. The work must be inaugurated and carried on by those of broad minds, clear views, a keen sense of right persistence and determination, and unhampered by prejudices, and to instill these into the minds of the people has been the unselfish work of UP-TO-DATE FARMING and the Society of Equity.

MAN'S FOOD ASSURED

One of the greatest problems which has in late years occupied the attention of scientists has been solved by the discovery of new deposits of nitrate of soda. "How can the exhausted fields and farms of the world be replenished with the nitrogen which alone can produce food for the race?" was the question. The finding of the new deposits in Chile, covering a vast area, is the answer.

Nitrate of soda is not as visibly connected with the welfare of the race as sunshine, but it is almost as important an element in the development of the individual and the perpetuation of the race. Some scientists have gone so far as to compare the effects of the exhaustion of the nitrate beds with those which would follow upon the withdrawal of the sun from the earth. "No sunshine, no growth," says science. "Without nitrate of soda to fertilize the world's exhausted fields and farms, there will be a long series of constantly diminishing crops and a consequently dwindling, degenerating, starving and dying-out population," says agricultural chemistry.

Some specialists have said the Chilean beds, as heretofore, would be exhausted in fifty years, and that the area of decreasing crops would then begin, with terrible consequence to the race. As a matter of fact, new nitrate of soda deposits have been discovered continuously for many years, so that there has actually never been a time when the American farmers' supply of nitrate was in danger of failing. The new discoveries, however, place the certainty and immensity of his supply beyond all question. He can now secure unlimited quantites of this most effective and most easily applied of all fertilizers at a more advantageous price than ever before. In fact, overproduction is in sight unless new uses are found for nitrate.

The Chilean government for purposes of revenue, took charge of the vast deposits soon after their discovery. It has ever since not only controlled the known nitrate beds, but has systematically searched for others. Deposits of nitrate, of varying size, were constantly being discovered; and now comes the discoveries of nitrate of soda beds which will last not only hundreds of years, but longer. Two immense areas have only recently been discovered. Together they contain more than one billion tons of nitrate of soda. It would seem that Nature had placed the deposits in Chile for the use of farmers all over the world at just the time the needs of growing world-population would require it to renew their acreage and grow larger and better crops. From the best information obtainable the nitrate mines are good for 200 or 300 years, even at double the present rate of production, which is about 2,000,000 tons per year. A new process has been invented that will do for the nitrate business what the cyanide process did for gold production. Heretofore from 9 per cent to 10 per cent has been left in the waste, but with the new process it is claimed that there will not be a loss of 2 per cent, and at less cost of production than by the old method. Even the waste or tailings can be worked with a great profit.

Nitrate of soda is the world's leading fertilizer and it is gratifying to note that the American farmer may now secure unmeasured supplies of his best fertilizer—contrary to the general rule—at rates cheaper than ever before.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FIVE FOR $2.00
Foreign Subscriptions, including Canada, 75c a Year

Clubs. Two subscriptions for $1.00; five for $2.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE*.

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

FINED

Equity Farm Journal Publisher and Editor Fined

Chicago, Ill., June 19, 1908.
MR. J. A. EVERITT,
Indianapolis, Ind.

Dear Sir: I was advised by Judge Sadler today that the defendants appeared in court and he fined them as follows: Bowne, $200.00; Nelson, $100.00.

Immediately thereafter they were put in the custody of the sheriff.

D. K. COCHRANE, Atty.

COURT RECORD OF THE CASE TO DATE

People vs. Bowne, Nelson and Gentner —Information for Criminal Libel

Feb. 13.— Leave to James A. Everitt to file information.
Capias order to issue.
Case postponed to February 27, 1908; bonds of $1500.00.
Bonds filed.

Feb. 27.— Case transferred to the Criminal Court for a Jury trial.

Feb. 28.— By agreement case postponed to March 18, at 9:30.

Mar. 18.— Leave granted to States Attorney to file Amended information.
Defendants Nelson and Bowne except.
On motion of States Attorney, D. K. Cochrane appointed to assist.
Amended information filed, and cause continued to March 25, at 9:30.

Mar. 25.— At 9:30. Motion of defendants, Case continued to April 8, at 9:30.

April 8. — Case continued to April 10.

April 10.— Defendants arraigned, pleaded "Not Guilty", trial by Jury.

April 18.— Verdict of Jury finding defendants guilty.
Motion for new trial by defendants.

June 9. — New trial granted to John Gentner.
Case postponed to June 18.

June 18.— Motion for new trial overruled as to Nelson and Bowne.
Motion for arrest of judgment over-ruled as to Neison and Bowne.
Nelson and Bowne arraigned in Court; Nelson on verdict sentenced to pay $100.00 and costs, and to stand committed to the House of Correction until paid.
Bowne sentenced to pay a fine of $200.00, and costs; sentenced to stand committed to the House of Correction until paid.

WILDER'S "WHIRLWIND" SILO FILLER

Will fill your Silo with any Power from 4 H-Pup. Will cut or shred green or dry fodder and cut hay or straw. Our catalog explains why Whirlwinds succeed where others fail. Carried in stock at principal transfer points. Pamphlet,—"How and Why to Fill a Silo," sent free.

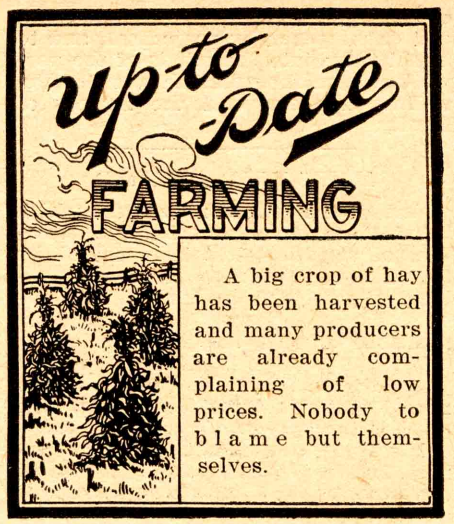
DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers



A big crop of hay has been harvested and many producers are already complaining of low prices. Nobody to blame but themselves.

MAN'S WORK

God's earth a pleasant garden is,
But evil grows among the good;
Bad weeds are sprouting in the corn,
And tangled thorn in shady wood.
Man's work is to destroy the bad,
And make still better what is good.
—STELLE.

AVAILABLE FERTILITY

That a field may fail to produce well is not a positive proof that it is impoverished. Soils have been found to contain, a foot in depth, 4,000 pounds of phosphoric acid to the acre. Average crops of wheat and other grains remove only from 20 to 25 pounds of phosphoric acid per year; hence the above supply would last indefinitely, yet such soils soon begin to show impoverishment. That is because only a small portion of the phosphoric acid is available, and would just as well not be there. The great need most likely is humus—decayed vegetable mould or organic matter. The loss of humus from the soil affects not only the nitrogen contents but also the chemical combination of the mineral elements particularly the phosphates. In the presence of the necessary alkaline matter the phosphates and other minerals unite with organic compounds produced from the decay of vegetable matter and form humatis, putting these elements of fertility in the very best form for plant use.

In cases like the above deeper breaking, barn yard manure, which is largely humus, clovers, which supply nitrogen and humus, and the turning under of green crops, are indicated rather than commercial fertilizers. Soils that are too acid must have the acidity corrected by an application of lime or hard wood ashes. This librates and makes available elements that cultivation will not release, and apparently changes the nature of the soil and makes it an easy matter to keep up the supply of humus.

TIMOTHY AS A FARM CROP

Timothy hay is in good demand and will remain so, but as a rule it is not so profitable a crop as it should be. The fault is not in the timothy, but in the cultivation and management. When a field gets so tired that it will not produce much else it is thought to be ready for timothy and a rest. The result is perhaps an average of a ton to the acre, whereas the average ought to be at least three tons. Timothy should not be grown as a side line, but as a main crop. The land should be reasonably fertile, a well drained sandy loam, by no means lacking in humus. If this land can be plowed at intervals several times during the season, it will well pay for the labor. For this reason, if the corn can be got off early enough corn land is excellent to seed to timothy, but the usual way of seeding among the stalks or even among the shocks, is always imperfectly done and leaves the ground too rough and too much trash on it. To seed corn ground properly and get the best results everything should be taken off and the ground thoroughly worked down. If not too late in the fall this plan is always successful.

But this is a digression. Working the land several times during the summer, frees the ground from weeds, brings it into good tilth, most likely adds to its supply of humus, and gives the atmosphere greater freedom in its action upon tthe mineral elements in the soil. In September in the Central Belt give the soil its final working, which should be thorough—plowed, disced, rolled, harrowed, and whatever is necessary to make a perfect seed bed. Toward the last of September sow at least a third more seed than is usually sown in the neighborhood, and harrow very lightly. We prefer to roll heavily just before sowing so as to pack the ground well, an important part of the work, and after the seeding harrow lightly to cover the seed. This proceeding guarantees a crop and at least double the ordinary yield.

THISTLES IN THE PASTURE

We notice in pastures, especially in Southern Illinois, one of the large varieties of the thistle (not the noted Canada thistle) much more common than it used to be. This is a troublesome weed in pasture lands, but it is not difficult to destroy. It does not spread except from seed, and if cut close into the ground when first in bloom, or to be safer, before it blooms, the bunch is likely to be destroyed. If cut early a second cutting may be necessary, as it may put up new sprouts in time to mature seed.

CORN AND THE MINIMUM

America's great staple, corn, has passed the minimum, and it has done so independent of the Patton corner in Chicago, for the closing of the May option did not affect the price, and Equity farmers in Southern Illinois are now selling their corn at 75 cents per bushel at their local markets, or even at their crib doors. Once more business methods triumph, and those who held their crops are reaping a merited reward. It is painful to see farmers so slow in taking reasonable action for their own benefit and security when proofs of its efficiency are so abundant.

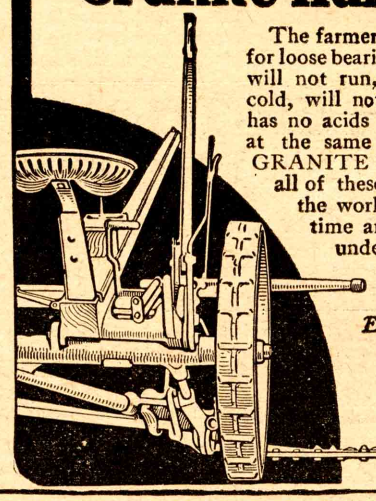
WHO WILL PAY FOR IT?

A prominent agricultural paper, one of the produce-more kind, says if the farmers of this country could increase their production of grain only ten per cent they would increase the nation's wealth $214,000,000. But that estimate is based on present prices. Were ten per cent added to the quantity of grain produced, would not more than ten per cent be taken from the price of grain? The present product supplies the needs of the world at the price. The needs being supplied, if more were produced who would want it? Who would pay that two hundred and fourteen millions for it? Such papers claim that supply and demand fixes the price, but they ignore all that when they urge greater production. We are anxious that enough be produced, but enough is enough, and when there is enough it is time to stop, unless the producers are anxious to sell more for less money.

SECRETARY WILSON AGAIN

"Out of the heart the mouth speaketh," and our good friend Secretary Wilson has again spoken. He is reported to have recently declared that 1908 promises to be a bumper crop year. "We have never had a more favorable spring," the Secretary is reported to have said, "and I desire to predict an unprecedented crop year." The Secretary of Agriculture cannot be misinformed as to the unprecedented floods of this spring and summer, of the long time farmers were held back from planting in a very large area—in the whole country in fact—of floods which destroyed crops after planting had been done, and of the unfavorable condition of soils almost everywhere. Meadows were thought for a time to promise well, but even these have gone back in condition wonderfully during the last few weeks. Our information

Granite Harvester Oil



The farmer's needs demand a heavy oil for loose bearings, one that will work freely, will not run, is not affected by heat or cold, will not gum or grow rancid, that has no acids to injure the bearings and is at the same time economical to use. GRANITE HARVESTER OIL answers all of these requirements and lightens the work of the horses, saving their time and strength. It works perfectly under all conditions and in any weather, and is just as good for all sorts of farm implements as for harvesting machinery.

Every dealer in farm supplies carries it in stock.

STANDARD OIL COMPANY

P & O POTATO DIGGER

One of the Most Useful of All Farm Implements.

You need the P. & O. Potato Digger not only as a matter of **economy**, but for **results.** The potato digging season comes when help is scarce and expensive, at a time when they leave the farm for the winter's work in the towns. Then is when you need labor-saving implements. At such times the **P. & O. Potato Digger,** on a fair-sized potato patch,

Will Pay for Itself In a Single Day.

One man with a team and this Digger will plow up **more potatoes** than a **dozen men with hoes,** and do it better, cleaner and more thoroughly. As this digger plows deep, it goes **right under the hill,** and turns up all the potatoes **without cutting, bruising or loss.**

The **truck** in front is adjustable either way, and holds the digger in line. The **revolving fender** prevents vines from clogging the beam. The **shaker** under the grate causes a continuous vibration that thoroughly sifts the potatoes from the soil, leaving them all exposed on the surface. The **runners** under the shaker carry the digger along evenly and smoothly, and prevents the jerking so common on other diggers, and makes them so hard to control. The P. & O. Potato Digger is the only one made with these runners. And last but not least, it is strong enough to **last a lifetime.**

It is a **low-priced** digger within the reach of every farmer, and you cannot afford to be without one. Now is the time to see about it. Ask you dealer for the **P. & O. Potato Digger,** and **insist on getting it.**

Write for **Beautifully Illustrated Pamphlet No. 41,** of interest to every farmer, and a **P. & O. Catalog,** which will be **Mailed Free.**

BUCKEYE MOWER and BINDER REPAIRS
Weber Implement Co., 415 N. Main st., St. Louis, Mo.

and personal observation seldom indicated a more discouraging season; and the unfavorable conditions continue with remarkable persistence.

But Secretary Wilson got in his work. Te gamblers and speculators, the American price-makers, heard him declare there was to be a bumper crop, and he ought to know, of course. So down goes the price. No use to pay high prices when bumper crops are only a few months ahead of us. Products may be a little scarce now, but the Secretary of Agriculture says there is to be plenty directly.

We move the establishment of a Department of Speculation and Gambling to keep farm prices down, and that Secretary Wilson be put at the head of it. We confess it would not be much of a promotion, for there seems to be about where he stands now.

WHAT BECOMES OF THE CORN?

Of course everybody knows about feeding corn to livestock, poultry, etc., but the American corn crop is a big thing, and were that all the use made of it there would be a surplus that could not be disposed of at any price. No small amount of it is used in the manufacture of hominy grits, corn flour, and special stock feeds. Many of the best breakfast foods are now made largely of corn, and some of the most popular pancake flours contain a liberal amount of corn flour. Wheat flour and corn flour blended, many believe, makes better bread than wheat flour alone; but dishonesty in such blending has practically driven that out of the market.

The glucose industry is probably the largest special market for corn. Twelve factories consume from 40,000,000 to 50,000,000 bushels a year. Some of the factories grind thirty carloads a day. Much of it is converted into starch, which is worth from $45 to $55 per ton.

Other uses for corn are being constantly discovered, and a valuable oil is now being extracted from the heart of the grains. This oil is worth around $100 per ton.

No, we do not mention the distilleries, for what they use is insignificant, and it practically all returns to the feeding of livestock, hence it does not affect either the demand or the price.

THE LATE GRAIN CORNER

It is said that in the recent corner in the grain market at Chicago, two men made a million dollars each in corn, and many more cleared from half a million to a hundred thousand.

The wheat deal resulted in about the same gains to other parties, and the oats deal ran well up towards those figures. Every cent of these gains was created by farmers, but those who gathered them in are not farmers, and perhaps never were. These are the men the farmers were working for all last summer, and not one of them would give a farmer a dinner if he were in Chicago and hungry.

When we wonder what becomes of the wealth the farmers create, as figured out by Secretary Wilson, the above points to where it drifts and accumulates. These men "toil not, neither do they spin," but no farmer revels in wealth as do they. We repeat, the farmers create the wealth these speculators gather in, and the farmers department of the United States government acts as their statistical agent and helps them to draw in the load. But the department works for the farmers too. It urges and helps them devise plans to produce more and more that the margin between the price paid the farmers and that won by the gamblers may be all the greater.

Seriously, we do believe the Department of Agriculture should eliminate that part of its statistical work which so aids and encourages this gambling in farm product prices, and that the Congress should devise some means of preventing it altogether. It so unequalizes prices — forces the prices paid farmers to the very lowest and those paid by the consumers to the very highest. Between the two prices accumulate the gamblers' unmerited millions.

Easy to Lay Amatite ROOFING

THE first ready roofings, made some thirty years ago, lasted a very short time.

Then manufacturers improved the goods and smooth surfaced roofings of various kinds were developed that would endure fairly well *if the top surface was given a coat of heavy waterproof paint every two years.*

Now comes Amatite—with a mineral surface which requires no painting and which will last longer *without painting* than the other other kind did *with constant painting.*

The top surface, being mineral, is unaffected by weather or climate. It really protects.

The waterproofing material in Amatite is pitch—*the best resistent to water known.* Water will in time dissolve or disintegrate almost anything, but it is powerless against Pitch.

Roofings of twice the price often do not protect as well because they are not waterproofed with pitch.

Amatite is easy to lay—any one can do the work. We furnish you free nails and liquid cement for laps.

Investigate the cost of Amatite in your locality. You will be astonished at its low price.

Samples and illustrated Booklet FREE on request to nearest office.

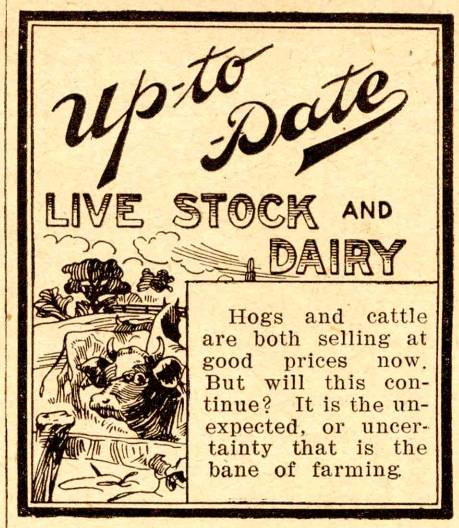
WE GUARANTEE A SQUARE DEAL

to all who trade here—write our advertisers. See guarantee of advertisers in this issue.



Hogs and cattle are both selling at good prices now. But will this continue? It is the unexpected, or uncertainty that is the bane of farming.

NATURE HELPS

As farmers turn the mellow soil,
And plant the strangely sleeping seed,
Their partner, Nature, saves them toil,
While flocks and herds in pastures feed.

STOCKMEN TAKING ACTION

We are informed that, in April, four thousand sheep men, representing 27,000,000 sheep, worth $80,000,000, met at Salt Lake City and formed an association to protect themselves from the manipulations of the eastern wool buyers. The association includes sheep men from Utah, Wyoming, Montana, Nevada, Colorado, Arizona and New Mexico. The purpose of these men is to hold their wool until the schemes of the market "bears" are defeated, and the demand makes equitable prices.

Thus is the spirit of Equity taking hold upon the people everwhere, and none need it worse than the wool growers and stock men. The putting down of the prices of wool as has been done this season, is without reason and has no justification either in the condition of supply or demand. Of course, the bankers' panic of last year is made the pretext, but it is only a pretext. The mills need the wool the same as they did a year ago, but speculation saw its oportunity, and was not slow to avail itself of it. We trust the wool growers will be courageous enough to accomplish their purpose.

And when the price of meats can be arbitrarily raised, as was done recently in New York, without so much as a hint of increasing the price of livestock, it is time the stock men took action also. Meat costs no more now, and presumably not so much on account of the lower price for labor, than it did last year, and if an increase of the price to consumers is justified, there should be a corresponding increase in the price of the animals from which the meat is taken.

How easy would it be to regulate all these things, if the producers of all crops and products would act in concert, and co-operate to work out the interest of each, which is truly the interest of all. But so long as each persists in fighting his own battles, and is as ready to combine against his fellows as to restrain his enemies, the efforts will be spasmodic and ineffective. Let the cry be Equity for all, and then all work together to secure it.

GUARD WELL THE MILK

Few articles of food are in so general use as milk, and few substances are more easily contaminated or affected in a harmful way. Of course, the first thought is of bacteria, that universal refuge of those who would explain the otherwise unexplainable. But there are bacteria, and perhaps too much cannot be said of them. Milk sometimes has a bitter taste; this is caused by bacteria. In some milk may be noted a putrifactive taste—bacteria; and that ruinous condition known as ropy milk is also produced by bacteria.

But bacteria are not responsible for all milk troubles or taints. The first thing to consider is the health of the cow. Milk drawn from a cow showing the least symptoms of ill-health or sickness, should never be used, and, of course, should not be sold. The matter of next importance is the feed and water consumed by the cow. That the feed affects the milk is easily proven. In the earlier days when cows ran at large and fed on lands infested with wild onions which they ate greedily, the milk had such a taste of onions as to be unfit for use. Turnips fed to cows impart a taste to the milk, and the milk of cows pastured in a field overrun with rag weed (Artemisia) has a putrid taste that is unpleasant if not unhealthful. Musty clover or rotten hay or straw eaten by milch cows convey their unwholesomeness to the milk, as does also impure and stagnant water. We would not use milk having any of these tastes or odors, nor would we allow it to be given to children. And all these infections remain in the cream and butter, and are easily detected therein.

But these troubles do not end with the food and drink. Milk, cream and butter are great absorbents of impurities in the air. An ordor discernable where milk or butter is placed is sure to be absorbed, often to a degree that imparts a taste to the article, and makes it unfit for use; for if there is anything poisonous or harmful in the air—musty or unwholesome, of decayed animal or vegetable matter, the milk or butter gets it, and so does the person who uses them.

No article of human consumption requires greater care in production and handling than milk and butter. The cow must be healthy, the feed and pasture good, the vessels absolutely clean, and the air where the milking is done and the milk and butter is stored must be pure. These are close requirements, but they are not closer than health demands.

CORN AND MILK PRODUCTION

On farms corn is the staple feed for cows, and this season of high priced corn again brings up the question whether any feed may be substituted for corn without a loss in milk production. One of the best milk and butter records ever made, that of the famous Modena, a record of 13,474.83 pounds of milk and 686.47 pounds of butter during a year, it is claimed was made without a grain of corn during the entire test year. But these experimental rations are so complicated, and involve so many different articles, that they are of little benefit to farmers. It may confidently be said, however, that a cow running on a good pasture and given a reasonable feed of bran and shorts in equal parts by weight, will do her best without any corn. During the winter, clover or pea hay, or corn fodder may be substituted for the pasture, and equally good results continue without corn, the bran and shorts or other like feed substituted for it.

DUROC-JERSEY HOGS

A reader wishes to know the origin of the present Duroc-Jersey hog. Without going back into the mythical, we may state that several years ago there was bred in New Jersey a large, course boned, red hog, that attained a weight of from 500 to 600 pounds, and was called Jersey Reds. At the same time there was bred in the adjoining State of New York a red or sandy hog of much the same type, but smalled of bone and finer of texture, called the Durocs. A combination of these hogs resulted in the Duroc-Jerseys, and during an extended visit in New Jersey a few years ago, the writer saw no other kind of hog in the State.

RAISING CALVES

Raising calves is one of the problems before the average American farmer. It is claimed even now that there is a scarcity of beef stock in the country, and the remunerative demand for veal is tempting the marketing of calves to such an extent that the supply of beef stock is not keeping pace with the demand. Farmers should quit vealing, and raise more calves. And they should raise better ones. The custom still prevails on the farms of allowing the calves to suck the cows at milking time, and as a rule they are not given milk enough, and they are stunted, dwarfed, in the beginning of their growth and development. Milk taken that the calf ought to have is very dear milk. Where calves are brought up with the cows, they should be taught to eat as soon as possoible, previous to which they should have all the milk they need to give them a good start to growing. They should have a rich pasture lot to run in, and by keeping shelled corn before them they will begin to eat in from three to six weeks. A pint of shelled corn twice a day makes a calf running in a grass lot a good feed during the first month after it has been learned to eat, and a bushel of corn furnishes the month's feed. The corn may then be doubled, requiring

DON'T THROW MONEY TO THE PIGS

The mine owner gets his gold mixed with rock and combined with other metals. He gets out all the gold and then makes in addition what he can from the lead and silver, the "by-products."

The dairyman's gold is cream; the skim-milk his principal "by-product." To get all the profit he must use an

IMPROVED 1908 U. S. CREAM Separator

With **this** Separator he gets out **all** the cream, and then uses to best advantage the skim-milk. He can't afford to feed cream to pigs.

Our Catalogue No. 187 tells why. Let us send you one.

VERMONT FARM MACHINE CO., Bellows Falls, Vt.

Distributing warehouses at: Chicago, Ill., La Crosse, Wis., Minneapolis, Minn., Kansas City, Mo., Omaha, Neb., Toledo, O., Salt Lake City, Utah, Denver, Colo., San Francisco, Cal., Spokane, Wash., Portland, Ore., Buffalo, N.Y., Auburn, Me., Montreal and Sherbrooke, Quebec, Winnipeg, Man., Hamilton, Ont., Calgary, Alta. 497

two bushels for the next month, and most of the milk may be taken from it. The calf is now three months old, and may be kept from the cow altogether. If the pasture is good, the corn feed need not be materially increased. The point is to keep the calf growing, and a calf raised in that way will, at six months old, about double the weight of one raised in the old farm way without being taught to eat; and it will be worth twice as much.

THE HOG AS A HELP AND A PEST

The writer always did like to feed hogs. The weather could not be too cold for him to stand and see them eat. And few animals kept on the farm are surer sale and better profits. But no animal requires greater care and safer quarters. If the farmer does not know exactly where his hogs are, he does not know that they are not in mischief. If there is a place in the fence where they can get out they are sure to find it, and then they are just as sure to get into the place of all others where they should not be. A sow and her brood can do more damage in the pasture in the spring of the year in less time than can be done by all the other stock on the farm. Of course nose rings are a restraint, a kind of safety appliance, but the hog raisers should have fences that he knows are hog proof. Without such fences, he would better allow some one else to raise the hogs.

Good pasture lots enclosed by such fences, however, with shade in summer and shelter in winter, and clean water all the time, with arrangements for feeding that prevent wastefulness—then the hog is a true income booster. Resourcefulness will suggest many turns both in feed and management that will add to the thrift and growth of the hog and to the profits of his owner. Get out of the old notion that a hog is only a hog, and that any treatment is good enough for a hog. The money comes over the other road.

THE PIGS

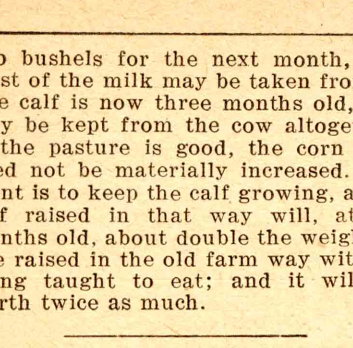
Pigs should be taught to eat as soon as possible. If the sows be fed slop in a convenient trough, the pigs will very soon learn to eat with them. Then if shelled corn be given the pigs will soon learn to eat that. This accomplished, dependence on the sow is about at an end. At this stage, we like to have a pen provided with feed troughs, that the pigs can enter but that the sow cannot. In these pens we like to keep shelled corn or chops all the time, and to feed slops two or three times a day. During this time the sows may be fed ear corn outside the pen.

Under this treatment the pigs may be weaned early, and the task is not a difficult one. It is only necessary to remove the sows to another lot, preferably one that does not adjoin the lot where the pigs are. The old plan of allowing the sows to wean the pigs by refusing to let them suck, though nature's way no doubt, is not the best way for the production of modern market hogs, such as nature never knew how to grow.

An Illinois breeder of some note, likes to wean the pigs in sections. He takes from the sow two or three of the best and strongest ones. Then in a few days he takes two or three more of the best that were left, and so on until all are taken. This gives the inferior ones the longest hold upon nature, and by the time the last are taken the sow is well dried up. This plan seems to controvert the theory that each pig has its own teat and will not suck any other. We prefer to teach the pigs to eat, as above, and then remove the sow instead of the pigs.

THE
"TUBULAR"
Has a Marvelous Advantage Over Others.

The manager of a prominent agricultural publication recently wrote us about this picture:—



"It seems to me that this is the most emphatic way of showing the vital features of your Tubular Separator that I have ever seen. As I look upon the matter the bowl or what is in it practically does the whole of the work, so it is easily apparent that the Tubular has a marvelous advantage over others."

The quoted comment is absolutely true. The Tubular will prove it in your dairy—no cost to you.

W.F. YOUNG, P.D.F. 102 Monmouth St. Springfield, Mass

"Absorbine is All You Claim for It"

Mr. Own Mohler, Thornville, Ohio, writes under date of May 11th, 1908, "I used your ABSORBINE on a horse that had a sore shoulder that had left a bunch and it entirely removed the bunch. It is all you claim for it. I would not do without it." ABSORBINE stops lameness, kills pain, removes Bog Spavins, Thoroughpins, Splints, Wind Puffs, Shoe Boils, Enlarged Glands, and similar bunches without blister or removing the hair and horse can be used. $2.00 per bottle express prepaid. W. F. Young, P. D. F., 102 Monmouth St., Springfield, Mass.

Bigness alone does not make the finest separators; but large factories speak volumes. Size comes with a successful machine after a demand has been created by merit. The Sharples Tubular Separator is made in three immense factories. One is at West Chester, Pa., another at Harburg, Germany, for European demand and a third at Toronto, Canada. If you want to know about the Tubular send for latest catalog No. 136 and booklets in color.

Every reader knows how it helps the looks of a place *and adds to its value* if it has a nice fence between lawn and highway. When an ornamental fence made of iron costs no more than wood it is certainly short sightedness not to have a good fence. Devote a little money from harvest returns to a new and up-to-date fence. It will add more than its cost to the value of the farm. Send for big catalog of all styles to Up-to-Date Mfg. Co., 973 Tenth St., Terre Haute, Ind.

The Epitomist, 44 Main St., Spencer, Ind., is giving a fine set of 12 post cards with a six months subscription to the Epitomist for only 10c. These cards in your store would be two for five cents, so you are getting 30c worth of cards alone. We have seen the cards—take our word for it—you will be delighted. Send 10c today.

MORE MONEY
From Your Cows and
Much Less Work
In Getting It.

If you could see the Real "DIFFERENCE" between the NEW BUTTERFLY CREAM SEPARATOR and any other made—Difference in amount of the cream you get; Difference in the quality of cream; Difference in the way the machine runs. Difference in the number of times a minute you have to turn the crank; Difference in the way the milk is aerated and purified while being separated; Difference in the time and trouble it takes to clean the skimming device—you would say, as hundreds of others are saying today—"I'll get the NEW BUTTERFLY CREAM SEPARATOR."

If you could see how to make easily $10 to $15 more a year on each and every cow you keep, and still do it with less work for your wife and yourself, you'd say: "I'll get a Cream Separator."

OUR PATENTED ALUMINUM CORRUGATED SKIMMING DEVICE makes the New Butterfly Cream Separator different and 8 times as efficient as any other machine. Every drop of milk that enters the bowl of the New Butterfly Cream Separator is actually put through the skimming process 8 times. This guarantees complete separation, and you can't fail to get ALL THE CREAM. New Butterfly Cream Separators are sold as they ought to be. Not by agents, but direct from our factory to your farm. Freight paid and on 365 days' trial. Send today for illust'd catalog.

For average use, we recommend No. 4½, capacity 450 to 500 lbs. of milk per hour. PRICE delivered at your town— $39.80

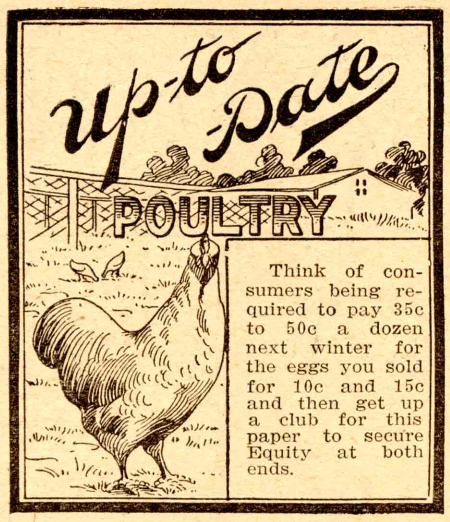
If you will send 10c for a six months' trial subscription to our large paper, The Epitomist, we will send to you, free, a set of twelve beautiful flower post cards. Each is different and represents the natural colors of the flowers and every card has the language of the flowers, portrayed in verse. These cards are strictly HIGH-CLASS and are not like any you have seen, for they are entirely new.

Write today and we will lose no time in sending them to you. Ask about the surprise which we are sure will interest you. We have only a limited supply of these beautiful cards, so send today if you want them. Address The Epitomist, 44 Main St., Spencer, Ind.



Think of consumers being required to pay 35c to 50c a dozen next winter for the eggs you sold for 10c and 15c and then get up a club for this paper to secure Equity at both ends.

NO FRILLS

There's no music in her singing;
No great beauty at her best;
She's plain, old fashioned Biddy,
But there's money in her nest.

CONVENIENCE AND COMFORT

People do not take things hit-or-miss so much as they used to do; they cannot afford it; life is too full of modern ways and things. Some innovations in the interior of the poultry house are just now receiving well merited attention. The first we may mention is movable perches, and a double set of them, so that one set may be all the time out in the weather. This reduces the lice and mite trouble to the minimum. The perches exposed to the weather soon become free from thes pests, and a change of the perches every few days, leaves only the walls and the beams upon which the perches rest as homes and breeding places for the insects, and these are much more easily treated when the perches are moved.

Second, we may mention the dropping board. This is not a new device, but few farm poultry houses have it. It is a comfort to the fowls and a great convenience to the keeper. It is easier to clean the house than if the droppings went to the ground. Besides it gives a space between the board and the ground where the poultry may resort in the day time, and find shade and comfort, and a dry place to scratch and wallow. The movable perches make it easier to clean the dropping board as removing the perches enables the keeper to get to it better with shovel and broom. If the dropping board be fastened to the back wall with hinges, and suspended in front by a chain or other device at each corner so it may be let down in front during the process of cleaning, the work is still more simplified. A still greater improvement is to make the dropping board in sections and have it rest on supports instead of being fastened at all. The dropping board itself may then be removed from the house to be cleaned, and may be even washed and given a day's sunning, a great gain to the cleanliness of the house.

Then comes the front curtain. This is more valuable in winter than in summer. It hangs immediately in front of the roosts, and is to be raised and lowered like a window shade. It need not be an expensive affair. An old quilt, an old wagon cover, an old binder apron, an old carpet, or anything of that kind, will serve a good purpose. The object is to reduce the roosting space, to economize the heat given off by the fowls, and to add to their feeling of security.

These are all simple arrangements, add very little to cost, and yet they may be made of great advantage both to poultry and keeper.

DOES POULTRY PAY?

"Of course it does," almost every farmer in this broad land is ready to answer. But do you know it does? Have you ever kept an account that enabled you to strike a balance between expenditures and receipts? Not many have, and not many know the actual status of the account.

Poultry keeping is a valuable asset to the farmer, a steady and sure source of income, and almost any other side line of the farm could be better dispensed with than raising poultry. But this does not prove that the difference is on the income side if the figures were strictly made and applied. A great advantage in poultry raising is that much of the keep is waste saved. No matter how careful the farmer or the housewife, there will be waste about the corn crib and barn, and about the kitchen. These wastes, otherwise entirely lost, are gathered up by the poultry and converted into something valuable. But what if the fowls eat with the horses and the hogs, especially when the latter are being fattened? In this way chickens may "eat their heads off," and no account is made of the cost. But this is not the fault of the chickens; it is the fault of the farm management.

But while it is true that fowls save waste, they also make waste. That is very likely to result if they get where they ought not to be. A brood in the garden, or among the flowers, or in the berry patch or among the grape vines, may in a very short time destroy more than they are worth. Again the fault of the management.

No small percent of the feed of the poultry, however, especially in the summer time, is an actual benefit to the farmer that it is taken—the millions of insects that the fowls devour—and in the final make up of profit and loss the fowls are entitled to credit for this service. Another consideration is that the income derived from the poultry seems to be an income secured by those not expected to have an income, and for that reason it is viewed as clear gain. Be all this as it may, there is room for accounts to be kept with the poultry even on the farms, and we advise that it be done, as a matter of education as well as of information, and the thing of first importance will be found to be to have the enclosures such that the fowls cannot get where they will be injurious instead of beneficial. The profit in poultry depends much upon the facilities for controlling and caring for it.

CLEAN RUNS

It is of the utmost importance that the poultry runs be not allowed to grow up in grass and weeds. The young poultry will range early, and the cold dews of August on high grass and weeds is destructive of young chicks and turkeys even this late in the season. On the contrary, if they have a short sod, a mere carpet of green for their early morning ramble, they enjoy it, get much that is good for them to eat, and begin the day with vigor and confidence. For this reason it is good that the main poultry run be a pasture lot kept nipped close. But it should be a night rather than a day pasture, for in the day time when the chicks are out many are liable to be trod on and killed.

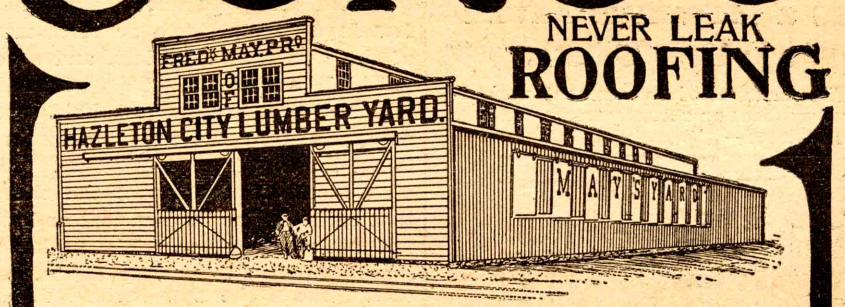
YOUNG ROOSTERS

Sell the young roosters as broilers. While it is good business to save the early pullets for winter layers, it is equally good business to push the young roosters, and bring them into the earliest possible market. Many farmers burden their flocks with roosters. It is a wasteful and annoying practice.

PULLETS AND LAYERS

Keep an eye on the most thrifty, earliest hatched pullets. They are to be the winter layers, no matter what the variety.

CONGO
NEVER LEAK
ROOFING



CONGO Ready Roofing is like a government bond—the best and safest investment you can make.

It may not be the cheapest roofing you can buy at the start, but in durability, satisfaction and economy in the long run, there is nothing better.

Congo is proof against every kind of climate and weather and is almost as soft and pliable as rubber.

It is easy to lay and clean to handle.

Send for a free Sample and you'll see what a real "never leak" roof is like.

I WANT MY SCALE ON EVERY FARM

And I want to tell you why you should own a scale and do no more guessing, I want you to feed your stock by weight. I want you to buy and sell and loan everything by weight. I also want you to have my offer before buying. For 43 years I have been fighting the scale trust. I was the first man to **sell to the farmer on trial,** and to ask no pay until my scale was tested. I was the first man to sell on easy payments. I was the first to **pay the freight.** I am today the only man who makes a **reliable,** high grade, warranted Pitless Wagon Scale, sold at a low price, **on free trial** and **easy terms.** Write me for my **"Reasons Why I Should Buy a 'JONES' Scale."** I will send it free.

With a good system of distribution no crop of fruit this country ever raised would equal the natural demand.

ONLY ITS KIND

"Do men gather grapes of thorns or figs
of thistles?
The holy Son of Good inquired;
The question means as much today
As when 'twas asked by The Inspired.
To get the best from tree or vine,
Takes best of soil, and care, and kind.

NOT BETTER THAN IS SOWN

That every tree and plant should bear after its kind was the feat of creation, and later it was declared "as a man sows so also shall he reap." Many expect the best when they do not plant the best. That is contrary to nature and it is unreasonable Somebody will plant the best in the very best place, and give it the very best treatment; and that person will have the best and deserves it. The man who does not do so need not expect as good stuff as the man who does, and when the man who does the best wins the premium or gets the best price, the man who does not has no cause for envy or complaint.

The point we wish to make is, that success is always bought with price, and whoever is not willing to pay the price cannot honestly expect or claim the prize. It is the wish of UP-TO-DATE FARMING that all Our Up-to-Date People shall be on the top seat in the front row, but we know it takes climbing to get there, and then it takes some clinging too, to stay there. In plain words, what we mean is this: Don't be satisfied with anything but the best. The difference in the cost of seed or plant or tree is of little account. A tenth added to the original cost may double the value of the product. But the road to success does not end where it begins. Many make their greatest mistake at this point. The best always deserves the best place, and then it deserves the best treatment. That is the price. The best seed or plant may be put in an unsuitable or unadapted place and then neglected. The result is likely to be a greater failure than if the hardier "scrub" had been used in the beginning.

We may here remark that, particularly in country places, buyers are not sufficiently discriminating. They fix a price upon a commodity, and then everything in the line of that commodity goes. The man who carelessly plants, carelessly cultivates and carelessly markets gets the same reward as does the man who is up-to-date in all these particulars and brings the better stuff such treatment secures. Such a system discounts progress and pays a premium on carelessness and indifference. When farmers become the business people the greatness of their calling demands, they will see to it that rewards are proportioned to skill, industry and ability, and to the success achieved thereby.

BEANS IN ROTATION

Garden beans may yet be planted, now taking the place of some vegetable that has run its course. If beans have been planted at regular intervals since the danger from frost was over, the garden is getting ready to furnish the table with its most useful product throughout the remainder of the season. Late planting should be of the earliest varieties, usually found in the bunch sorts, though, of course, the vining or stick beans are the greatest yielders. Late planting need not be more than a few hills, as one or two messes is all that can be expected from a planting. The successive plantings, therefore, should be only a few days apart. Plant three or four inches deep in anticipation of dry weather, and keep well hoed from the time the plants are up until they begin to bloom.

THE STRAWBERRY BED

The time is again here when hundreds of farmers and their families are wishing they had set a strawberry bed last year. That fit of wishing attacks people once a year until they make themselves immune by setting a bed.

Strawberry plants may be set successfully almost any time except in winter. We prefer September for fall setting, and no fruit plants will make a quicker return. Plants set in September and carefully cultivated during the growing season, and then mulched for the winter may be depended upon for a full crop next year.

Strawberries like a mellow loam well supplied with humus, and slightly mixed with sand it is all the better. The plant needs moisture, but it will not flourish in soggy, undrained land. Give it a well drained, mellow, warm soil then keep free from weeds, and the plants protected with mulch in winter, and failure need not be expected.

CUTTINGS AND LAYERINGS

An authority in floriculture gives this method of propagating roses from cuttings, and much the same method may be employed with cuttings from most other plants. Select the twig you wish, one with three or four buds, and partly break it off, leaving it, however, so that it will still receive nourishment from the parent tree and remain green. In a few days the break will have begun to heal. Now take the cutting, strip off all the leaves but one, and stick it into a box of moist sand, leaving but one or two buds above the surface. Place the box, which should be one that will readily drain itself, on the north side of the house, or where it will be sheltered from the direct rays of the sun. The sand must be kept moist, but not wet. In dry, hot weather it may be necessary sometimes to sprinkle it every day, or even several times a day. Grass clippings put in the box as a mulch keeps the sand cool and moist. The cuttings should not be removed until they begin to grow and put out new buds, and when they are removed, it should be done with great care, and the ground to which they are transferred should be rich and moist.

Layering is a much simpler process. Bend down a branch till it touches the ground, cut a little way into the wood on the under side where it touches the ground, and fasten down with a forked stick; cover with soil, leaving only the tip of the twig out. Of course the dry surface should be removed where the twig touches so that it may be and remain in moist soil. In a few weeks it will be rooted and ready for removal as an independent plant.

STILL WAITING

We are told that the fruit growers of Tennessee, who had been aroused to the necessity of union and co-operation, after holding a meeting or two, could not agree, and decided to wait another year before taking definite action. The effort was to bring several local organizations together, and each wished its own way.

So there is another year of waiting, and the profits of another crop lost. It will continue to be so. The solution of the farmers' marketing problem is in a national organization that covers all crops and directs all marketing, so that markets already supplied may be avoided, and shipments directed to where the commodities will be taken at remunerative prices. Such a system will bless the users by taking to them the goods they need, and it will bless the producers by assuring them a sale at a reasonable profit. Why do farmers wait?

A Good Four-Horse Gang, Sulky, and Disc Plow Evener

One of the most difficult things to get in the way of eveners is a good 4-horse Evener for Gang, Sulky, or Disc Plow. There are many kinds made—some home-made—others made to sell, but the majority of them fail to work satisfactorily.

The reason is usually because the principle upon which they are made is not correct. It is not so easy a thing as many imagine, to make eveners for more than two horses that will work nicely—give even draft to each horse and cause no trouble. Every farmer who has tried them has learned that.

There is a firm who has made a specialty of making 2- 3- 4- and 5-horse eveners for fifteen years and over and the big success they have made is the best proof that their eveners are the best on the market. We refer to the Heider Manufacturing Company, Dept. 23., Carroll, Iowa.

Their eveners for Sulky, Gang and Disc Plows are simply fine. Their 3-horse Evener is particularly good for use on hay wagons where loader is used, manure spreaders, etc., in fact, anything where they want to use three horses on an implement with a pole.

If you'll write a postal they will be pleased to send you their Evener Catalog which shows a large line of their goods. They also manufacture some excellen ladders. Mention this paper when you write.

GIVE AND RECEIVE

There are loyal hearts, there are spirits brave,
There are souls that are pure and true;
Then give to the world the best you have,
And the best will come back to you.
—*M. S. Bridges.*

OUR UP-TO DATE PEOPLE

It is natural, we supose, for an editor to feel drawn toward his readers, to feel nearer to them than to the mass of humanity, and to think they are a little cmarter than most people. Bnt we do sincerely believe the readers of UP-TO-DATE FARMING, Our Up-to-Date People, are the most progressive people on earth. And we have good reason for thinking so. We are constantly urging the solution of great questions that other papers and other people ignore or ridicule, but that we have time and again proven to be the key to the independence and steady prosperity of the people, especially of the people who till the soil. Besides, while we earnestly endeavor to treat all people and all questions with the utmost fairness and consideration, we do not hesitate to condemn what does not seem to us for the general good, and to advocate, no matter who may condemn it, whatever we consider for the betterment of the country and its people. In all these things our readers stand by us. They may not approve all we say or do, but their minds are so broad and their hearts are so true, that they see the good, consider the doubtful, take no fright at what seems to them new, and fearlessly reach onward and upward to what for the movement may appear beyond their grasp. Hundreds of them write to tell us how they appreciate our course toward all these people and things, how their hope centers in the accomplishment of our purposes, of the educational work we have done, and of the good already achieved. We have a right to single out such people from the rest of mankind, and to believe that they are in the front ranks of those who shape the progress of the world.

And never do we feel closer to these people than when we write to them in the Home on the Farm, where the parents are in line with the best and most progressive, and the boys and girls are growing up in the midst of Nature's loveliness, with souls that see a brighter future for the farm. To them

Hope's cheerful voice comes sweeping o'er
The acres where the farmer toils.
They see the day, not far away,
When honest toil in fertile soil,
Shall be their own, not gamblers' spoils.

There may be discouragements; there certainly will be toil and disappointments, but

"When the hens refuse to lay
And there's nothing seems to pay
And you're sad and mad and blue,
Don't forget the old refrain
Just to try and try again,
For you'll get there if you do."

Then—

"What's the use of fussing, fussing?
Fussing doesn't help a mite—
Fussing never brought you sunshine
Or dispelled the clouds of night!
Fussing never won you friendships,
Never helped you win a heart!
It has only helped to mark you
As a failure from the start.

"Keep you face all wreathed in sunshine,
Let your eyes be filled with song,
Teach the world that life is gladness,
Joy is goodness, frowns are wrong!
Like the perfume of the roses
Let your presence blend with aid
To the many who are tramping
On all the human promenade!"

It is the brave spirit in the house or on the farm that conquers. Worry wears faster than toil, and when we think of the shadows that did not appear, of the sighs without a cause, and of the tears that need not have bee shed, we see—

"How foolishly we often fret,
When little troubles come to taunt us;
How often we decide to let
Poor little difficulties daunt us;
How often cowardly we swerve
And weakly shamble down the hill,
When but a little rest would serve
To keep us bravely mounting still."

Take the rest. The farm life justifies it more than any other. Every hour has its duty, but Nature works while man is sleeping, and, so far as the farmer is concerned, and let us say the farmer's wife also—

"The day is yours; your work is yours;
The odds are not who pays your hire;
The thing accomplished—that endures.
If it be what the days require."

That provides for needed rest, for study and improvement, for laying plans for future gains, for helping agriculture out of the ruts in which it has trailed so long. It is to that hour we pin our faith, on that hour we build our hope. When the farm work has justice, and the farm business is controlled as other business is, the farm home will be the envy of the occupants of all other homes, because God and Nature work together for its accomplishment, and people must have what the farms produce.

CLEAN UP THE GROUNDS

Next in keeping the soul, the inner self, clean and pure, the house inside should be kept clean and neat. This takes constant care and watchfulness, and it too often falls as a burden upon a single person, the housewife, the mother of the family, but almost every member of the household can help by keeping his or her things in their proper places, and being neat and tidy in their own persons.

The thing of next importance is the grounds. A well kept lawn is the canvas on which the home picture is painted, and it adds as much to the beauty of the home as anything else conected with it. On the other hand, weedy, plundered, unkept and unsightly surroundings make the prettiest home look untidy, and all the painstaking care of the people inside fails to make the home pretty. The lawn mower used is as much a beautifier as is the paint brush, and we urge the one as much as the other.

BUTTERMILK FOR BABIES

Science is getting in its work, and practical, independent thought is helping it along. Old notions, old theories, and old ways of doing away with the good old people that entertained and did them. But sometimes scientific discoveries prove to be unscientific fakes. Hence it is not best, perhaps, to acept without question everything that is labeled a new discovery.

Among the latest is the buttermilk food for babies. This has the endorsement of some high medical authorities, and the reasonableness of it prompts us to give it to our readers. The buttermilk is prepared as follows: Take one quart of fresh buttermilk, and add one even teaspoonful of flour, (rice, wheat or other kind), heat the mixture over a gentle fire, constantly stirring until it has boiled up three times, which ought to require about twenty minutes. Then add two or three tablespoonfuls of pure sugar. Cool, and it is ready for use. It will sometimes coagulate and become lumpy in the feeding bottle, and may require an occasional shaking up.

The scientific facts on which the value of this food is based, are given as follows: Buttermilk is poor in fat and rich in albumen. The proteid is present in finely divided particles. This, it is claimed, renders it valuable as temporary nutrition for dyspeptic infants, particularly since most babies are unable to digest fatty substances. It is specially adapted for infants that have been troubled with gastric-intestinal disorders, evidenced by much crying, colic, poor nutrition, and unnatural bowel action. It is claimed to be an actual remedy for indigestion. European doctors are recommending it, and it has been adopted by the Children's Hospital Society, and also by the health department of Chicago.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

Get Trusted for This Washer

WE will trust any responsible party for a 1900 Gravity Washer. We will ship you the washer and prepay freight. Take our washer and use it a full month.

Wash your finest linens and laces. Wash your heaviest quilts and blankets.

And—if you don't find that our washer saves your time, strength and health—that it saves wear and tear on your clothes, saves mending and saves money—don't keep it. Tell us you don't want the washer and that settles the matter.

You don't take any risk because you don't send us any money in advance—nor do you send us any money after the month's FREE trial, unless you decide to keep the washer. If you wish to keep the washer—if you see how it will save enough to pay for itself in a short time—then send us each week or month part of what the washer saves for you.

We make this offer because we know our 1900 Gravity Washers are far and away better than those made by any other concern. We are willing to prove this, so we offer to send you a 1900 Gravity Washer and let you see for yourself all it saves. Thus our 1900 Gravity Washers sell themselves.

Then—if you send us part of what the washer saves until it is paid for, the washer really pays for itself.

In just a short time it is all paid for and, after that, the washer is yours and all it saves is yours.

Our washers are the only washers that sell, and pay for, themselves.

Don't waste your time and money with cheap washers that wear out clothes faster than they wash them.

Give the 1900 Gravity Washer a chance to prove to you what a comfort a washer can be.

Our new Washer Book tells all about our washers and shows how they work.

Your name and address on a post card mailed to us today brings the book by return mail, postpaid.

Write us now. Address—

BEES ON THE FARM

We generally talk of bees in connection with poultry. But the home on the farm is the ideal home for bees. Conditions are almost always favorable there, caring for them is no very great task if there be not too many, and watching them during the swarming hours of the swarming season, is both rest and recreation for the women and children. Then the wild flowers bloom around the farm everywhere, storing the most delicious sweets that go to waste if there be no bees to gather it. At every farm home there should be a few colonies for the honey they produce is that much clear gain.

TREES AROUND THE HOME

There are few more beautiful sights than a nice country home nestling in a grove of stately and shapely trees. But trees should not be too close to the house. There should be a free circulation of air and a liberal distribution of sunshine all about the home. Too much shade prolongs the dampness, generates mildew, and encourages fungus growth, all of which are antagonistic to health and happiness.

PRIDE IN ONE'S POSSESSIONS

Are you proud of everything about the home on the farm? Some do not like to hear people brag on their own things, but we acknowledge that we do. Of course we do not admire a braggart in any line, but we like for everybody to be proud of what he has and to speak well of it, if he can truthfully; and if he cannot, to get rid of it and obtain something that he can speak well of.

We have seen men who would scorn to wear patched clothes, driving horses that looked like they had been trying the starvation cure for half a year. Were they proud of their teams? The barn may be a rattletrap, the fences away and the gates broken. Are they proud of their outbuildings and surroundings? A woman who would almost faint if seen with a dirty face or soiled clothing, contentedly sits in broken chairs or looks out upon a littered, unkept yard.

We are aware that this advice might lead to extravagance, to the purchase of things beyond one's means; but we do not mean it so. Whatever one has let it be so kept that it may be shown without a blush. Be proud of what you have, and welcome friends in the midst of your things without an apology, for in such case there is nothing to apologize for.

THE EATING HATBIT

The human family, especially civilized humanity, has the eating habit. We are talking seriously. Of course people must eat. Food must be taken to maintain health and vigor and sustain life; but people eat too much, and then the nautral purpose of food is defeated and eating becomes a curse. We presume that over-eating is more prevalent in the country than in the city, because on the farm almost every step brings one in contact with something that may be eaten—a temptingly crisp and tender vegetable here, a berry there, a bunch of grapes yonder, an apple, a peach or a pear, a plum or a nut—always something to tempt the taste or the appetite. Thus children acquire the eating habit, the taste and the appetite becomes abnormal, and the habit becomes fixed as does any other habit. Begun in childhood, it is not much resisted in maturity, and it clings to us in old age. It soon learns to stay with us at the table, and instead of natural eaters of necessary food, we become pulpers, gorgers and gluttons, devouring things the system does not need, and quantities irrational if not outrageous.

This constant or excessive pouring into the stomach of things not needed to build up or to repair the body, or to maintain the normal temperature, the only legitimate objects of eating, keeps the divestive and alimentary system in an unnatural strain, clogs every channel of the most wonderful complex drainage system, piles up obstructions where everything should be clear and free, gathers poisons that the overworked powers were unable to throw off, and invites sickness and death—impairment of body and mind—instead of maintaining health and perpetuating life.

While this habit may be earlier cultivated and stronger in the country than in the city, it is more disastrous in the city than in the country. The vigorous country life, enables the system to stand more, and the excessive eating in the city is apt to be of more harmful things. At all events, in country or city, dyspepsia and constipation, headache and weakened nerves, impaired powers and shortened universal heritage of civilization, bequeathed by an abnormal or inordinate eating habit.

The boy becomes a tough tramp because he has not backbone enough to say NO when the boys urge him to smoke, drink and play fool for the crowd. No girl ever went wrong who had a good firm NO on her lips ready for immediate use. Use your backbone and jawbone and say NO to every foolish scheme. — Connersville (Indiana) Courier.

"The hand that rocks the cradle rules the world"—is a saying old but true. Then how important it is to give that hand and its owner in every home in the country every care and convenience. Ladies on the farm can cut down their work if they but use the inexpensive conveniences made for them. The "One Minute Washer" is a machine made by the Hawkeye Incubator Co., Newton, Iowa, that will save many hours of weary drudgery on wash day. Send to the manufacturers for information about it.

AN OCCASIONAL SMILE

WANTED BOY PROPERLY SPANKED

A school teacher boxed the ears of a pupil a few days ago. The boy told his mother, and the next day the teacher received the following note: "Nature has provided a proper place for the punishment of a boy, and it is not his ear. I will thank you to use it hereafter."

NOT ON HER LIFE

An old Irish woman walked into a large department store. The floor walker, who was very bow-legged, asked her what he could do for her. She told him that she would like to look at the handkerchiefs that they advertised.

"Just walk this way, madam," said the floor-walker.

She looked at his legs.

"No sir," indignantly replied the old lady, "I'll die first."—Ladies' Home Journal.

IN DOUBT

Patrick Murphy, while passing down Tremont Street, was hit on the head by a brick which fell from a building in process of construction. One of the first things he said, after being taken home and put to bed, was to send for a lawyer.

A few days later he received word to call, as his lawyer had settled the case. He called and received five crisp, new $100 bills.

"How much did you get?" he asked.

"Two thousand dollars," answered the lawyer.

"Two thousand, and you give me $500? Say, who got hit with that brick, you or me?"—Boston Herald.

STILL AT HIS OLD TRADE

Senator Dolliver was making a speech during the campaign in West Virginia near the place where he was born and reared. He waxed sentimental. "Dear old country," he said: "I love every foot of it. I know it as well as I do my adopted State. Why, right over there is a farm where I have spent many hapy hours. I gathered and carried away more than fifty bushels of chestnuts that grew on that farm."

"Yes," came from a seat in the rear, "and you have been peddling them out ever since."

"There used to be a Dutch barber who kept a place in the city here," says a short story teller in the New York Times. "He had an assistant who was just as Dutch as the boss, but the assistant thought the boss about the meanest man on earth. Every time he would get a customer in the chair he would tell him all about the boss. One day he had a man all fixed, face lathered, and head laid back. Then he began his tale of woe as he stropped the razor.

"'My poss iss der meanest man. He charches me 10 cents if I cud a man und a quarter if I gash him.'

"The assistant went on stropping and the man in the chair was beginning to get uneasy, for it seemed to be a settled thing that every customer would have something happen to him. He waited in silence. Presently the assistant resumed.

"'Pud I don't care today.'

"'Why?' inquired the customer.

"'Pecause I vun five dollars on der races yesterday, und I mide as vell spend id dat vay as any odder.'

"The customer suddenly remembered that he had to catch a train."

CORNS

are only troublesome without A-Corn Salve. Takes the corns out by the roots, and does away with all danger of blood-poison. Swift, sure, painless. 15 cents at druggists or by mail. GIANT CHEMICAL CO., Philadelphia

CHICAGO HOUSE WRECKING COMPANY, 35th and Iron Sts., CHICAGO.

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

Apr. '08 **If this date is on you wrapper you will not receive another copy of Up-to-Date Farming unless you renew NOW. Renewal rate 50 cents to any subscriber. Send in to-day.**

Have you sent for some Dumper cards?

The terms to procure them are published in this paper. Through them the present subscribers should soon double the circulation of UP-TO-DATE FARMING.

We know this is a busy time on the farms. But we believe farmers oftentime imagine they are too busy to do something that will have a commanding influence on their business.

To illustrate: What would you expect of that manufacturing business that the owner would say: "Oh, I am so busy manufacturing that I cannot give any thought or time to selling?"

This is just the way farmers have always done and we suppose this is the reason that manufacturers and merchants are called business men and farmers are called ———.

Is it not time that farmers enter the class of business men? They will when they consider marketing of their crops as important as producing. The better the prospects are for a crop and the larger the crop is the more thought, time and preparation they must give to its marketing.

We have said all of this before—perhaps in a different way. But it will bear saying again. We wonder whether it ought not be said in every issue of UP-TO-DATE until every reader of the paper will quit producing long enough, or defer harvesting long enough, to do a good turn toward disposing of the crop at profitable prices?

In one of our farm paper exchanges we found this:

When considering an investment in the way of implements, additional buildings or like lines, ask the questions "Will it increase production? Will it reduce cost of production? Upon the answer to these depends the wisdom of the outlay.

Granaries, elevators, or storehouses of any kind will not add a bushel to the crops nor reduce cost of production; but they will enable the farmer to control his crops, resulting in small visible supplies and profitable prices. We will leave it with OUR readers if the editor who wrote the above editorial knows the first principle of PROFITABLE farming?

We admit that we have said all of this to impress on each reader the value of extending the circulation of this paper, consequently a greater control of the 1908 crops resulting in more equitable prices. We don't know how this can be done more effectively than through the medium of the Dumper Cards and a little of your personal co-operation—just a little. See the offer.

The early bird gets the worm and the dumper gets the knocked down price. The speculators are waiting for him.

A movement founded on truth, and to secure justice and equity will not long be deterred by opposition or difficulties no difference how formidable they may be. Such a movement, when it finds its way to the people, will be perpetuated because the masses desire justice and cry out for redress only when it is denied them.

The masses, farmers, laborers in stores and factories and trades people, complain only when equity is not given them. It is the classes who oftentimes complain when they get justice and all get equity. The farmer being the most powerful, numerically and industriously, can control and the only reason they do not is from lack of co-operation which the smaller classes understand so well.

It used to be that farmers worked so hard in summer they had no time to read. But it is not this way with our Up-to-Date people. UP-TO-DATE FARMING is helping to make conditions better so that farmers now have time to look over their favorite papers in summer. When doing this don't forget the advertisements. Read them carefully as it is your duty to yourself to know what is newest and best in the way of tools, implements and conveniences.

"A farmer is known by the crops he reaps"—Farm Journal. Some of them are also known by the crops they dump, or control.

Question. Is it more often for necessity to raise money that the crops are dumped or for lack of facilities to store and hold them?

Some farmers will attend all the political rallies of the campaign and not be guilty of attempting to increase the power of the Farmers Pools for profitable prices on this year's crop.

Farmers must not look to the political parties for a solution to their problems, but to themselves.

When farmers get in a position that they can help themselves, God and the government will help them, but not before.

THE FARMERS' POOLS

(Concluded from page 2)

with farmers now, we hope they will give some thought to marketing the crops and include their neighbors and more distant friends in their thoughts. This paper gives the only practical plan for quick action, which is necessary. See the Farmers' Pools and the offer of Dumper Post Cards, free.

COURTING DIVISION

Whenever it was proposed to organize a society to handle and control the tobacco crop independent of the Society of Equity, difference of opinion and division in our ranks were invited, and, as to be expected, the invitation is being promptly accepted. Ohio County, Ky., held a special meeting which was well attended by its best farmers and leading members of the Society, and after mature deliberation resolved to have no affiliation with the new special tobacco organization, wisely determining to adhere to the Society that takes care of all the crops. Other counties will no doubt follow the example of Ohio, and it will be seen that nothing has been achieved by the single tobacco society but a tendency to division.

DO YOU WANT A BOY?

The Children's Aid Association of Indianapolis has on its register a large number of boys between the ages of 12 and 16 years for whom it is desirous of securing employment and homes temporarily, or in some cases permanently.

Any of our readers needing a boy should correspond with the Association, 236 Lemcke Building, Indianapolis, Indiana, addressing Miss Kiler, and state about what is wanted. The Association recommends that a little compensation be given in each case, besides a home, to encourage the boys.

COONER & FORTUNE CO., - - - INDIANAPOLIS, IND

MICHIGAN LADIES SOCIETY OF EQUITY

Officers—President, Mrs. James Howey, E. Jordon; vice-president, Mrs. C. A. Masten, Sherwood; secretary, Miss Julia Ball, Hamburg; treasurer, Mrs. Matthew Hamilton, Williamsburg.

The Michigan Ladies Society of Equity is a new and growing organization with headquarters at East Jordan, Mich., and organized for the advancement of the farmers' wives and daughters. It has been said of this society that it is one of the healthiest youngsters old Michigan ever inherited. So while the old folks—the A. S. of E.—are resting, we are hustling, and hoping they may soon spring into activity.

This society would like to hear from women interested in Equity, and hope they will write letters to UP-TO-DATE and improve the space so kindly offered to the ladies by Mr. Everitt.

SPRINGTIME AND HARVEST

All over the country the busy spring season has come. Farmers will now be busy putting in their crops, and there will hardly be a cessation from work until they are harvested and—we almost said—sold.

But we do hope that when the time comes to sell the next crops, farmers will have the good sense to not dump them into the hands of other people to hold until the demand comes, for the demand will surely come, and some one must hold for that demand. Why not the farmers? Farmers have first what all the other people must have, and can take their profit if they will. But will they? And when will they?

The human race is making wonderful progress in these later days, and we believe the farm homes are keeping well up with the procession. And much is due to the manly boys and womenly girls. Polite and courteous and helpful, they are the pride of any home, and especially of the home on the farm. For the help of these young people the Michigan Ladies Society of Equity is organized. We ask the young people of the farms to make it their society. Interest themselves in the society.

NOTES

The ladies of the Goldenrod Local, M. L. S. of E., met with Mrs. James Thompson, at her pleasant country home. Meeting opened in usual form with all officers present. Music and singing.

We missed the cheerful face of our sister, Mrs. Hackett, she being detained at home by sickness.

Business meeting over, we took up our program. Some good readings were given. Question box opened and questions read by our president were good, and were discussed with interest.

Some good selections were given on the phonograph. Equity song by Miss Lottie Henning, "Why Are You Waiting?" Meeting closed in form, and adjourned to meet with Mrs. Shepard on May 27.

We were invited to the dining room where a very dainty supper was waiting. This was much enjoyed by all present. We each returned to our homes to long remember this meeting.

Under the direction of the Goldenrod Local arrangements have been made to hold Bible Study meetings on Sunday afternoons at 3:00 o'clock. The Bible is always present in our local meetings.

The Ladies' Locals M. L. S. of E. are buying eggs from their members in good standing (and we are glad to say that nearly all are) paying for the eggs out of our local treasury, 15c per dozen. That the plan is a success shows by the way eggs come in and the interest taken. Over 200 dozen were bought in less than three weeks from members only. We ask the farmers' wives to investigate our plan—it will help you in many ways, both socially and financially.—Charlevoix Co. Herald.

The ladies of Forget-me-not Local met with Mrs. John Schroeder on Wednesday at her pleasant country home. Meeting opened in usual form. All officers, ten members and four visitors present. Messrs. Schroeder and Howey gave very interesting talks on various topics which were discussed with much interest by the members. The aprons made by the ladies were all sold and another goodly number are being made for the benefit of the society. Any donations of cloth will be cheerfully accepted. Our meetings are getting better and stronger. The afternoon drew too quickly to a close. Mrs. Schroeder and daughter sang a beautiful song. Prayer was read and repeated in concert. Meeting closed to meet with sister Mary Bartholomew on Wednesday, June 3d; Let all members be present. A fine supper was served in the pleasant dining room, over which our sister did the honors as hostess. A short half hour was spent in pleasant conversation and then we went our respective ways to remember this as another of our best meetings.—Charlevorix Co. Herald.

OBITUARY NOTICE

Clarence Richard Kidder was instantly killed Wednesday while working near Hitchcock, Antrim Co., Michigan, for the East Jordan Lumber Co. He was driving a team hauling logs on big wheels when a jolt threw him under the wheel which run over his head and shoulders crushing him to death.

Clarence was born Sept. 23rd, 1884, in Echo Township Antrim Co., Michigan, and died June 10th, 1908. He was 23 years, 9 months and 7 days old. He leaves besides his parents, one brother, Frank Tower, of Echo, Mich., and one sister, Mrs. Mae Kelley, of Wiggins, Mississippi, and a large circle of relatives and friends.

Clarence was born Sept. 23rd, 1884, in and always made friends wherever he might go. Mr. and Mrs. Kidder are very prominent workers in the A. S. of E. Society and consequently Clarence was always ready to do his part at the socials and parties gotten up for the benefit of the society and will be missed by the young people of the society. The funeral was held Friday forenoon at the home, Rev. Griggsby conducting the services. The floral offerings from sympathizing friends were very numerous and beautiful.

—Rose Local No. 3, Michigan Ladies Society of Equity.

RESOLUTIONS OF RESPECT

Whereas, through the inscrutable and mysterious will of Devine Providence, to which we bow with love and reverence. Our good brother and fellow citizen, W. G. Scott, has been suddenly called from among us to render an account of his stewardship to our heavenly Father and whereas: We have recognized in Walter Gilbert Scott, our deceased brother, a good and faithful advocate of the rights of man more particularly the rights of the American farmer; and

Whereas, we always found Brother Scott honorable, honest, unselfish, liberal and unprejudiced in all his relations with his fellow men,

Therefore be it resolved: That we feel and express the deepest sorrow and regret for his unexpected taking away, and extend to his family our most heartfelt sympathy.

Resolved. That these resolutions be spread on the minutes of the Rochester Local Union of the Farmers Society of Equity and forwarded to the local press and the official paper.

S. W. MORRIS Sec.
Rochester L. U. No. 1.

PRIZE WINNERS FOR MAY 15

The hidden picture puzzle brought hundreds of replies from our subscribers, and it was difficult to choose the best articles from those contesting, altho we believe our decision as given below is just, and decided wholly on the merits of the case. Many still send answers, but neglect to send the article required. Of course these have to be cast aside.

The following the the prize winners:

First Prize, $1.50—Mrs. Nels Ihle, Stater, Iowa.

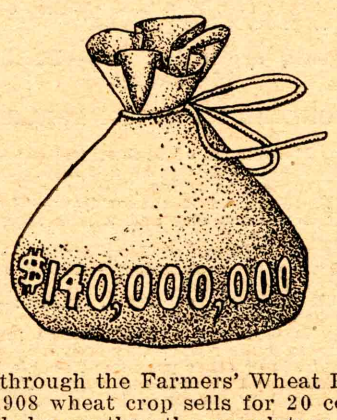
Second Prize, $1.00—Louis Glasser, R. R 3, Mt. Lake, Minn.

Third Prize, 50 cents—Harold F. Wright, Belgrade, Mont.

Fourth Prize, 50 cents—Clarence E. Laizure, R. R. 7, Columbus, Kans.

We hope the winners and losers, too, will all come back again. Do your best and you will win a prize. We only regret we can't give a prize to everyone who answers.

THERE'S MONEY IN IT



If through the Farmers' Wheat Pool the 1908 wheat crop sells for 20 cents a bushel more than the speculators will pay, if in control, it will mean $140,000,000 more in farmers' purses.

Do farmers want this extra money?

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

To Introduce Our New Excelsior Solar Telescope

Pat. Applied for.

THIS is a large powerful Achromatic Telescope for Terrestrial and Celestial use. This telescope is provided with an adjustable Solar Eye-piece. With this wonderful eye-piece you look the Sun square in the face, on the brightest and hottest day, and study its face as you do the moon by night. Every student needs one. This eye-piece alone is worth more than we charge for the entire telescope. Remove the Solar Eye-piece lense and you have a perfect telescope for land observations. Read what this customer says:

Never before sold on any telescope for less than $8.00 or $10 00.

Stevensville, Ont., Dec. 18, 1906.
R. C. Irving & Co., Indianapolis.
Dear Sirs.—I received your telescope last Saturday. It is a dandy and I am well pleased with it.
Yours very truly, Enos. Winger.

Positively such a good telescope was never sold for this price before. These telescopes are made by one of the largest manufacturers of Europe. Measure closed 12 inches and open 3½ feet in five sections. They are BRASS BOUND, BRASS SAFETY CAP on each end to exclude dust, etc., with POWERFUL LENSES, scientifically ground and adjusted. GUARANTEED BY THE MAKER. Heretofore telescopes of this size have been sold for from $8 to $10. Objects miles away are brought to view with astonishing clearness. Sent by mail

Postpaid for $1.10.

This is a grand opportunity and you should not miss it. We WARRANT each telescope just as represented or MONEY REFUNDED. Remit by Registered letter, Postoffice Money Order or Bank Draft, payable to our order.

INDIANAPOLIS, INDIANA

NEW INVENTION!

NOTHING ELSE LIKE IT.

Ohioan's New Method of Cleaning Clothes

Causing Great Excitement Where Exhibited.

UNLIKE ANYTHING YOU'VE SEEN OR HEARD OF

Cleans Family Wash In 30 to 50 Minutes.

No Rubbing—No Chemicals—No Motors No Washboard—No Wash Machine.

Over 35,000 Already Sold—Ladies Delighted

SEE HOW SIMPLE, different, easy. Put on stove—add water, then soap, then clothes—that's all. In 5 to 8 minutes clothes clean. Laundries clean clothes without rubbing—the EASY WAY does the same at your home. Dirt removed automatically except to move knob occasionally.

The EASY WAY, in one operation does the combined work of wash boiler, wash board and washing machine—less time, almost no labor—no injury to clothes.

The EASY WAY developes energy by mechanical manipulation, associated with hot water, soapsuds, superheated steam, and scalding vapor, utilized as a compound force, all confined in a closed metal compartment. Special operating arrangements.

Cleans woolens, flannels, blankets, or colored clothes, as well as white goods, finest laces, curtains, bedclothes. Saves time, fuel, labor, clothes, buttons, strength, looks, health and money.

EASY WAY IN 30 TO 50 MINUTES CLEANS WASHING WHICH BEFORE TOOK THE ENTIRE DAY.

NO RUBBING, wear, tear or injury. No soggy, bad smelling, heavy wood—but all metal, strong, durable, sanitary, light in weight. Easily used, cleaned, handled—always ready. Child can use it—no experiment. NO MOTORS. Saves 52 days' drudgery yearly.

THOUSANDS PRAISE IT.

J. McGee, Tenn., writes:—"One young lady cleaned DAY'S WASHING by old method in ONE HOUR with Easy Way—another in 45 MINUTES." Mrs. T. Bullen, Canada, writes:—"I washed BEDDING, HEAVY QUILTS, CURTAINS, Etc., WITHOUT RUBBING, and in a very SHORT TIME." Lauretta Mitchell, O., writes:—"Done a BIG WASHING IN 45 MINUTES—SOLD THREE ALREADY." A. D. Poppleton, N. Y.:—"Gives perfect satisfaction. Washed bed quilts, GREASY OVERALLS and fine clothes. Greatest thing on earth." Walter M. Glenn, O:—"Easy Way far superior to any other method—cleans clothes perfectly." J. H. Barrett, Ark., after ordering 38 Easy Ways, says:—"You have the grandest invention I ever heard of." J. W. Meyers, Ga., says:—"Find check for 12 Easy Ways. Greatest invention to womanhood, forever abolishing miserable washday. SELLS ITSELF."

PRICE ONLY $6.00 COMPLETE—sent to any address. NOT SOLD IN STORES. SEND NO MONEY, only send your name and address. We're old firm; capital $100,000.00. Eeverything proven. Guaranteed. WRITE TODAY for 30 DAY TRIAL OFFER, thousands testimonials, etc. CIRCULARS FREE.

HARRISON MANUFACTURING CO., 701 Harrison Building, Cincinnati, O.

BARRELS of AIR BURNED as FUEL

New, Remarkable Stove---Ohioan's Great Invention---Consumes 395 Barrels of Air to One Gallon of Common Kerosene oil, making oil-gas--- the New Fuel that looks and burns like gas!

Wood, coal and oil all cost money. **ONLY FREE FUEL IS AIR!** Unlimited supply—no trust in control. Air belongs to rich and poor alike. We cannot burn air alone but see here! **Our wonderful gas stove burns air and gas—very little gas—principally air. Takes its fuel almost entirely from the atmosphere.**

A miniature gas works—**penny fuel for every family**—save ⅓ to ½ on cost—save dirt and drudgery—no more coal or wood to carry—ashes unknown—absolute safety.

SEE HOW SIMPLE! TURN A KNOB--TOUCH A MATCH--FIRE IS ON. TURN AGAIN--FIRE IS OFF! THAT'S ALL.

Astonishing but true—time tested—proven facts—circulars give startling details—overwhelming evidence.

NO SUCH STOVES SOLD IN STORES—UNLIKE ANYTHING YOU'VE SEEN OR HEARD OF.

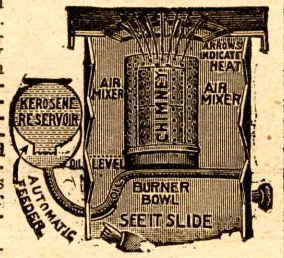
A genius of Cincinnati has invented a new, scientific oil-gas generator that is proving a blessing to women folks, enabling them to cook with gas—relieving them of drudgery. Makes cooking and housework a delight and at the same time often saves one-third to one-half in cost of fuel.

How often have many of our lady readers remarked that they would give anything to get rid of the drudgery of using the dirty coal and wood stoves—also the smoky oil wick stoves and their gasoline stoves which are so dangerous and liable to cause explosions or fire at any time?

Well, that day has arrived and a fine substitute has been discovered and every family can now have gas fuel for cooking, baking and heating and not have their kitchens a hot, fiery furnace in summer, and be carrying out coal and ashes—ruining their looks and health.

Thousands a Week.

Upon calling at the factory we found that this invention has caused a remarkable excitement all over the U. S.—that the factory is already rushed with thousands of orders and evidently the Company's representatives and agents are making big profits as they offer splendid inducements.



Sectional Cut of Generator

As will be noticed from the engraving, this OIL-GAS GENERATOR is entirely different from any other stove—although its construction is very simple and is built on the latest scientific principles, having no valves, which is a marked improvement, as all valves are liable to leak, carbonize, clog up or overflow.

By simply moving a knob the oil is automatically fed to a small steel burner bowl or retort where it is instantly changed into gas, which is drawn upwards between two red-hot perforated steel chimneys, thoroughly mixed with air and consumed, giving a bright blue flame—hottest gas fire, similar in color and heating power to natural gas.

This invention has been fully protected in the U. S. Patent Office and is known as the HARRISON VALVELESS, WICKLESS, AUTOMATIC OIL-GAS GENERATOR—the only one yet discovered that consumes the carbon and by-products of the oil.

The extremely small amount of Kerosene Oil that is needed to produce so large a volume of gas make it one of the most economical fuels on earth, and the reason for the great success of this Generator is based on the well-known fact of the enormous expansiveness of oil-gas when mixed with oxygen or common air.

Oil-gas is proving so cheap that 15c to 30c a week should furnish fuel gas for cooking for a small family.

Kerosene oil, from which oil-gas is made, may be purchased in every grocery—is cheap, and a gallon of it will furnish a hot blue flame gas fire in the burner for about 18 hours; and as a stove is only used 3 or 4 hours a day in most families for cooking, the expense of operating would be but little.

In addition to its cheapness is added the comfort, cleanliness—absence of soot, coal, dirt, ashes, etc.

What pleasure to just turn on the oil—light the gas—a hot fire ready to cook. When through, turn it off. Just thnik; a little kerosene oil—one match—light—a beautiful blue gas flame—hottest fire—always ready—quick meals—a gas stove in your home.

It generates the gas only as needed—is not complicated, but simple—easily operated and another feature is its PERFECT SAFETY.

NOT DANGEROUS LIKE GASOLINE.

and liable to explode and cause fire at any moment. This stove is so safe that you could *drop a match in the oil tank and it would go out.*

This Oil-Gas Stove does any kind of cooking that a coal or gas range will do—invaluable for the kitchen, laundry—summer cottage— washing— ironing— camping, etc. Splendid for canning fruit—with a portable oven ploced over the burner splendid baking can be done.

Another Important Feature.

is the invention of a small Radiator Attachment which if placed over the burner makes a desirable heating stove during the fall and winter so that the old cook stove may be done away with entirely.

While at the factory in Cincinnati the writer was shown thousands of letters from customers who were using this wonderful oil-gas stove, showing that it is not an experiment but a positive success and giving splendid satisfaction and as a few extracts may be interesting to our readers we produce them:

L. S. Norris, of Vt., writes:—"The Harrison Oil-Gas Generators are wonderful savers of fuel—at least 50 per cent to 75 per cent. over wood and coal."

Mr. H. Howe, of N. Y., writes:—"I find the Harrison is the first and only perfect oil-gas stove I have ever seen—so simple anyone can safely use it. It is what I have wanted for years. Certainly a blessing to human kind."

Mr. E. D. Arnold, of Nebr., writes:—"*That he saved* $4.25 *a month for fuel* by using the Harrison Oil-Gas Stove. That his gas range cost him $5.50 per month and the Harrison only cost $1.25 per month."

J. A. Shafer, of Pa., writes:—"The Harrison Oil-Gas Stove makes an intense heat from a small quantity of oil—entirely free from smoke and smell—great improvement over any other oil stove. Has a perfect arrangement for combustion—can scarcely be distinguished from a natural gas fire."

Mr. H. B. Thompson, of Ohio, writes:—"I congratulate you on such a grand invention to aid the poor in this time of high fuel. The mechanism is so simple—easily operated—no danger. The color of the gas flame is beautiful dark blue, and so hot seems almost double as powerful as gasoline."

Mrs. J. L. Hamilton writes:—"Am delighted—Oil-Gas Stove's so much nicer and cheaper than others—no wood, coal, ashes, smoke, no pipe, no wick, cannot explode."

Hon. Ira Eble, J. P., of Wis., writes:—"Well pleased with the Harrison—far ahead of gasoline. No smoke or dirt—no trouble. Is perfectly safe—no danger of explosion like gasoline."

Chas. L. Bendeke, of N. Y., writes:—"it is a pleasure to be the owner of your wonderful Oil-Gas Stove—no coal yard, plumbing—ashes or dust. One match lights the stove

HEATER AND COOKER, OR HEATING EXCLUSIVELY. ALL SIZES.

and in ten minutes breakfast is ready. No danger from an explosion—no smoke—no dirt—simply turn it off and expense ceases. For cheapness it has no equal."

Agents are doing fine—Making big money.

WONDERFUL QUICK SELLER.

Geo. Robertson, of Maine, writes:—"Am delighted with Oil-Gas, so are my friends—took 12 orders in 3 days."

A. B. Slimp, of Texas, writes:—"I want the agency—in a day and a half took over a dozen orders."

Edward Wilson, of Mo., writes:—"The Harrison very satisfactory—sold 5 stoves first day I had mine.,,

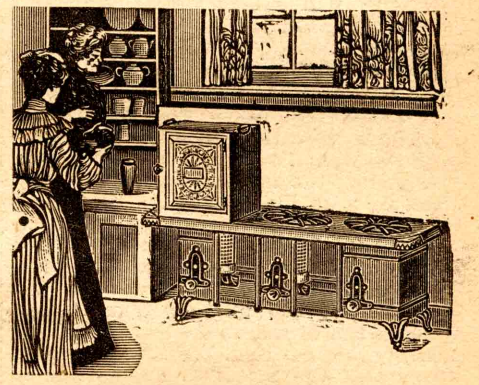
J. H. Halman, of Tenn., writes:—"Already have 70 orders."

This is certainly a good chance for our readers to make money this summer.

Hundreds of other prominent people highly endorse and recommend oil-gas fuel and there certainly seems to be no doubt that it is a wonderful improvement over other stoves.

The writer personally saw these Oil-Gas Stoves in operation—in fact, uses one in his own home—is delighted with its working and after a thorough investigation can say to our readers that this Harrison Oil-Gas Stove made by the Cincinnati firm is the only perfect burner of its kind.

It is made in three sizes, 1, 2 or 3 generators to a stove. They are made of steel throughout—thoroughly tested before shipping—sent out complete—ready for use as soon as received—nicely finished with nickel trimmings, and as there seems to be nothing about it to wear out, they should last for years. They seem to satisfy and delight every user and the makers fully guarantee them."



HOW TO GET ONE.

All our lady readers who want to enjoy the pleasures of a gas stove—the cheapest, cleanest and safest fuel—save one-third to one-half on fuel bills and do their cooking, baking, ironing and canning fruit at smal expense should have one of thes remarkable stoves.

Space prevents a more detailed description, but these oil-gas stoves will bear out the most exacting demand for durability and satisfactory properties.

If you will write to the only makers,

THE WORLD MFG. CO., 6950 World Bldg. Cincinnati, Ohio, and ask for their illustrated pamphlet describing this invention and also letters from hundreds of delighted users you will receive much valuable information.

The price of thes Stoves is remarkably low, only $3.25 up. And it is indeed difficult to imagine where that amount of money could be invested in anything else that would bring such saving in fuel bills, so much good health and satisfaction to our wives.

DON'T FAIL TO WRITE TODAY

for full information regarding this splendid invention.

The World Mfg. Co. is composed of prominent business men of Cincinnati, are perfectly responsible and reliable capital $100,000.00 and will do just as they agree. The stoves are just as represented and fully warranted.

Don't fail to write for Catalogue.

$40.00 Weekly and Expenses.

The firm offers splendid inducements to agents, and an energetic man or woman having spare time can get a good position, paying big wages by writing at once and mentioning this paper.

A wonderful wave of excitement has swept over the country, for where shown these Oil-Gas Stoves have caused great excitement. Oil-Gas fuel is so economical and delightful that the sales of these Stoves last month were enormous and the factory is rushed with thousands of orders.

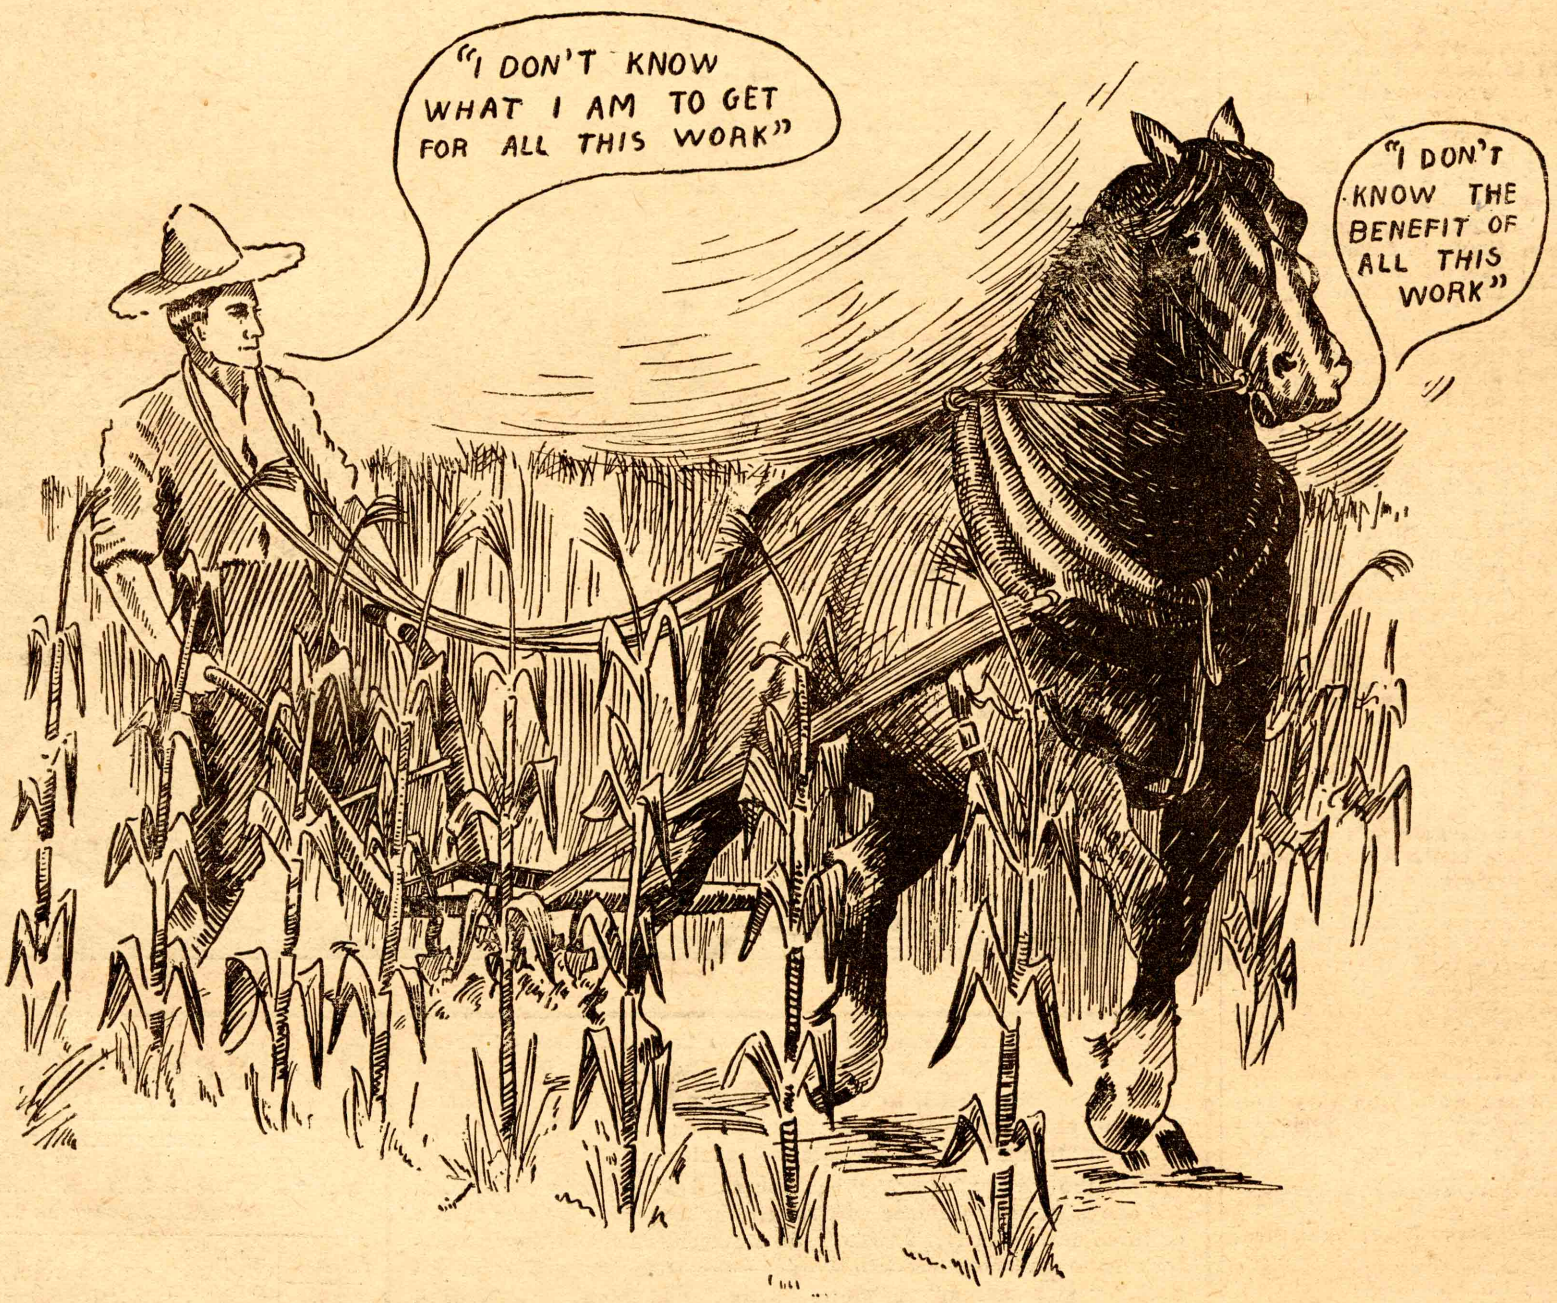
Many of our readers have spare time, or are out of employment and others are not making a great deal of money, and we advise them to write to the firm and secure an agency for this invention. Exhibit this stove before 8 or 10 people and you excite their curiosity and should be able to sell 5 or 8 and make $10.00 to $15.00 a day. Why should people live in penury or suffer hardships for the want of plenty of money when an opportunity of this sort is open?

Up-To-Date Farming

OUR MOTTO:
FARMERS TO THE FRONT
OUR OBJECT:
EQUITABLE PRICES FOR ALL PRODUCTS
OUR PLAN:
CONTROLLED MARKETING

Volume XI | INDIANAPOLIS, INDIANA, JULY 15, 1908 | Number 14

MAN AND HORSE



Which Knows the Most as to What Returns he Shall get for his Work?

There is something more for intelligent beings than hard work. The horse or mule submits to his harness and works and sweats between the rows of the growing crops without an inquiry as to whence the product comes or whither it goes. What these apparently patient animals may think we do not know. It seems to be enough for us to know and require that they faithfully do our bidding—that they prepare the ground for the seed, that they assist in the planting, that they cultivate the growing crops, and then help with the harvesting, perhaps draw the loads to the market. They are not presumed to know what becomes of it then, nor to take any thought of the return that may be made for it.

How much different from that are most farmers—men

(CONTINUED ON PAGE FOUR)

THE FARMERS' POOLS

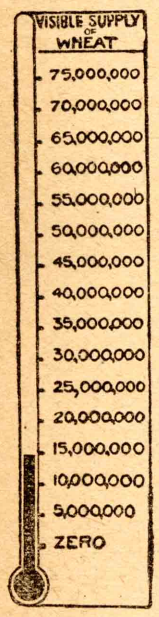
All the grain that has been raised in the past has been consumed and we may safely assume that, with the great increase of population and enormous increase in consumption, all the farmers raise this year will be consumed.

Since above is a fact, then can there be any good reason why many farmers who are not compelled to sell to raise money for urgent needs should dump their crops nearly as soon as ready for market at prices 10 to 20 per cent under what it is worth?

We are glad to note that such farmers are becoming less numerous as each season arrives and we believe the movement to control the crops will develope until enough of each crop is held off of the market (pooled) to compel the agreed price from the beginning to the end of the crop year.

The world raises about the same average crop of wheat each year. When the crop is large in some countries it is small in others, and the average is maintained. People who have examined statistics know this is true. Since the winter wheat crop in this country is a good large one, but will not be as large as generally reported before harvest, the following dispatch from Russia appears to bear out our assertion that the average will be maintained.

ODESSA, July 6.—The wheat crop this year is so bad, being from 25 to 50 per cent below the average, that representatives here of American agricultural machinery manufacturers are countermanding orders. Grain dealers predict a famine.



The visible supply continues to decrease at the rate of about two million bushels weekly. It is impossible to tell whether this will continue or whether enough wheat is being dumped to fill up the local mills and elevators and force the overflow into the large elevators at Central markets to increase the visible. Our advices are, however, that "farmers are not marketing freely", and "farmers are not inclined to accept prices offered at present."

This is encouraging. It must be expected that buyers will not put the price up as long as the dumpers are marketing. But if the visible can be kept down until they unload, those farmers who held will easily be in control of the situation and America will make the price on wheat for the world.

VISIBLE SUPPLY

June 27,	15,501,000 bu.
June 20,	17,533,000 bu.
June 13,	19,232,000 bu.

Dumper Post Cards

THEY ARE FREE!

These cards are designed to increase the circulation of UP-TO-DATE FARMING and the membership of the Farmers Pools.

THEY ARE FREE to every subscriber to UP-TO-DATE FARMING who will use them. How many sets will you mail? We want each subscriber to mail at least five sets to five friends.

Send the coupon below. When you receive the cards mail No. 1, the one where the Dumper hatches all our troubles. Follow in two or three days with No. 2, where the Dumper is held in the speculator's hand and continue two a week—the Dumper "gets it in the neck," " gets snared," is "plucked clean," and finally is a "cooked goose." By or before your friend reads the six cards he will be converted and will be a subscriber.

For each card we receive back with your name on we will send you 25 cents. If five cards are returned you will get $1.25 while your expense will have been 30 cents for postage—profit 95 cents. All your friends may not subscribe, again you may get more than one subscriber from a set. If the cards are sent to names judiciously selected, it is sure to be very profitable in cash returns besides this is the way to make the Farmers' Pools successful.

We will send cards to the new subscribers secured from your cards and more cards to the subscribers received from your friends' cards and so on. You can now figure the possibilities of increasing the circulation of UP-TO-DATE FARMING by this plan, consequently its power and influence in securing profitable prices for the 1908 crops.

How many shall we send you?

EDITORIAL

MORE ABOUT THE IRRIGATION PROJECT

Up-to-Date Farming Strongly Endorsed

Our recent article on the irrigation projects in the West has attracted attention all over the country, especially in the region supposed to be most benefited by the irrigation. Concerning it, we have the following letter from Kansas City, Mo.:

EDITOR UP-TO-DATE FARMING.

The writer has read with great interest your article in the June first edition regarding the reclamation service and agrees with the editor in every particular. If the government can afford to spend forty million dollars in five years, as it has done in the irrigation of arid lands, it can certainly afford to spend a few millions improving the roads of the older States and assisting the farmers in marketing their crops, once grown.

However, I insist that the government is doing the wise thing in reclaiming the arid west. Mainly for this reason if for no other: The young men growing up on our farms of the middle States are ambitious to own land of their own. There cannot be another eighty or quarter section added to the old home place and the boys must each have a farm of his own. What is more natural than he should strike out for himself.

But in the reclamation there are defects which the able editor of UP-TO-DATE has not characterized. These defects I am now trying to have remedied by getting the farmers to help me in passing a bill amending the Arid Land Laws. The serious fault with these laws is that they provide for settlement on the arid lands within six months after a farmer has made a filing (which means to have the land properly and legally set aside for him by the land office).

The history of the reclamation projects in the past shows that water is never delivered to the lands when the government intended it should be. This is not the result of the government engineers, but because the building of reservoirs, canals, and then filling them is a matter that cannot be determined to an exact time.

Farmers anxious to acquire these government lands file on them when the openings are announced through the press, and six months later they have to go there and reside. The water is not delivered say for a year. The farmer can do nothing in the way of growing a crop or improving his land. He is on a dead expense.

Well, the very class of men who need this land and for whom it was intended by Uncle Sam, are just the ones who cannot afford to lose a whole year, of often two years' time.

The results are that the farmer spends a year or two waiting and a good share of his savings and then has to go away to some place where he can earn a living, while the land grabber comes along and files a contest against him because he has left the farm.

Under the United States land law this is not a square deal to the farmer. It plays into the hands of the land grabber every time. I want the laws amended so that the farmer who wants a government farm can get it and not have to live on it until six months after the water is delivered by the government on to this land. This affords a protection to the farmer.

I am getting hundreds and thousands of farmers interested in this but it is difficult to get all of them interested because so few of them have a direct knowledge of what the land laws are—not at least until they begin to want a government farm. I wish every farmer who reads this article would help me out in this and give me their support as I know the voice of the farmer if united will create a powerful sentiment down at Washington in changing the present obnoxious land laws as pertains to the entry of irrigable government land.

WM. R. DRAPER.

The following letter from Parma, Idaho, comes directly from the scenes of reclamation, and it quite sustains the position taken by Mr. Draper in the preceding letter:

EDITOR UP-TO-DATE FARMING.

I read an article in your paper concerning irrigation, which I endorse because it is true; but by the time the farmer gets the benefit it is no poor man's proposition. The land owners are charged $40 per acre for the water; $3 must be paid down and the balance in ten years. About the time he gets his water paid for and title to his land, the State jumps on him for heavy taxes. Eastern farmers can't compete with us, because we can raise so much more to the acre and are sure of a crop if we have the water; but I believe they may make as much as the western farmers, because our taxes are high and freight rates almost prohibitive. Lumber and everything else is in the combine but us farmers.

Speaking of watering stock, some of us here would be glad to get water to water our stock with. I have been here over three years, waiting for Uncle Sam to pour a little water on my parched tongue. Others have been here more than five years, leaning up against a sage bush waiting for the President and Congress to have pity on them. I think the authorities have about as much pity on the fellows out here as they have on flies that buzz hopelessly against their door and window screens. They can send a fleet around the world to terrorize other nations, and burn up five million dollars worth of coal; but what do they care for starving farmers away out on the irrigated (?) lands?

I would like to get married in this country, but how can I hope to support a family under these conditions. I have 80 acres homesteaded, with the following improvements: Good house 12x16 feet with shed, engine house 12x16; 45 acres fenced and 12 acres in rye, 30 acres cleared of sage brush. I have a folding bed, a cupboard, No. 8 cooking stove and outfit, tables, dishes, tools, etc. I also have a 12 horse power gasoline engine. Will sell the whole outfit, except my clothes, books and phonograph for $810 cash. I will then leave the United States. M. O'BRIEN.

A clipping from an Idaho paper confirms the above letter that water costs $40 per acre, and says water is promised by April 1, 1910. Then if the water be delayed as said by Mr. Draper, the irrigated homesteader cannot be the happiest man in the world.

Oh, that farmers would act in concert regarding matters pertaining to their own interests.

STAY WHERE YOU ARE AND DO YOUR BEST

It is risking something, we must agree, to advise people to stay where they are, for, in spite of the fact that "the rolling stone gathers no moss," we have to acknowledge that we have known people who would never have been worth a nickel had they remained where they were born and brought up, but who became useful, prominent and perhaps, wealthy citizens of places remote from their old homes.

But the spirit of restlessness, the constant longing for something new, the eager and too inconsiderate Eldorado, is not to be encouraged. Almost all regions have their advantages and their disadvantages, and when these are all summed up and a fair dividend struck, there is not so much difference in localities, and where one is content and feels that he can reach out and do his best is a very good place to stay.

As an argument along this line, we are authorized by the Department of Agriculture to say that the sudden ruin that hot winds sometimes bring to growing crops in parts of the West are well known, but it is not often referred to in the boom literature. Blowing strongly across the unobstructed plains, these winds may in a few days blast all hope of even a partial harvest. This is particularly true in the lower portion of the central plains region, where the winds most to be feared blow from the southwest or south. In the northern prairie region the farmer is exposed to the hot "Chinook" wind which sweeps down from the Canadian mountains. This either dries out growing crops, or, if it prevails before the danger of killing frosts is past, it causes loss through urging vegetation forward prematurely. Cold winter winds also do great injury to crops, make the climate more severe for stock and men, and interfere with an even covering of snow upon the ground.

In Southern California, dry winds from the north and northeast sweep down from the Mohave Desert with destructive results. Coming in June, these winds may reduce the wheat yield to almost nothing.

The purpose of the Department in giving out these facts is to show the importance of windbreaks, and to announce its intention to experiment therewith; but it is very good reading to lay beside the glowing stories of the irrigation projects, and the boom circulars of railroads and land syndicates. The first idea was that irrigation would make the arid lands a blooming paradise. The government irrigated. Now some disastrous winds are to be shut off. The government proposes winbreaks. It is only an experiment. Wind has a vexatious habit of getting around and over windbreaks, and pouncing down upon the unsuspecting crops in the fields.

But we say all the same: Go ahead with your irrigation; go ahead with your windbreaks. Reclaim the arid lands, even if you have to bottle up the hot winds. But remember us fellows back here in the States and throw us the crumbs that fall from the reclamation tables, that we may spread them on our public roads, that our teams and wagons may be kept on the face of the earth.

WOMEN MOB MEATSHOPS

Dispatches from New York tell us that six hundred women held a meeting in Brooklyn not long since to protest against the high prices charged for beef and other articles of food. They declared they would fight against such prices, paraded the streets, and stoned several meat stores. The next day about 150 women marched through the streets, stopping at butcher shops, calling the proprietors to the doors, and telling them they must lower the prices at once. The retail dealers protested that they were not responsible for the prices, that it was the wholesalers that had forced the prices up.

If these women and other meat eaters of Brooklyn and New York could know that there was no scarcity, or comparatively none, in the supply of beef cattle, and that the prices of livestock rule much the same, their protest would be much more earnest if not more violent.

The excessive price charged by the packers for meats, and its constant growth from the packers to the retailers, is of more interest to the farmers who grow the stock than it is to the consumers. The latter can live without the meat, the former are impoverished when they cannot sell their cattle. The high prices cut down the consumption, diminish the demand, restrict the markets, cause a surplus of stock to appear, and give the packers an excuse to still further reduce the price of the raw material, the livestock.

These arbitrary fluctuations in price benefit no one but the speculators, and there should be some way to hold them in check. This check must come from the first owners, the stock raisers. They must co-operate with each other, act in unison, control the marketing and through that the price. The millions of stockmen should control the packers instead of the packers controlling the millions of stockmen as it is now. And to protect their markets and maintain the consumption of their product, they should see to it that consumers be supplied at equitable prices. This may look like a big proposition, but it is no bigger than the interests that are involved in it.

MAN AND HORSE

Which Knows the Most as to What Return He Shall Get for His Work?

(Concluded from page 1)

who walk upright, have eyes to see, brains to conceive and intelligence to reason, to plan and to execute? They toil the same as the beasts, except that there is no lash behind them but their own necessities and the crying needs of their families. That they produce, harvest, and market they know, but what reward they shall receive they do not know, nor do they often inquire. They have been taught to believe some one else must determine that, though they realize it is the thing to which all their labor points and on which all their success depends. If they do not get enough they may "nicker," complain, as does the horse when his feed is shortened, but they are as helpless in present ways of marketing to add to what they receive as the horse is to add another ear of corn to his feed.

We do not say these things with the least thought of ridicule, nor with any purpose to minimize the intelligence of the average farmer. We affirm that the mass of farmers are as intelligent as the mass of any other class of labor; and we know what we say, for we have been intimately associated with all these classes. But farmers have gone into marketing ruts, and have been given by their teachers and press such a one-sided idea of farming as a business, that they have become about as helpless in regard to the reward for their labor, or in determining the value of their products, as are the beasts that draw their plows and machinery, and that they direct by bit and line. If this seems like a hard saying, we only appeal to farmers' own intelligence if it is not true.

We can only say as did the Apostle, "Brethren, these things ought not so to be." Farmers must get out of those old marketing ruts. They must control their labor and its products as other people control theirs. And they must organize and co-operate to do it. UP-TO-DATE FARMING will show them how and help them, and it will ask no reward other than the mere subscription price which all papers and the post-office department itself, require to be paid, and the further favor of those who read it now, to speak of these things to their neighbors, and help us to get the paper into the hands of the millions of farmers to whom its teachings and the accomplishment of its purposes mean so much.

LONG ISLAND FARMERS ORGANIZING

The press informs us that the farmers of Long Island, New York, are organizing to more intelligently market the vast quantities of produce grown there. About two-thirds of the farmers now belong to the organization and the membership is reported to be growing rapidly. At each shipping station there is a local board and a buyer, who must make daily reports to headquarters. The buyer pays the individuals as purchase is made, and each package is marked with the initial of the producer. This initial is followed through to the final market, so that each producer gets the benefit of his own production—the painstaking one who markets nothing, but the best is rewarded, and the careless or indifferent one suffers accordingly. No member is allowed to sell his own produce unless he can get 5 per cent more than the association price. Outside or speculative buyers, as is always the case, are striving to disrupt the association by attacking the leaders and trying to create dissatisfaction.

The association expects to market 2,000,000 bushels of potatoes this year, and still more each succeeding year. This year will be devoted almost exclusively to potatoes. Association buyers and shippers are required to keep posted as to the supply in the market and direct their shipments accordingly. With this intelligent distribution the shipments can be regulated so that there never need be a glut or forcing down of prices. After this season, which is now well advanced, other products will be cared for by the association.

UP-TO-DATE FARMING watches with great interest all these efforts at organization to control crops and marketing. They all point in one direction — to the final completion of a national system of marketing that shall place all surplus products in such markets as need them at prices that will multiply consumption and yet will always be remunerative to the producers. The Equity plan still meets every requirement, and guarantees universal success, not because it is a plan merely, but because it is right.

COTTON "FUTURES"

Cotton planters have suffered from gambling transactions or dealers in "options," buying "wind" under pretense of future delivery of cotton, almost as much as have the growers of wheat, corn and other grains. The cotton States are aroused to these wrongs done their best citizens, and their legislatures are taking action to prevent it. More than two years ago the Georgia legislature adopted a law against "future option" deals in cotton, and since then all the other cotton growing States have adopted similar measures, unless we may except Louisiana, and a bill to that effect is pending in the legislature of that State unless indeed it may have been adopted already.

This is the way to treat that subject. There is little use to curtail crops to prevent market gluts so long as speculators may buy nothing at fictitious prices and say they have bought definite products, bringing a world full of nothingness in direct competition with the actual products of honest and most useful labor. Congress should take this matter up for the whole country and make it apply to all crops. It is a good question to agitate during this campaign year, and congressmen who are afraid to do things pending an election lest it might effect their chances for re-election, should be given a free pass to stay at home. What say you, farmers? You can do whatever you all agree upon.

NOTE—Since the above was written the New Orleans Cotton Exchange proved itself bigger than the Louisiana State Legislature, and secured the defeat of the anti-option bill above referred to. Farmers, this whole proposition is up to you. The exchanges may be bigger than some of the State legislatures, or bigger even than Congress; but are they bigger than you who make Congress and the legislature?

CONTROLLING THE COTTON CROP

As late as June 4 the following appeared editorially in the Cotton Journal:

It is a well known fact that many of the mills are running on short time, due, they claim to their inability to find a market for their goods. We know that a general trade depression exists in this country, and that foreign trade is none too good. This is a presidential year, and business will not get down to a normal until after the election, next November. One thing is certain, farmers cannot make much, if any profit, on cotton at ten cents per pound. If the acreage cannot be reduced in any other way except the plowing up of a few acres now, provided a large acreage has been already planted, the sensible thing to do is to treat the patient severely at the start, rather than have to submit to severer consequences later on. This is a matter which the farmers themselves must settle. All that we can do is to give information relative to present conditions, and from those forecast the future. The cotton acreage should have been reduced at the start of the planting season.

Of course that means little so far as the crop of 1908 is concerned, but it is valuable as showing the trend of public thought. A very few years ago any one who would have suggested a reduction of crops to meet conditions and maintain prices, would have been regarded as a fit person for an asylum or a penitentiary. Now it it talked everywhere and effectively practiced with many products that have a restricted area. The sentiment will grow and become a business rule in farming. We do not believe it will ever result in making farm products more costly to those who consume them, or in any material decrease in production. But it will result in intelligent marketing at steady prices and in increased consumption. Even in the case of cotton the mills will learn to know whence their supplies must come and at what price. They will, therefore, be regular purchasers instead of spasmodic buyers, constantly hoping for a fall in price.

TIMELY WARNING

Sears, Roebuck & Co., the catalogue house people, seem to have got along hard lines so far as the courts are concerned. Not long ago it is said they were up against a charge of misrepresenting goods they were selling; and then, it is claimed, the pure food law knocked out their grocery business because the goods they were furnishing at their alleged low prices were so adulterated and impure that they would not stand the test of the law.

Now, at the instance of the Vermont Farm Machine Company, the United States Circuit Court for the Southern District of New York, has found them guilty of infringing a patent in the sale of a cream separator with certain improved attachments, and ordered them to pay to the Vermont Farm Machine Company "all the gains, profits and advantages which the said defendant and its confederates have derived, received or made" from the sale of said separator, and also to pay the costs of the suit.

The worst feature of this case is, that all who have been induced through the catalogues of S., R. & Co., to purchase cream separators with these improvements attached, are just as liable to prosecution as were Sears, Roebuck & Co. themselves. And such purchasers must not put the blame for such prosecution upon any one except those who induced them to make the purchase. If Sears, Roebuck & Co. propose to carry out their pledge to protect their customers, it is now up to them to not only pay the sums adjudged against them by the court, but to furnish their unfortunate customers with separators that do not infringe a patent, or to return the money paid for the ones they bought.

This is but another incident going to prove that it is better to trade with the home folks.

A Wanderer's Litany

When my life has enough of love, and my spirit enough of mirth,
When the ocean no longer beckons me, when the roadway calls no more,
Oh, on the anvil of Thy wrath, remake me, God, that day!

When the lash of the wave bewilders, and I shrink from the sting of the rain,
When I hate the gloom of Thy steel-gray wastes, and slink to the lamp-lit shore,
Oh, purge me in Thy primal fires, and fling me on my way!

When I house me close in a twilit inn, when I brood by a dying fire,
When I kennel and cringe with fat content, where a pillow and a loaf are sure,
Oh, on the anvil of Thy wrath, remake me, God, that day!

When I quail at the snow on the uplands, when I crawl from the glare of the sun,
When the trials that are lone invite me not, and the half-way lamps allure,
Oh, purge me in Thy primal fires, and fling me on my way!

When the wine has all ebbed from an April, when the Autumn of life forgets
The call and the lure of the widening West, the wind in the straining rope,
Oh, on the anvil of Thy wrath, remake me, God, that day!

When I wake to my adventures strange throng valiantly forth by night,
To the sting of the salt-spume dust of the plain, and width of the western slope,
Oh, purge me in Thy primal fires and fling me on my way!—

When swarthy and careless and grim they throng out under my rose-grown sash,
And I—I bide me there by the coals, and I know not heat nor hope,
Then, on the anvil of Thy wrath, remake me, God, that day!

—*Arthur Stringer.*

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FIVE FOR $2.00
Foreign Subscriptions, including Canada, 75c a Year

Clubs. Two subscriptions for $1.00; five for $2.00. These rates also apply to one person for two or five years respectively.
Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE*.

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

NEW INVENTION!

NOTHING ELSE LIKE IT.

Ohioan's New Method of Cleaning Clothes

Causing Great Excitement Where Exhibited.

UNLIKE ANYTHING YOU'VE SEEN OR HEARD OF

Cleans Family Wash In 30 to 50 Minutes.

No Rubbing—No Chemicals—No Motors No Washboard—No Wash Machine.

Over 35,000 Already Sold—Ladies Delighted

SEE HOW SIMPLE, different, easy. Put on stove—add water, then soap, then clothes—that's all. In 5 to 8 minutes clothes clean. Laundries clean clothes without rubbing—the EASY WAY does the same at your home. Dirt removed automatically except to move knob occasionally.

The EASY WAY, in one operation does the combined work of wash boiler, wash board and washing machine—less time, almost no labor—no injury to clothes.

The EASY WAY developes energy by mechanical manipulation, associated with hot water, soapsuds, superheated steam, and scalding vapor, utilized as a compound force, all confined in a closed metal compartment. Special operating arrangements.

Cleans woolens, flannels, blankets, or colored clothes, as well as white goods, finest laces, curtains, bedclothes. Saves time, fuel, labor, clothes, buttons, strength, looks, health and money.

EASY WAY IN 30 TO 50 MINUTES CLEANS WASHING WHICH BEFORE TOOK THE ENTIRE DAY.

NO RUBBING, wear, tear or injury. No soggy, bad smelling, heavy wood—but all metal, strong, durable, sanitary, light in weight. Easily used, cleaned, handled—always ready. Child can use it—no experiment. NO MOTORS. Saves 52 days' drudgery yearly.

THOUSANDS PRAISE IT.

J. McGee, Tenn., writes:—"One young lady cleaned DAY'S WASHING by old method in ONE HOUR with Easy Way—another in 45 MINUTES." Mrs. T. Bullen, Canada, writes:—"I washed BEDDING, HEAVY QUILTS, CURTAINS, Etc., WITHOUT RUBBING, and in a very SHORT TIME." Lauretta Mitchell, O., writes:—"Done a BIG WASHING IN 45 MINUTES—SOLD THREE ALREADY." A. D. Poppleton, N. Y.:—"Gives perfect satisfaction. Washed bed quilts, GREASY OVERALLS and fine clothes. Greatest thing on earth." Walter M. Glenn, O:—"Easy Way far superior to any other method—cleans clothes perfectly." J. H. Barrett, Ark., after ordering 38 Easy Ways, says:—"You have the grandest invention I ever heard of." J. W. Meyers, Ga., says:—"Find check for 12 Easy Ways. Greatest invention to womanhood, forever abolishing miserable washday. SELLS ITSELF."

PRICE ONLY $6.00 COMPLETE—sent to any address. NOT SOLD IN STORES. SEND NO MONEY, only send your name and address. We're old firm; capital $100,000.00. Everything proven. Guaranteed. WRITE TODAY for 30 DAY TRIAL OFFER, thousands testimonials, etc. CIRCULARS FREE.

FREE SAMPLE To Agents

WANTED AGENTS, SALESMEN, MANAGERS—MEN OR WOMEN—at home or traveling, all or part time—showing—taking orders—appointing agents. "EASY WAY" new. NOTHING LIKE IT. World unsupplied—agents making big money. When operated, people stop—get excited—watch it as thing of life. 12 see—10 buy.

C. O. Garrett, O., writes:—showed 7 families, sold 6. A. B. Verett, of La., sold 8 one day. J. T. Peay, of N. C., been out 2 days, sold 12. W. R. Stephenson, Tex., ordered 244 in 60 days. N. Boucher, of Mass., ordered 75 more—says everybody wants one BEST BUSINESS I EVER HAD.

Write today for special agents plan, free sample, 1908 offer—act quick

HARRISON MANUFACTURING CO., 701 Harrison Building, Cincinnati, O.

BARRELS of AIR BURNED as FUEL

New, Remarkable Stove---Ohioan's Great Invention---Consumes 395 Barrels of Air to One Gallon of Common Kerosene oil, making oil-gas---the New Fuel that looks and burns like gas!

Wood, coal and oil all cost money. **ONLY FREE FUEL IS AIR!** Unlimited supply—no trust in control. Air belongs to rich and poor alike. We cannot burn air alone but see here! **Our wonderful gas stove burns air and gas—very little gas—principally air. Takes its fuel almost entirely from the atmosphere.**

A miniature gas works—**penny fuel for every family**—save ⅓ to ½ on cost—save dirt and drudgery—no more coal or wood to carry—ashes unknown—absolute safety.

SEE HOW SIMPLE! TURN A KNOB--TOUCH A MATCH--FIRE IS ON. TURN AGAIN--FIRE IS OFF! THAT'S ALL.

Astonishing but true—time tested—proven facts—circulars give startling details—overwhelming evidence.

NO SUCH STOVES SOLD IN STORES—UNLIKE ANYTHING YOU'VE SEEN OR HEARD OF.

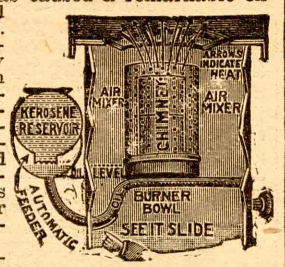
A genius of Cincinnati has invented a new, scientific oil-gas generator that is proving a blessing to women folks, enabling them to cook with gas—relieving them of drudgery. Makes cooking and housework a delight and at the same time often saves one-third to one-half in cost of fuel.

How often have many of our lady readers remarked that they would give anything to get rid of the drudgery of using the dirty coal and wood stoves—also the smoky oil wick stoves and their gasoline stoves which are so dangerous and liable to cause explosions or fire at any time?

Well, that day has arrived and a fine substitute has been discovered and every family can now have gas fuel for cooking, baking and heating and not have their kitchens a hot, fiery furnace in summer, and be carrying out coal and ashes—ruining their looks and health.

Thousands a Week.

Upon calling at the factory we found that this invention has caused a remarkable excitement all over the U. S.—that the factory is already rushed with thousands of orders and evidently the Company's representatives and agents are making big profits as they offer splendid inducements.



Sectional Cut of Generator

As will be noticed from the engraving, this OIL-GAS GENERATOR is entirely different from any other stove—although its construction is very simple and is built on the latest scientific principles, having no valves, which is a marked improvement, as all valves are liable to leak, carbonize, clog up or overflow.

By simply moving a knob the oil is automatically fed to a small steel burner bowl or retort where it is instantly changed into gas, which is drawn upwards between two red-hot perforated steel chimneys, thoroughly mixed with air and consumed, giving a bright blue flame—hottest gas fire, similar in color and heating power to natural gas.

This invention has been fully protected in the U. S. Patent Office and is known as the HARRISON VALVELESS, WICKLESS, AUTOMATIC OIL-GAS GENERATOR—the only one yet discovered that consumes the carbon and by-products of the oil.

The extremely small amount of Kerosene Oil that is needed to produce so large a volume of gas make it one of the most economical fuels on earth, and the reason for the great success of this Generator is based on the well-known fact of the enormous expansiveness of oil-gas when mixed with oxygen or common air.

Oil-gas is proving so cheap that 15c to 30c a week should furnish fuel gas for cooking for a small family.

Kerosene oil, from which oil-gas is made, may be purchased in every grocery—is cheap, and a gallon of it will furnish a hot blue flame gas fire in the burner for about 18 hours; and as a stove is only used 3 or 4 hours a day in most families for cooking, the expense of operating would be but little.

In addition to its cheapness is added the comfort, cleanliness—absence of soot, coal, dirt, ashes, etc.

What pleasure to just turn on the oil—light the gas—a hot fire ready to cook. When through, turn it off. Just think; a little kerosene oil—one match—light—a beautiful blue gas flame—hottest fire—always ready—quick meals—a gas stove in your home.

It generates the gas only as needed—is not complicated, but simple—easily operated and another feature is its PERFECT SAFETY.

NOT DANGEROUS LIKE GASOLINE.

and liable to explode and cause fire at any moment. This stove is so safe that you could *drop a match in the oil tank and it would go out.*

This Oil-Gas Stove does any kind of cooking that a coal or gas range will do—invaluable for the kitchen, laundry—summer cottage—washing—ironing—camping, etc. Splendid for canning fruit—with a portable oven ploced over the burner splendid baking can be done.

Another Important Feature.

is the invention of a small Radiator Attachment which if placed over the burner makes a desirable heating stove during the fall and winter so that the old cook stove may be done away with entirely.

While at the factory in Cincinnati the writer was shown thousands of letters from customers who were using this wonderful oil-gas stove, showing that it is not an experiment but a positive success and giving splendid satisfaction and as a few extracts may be interesting to our readers we produce them:

L. S. Norris, of Vt., writes:—"The Harrison Oil-Gas Generators are wonderful savers of fuel—at least 50 per cent to 75 per cent. over wood and coal."

Mr. H. Howe, of N. Y., writes:—"I find the Harrison is the first and only perfect oil-gas stove I have ever seen—so simple anyone can safely use it. It is what I have wanted for years. Certainly a blessing to human kind."

Mr. E. D. Arnold, of Nebr., writes:—"*That he saved* $4.25 *a month for fuel* by using the Harrison Oil-Gas Stove. That his gas range cost him $5.50 per month and the Harrison only cost $1.25 per month."

J. A. Shafer, of Pa., writes:—"The Harrison Oil-Gas Stove makes an intense heat from a small quantity of oil—entirely free from smoke and smell—great improvement over any other oil stove. Has a perfect arrangement for combustion—can scarcely be distinguished from a natural gas fire."

Mr. H. B. Thompson, of Ohio, writes:—"I congratulate you on such a grand invention to aid the poor in this time of high fuel. The mechanism is so simple—easily operated—no danger. The color of the gas flame is beautiful dark blue, and so hot seems almost double as powerful as gasoline."

Mrs. J. L. Hamilton writes:—"Am delighted—Oil-Gas Stove's so much nicer and cheaper than others—no wood, coal, ashes, smoke, no pipe, no wick, cannot explode."

Hon. Ira Eble, J. P., of Wis., writes:—"Well pleased with the Harrison—far ahead of gasoline. No smoke or dirt—no trouble. Is perfectly safe—no danger of explosion like gasoline."

HEATER AND COOKER, OR HEATING EXCLUSIVELY. ALL SIZES.

Chas. L. Bendeke, of N. Y., writes:—"it is a pleasure to be the owner of your wonderful Oil-Gas Stove—no coal yard, plumbing—ashes or dust. One match lights the stove and in ten minutes breakfast is ready. No danger from an explosion—no smoke—no dirt—simply turn it off and expense ceases. For cheapness it has no equal."

Agents are doing fine—Making big money.

WONDERFUL QUICK SELLER.

Geo. Robertson, of Maine, writes:—"Am delighted with Oil-Gas, so are my friends—took 12 orders in 3 days."

A. B. Slimp, of Texas, writes:—"I want the agency—in a day and a half took over a dozen orders."

Edward Wilson, of Mo., writes:—"The Harrison very satisfactory—sold 5 stoves first day I had mine.,,

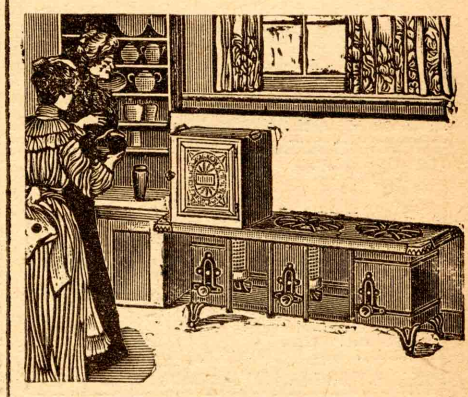
J. H. Halman, of Tenn., writes:—"Already have 70 orders."

This is certainly a good chance for our readers to make money this summer.

Hundreds of other prominent people highly endorse and recommend oil-gas fuel and there certainly seems to be no doubt that it is a wonderful improvement over other stoves.

The writer personally saw these Oil-Gas Stoves in operation—in fact, uses one in his own home—is delighted with its working and after a thorough investigation can say to our readers that this Harrison Oil-Gas Stove made by the Cincinnati firm is the only perfect burner of its kind.

It is made in three sizes, 1, 2 or 3 generators to a stove. They are made of steel throughout—thoroughly tested before shipping—sent out complete—ready for use as soon as received—nicely finished with nickel trimmings, and as there seems to be nothing about it to wear out, they should last for years. They seem to satisfy and delight every user and the makers fully guarantee them."



HOW TO GET ONE.

All our lady readers who want to enjoy the pleasures of a gas stove—the cheapest, cleanest and safest fuel—save one-third to one-half on fuel bills and do their cooking, baking, ironing and canning fruit at small expense should have one of thes remarkable stoves.

Space prevents a more detailed description, but these oil-gas stoves will bear out the most exacting demand for durability and satisfactory properties.

If you will write to the only makers,

THE WORLD MFG. CO., 6950 World Bldg. Cincinnati, Ohio, and ask for their illustrated pamphlet describing this invention and also letters from hundreds of delighted users you will receive much valuable information.

The price of thes Stoves is remarkably low, only $3.25 up. And it is indeed difficult to imagine where that amount of money could be invested in anything else that would bring such saving in fuel bills, so much good health and satisfaction to our wives.

DON'T FAIL TO WRITE TODAY

for full information regarding this splendid invention.

The World Mfg. Co. is composed of prominent business men of Cincinnati, are perfectly responsible and reliable capital $100,000.00 and will do just as they agree. The stoves are just as represented and fully warranted.

Don't fail to write for Catalogue.

$40.00 Weekly and Expenses.

The firm offers splendid inducements to agents, and an energetic man or woman having spare time can get a good position, paying big wages by writing at once and mentioning this paper.

A wonderful wave of excitement has swept over the country, for where shown these Oil-Gas Stoves have caused great excitement. Oil-Gas fuel is so economical and delightful that the sales of these Stoves last month were enormous and the factory is rushed with thousands of orders.

Many of our readers have spare time, or are out of employment and others are not making a great deal of money, and we advise them to write to the firm and secure an agency for this invention. Exhibit this stove before 8 or 10 people and you excite their curiosity and should be able to sell 5 or 8 and make $10.00 to $15.00 a day. Why should people live in penury or suffer hardships for the want of plenty of money when an opportunity of this sort is open?

$1.75

A good first-class sheller will save its cost in a week's use.
O. K SEED STORE, Indianapolis

up-to-Date FARMING

Wheat is selling at points of first delivery in Indiana at 78 to 83 cents. This is about 20 cents below what it should be—$20.00 on a hundred bushels. There's nobody to blame but farmers and their false friends and blind leaders.

HE DON'T KNOW

The timothy and clover are resting in the stack;
The corn begins to tassel, and the wheat is in the sack;
The summer is upon us, with all nature in repose,
But what the season's work is worth the farmer never knows!

A FEW NOTES

The quail, commonly known as Bob White, is one of the best friends the farmer has. Its natural food is weed seeds and insects, and the quantity of these each bird consumes is almost beyond comprehension. The laws for the protection of the quail should be rigidly enforced in the common interest of agriculture.

* * *

The entire cultivated field should be productive. We seldom enter a field in which there are not spots, larger or smaller, which fail to produce. These impoverished places sometimes aggregate quite a percentage of the entire field, and it is an absolute waste of acres, of labor and of seed to plow, plant and cultivate them. Special effort should be directed to the fertilization of these spots. They may need time to correct acidity, but most likely their greatest need is humus, phosphorus and nitrogen, of which stable manure plowed under is the best source of supply.

* * *

A contemporary recites the fact that 25 cents a bushel added to the sweet potato crop of Tidewater County, Va., for four years, raised the growers from poverty to respectable wealth, and that the Southern cotton planters have for the last year or two, added $6,000,000 a year to their income by co-operating together. "Organization," says the paper from which we quote, "is the 'big stick' of commerce, and it is time for farmers to learn how to use it." True words are those. The farmer's income depends upon the price, and until he can have a definite price, he can have no definite income; and he can get a definite price only by controlling it himself, and that he can do only by co-operation.

* * *

Much of the value of home-made manure is lost in the application. Green manure just as it comes from the stable, considerably mixed with hay straw, as it is likely to be, spread on land with a manure spreader and immediately plowed under, gives the land its full value. In that condition thus trapped in the soil, it gives off the three elements of fertility—nitrogen, phosphoric acid and potash—while the organic matter in it supplies the soil with humus. The next best way to apply manure is to spread it evenly on land that has already been plowed and then thoroughly work it in.

* * *

The pure food law is liable to lead to a pure seed law. Mr. Mann of Illinois, introduced into Congress during the recent session of that body, a bill providing a $200 fine for selling adulterated or misbranded seeds and bulbs.

The farmer* must* combat many sources of loss, and one of the most serious, especially in regions where heavy rains are frequent, is the washing away of the soil. This may be prevented, but often it is no easy task. Farmers must remember that water will flow down hill, and the steeper the incline the more rapid the current and the greater the liability to wash. In ditching, that fact must be kept constantly in mind. All ditches must lead to lower ground, and wherever there is so near a level as to impair the current, sediment will gather and fill up the ditch. Then if there is a low embankment, the water will overflow and find a lower level, and possibly cut another channel. Fields inclined to wash should be kept in grass and pasture.

* * *

Dry weather in the early stages of the crop is not so disastrous as when the crop is approaching maturity. In the early stages, if the soil be dry, nature forces the plant to make root so as to enlarge its feeding ground, and the feeders go down in search for moisture. When the rains come and make the plant food abundant, the enlarged root system is ready for it and rapid growth is the result. As the plant approaches maturity is when it needs most food, and a drought at that time is most disastrous.

REPLANTING

In modern ways of doing everything in a hurry and planting with machinery, replanting is about abandoned as an unprofitable job. Unless the stand is exceptionally good we believe it pays to replant corn at least, though it is too late now to do it profitably. Every place for a stalk of corn that has no stalk is a blank in the field, and when the yield is computed there is a corresponding deficit. But for the replant to do much good, the late planted seed must have a good chance. The old plan, therefore, of replanting with a hoe, first digging up a place for the hill, making a good, clean seed bed, then carefully dropping and properly covering the seed, is the most profitable way. It is old fashioned, slow and tedious, and not many modern farmers will do it, but if done in time and done right, it may add bushels to the yield per acre with no extra work or cost but the replanting.

OAT HAY AS FEED

No one doubts the value of oat hay as feed, and in these days of high priced timothy and corn, oat hay may find a profitable place in farm economy. Oats that does not promise a profitable yield of grain, may be converted into very valuable feed for horses that will take the place of both corn and hay. It should be cut with a mower when the grain is just passing from the milk to the dough state, and cured the same as timothy. Indeed, it should be handled throughout as timothy. It may be stacked in the field, if desired, but in that case the stack should be topped off with grass hay, as the oat straw is more liable to take water. It is better to put in the barn when you wish to feed it. If properly cured without rain, it makes ideal feed for horses, or for growing cattle. It is likely, however, to attract mice and rats—more so than corn in the crib.

BLUE GRASS SEED POOLED

The Mason County, (Ky.) Independent tells us that the blue grass seed is in the Farmers' Pool. The large growers of Clark, Montgomery, Bourbon, Madison and Fayette Counties, met at Winchester and pooled their crops. This means virtually the entire output of blue grass seed, for the counties named produce the bulk of the crop of the whole country. These same growers pooled their crops last year, and the entire pool was sold at once. The result was so satisfactory, that they did not hesitate to pool again this year, the pool being much larger than last year. It is very gratifying to note that farmers are actually learning to do business in a business way.

MANSON CAMPBELL, President, The Manson Campbell Company, Ltd.

I'll Give You Plenty of Time to Prove that the CHATHAM Fanning Mill is the Best Seed Grader and Cleaner Made
—And Will Pay for Itself in a Year.
You can prove this by simply taking my proposition and **cleaning your grain**—before you **sell** it—or before you **sow** it. **$1,000,000** lost by Farmers in every state each season by selling and sowing **dirty grain** is a low estimate. You **won't** haul it to **be cleaned** before you sell your grain, so you are "docked" on the price because of **dirt** in every bushel. Just take me up on my offer—get a **CHATHAM Fanning Mill** and save its price easily by using on your place. Take 30 Days' Free Trial first.

WHAT IT DOES BESIDES GRADING
Cleans—wheat for market, oats out of wheat, cockle out of wheat; garlic, chess, mustard and all other foul seeds out of wheat; buckhorn plantain out of clover, separates rye from wheat. Cleans beans—oats—barley—timothy seed. Grades seed corn. **A general purpose seed grader and fanning mill all in one.** Has screens and riddles for all purposes.

Chatham Free Book Tells You My Plan On 30 Days Free Trial
This valuable book tells many other ways than those above that a Chatham Fanning Mill will make and save for you. As a practical man you know that all I've said above is true and you also know that in selling direct from our factory—prepaying freight to you—giving you **30 DAYS' FREE TRIAL**—and our wholesale price—we have simply got to give you a **CHATHAM Fanning Mill** that does all we claim for it. Our business life depends on our mills making good.

Remember that I Prepay the Freight
I'll send you a **CHATHAM Fanning Mill** on 30 Days' Trial without any advance payment, just to prove it will do all we say it will. 250,000 sold already in U. S. and Canada. Experiment Stations indorse them, and Agricultural Papers recommend them to subscribers. So why take **low prices** for dirty, mixed grain, or sow seed that **grows weeds** and **mixed crops? Write nearest office** for full particulars, prices and New Catalog.

A LESSON IN QUANTITY

Onion production is a feature of Texas farming. This season the onion producers "spread themselves." They had been told so much that success in farming depended upon raising big crops, they concluded they would meet the conditions and for once be hailed as successful farmers. They worked hard, planted big crops, and made unusually large yields—produced by all odds, more onions than ever before.

And they were rewarded with prices that hardly paid for the harvesting, and had less money than they had formerly received for much less yields! Were they successful? That depends. If lots of onions is success, they had it. If a cash income means success, they were failures.

INBREEDING OF PLANTS

Man is all the time trying to improve upon nature, and, it must be confessed, in many things he has succeeded. It is very rare now that inbreeding of stock is permitted. But with crops it is quite different. We frequently secure crosses by mixing seed, but since in most plants both male and female elements is in the same plant, we practice the very closest of inbreeding, the two elements coming from the same stalk, often from the same flower. The corn plant is one of the finest examples in farm crops. In the corn plant the female element is the so-called silk that protrudes from the tip of the ear, the male element is the exceedingly fine pollen dust thrown off from the tassel. If the silk be fertilized from a dust of pollen from the tassel of the same stalk, it is clear that the resulting grain must be the product of close inbreeding.

Would the corn be better, stronger, more vigorous, hardier, as is claimed in the case of animals, if this inbreeding were not permitted? We do not know, but it is a matter not difficult to test; it is an experiment easily tried. As soon as the tassels appear and before they have had time to shed any pollen, cut them out from a row or two in different parts of the field, or from stalks scattered over the field. It is very clear that the ears grown upon such stalks must have been fertilized with pollen from other stalks—their parents may be cousins, but they are not brother and sister, as they would be if the pollen came from the tassel grown upon the same stalk. Using such corn for seed next year, and treating some hills in the same way, might in a few years develop a much better type of corn.

However, since the silks are fertilized by pollen grains floating in the air, it is perhaps not very often that the silks on a stalk are all fertilized by its own pollen. This acts as a natural bar to inbreeding, and may be an important factor in maintaining the constitutional vigor and hardiness of corn. But the seeds of plants that produce both elements in the same flower are certainly fertilized with their own pollen.

EXCESSIVE CROPS AND FREIGHTS

Even the railroads are beginning to understand the effect of excessive crops upon the markets, and the fruit and vegetable growers, the producers of perishable crops, are coming up against a proposition that has not heretofore confronted them. The railroads in many places are refusing to receive such products for shipment until the freights are paid or guaranteed. So many shippers rush these crops to market without any knowledge or thought of the supply or price, so much of it going to glutted markets and selling at prices that do not pay the freight, that the railroads are becoming unwilling to risk the entire cargo for the freight.

And the railroads cannot be blamed. They must have pay for their work. It is of no interest to them to haul fruits and vegetables a hundred or two miles and dump it at points already suplied, and where consumption has no use for it. If growers, therefore, are so unwise as to ship their stuff that way, they may expect to have to meet the losses resulting from their own folly, and to pay the freight besides.

But this advance charge for freight will pave the way to conditions even more serious than that. When the point is reached that only those can ship who can pay or guarantee the freight, the gap between the rich and the poor is widened immensely, and the privileges and powers of wealth are tremendously extended. The poor must then sell to those who are able to ship, and at whatever price the shippers may choose to pay. It does not take any great degree of wisdom to understand where this would lead to. And this is the natural outgrowth of unwise shipments, shipments of commodities whose sale at destination will not pay the freight.

What does it mean? That producers and shippers must inform themselves of the condition of the markets they seek; that they must know the supply and demand at all available points; that they must control both shipments and price, so that they may be sure not only of the freight, but of a profit on the goods. This means co-operative organization, and the very conditions must drive farmers to it. The quicker the better for all concerned.

Colonel Cody tells a story, about a well-known westerner who had suddenly become quite wealthy.

The first thing he did was to build a theatre and give it to his native town.

He watched over the building of this theatre as a mother hen watches over her brood.

There wasn't a detail of carving or carpentry that he didn't watch carefully.

One day the millionaire entered it as a decorator was beginning to paint a bust over the stage arch.

"Hold on there! what ye paintin'? he said.

"Portrait of Shakespeare," the decorator answered.

"Shakespeare, eh? Who the deuce is he?" said the millionaire.

"Shakespeare was the greatest poet and dramatist the world has ever seen."

"He was, was he? Did he ever do anything for this town?

"No; of course not."

"Then paint him out," said the millionaire, "and put me in."

Our western friend didn't want to be forgotten—neither do we.

The above is printed from a little booklet published by the Geo. Ertel Co., Quincy, Ill. If you want to be Up-to-date bale your hay and further more ask the Ertel Co. for their catalog and to tell you all about it.

Every Farmer Should Write for These Two Free Books

You see all kinds of free catalog offers in the papers and many interesting ones, but if you have not already written for the New 1908 American Manure Spreader Book and their New 1908 Detroit Tongueless Disc Harrow Book it will pay you to do so at once.

Both the American Spreader and the Detroit Tongueless Disc are famous in every section in America for their exclusive features and high quality.

These books, which tell all about comparative values and convenience and usefulness of these machines, also contains most interesting and valuable information upon many subjects relating to the soil—larger crops, fertilizing—value of manure, etc.

They tell you comparative prices and about durability, workmanship and materials, and make it easier for you to be sure you are getting the best when you buy any spreader or disc.

All "American" machines are sold on the most liberal plan so that you save money and get higher quality for the price you pay. Besides they are all sold on a month's free test to use on your place and on your work so that you can be absolutely sure and satisfied that you are getting the best. And if you wish time to make payments this Company will make you the most liberal terms.

It will pay you to write today and ask for the books you are interested in—either about American Spreaders and Fertilizing or about the Detroit Tongueless Disc Harrow. You can have both free if you say you want them. Address a postal to W. W. Collier, Gen'l Mgr., American Harrow Company, 531 Hastings St., Detroit, Mich.

When you want to know about what a Hay Press will make for you in dollars and cents send for catalog of Lightning Hay Presses—there are no better made. Write Kansas City Hay Press Co., 516 Mill St., Kansas City, Mo.

E. W. Wagner, the great corn man of Chicago, has written a circular that every corn grower should have. Send to E. W. Wagner, Dept. F, Chicago, for a copy, free.

No up-to-date dairy farm is without its Silo. They are money makers for dairymen. Now then, a "Whirlwind" Silo Filler is needed. Send for free booklet "How and Why to Fill a Silo" whether you already have a Silo or not. Address Wilder-Strong Implement Co., Box 86, Monroe, Mich.

Easy to Lay

THE first ready roofings, made some thirty years ago, lasted a very short time.

Then manufacturers improved the goods and smooth surfaced roofings of various kinds were developed that would endure fairly well *if the top surface was given a coat of heavy waterproof paint every two years.*

Now comes Amatite—with a mineral surface which requires no painting and which will last longer *without painting* than the other other kind did *with constant painting.*

The top surface, being mineral, is unaffected by weather or climate. It really protects.

The waterproofing material in Amatite is pitch—*the best resistent to water known.* Water will in time dissolve or disintegrate almost anything, but it is powerless against Pitch.

Roofings of twice the price often do not protect as well because they are not waterproofed with pitch.

Amatite is easy to lay—any one can do the work. We furnish you free nails and liquid cement for laps.

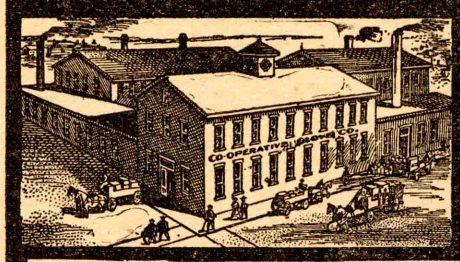
Investigate the cost of Amatite in your locality. You will be astonished at its low price.

Samples and illustrated Booklet FREE on request to nearest office.

BARRETT MANUFACTURING COMPANY

New York Chicago Philadelphia Boston Cleveland Cincinnati Minneapolis New Orleans St. Louis Pittsburg Kansas City

You Can Own A Factory Like This



WE START YOU In A Business Of YOUR OWN Right In Your Home Town

We will start you in the canvas glove business, show you how to develop it into a hale, hearty business, make its product, sell its goods and bring its profit to you, and last, but not least, make one dollar grow rapidly into two.

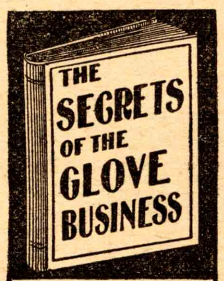
Never before in history of business has help like this been offered to ambitious men.

Here is brought to your home and placed in your very hands the accumulated wisdom, the priceless experience and proven plans of the glove business. Here is spread before you the vivid drawings and information, the actual working details needed in the glove business.

We are making you this offer, we want you to start a factory, to become prosperous. We want to show you how this can be done on little capital (from $30 to $145), with the possibility of making thousands of dollars.

We do all this for you, start your factory, simply with the understanding that you buy supplies and goods from us so long as our prices are as low or lower than you can get elsewhere.

This is not a speculation in any sense of the word. It is a sound, permanent and highly profitable business. The money to be invested is spent entirely for the necessities of the business; there is no waste material, no dead stock—every yard of cloth can be turned back into cash at a moment's notice.



This valuable book contains a great deal of information about the secrets of the glove business and how any one with a capital of from $30 to $145 can make money, right from the start. Send for it right now, today.

WE WILL SEND FULL INFORMATION

about the business and how we will assist you to successfully start a factory. If you would like this information it will cost you only one cent (a postal card) to get it.

There is no class of goods for which there has been such an unsatisfying demand as there has been for cloth gloves and mittens. Everybody uses them—the farmer, the mechanic, doctor, lawyer and the merchant in all sections of the country.

We want to prove to you that those in the Glove Business are successful and build up a large business. Those who have had the nerve to start and have thrown their brains and energy into the work get along well and have factories in two or three years.

Write us today, start now, do not let the golden opportunity slip by. We will help you to success, help you in every little detail; help you to succeed. Don't miss this opportunity even if you have to borrow the money to start with; in three months' time you should pay it back and have money of your own to do business on.

We Expect to Start Only a Few of These Factories

One can be started in any spare room at home or small store room and be enlarged as the business requires

This is simply an opportunity to go into the manufacturing business, which, with a reasonable amount of work and attention to business will make a man or woman a prosperous factory owner in a reasonable time.

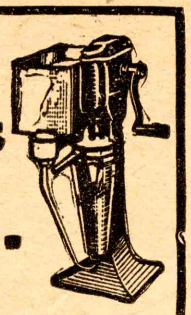
We Can Give You a Start where you can make thousands of dollars a year, and not blister your hands with a pickax either.

We expect to start a few of these factories, protect their interests, and give them our valuable assistance. We hope to make our profit from the cloth we sell, and if our prices are not as low or lower than others, we do not even ask you to buy from us. By this arrangement we'll get a small profit and a few people will get a start in a manufacturing business that in time should be a huge manufacturing plant employing many people.

The two brothers of The McCreery Manufacturing Company started only a few years ago absolutely broke, actually borrowed $100.00 to start with. At first only had two girls working and have risen to be worth thousands of dollars, do an enormous business, own their own large factory and have valuable interests in others, all in a remarkably short time. If a factory will do this for us, it will do the same for you. Don't miss this offer. First come, first served. Write today for free book and full information.

THE McCREERY MANUFACTURING CO., 630 Dorr St., Toledo, O.

Little Thefts from the Dairy-man



The difference between the Tubular and "bucket bowl" separators is measured in hundredths of one per cent of butter fat which the Tubular saves and the "bucket bowls" let go into the skimmed milk.

Hundredths of one per cent are hard to realize. Let's call it one ounce of butter fat lost each milking by a "bucket bowl," which

The Tubular Would Save

This would amount to 45 pounds of butter per year, worth at least $11.25.

"But will the Tubular make this saving over a 'bucket bowl' separator—every 'bucket bowl' separator? Will the Tubular prevent or stop this sort of little twice-a-day theft in my dairy?"

We're ready to stand the cost of a tryout and proof. Write for Catalogue No.136 then tell us how many cows you have, and how you now dispose of the milk. Then we'll tell you and prove to you what the Tubular can do for you.

THE NEWTON REMEDY CO., Toledo, Ohio

FARM WANTED

Hundreds of readers of Up-to-Date Farming want to buy a farm. Have you one for sale? Advertise it in the Business Exchange for quick purchaser. Rate 5c a word.

Up-to-Date LIVE STOCK AND DAIRY

Hogs at $7.00 and cattle at $8.00 should not stimulate stockmen to produce extremely, as that will result in low prices. Extremes of production should be guarded against and extremes of price will be avoided.

CO-OPERATE IN SELLING

The farmers wonder when meat's high,
Why livestock prices rule so low;
But packers smile when they complain,
And lower yet the prices go.
It will be so, 'tis safe to say,
Till farmers sell a different way.

TALKS WITH STOCKMEN

Last year there was marketed in Chicago 15,761,479 animals, for which was paid $326,540,600. And this, it is said, does not include the business done by the big packers. Chicago is a great stock market, but it is not the only one by any means. St. Louis, Kansas City, Omaha, Indianapolis, and all the large cities take their share. All of which to prove that the livestock business of this country is a big thing. Those engaged in such a business ought to exercise greater control over the price of the raw material, their own product.

* * *

Wild horses are still abundant in the West. Government authority estimates the number now roaming the mountain ranges of Nevada at from 20,000 to 25,000.

* * *

A bath for the tired horse is recommended. When the harness is removed wash the horse down with cool water, using a stiff brush, drying with a cloth.

* * *

Early maturity is an important consideration in any market animal. The shorter the time required to make the animal ready for market the greater the profit. This is particularly true of beef cattle, hogs and sheep. Always select the early maturing types.

* * *

Bacteria causes milk to sour, and milk left at animal temperature will sour in about 12 hours. If cooled to 10 degrees bacteria will not begin to grow in the milk for about 6 hours, and they will then grow so slowly that the milk will remain sweet for about 36 hours. Cooled to 50 degrees milk may be kept sweet two or three days.

* * *

Pure water for the cow to drink is an essential element of pure milk. The cow that is compelled to drink from mudholes and stagnant pools cannot be expected to give wholesome milk.

* * *

Shall the cows come in fresh in the spring or in the fall, is a question that is now being earnestly considered on the farm. A few years ago the spring as the proper time was considered undebatable, and the fresh cow in the fall was an accident. But sentiment is changing. Winter milk is easier kept and it is better than summer milk, and better butter can be made in winter than in summer, and it always brings a better price. And the cow must be fed in winter whether she gives much milk or little. More pains must be taken with the fall calf, perhaps, but the calf should be well fed and well treated whether in winter or summer. Sentiment is getting favorable to fall calves and winter milkers on the farm.

* * *

The livestock interest in the United States is one of the greatest interests. According to the last report of the bureau of animal industry, the number of cattle in this country, exclusive of milch cows, is 51,556,000, valued at $881,551,000, an average of a little more than $17 per head.

* * *

There must after all be some Yankee blood on the other side of the sea. A grocer of Oldham, England, has invented a machine to feed his horse on exact time. As a basis he used an American alarm clock. Attached to this is a weight connected in such a way that when the alarm goes off the weight is released, and that in turn releases a hinged bottom to a box containing a feed for the horse and placed directly over the feed box. As the bottom of the box drops downward, the feed falls into the feed box and the horse is fed.

* * *

Among beef cattle, heavy weights are best in the market, and to produce heavy weights it is necessary to commence with the calves. A stunted calf will never make a heavy weight. The calf should be taught to eat as soon as possible, and then it should be fed regularly, besides having a rich pasture to run in. Until it begins to eat, it should have all the milk it can digest and assimilate. Ground feed or bran is a good thing to begin with, and it will soon learn to eat shelled corn. As it learns to eat, its milk ration may be reduced in proportion to the feed it takes, and it should have access to water in its pasture lot. Young stock, no matter how rich their pasture, will make heavier weights if given a grain feed also.

* * *

Our fathers thought to fatten hogs they should be confined to a small pen and fed on grain alone. That has been found to be a mistake. Hogs that are being fattened will do better in a pasture lot. The green stuff they get aids in the digestion and assimilation of the heavy grain feed given them. For this reason hogs may be fattened much more cheaply in summer, or during the growing season, than in winter, besides the saving of what is required to maintain the animal heat in cold weather. But fattening hogs must have plenty of shade or shelter from the sun in hot weather. They should never be allowed in hot weather to seek shelter in closed rooms.

* * *

No matter what kind of stock you raise, nor for what purpose, the best is none too good. And it is about as easy, and almost as cheap, to have the best as it is to have the inferior. Often the difference between prosperity and poverty is the difference in seeking the best to begin with. If you cannot keep the best sires you can patronize those who do keep them; then you have the same foundation to build upon that they have, and you have been at very little additional expense.

BEEF TYPES

Prof. Mumford gives the following as true markings of the ideal beef types of cattle:

A good feeder has a strong back and a straight top line. The under line should also be approximately straight, and especially should it be carried back by a low flank. In judging this point in a lean animal we should give due credit to a deep, expanded paunch, which is indicative of great capacity. Above all things, in connection with straight, uniform, and parallel lines, insist upon a deep and broad frame, giving the general appearance of a low-set and blocky form. Extreme bony-built animals as well as rangy ones should be avoided. A certain elasticity of movement and vigor of action, giving the animal style, are valuable characters. Coarseness and lack of smoothness indicate inferior feeding qualities.

An animal possessing a coat of fine, bright, silky hair, a loose pliable skin of medium thickness, and fine dense, smooth bone, is said to possess quality. These characters are invariably associated with early maturity and rapid fattening. The possession of these valuable characters does not necessarily imply greater gains on the same food, but it does imply that an animal of good quality can be finished earlier and consequently on less food than that required for animals that are covered with hard, papery skin, which clings tightly to the carcass, and that are distinguished by large, coarse heads, large bone, and a general lack of harmony in the development of parts.

The Maryland Experiment Station gives the following as the desirable points for feeders:

The best type of feeder has a conformation which will allow the production of a maximum amount of the high-priced cuts of beef. The good feeding steers are those which are comparatively wide, round and deeply ribbed. The animal which is upstanding, light in the flank and shallow in heart girth seldom makes a good feeder.

In form the feeder should be broad and deep in front, low set and blocky built; he should carry out strong and wide in the hind parts as well, and be deep and low in the flank and twist. The head is usually a condensed reflection of the rest of the form. A broad, short head is associated with a thick, wide, low set body, and the narrow head with slim face is generally accompanied with more narrowness and greater length of legs and body.

It will be found frequently that the narrow chested animal is a poor feeder, and makes but little progress in proportion to the feed it eats. The animal with the deep, wide chest on the bottom, and not shrinking away behind the forelegs, is one strong in vital force and constitution, and is not deficient in capacity to make feed into flesh and fat economically.

An important factor in the value of a beef animal is quality, and quality in the steer means fine bone, soft, mellow hide, and fine, silky hair, while a very rough, heavy frame, coarse joints, prominent ragged hips, and rough, open shoulders are such attributes as are the most striking evidences of deficiency in this feature.

DON'T THROW MONEY TO THE PIGS

The mine owner gets his gold mixed with rock and combined with other metals. He gets out all the gold and then makes in addition what he can from the lead and silver, the "by-products."

The dairyman's gold is cream; the skim-milk his principal "by-product." To get all the profit he must use an

IMPROVED 1908 U. S. CREAM Separator

With **this** Separator he gets out **all** the cream, and then uses to best advantage the skim-milk. He can't afford to feed cream to pigs.

Our Catalogue No. 187 tells why. Let us send you one.

MORE MONEY FROM COWS

Protect your cows from flies and they will give more and richer milk—stand quiet while milking. Returns 400 per cent profit. Use

FLY-FUMA

and all flies and insects leave. It is harmless to man and beast. Cures sores. Good for horses—lice on poultry, fleas on dogs, etc. Easily applied with sprayer or cloth.

Free With first order for a gallon we will send a 50c Electric Sprayer—best made. Quart 35c; gallon $1.00; 5-gallon can $4.00. Made by

O. K. SEED STORE, Box A, Indianapolis, Ind.

Dealers write for prices

"I used Fly-Fuma on 50 cows in dairy with perfect success. Man with sprayer will go over the herd in ten minutes. I use on horses with fine results. It is fine for sore shoulders and harness galls. I used Fly-Fuma on dogs for fleas and on chickens for lice with perfect results."

F. McGAVOCK, Nashville, Tenn.

TAMWORTH SWINE

At present the Tamworth as a bacon hog is attracting considerable attention and for the information of those unacquainted with the peculiar merits of this breed, a brief description might be of interest. The red Tamworths are probably the most popular of the bacon breeds because of their adaptability to all climes and conditions, are remarkable for their long, deep sides, well rounded hams and light shoulders with a light jowl and head. The conformation of the Tamworth being such as to insure a middling of even thickness throughout, well streaked with lean and convertible into the highest class of "breakfast bacon." But aside from their reputation as producers of a very superior quality of pork,—the ultimation of all hogs—the Tamworths possess other qualities that should appeal strongly to every hog grower.

They are the most prolific of all breeds and being very careful mothers hardly ever over lay a pig and being deep sucklers furnish plenty of milk for all.

I instance one sow that raised 42 pigs in 3 litters all born within a year and 7 months after this, brought a litter of 15 pigs.

The experiment stations have fully demonstrated that the Tamworth possesses as economical feeding qualities as any of the fat breeds in several instances surpassing them.

To the farmer of the great corn belt, the Tamworths value for crossing on the chunky, shortlegged, short-bodied lard breeds can hardly be over estimated. The progeny will inherit strength, vigor and prolificacy surpassingly.

The great demand for a leaner and more delicately flavored bacon and the ravages of cholera and swine plague in the United States justifies the belief that an active, hardy, muscular hog like the Tamworth is bound to seek supremacy in the hearts of the American swine breeders.

W. WARREN MORTON.

To Make Harness Last

Harness oil serves an important purpose in stable economy.

Everyone knows how a water-soaked shoe hardens and how much more liable it is to crack or wear through when in that condition.

It is just so with a harness. The leather and making may be the best, but continued use in all weathers—wind, rain, sun and cold—tend to harden and dry out the leather and leave it without "life" or lasticity. Just at this point the destruction of the harness begins, because the open pores in the leather readily absorb moisture and animal sweat and decay at once sets in.

If a harness is kept soft—the pores filled with Eureka Harness Oil—it will go through daily service under the most trying weather conditions and last very much longer than it otherwise would.

"Eureka" is a heavy bodied oil made especially for treating harness. There are no acids or anything whatever in it that can injure leather, but it does contain elements that are positively beneficial.

When a harness is cleaned, an application of Eureka Oil makes it pliable—soft as a glove, tough as new leather. In point of fact—barring wear on the stitching—just as good for looks and actual service as a new harness.

Sloan's Liniment has been standard for man and beast for years and years. Merit wins. No article can retain its popularity so long if it is not good. Sloan's Liniment is good. Send for booklets treating on Horses, Cattle, Hogs and Poultry. They are free. Address Dr. Earl S. Sloan, Boston, Mass.

Do you want to start in business? Are you ambitious to own a factory? Scores will answer yes to both questions. Then write The McCreery Mfg. Co., 630 Darr St., Toledo, O., and they will tell you how you can enter the glove business. A large free book explaining all—it is sent free.

Heaves can be positively and permanently cured by the method of The Canadian Remedy Co., Dept. C, Citizens Bldg., Cleveland, Ohio. No cure, no pay is their policy. Have you a horse afflicted? Better try it.

Sore Shoulders on Horses

Are a source of much anxiety, trouble and financial loss, especially in hot weather. How to cure and prevent them is explained in a little booklet published by Johnson-Slocum Co., 426 State St., Caro, Mich., which is sent free for the asking.

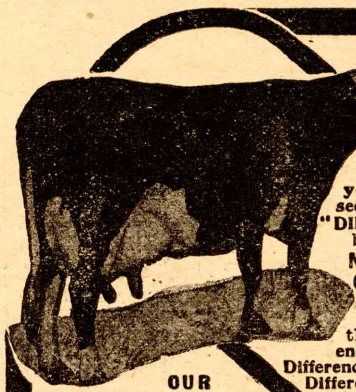
Empire Cream Separator Company

Western Branch: Chicago, Ill. Bloomfield, N. J.

MORE MONEY

From Your Cows and Much Less Work In Getting It.



If you could see the Real "DIFFERENCE" between the NEW BUTTERFLY CREAM SEPARATOR and any other made—Difference in amount of the cream you get; Difference in the quality of cream; Difference in the way the machine runs. Difference in the number of times a minute you have to turn the crank; Difference in the way the milk is aerated and purified while being separated; Difference in the time and trouble it takes to clean the skimming device—you would say, as hundreds of others are saying today—"I'll get the NEW BUTTERFLY CREAM SEPARATOR."

If you could see how to make easily $10 to $15 more a year on each and every cow you keep, and still do it with less work for your wife and yourself, you'd say: "I'll get a Cream Separator."

OUR PATENTED ALUMINUM CORRUGATED SKIMMING DEVICE makes the New Butterfly Cream Separator **different** and **8 times as efficient** as any other machine. Every drop of milk that enters the bowl of the New Butterfly Cream Separator is actually put through the skimming process **8 times.** This guarantees complete separation, and you can't fail to get **ALL THE CREAM.** New Butterfly Cream Separators are sold as they ought to be. Not by agents, but direct from our factory to your farm. **Freight paid and on 365 days' trial.** Send today for illust'd catalog.

For average use, we recommend ***No. 4½****, capacity 450 to 500 lbs. of milk per hour.*

PRICE delivered at your town— **$39.80**

ALBAUGH-DOVER CO. Capital $1,000,000

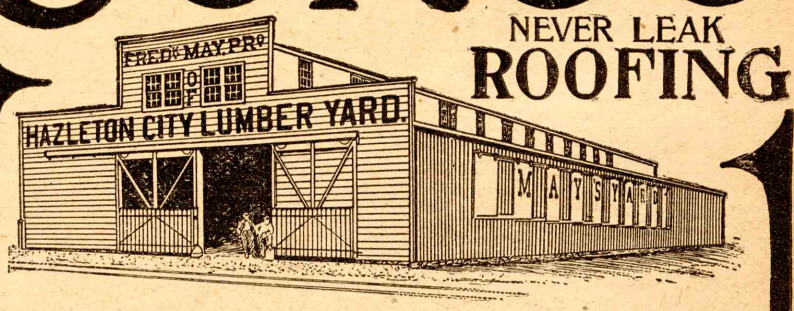
CONGO

NEVER LEAK

ROOFING



CONGO Ready Roofing is like a government bond—the best and safest investment you can make.

It may not be the cheapest roofing you can buy at the start, but in durability, satisfaction and economy in the long run, there is nothing better.

Congo is proof against every kind of climate and weather and is almost as soft and pliable as rubber.

It is easy to lay and clean to handle.

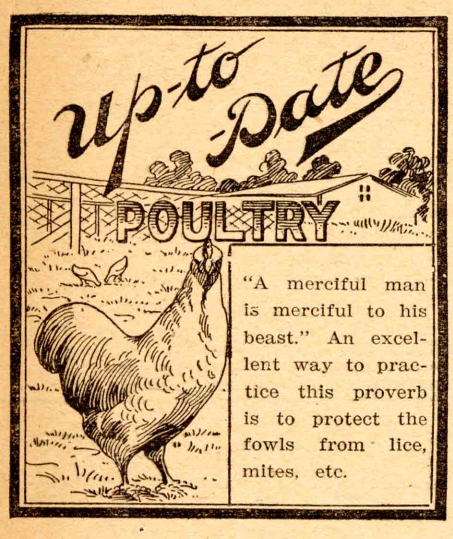
Send for a free Sample and you'll see what a real "never leak" roof is like.

UNITED ROOFING AND M'F'G. CO.

Successor to Buchanan Foster Co.

584 WEST END TRUST BLDG., PHILADELPHIA, PA.

CHICAGO SAN FARNCISCO



"A merciful man is merciful to his beast." An excellent way to practice this proverb is to protect the fowls from lice, mites, etc.

THE CHICKEN

Not much for me; not much for me,
When lonely in the coop I stand;
But on a thousand farms, you see,
The wealth of nations I command.

SCRATCH AND PICK

Hens may be too fat to lay most abundantly.

Your "luck" with the chickens will depart if you don't keep the hen-house well cleaned. Sprinkle lime over the floor, and on the walls and perches. Plenty of lime properly used is an almost sure guarantee of good luck with poultry.

It is not well to feed the same feed all the time. A change once in a while often increases egg production. Where fowls run out and can get grass and bugs, a little grain, corn or wheat, or both, may be relied on to complete the ration. An occasional light feed of meat stuff is useful and profitable. Cracklings are good for that purpose.

If the fowls have to be kept in close quarters, keep their quarters clean and well-littered. Scatter their dry feed in the litter and give them every inducement to scratch. In such cases the fowls must have access to gravel or grit.

If you are not using movable perches, introduce them at once. That is, knock the perches loose and arrange so they will lie in place without being fastened. Then have two sets of perches. When one set is in use have the other set out doors in the weather. Change about twice a week. Good way to keep clear of mites.

Do not be in too great a hurry to take off chickens after they are hatched. Twenty-four hours is not too long for them to remain in the nest. A little finely crumbled corn bread is good for a first feed. Stale bread soaked in milk, squeezed out dry and finely crumbled, is also good.

A damp poultry house must not be tolerated at all. This is a matter that must be specially looked after during the rainy season.

We have to admit that a hen is a hen, but some hens are better than others, and it is just as well to have the best in poultry as in cattle, hogs or horses. Thin out the flocks, always keeping the best; it is wonderful what improvements may be made. It is a good plan to change roosters every year, always getting thoroughbreds.

An important matter is to keep clean water where the fowls can get to it at any time. Laying hens must have plenty of water.

Some of the most successful poultry raisers are no longer feeding wet feed. The "mash" is certainly going out. Dry feed exclusively is being used with the best of success. After all, it is much nearer to nature than the wet up feed.

THE HOUDAN

This is a French fowl and it is one with which we have never had any personal experience, but those who have raised them extensively speak of them as a very desirable variety.

The Houdans are not pretty, a brownish black, mottled with white and with feathered heads, but they are great layers of large, white eggs. The chicks are active little fellows, hardy and rapid growers. It is said they will gain a pound a month from the egg, so that at six months old they should weigh six pounds. They are said to mature earlier and to begin laying two months younger than the common American breeds. On the table they are tender and juicy. It is claimed that they are as active and as good foragers as the Leghorns, and as heavy as the Plymouth Rocks or Wyandottes and excel the best as layers.

Rhode Island Reds as rapidly becoming one of the most popular breeds in America—if indeed they have not already become *the* most popular. Virginia Poultry Farm, McGaheysville, Va., have eggs and stock to sell from prize winners. We have just had explained to us by W. A. Shook, proprietor, his method for selecting the laying hen and the best layer without using trap nests, etc. See ad. in Business Exchange.

BEST THREE VARIETIES OF WHEAT

Fultzo-Mediterranean Wheat

FULTZO-MEDITERRANEAN WHEAT

Showing SIDE and EDGE views of this grand variety.

This is a wheat that has taken the country by storm where introduced.

It is one of the earliest; unsurpassed for hardiness to stand hard winters and rarely equalled for yields. It easily surpasses such old standard sorts as Fultz, Mediterranean (these two are its parents) Gold Dust, Velvet Chaff, Fulcaster, Rudy, etc., by *10 to 20 Bushels per acre.* Understand, if you have been growing any of the aforesaid kinds and you will sow the Fultzo-Mediterranean this year side by side you will harvest 10 to 20 bushels more per acre of the new kind than the old ones next harvest. Thousands have done so this year. The straw grows only medium length, is very stiff, bears large square built heads like illustration. It does not lodge except under the most extraordinary and unusual circumstances. *We recommend it as without a peer for rich ground.* The chaff is white, heads smooth or beardless, grains large and firm, color red.

This wheat has established an enviable reputation from Kansas to Pennsylvania; Kentucky to Michigan. Its hardiness, earliness, productiveness and fine milling qualities adapt it to a very wide range of country and is a favorite with farmers and millers wherever grown. Originated in Illinois. Our seed is carefully grown, graded and cleaned and ready to drill when shipped.

PRICE: Small introductory lots by mail postpaid, 1 lb. 25c; 4 lbs. 75c. By freight or express at purchaser's expense, ¼ bu. 65c; 1 bu. $2.00; 2½ bu. (1 bag for 2 acres) $4.50; 5 bu. (2 bags for 4 acres) $8.50; 10 bu. (4 bags for 8 acres) $16.50; 25 bu. (10 bags for 20 acres) at $1.50 per bu. All bags furnished free.

We print below a few testimonials. If space permitted we could give many more. We do not give complete name and address because we would be advertising for the grower:

Sowed Fultzo-Mediterranean 1 bushel per acre. It stood winter perfectly and stooled well. It is as full a crop as anyone could wish. Wet spring,, fly or rust did not affect it in the least. It is admired by all who see it. Crop not harvested yet.—J. R. B., Essex Co., Ont., Canada.

I sowed the half-bushel of Fultzo-Mediterranean wheat in October, and it yielded 18 bushels. Our other wheat don't yield over 20 bushels per acre on the same field. Send me prices on your other wheat.—C. A. S., Stafford Co., Kan.

I sowed one bushel of Fultzo-Mediterranean wheat on one acre in a field with another kind sown two bushels to the acre. The stand of the F.-M. is good for 50 bushels. It is much earlier than other wheat and stands up better. The field is by the road and many people inquire as to what makes the difference.—Wm. T., Papeer Co., Mich.

Harvest King Wheat was far ahead of all other kinds in the neighborhood in every way. It yielded 50 bushels per acre while other wheat by the side of it yielded 10 to 12 bushels per acre. My wheat this spring is the finest in the neighborhood. Harvest King pleases me better than any other wheat I ever raised.—Wm. M., Clark Co., Ind.

I sowed 25 bushels of Farmer's Trust Wheat last fall. This wheat has proven to be a very superior variety. It came through the winter perfectly, and was not very seriously affected by the wet weather this spring. In spite of excess wet, drought, bugs, fly and rust, it has threshed out 27 bushels per acre, while other wheat makes from 5 to 15 bushels. I will try your wheat again.—B. W. R., Highland Co., O.

Harvest King Wheat

The way this noble variety of wheat holds in the esteem of wheat growers brings to mind the old Fultz wheat more than any other we can think of. Introduced nearly a dozen years ago, it retains its original vigor and continues to hold its place as the favorite on thousands of farms. The Harvest King Wheat is not a new variety and is now grown on a great many farms. There are, however, thousands of farms where it is not grown. These people should get it this year, also farmers who have been growing it for several years can profitably obtain new seed. This wheat is also a very hardy variety. Many times it has been known to make a good crop when less hardy sorts succumbed to the hard winters, droughts, rust, or other causes. It grows very vigorously, a great stooler, has good straw and well filled, long heads. Grain hard, color red, sought after by millers. The price is reasonable and farmers will not miss it if they sow liberally of Harvest King Wheat.

PRICE: By mail, 1 lb. 25c; 4 lbs. 75c. By freight or express ¼ bu. 65c; 1 bu. $2.00; 2½ bu. (1 bag for 2 acres) $4.50; 5 bu. (2 bags) $8.50; 10 bu. (4 bags) $16.50; 25 bu. (10 bags for 20 acres) or more at $1.50 per bu. All bags furnished free.

Harvest King.

Farmers Trust Wheat

If you want to grow bearded wheat and want the best, sow Farmer's Trust Wheat. You can trust it for a fine crop of the finest quality. It is the best variety of bearded wheat we know of. It is very hardy, a strong grower both in root and top, hangs to the ground in winter almost like rye, grows vigorously in the spring and stools out to make up for losses, if any, in winter. The straw is strong for a bearded wheat, heads large, grains large, long, hard; color, red. Ripens very early and is usually the first to be harvested, recommended highly.

PRICE: By mail postpaid, 1 lb. 25c; 4 lbs. 75c. By freight or express ¼ bu. 65c; 1 bu. $2.00; 2½ bu. (1 bag for 2 acres) $4.50; 5 bu. (2 bags for 4 acres) $8.50; 10 bu. (4 bags for 8 acres) $16.50; 25 bu. or more at $1.50 per bu. All bags free. Price subject to change of market.

How to Order

Send remittance with order or we will ship to responsible parties *payable on arrival* and subject to examination. Remit by money order or send cash in registered letter. Give full address including county and shipping station if different from postoffice. If you want to buy largely to sell again write for prices.

The O. K. Seed Store has been headquarters for best varieties of Winter Wheat for 25 years. We refer to our thousands of customers over the country; also by permission, to the Union National Bank of this city. Send us your order for wheat and harvest a big crop next year. Central location. Low freight rates. Prompt shipment. Circulars free.

O. K. SEED STORE

Dept. A, INDIANAPOLIS, INDIANA

Merchants and millers write for car load prices.

Harvest King Wheat for hardiness in winter is a world beater, and withstands great drought better than any kind I ever saw. From 2½ acres last year (a bad one) I threshed 82 bushels of 62 pounds per bushel. My Harvest King now looks fine and much better than any other kind.—J. R. G., Fayette Co., Ill.

The Harvest King is the king of the harvest field. My yield was 48½ bushels per acre. Nothing like it ever was seen about here before. I will sow all I raised. It's worth $5.00 a bushel for seed. —C. M. L., Allegheny Co., Pa.

The Farmer's Trust Wheat is twice as good as any other wheat sown here. It is the best bearded wheat I ever saw, and it stood the past severe winter better than any other. I consider it the finest variety. —E. C. C., Montgomery Co., Va.

FLOWER POST CARDS
Free to You

In order to introduce our large illustrated monthly, The Epitomist, which is of interest to every member of the family, we make this big offer to you.

Send 10c for a six months' trial subscription and we will send you, prepaid, twelve beautiful flower post cards absolutely FREE. These cards are strictly high-class and are something entirely new. Each card represents a scenic view and has THE LANGUAGE OF THE FLOWERS worked out most beautifully in mottoes in flower designs. For instance, in this series the violets spell out the words "Faithfulness;" the sweet peas, "Wish You Joy;" Chrysanthemums, "I Love You;" roses, "Love," etc. You won't be disappointed, for these cards are not like any you ever saw, and REMEMBER, we have a surprise for everyone that sends for these cards. There are only a limited number, so send today if you want them. THE EPITOMIST, 55 Main St., Spencer, Indiana.

The Pedigo Perfection Washer
The tubs are made of beft quality galvanized steel, put together with bolts, rivets and solder. The rub is made of hard maple. The side pieces, wringer bar and legs are of oak or other hard wood, nicely finished. All are firmly united by malleable castings and bolts. It makes the lightest, strongest and most durable washer on the market. Pay more for a fancy washer if you want to. Remember "perpetual motion" has not been discovered. Pedigo washers have no "nick-nacks" to get out of order. And the price is only $3.00. You can't beat it anywhere.
Cooner & Fortune Co., Indianapolis, Ind.

SHIFTING OF THE HOME

"God Bless our Home," the motto said,
And children lightly read the sign;
They passed the meaning by as vague,
With scarce a thought of The Divine.
But in the years not slow to come,
In turn, they prayed, "God Bless our Home."

THE HOME'S SUCCESSION

The children of today are the home makers of tomorrow. The rapidity of the change is almost bewildering. And yet it is no doubt wisely ordered. To the children the change comes slowly, and the way seems long. Only a brief space behind them the light, the things they know, fades into the dark eternity of the past. To them their parents and what those parents have seen and known, seem to reach back into the unknowable distance. The home itself is to them a fixture, and appears a part of the original creation because it reaches so far back that they cannot see its beginning any more than they can see the beginning of the hills; and so far as they can realize, it is to reach out into the future so far that its ending need not be considered. The home's realities and responsibilities, as the children see them, are matters of course, parts of the natural order of things, things that come and go as the winds and plants and flowers do, and merit for themselves scarce a passing thought.

But to the parents it is all different. They know when the home began, and however far advanced in life they may be, the beginning seems but a short step behind them. The longings that were theirs, the hopes that clustered around them, the sweet dreams from which they have yet scarcely awakened, all gather in the few brief years that a single step seems broad enough to cover. Since the beginning of their home, it is true, events have crowded into their lives so rapidly that they know the ending lies only another short step ahead, and they see if they do not mention the approaching inevitable. Consequently everything done by them has a purpose and every event a significance that means much to them, but that the children cannot see.

But beyond the little space on which the light of their own lives glimmers, the parents are still but children. The old home back there is an eternity that to them has no beginning. In the faint glare of memory's lamp they see the pictures, joyous, sweet, and sad, but those pictures finally stretch away beyond the light where darkness reigns; but the old home, the unseen days of it, remains there still. Thus since Adam opened his eyes on the beauties of Eden, homes have followed each other in rapid succession, the light of but a moment shining in each, quickly to dissolve in the eternity of the past and the eternity of the future.

How quickly the years chase each other away, and before life's dream is finished the children of one home have gone out to establish another—one by one to repeat the same experiences, to look back with eyes that shorten distances and forward with hopes in which roses bud and bloom, but that reveal the end, not where nor when, but lurking somewhere in the shadows not very far away.

Ella Wheeler Wilcox, in the similitude of a railway with its rushing trains, tells the same story in beautiful verse, which we know Our Up-to-Date People will enjoy reading:

As we speed out of youth's sunny station,
The track seems to shine in the light,
But it suddenly shoots over chasms
Or sinks into tunnels of night.
And the hearts that were brave in the morning
Are filled with repining and fears
As they pause at the City of Sorrow,
Or pass through the Valley of Tears.

But the road of this perilous journey
The hand of the Master has made;
With all its discomforts and dangers,
We need not be sad or afraid.
Paths lead from light into darkness,
Ways plunging from gloom to despair,
Wind out through the tunnels of midnight
To fields that are blooming and fair.

Though the rocks and the shadows surround us,
Though we catch not one gleam of the day,
Above us fair cities are laughing,
And dipping white feet in the bay.
And always eternal, forever,
Down over the hills in the west,
The last final end of our journey,
There lies the Great Station of Rest.

'Tis the Grand Central point of the railways,
All roads unite here when they end;
'Tis the final resort of all tourists,
All rival lines meet here and blend;
All tickets, all mile-books, all passes,
If stolen or begged for or bought
On whatever road or division,
Will bring you at last to this spot.

If you pause at the City of Trouble,
Or wait in the Valley of Tears,
Be patient, the train will move onward,
And rush down the track of the years.
Whatever the place is you seek for,
Whatever your game or your quest,
You shall come at the last with rejoicing
To the beautiful City of Rest.

You shall store all your baggage of worries,
You shall feel perfect ease in this realm,
You shall sail with old friends on fair waters,
With Joy and Delight at the helm.
You shall wander in cool, fragrant gardens
With those who have loved you the best,
And the hopes that were lost in life's journey
You shall find in the City of Rest.

But the narrow gleam of human li need not be a source of worry or disappointment. There is much tim in which to do good, and when the rec ord of human achievement is opene and all is seen in the glorious light o accomplishment, it will be seen that the big things in our history are not all that the angel scribes have written down., for—

Little drops of water,
Little grains of sand,
Make the mighty ocean
And the miles of solid land.

He or she, man or woman, or boy or girl, that does even a little thing for the sake of doing good, is helping to fill the great ocean of usefulness and to build the broad earth of life's achievements. Besides we know that though our own lives seem short, and our opportunities perhaps limited, yet—

In the dim hereafter,
Reckoning with the years,
Time you spent in laughter,
Time you lost in tears,
Will be saved by others,
In the same old fields and streams,
Living the same life over,
And dreaming the same sweet dreams.

—Here, then, is as good a thing as we and Our Up-to-Date People can know and practice; it is that—

"The inner side of every cloud
Is bright and shining;
Therefore, turn your clouds about
And always wear them inside out
To show their silver lining."

HEADACHE

The most universal suffering perhaps is from headache. There are many kinds of headache, the result of many different causes, but all, or nearly all, may be classed as symptoms of some other physical disturbance. One hears more said of sick-headache, nervous-headache, and billious-headache tha of any other, and what will cure o prevent these will relieve much of th suffering people endure from head ache.

In fact all these forms of headache, as people suffer them, may be traced to disturbances of the stomach brought

"Children Teething"
Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

Get Trusted for This Washer

WE will trust any responsible party for a 1900 Gravity Washer. We will ship you the washer and prepay freight. Take our washer and use it a full month.

Wash your finest linens and laces. Wash your heaviest quilts and blankets.

And—if you don't find that our washer saves your time, strength and health—that it saves wear and tear on your clothes, saves mending and saves money—don't keep it. Tell us you don't want the washer and that settles the matter.

You don't take any risk because you don't send us any money in advance—nor do you send us any money after the month's FREE trial, unless you decide to keep the washer. If you wish to keep the washer—if you see how it will save enough to pay for itself in a short time—then send us each week or month part of what the washer saves for you.

We make this offer because we know our 1900 Gravity Washers are far and away better than those made by any other concern. We are willing to prove this, so we offer to send you a 1900 Gravity Washer and let you see for yourself all it saves. Thus our 1900 Gravity Washers sell themselves.

Then—if you send us part of what the washer saves until it is paid for, the washer really pays for itself.

In just a short time it is all paid for and, after that, the washer is yours and all it saves is yours.

Our washers are the only washers that sell, and pay for, themselves.

Don't waste your time and money with cheap washers that wear out clothes faster than they wash them.

Give the 1900 Gravity Washer a chance to prove to you what a comfort a washer can be.

Our new Washer Book tells all about our washers and shows how they work.

Your name and address on a post card mailed to us today brings the book by return mail, postpaid.

Write us now. Address—

P & O POTATO DIGGER

One of the Most Useful of All Farm Implements.

You need the P. & O. Potato Digger not only as a matter of **economy**, but for **results.** The potato digging season comes when help is scarce and expensive, at a time when they leave the farm for the winter's work in the towns. Then is when you need labor-saving implements. At such times the **P. & O. Potato Digger**, on a fair-sized potato patch,

Will Pay for Itself In a Single Day.

One man with a team and this Digger will plow up **more potatoes** than a **dozen men with hoes,** and do it better, cleaner and more thoroughly. As this digger plows deep, it goes **right under the hill,** and turns up all the potatoes **without cutting, bruising or loss.**

The **truck** in front is adjustable either way, and holds the digger in line. The **revolving fender** prevents vines from clogging the beam. The **shaker** under the grate causes a continuous vibration that thoroughly sifts the potatoes from the soil, leaving them all exposed on the surface. The **runners** under the shaker carry the digger along evenly and smoothly, and prevents the jerking so common on other diggers, and makes them so hard to control. The P. & O. Potato Digger is the only one made with these runners. And last but not least, it is strong enough to **last a lifetime.**

It is a **low-priced** digger within the reach of every farmer, and you cannot afford to be without one. Now is the time to see about it. Ask you dealer for the **P. & O. Potato Digger,** and **insist on getting it.**

Write for **Beautifully Illustrated Pamphlet No. 41,** of interest to every farmer and a **P. & O. Catalog,** which will be **Mailed Free.**

Do you know the "Language of the Flowers?" If you will send 10c for a six months' trial subscription to our large paper, The Epitomist, we will send to you, free, a set of twelve beautiful flower post cards. Each is different and represents the natural colors of the flowers and every card has the language of the flowers, portrayed in verse. These cards are strictly HIGH-CLASS and are not like any you have seen, for they are entirely new.

Write today and we will lose no time in sending them to you. Ask about the surprise which we are sure will interest you. We have only a limited supply of these beautiful cards, so send today if you want them. Address The Epitomist, 44 Main St., Spencer, Ind.

about by wrong eating, aver-eating, or eating improper food, and leading to indigestion, disturbances of the alimentary canal, and constipation. The remedy is a simple one, but human persistence and recklessness, thoughless little risks in eating and in other things, the feeling that one bite more, or just a little of this or that, won't hurt, makes the remedy difficult to apply. It is merely to quit abusing the stomach; don't eat or drink what you have learned does not agree with you, no matter what the temptation, and do not eat too much no matter how strong the longing for more. We all enjoy and like to eat what tastes good, and what we seem to hunger for, but the thing that merely gratifies the taste, imposes work upon the stomach, and that patient servant sometimes rebels—never when not abused, and it sometimes uncomplainingly bears more abuse than any servant ought to be asked to bear.

These atacks are more likely to come on after some excitement—the excitement of travel, of being in company, or of some special wrong. The excitement is not the cause of the headache; some undigested substance taken into the stomach is the cause, and the excitement withdraws some of its helpers from that organ, and it was compelled to throw up its job, if not the thing that imposed upon it too great a task. Keep the bowels healthy and regularly performing their functions. Don't neglect this if you expect to be well. Whenever necessary, use a gentle laxative that will stimulate but not irritate these delicate organs, and not only the headaches, but other annoying, sometimes dangerous symptoms will disappear.

MID-SUMMER'S TRIALS

In the mid-summer season a good stock of patience and philosophy is necessary. In the heat and depression of summer the vitality becomes low, the system is depressed, its power of resistance impaired, and disease germs multiplied. It is harder to keep well in summer, especially during July and August, than any other time of the year. Much depends upon the diet. Less of meats should be eaten, and fruits and vegetables should be given the place of honor at all the meals. Milk and eggs, though not always a favorite, is almost always a good element of food for invalids. It may be taken cold, slightly warm, or even hot, as it best agrees with the patient. It is a good plan to rinse the mouth with water before and after taking milk, as the milk frequently leaves a taste in the mouth which sets the patient against the milk as food. Some cannot bear the milk and eggs beaten together. For such beat a little white of egg in the milk at the beginning, gradually incrasing the quantity, and soon a little, and then more, of the yolk may be added.

The utmost cleanliness should be observed in hot weather. Germs propagate slowly where the air is pure and everything clean. Take frequent baths, and do not allow the stomach to become loaded or foul. See to it that the bowels are regular. If there is any trouble or unpleasant feeling after eating, some sort of change is necessary. Either too much or improper food is being taken. Find out the cause and avoid it. The secret of health, especially in summer, is careful eating of proper food only, scrupulous cleanliness of person and surroundings, pure air and reasonable exercise. Of the latter there is little danger that there will not be enough in the home on the farm.

QUEER TREATMENT

The turkey is a funny bird
For everybody knows
That when we "dress" we undress him;—
That is take off his clothes.

And then he must be dressed again
And all sewed up, or tied,—
How odd! For now the "dressing" is
All put on his inside!

Harper's Magazine for July is brim full of good articles and interesting stories. For nearly six years it has been one of the leading magazines. For sale by all news dealers.

THE MIRROR

Some people are inclined to laugh at women and girls for their frequent resort to the mirror. We are not. Every woman and girl owes it to her sex and her friends to appear well, and since no one likes to be reminded of a personal fault or a fault in dress or appearance even by her closest friends, the silent but truth telling mirror must be the informant. And no one else's eyes tell a story that will be so quickly heeded as the person's own, and since her eyes can speak only through a mirror, let there be in the home a good large mirror, and do not upbraid the ladies for using it, not to see their faces only, but to note the set of their clothing, and everything connected with their personal apeparance.

BEAUTIFUL HAIR

Everybody, male and female, admires beautiful hair, but few have it. Hair is a delicate growth, and yields readily to treatment, good or bad. Few innocent things are worse abused than the hair. If the hair be neglected it will promptly show the neglect. If it receive rough treatment, it will be rough. If treated gently, carefully and sensibly, it will respond with a soft glossiness, a brightness and life that seems to say "Thank you" whenever it is touched.

In combing their hair, ladies should commence near the tips, carefully straightening the tangles, and setting the comb about an inch farther up each time. In this way not a hair need be broken or frayed, and not a hair root need be enfeebled by being strained. In combing and brushing the hair slowness is commendable. Take your time. Brush as gently as you comb. Keep the scalp clean by frequent washings in soft water, warm or cold as preferred. Any good toilet soap may be used. If soap is used wash the soap out well. Dry quickly and thoroughly. If the hair is thick or heavy, hold well apart until it is dried. Do not be too free in the use of hair tonics; you may be as often injured as benefited by them. A little quinine mixed in vaseline and the scalp annointed therewith, will remove dandruff, and is also good to stop hair from falling. Bad health, of course, will be reflected in the hair.

The above facts and treatment applies to gentlemen's hair as well as to ladies'; and we may say in addition that ladies make a mistake when they pile their hair in a great mass on the top of their heads and allow it to remain there for any great length of time, especially in hot weather. A free circulation of air through the hair and between the hair and scalp, is very important both to the hair and to the scalp.

Ten Things a Tubular Surely Does

1—Runs daily for months and months without a hitch. One man writes that in three years he paid out 40 cents for repairs.
2—It skims so clean we guarantee it to leave only one-half of that left by any other machine.
3—It turns easily requiring one-half the power needed by other machines.
4—It will run one-half longer without clogging than any other machine.
5—It delivers one-half less froth in cream than any other separator.
6—Needs only a tablespoonful of oil twice a week.
7—It requires little attention from the operator because every part is thoroughly tested and inspected by experts at our factory before shipping.
8—It requires one-tenth the time in washing required by any other separator.
9—The receiving can is lowest of them all and most convenient to clean and adjust.
10—A Tubular causes you no worry, fuss or muss. It is just a tried and true workman that is always on time; always sober.

If you own 8 to 10 cows a separator will pay for itself in a year from the cream saved. Send for catalog No. 136 from Sharples Separator Co., W. Chester, Pa.

According to Judge's Library two Irishmen were eating their lunch when one asked the other, "Pat, an' what be you thinking about?"

Pat replied, "Shure, Mike, I was a-thinking how I would be getting me clothes over me wings when I would get to heaven."

"You would better be thinking how you would be getting you hat over your horns when you get to the other place," answered Mike.

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

Apr. '08 **If this date is on you wrapper you will not receive another copy of Up-to-Date Farming unless you renew NOW. Renewal rate 50 cents to any subscriber. Send in to-day.**

National Annual Convention, Oct. 19, 1908, at Indianapolis.

Keep it in mind and arrange to attend it if you believe the true plan of the A. S. of E. is the only way to solve farmers' serious problems.

Enough time has been given to preliminaries and experiments. It is now time to establish the society on the only correct plan, which is the original plan and on which the society developed and grew in power every week.

Winter wheat harvest is over now for threshing, and—

We almost said "marketing," but we will say controlling of the crop. Cash wheat is selling for about 20 cents a bushel lower at country points than it should.

$20.00 a hundred bushels. There are many things you could buy if you had this extra money on your crop.

It may not be too late yet to build that granary if not already provided.

And while we think of it, has your local provided storage for the potato and apple crops?

All that need prevent farmers from getting profitable prices are lack of storage room and the determination to use them.

Keep the visible supply low. If you do this prices may rule low while the dumpers are unloading, but as soon as this is over and the demand must have the control portion, prices must advance to the agreed minimum.

Tell us what the grain growers generally do and we will tell you what the price will be. We believe very few wheat growers will sell at less than $1.00 on basis of Chicago market. If we are correct the price must advance to that figure.

When you need something advertised in the columns of UP-TO-DATE, buy from our advertisers, and when you buy from them and say you read UP-TO-DATE. It will pay all around.

Somebody who enjoyed a special privilege or profited by the defenseless condition of farmers once said "it will never do to let UP-TO-DATE FARMING have a million or more subscribers, why," he said, "it would be so powerful that it could dictate the policies of the government."

Our readers know that if this paper dictated to congress, all would be in the interest of the masses and Equity for all. Knowing this to be true, can it have too large a circulation or be too powerful? Don't the masses need a paper to do these very things and can any paper do them except it has a very large circulation?

Renew your subscription for UP-TO-DATE promptly. Watch the address on your wrapper and don't let the time slip by.

Who ever knew of a bushel of wheat going to waste because there was no demand for it? And it will go into consumption at $1.00 a bushel just as quickly as at 85 cents or a lower price. If it were not for the demand it would not be wanted at any price.

The biggest crops are usually raised by the newspapers before harvest. This is true with grain, cotton, livestock, etc.. When the panicky dumper has unloaded, the size of the crops begin to shrink to help the elevator interests and incidentally the farmer who held shares in the improved prices.

Mr. J. T. Gentry, of Northville, Ky., was a recent caller at headquarters and reported the 1908 Burley tobacco cut out completely—"not a plant bed in the County," he said. Two and a half million pounds are in the pool in the County and tobacco selling at the pool houses every day at Equity prices. This is the way grain growers, and producers of other crops could talk if they make the pools on the simple plan successful—minus the cutting out part.

Of tobacco, the buyers had a large supply ahead—visible supply—enough to last a year or more. But this is not the case with any other crop. If tobacco growers were so completely successful, why can not all other producers win.

KEEP ONE DOLLAR WHEAT BEFORE YOU

Yes, sons of the soil, who plow and who sow;
Who toil from gray morn till the sun has sunk low;
Whose labor yields riches yourselves never know;
Keep one dollar wheat before you.

Ye long have been faithful of heart and of land;
Ye have fed many millions, from strand unto strand;
And for fruit of your labor still grows the demand;
Keep one dollar wheat before you.

Both "live and let live!" though millions are fed;
By the sweat of your brow, shall ye bow your proud head,
To be crushed to the earth 'neath the rich gambler's tread?
Keep one dollar wheat before you.

All others who work in world's turmoil
Name the price to be paid for the fruits of their toil;
Ye, too, are free men; Ye sons of toil
Keep one dollar wheat before you.

For sake of the woman you won for your bride,
Who has faithfully loved you and toiled by your side;
For the sake of the children your joy and your pride
Keep one dollar wheat before you.

Let this be your motto: "United we stand,"
And with hands clasped together a true, loyal band,
Let all stand as one for the right you demand;
Keep one dollar wheat before you.

—Selected from "Songs of Equity."

Thrifty Farmers are invited to settle in the STATE OF MARYLAND where they will find a delightful and healthful climate, first-class markets for their products and plenty of land at reasonable prices. Maps and descriptive phamplets will be sent free upon application to STATE BOARD OF IMMIGRATION, Baltimore, Md.

THE FARMERS' POOLS

(Continued from page 2)

89 compared with 95 the preceding month. The report was issued 15 minutes before the close of the session of the Chicago board of trade and the market closed nearly two cents above the low point of the day. Another bullish factor was the government's estimate that only 33,799,000 bushels of old wheat in farmers' hands against 54,000,000 a year ago. Considering the great difference in the visible supply and in farmers' hands compared to a year ago, the farmers' position, with practically all the 1908 crop yet in his hands, is very strong indeed. They hold all the trump cards but will they play them to win dollar wheat?

MICHIGAN LADIES SOCIETY OF EQUITY

Officers—President, Mrs. James Howey, E. Jordon; vice-president, Mrs. C. A. Masten, Sherwood; secretary, Miss Julia Ball, Hamburg; treasurer, Mrs. Matthew Hamilton, Williamsburg.

A GOOD CAUSE

A few hours, once in two weeks, spent in pleasant association with farmers' wives and daughters helps them to bear the burden of this life with lighter hearts and willing hand. "A man works from sun to sun, but a wife's work is never done." She is as faithful to her home and the interests of her family as were the poor slaves to their masters. The M. L. S. of E. is a good cause and good work is being done. Husbands are invited to accompany their wives and learn the doings of the society.—A Friend.

GOLDEN ROD LOCAL MEETING

The Equity ladies spent a very pleasant afternoon at the home of Sister Hackett. Meeting called to order at three o'clock, Sister Laura acting as president in the absence of Sister Lanway. Prayer by Rev. Hackett. By-laws read; singing by Mesdames Shepard and Murray; meeting was conducted in usual form, various topics discussed for the good of the order; question box opened and questions read and answered with much interest to all. The mail order problem was discussed. Next came Bible reading from the book of Matthew. Brother Hackett gave a short talk to the ladies on their work, which he heartily approves of, and his were encouraging words. "Don't let us ever get discouraged and falter by the way, for the Lord will help us if we only watch and pray." Equity song, then a discussion on ways of helping the society. A little help in our charity work will be greatly appreciated. Closing song, "We are Nearer Home Today," sung in sympathy with our Sister Kidder in her sudden bereavement in the death of her son Clarence. He will be greatly missed by many loving friends and by young associates of his boyhood days. Meeting closed with prayer by Rev. Hackett. Adjourned to meet with Sister Matthews June 24. Let all members be present and visitors are always welcome. We missed Sister Ross from our circle on account of illness. She is a willing helper and ever ready to do her part. May we all feel it not only a duty but a privilege to meet once in two weeks. After the meeting closed we were conducted to the pleasant dining room and ten members were seated at the table loaded with good things prepared by our kind hostess who is not a stranger at entertaining company. We each returned to our homes with the bright anticipation of another pleasant meeting.

TRIBUTE TO A DEPARTED ONE

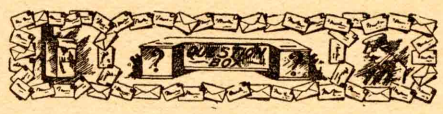
The Michigan Ladies Society of Equity has again been called on to sympathize with the mourning ones. This time is has been with our esteemed county vice-president, Mrs. Frank Kidder, in the sudden death of her son Clarence. Words fail us and seem as nothing in the overwhelming sorrow of this mother, the affection existing between her and her son being very strong. To Clarence was given a bright and happy disposition and he believed in saying the good things while we live. So his mother now has and will ever have the memory of his kind words and caresses as he would say, "Oh mother I am proud of you," or again, "you are the very best mother a boy ever had." These are a few of the words of "Dick" and as his mother says, we can never know the place that is left vacant in that home. Oft times in our meetings we have felt almost inspired as we heard her talk and say, "Oh mothers, talk to your boys, you can do so much good, and although they wander off sometimes, yet they will remember a mother's words." This is now a comfort to Sister Kidder that she did not fail in her duty. We know not the thoughts of this dear boy as he stepped out so suddenly from the door of this life to another. Loads of the most beautiful flowers were carried to this home as a testimony of sympathy and respect. Fifty-six teams and between two and three hundred people followed the remains to their resting place. Many of the Equity Sisters followed bearing ferns and roses, circling the grave and strewing roses on the casket.

Behold a sister in despair,
A sister of our own;
A heart that once was happy,
Now in grief we see;
We will stand by thee, dear sister,
Sad heart, we weep with thee.

To thee we give the loving hand,
A hand sincere and true;
Then cheer, sad heart, don't lose all hope
For we all weep with you.

Our prayers we give for thee sad heart,
In sorrow you are bowed;
Still do not think you weep alone,
Sad heart, we weep with you.

—*President M. L. S. of E.*



This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

QUESTION: *Please instruct us about sending a delegate to the national convention. (1) Our county is not organized, then are we entitled to a delegate from our local union? (2) Will the expenses be paid by the national union or must it be paid by the local? (3) When will the convention begin?—R. H. S.., ———, Minn.*

ANSWER: (1) You are entitled to one delegate from your local union. (2) By the local union. (3) October 19th, 1908.

WITH UP-TO-DATE'S PUBLISHER

Ambition! Was anything really great accomplished without ambition? The boy or girl who are ambitious in little things make the men and women who are ambitious to accomplish great things and accomplish them. In every community is an opportunity for the ambitious boys, and girls too, to "do something;" to make some money. One of the ways is to get subscriptions for this paper. See terms elsewhere.

Our advertisers! We take care to admit only reliable ones to our columns, and, as much of the success of this paper in helping farmers depends on the patronage of our advertisers, each reader owes it to himself and the paper to buy of the advertisers whenever possible. As a favor and help to us, please always mention UP-TO-DATE when writing advertisers.

If a renewal blank is enclosed in this paper it is to inform you that your subscription has expired and is also an invitation that you renew promptly.

The mails are very reliable. Letters seldom go astray and very rarely are they lost or stolen. If it is not convenient to buy a money order, cash in small amounts may be carefully enclosed in a letter and mailed at our risk. If silver is sent it must be wrapped in card board or paper or cloth.

It will help us very much if you send that part of your paper wrapper containing the address when renewing.

If the square to the left is marked with a "X," it is to inform the subscriber that his subscription expired with the last issue before this and should be renewed at once to insure receiving this paper without interruption. The renewal price is 50 cents, which pays for one year. We will gladly accept $1.00 for four subscriptions of which yours may be one, the other three new ones. A renewal blank is sent in this paper.

If the square to the right is marked with an "X", it is to remind you that your subscription has expired and remains unrenewed although you have been already notified. We don't want to lose a single subscriber, hence this second notice, and hope now to receive your renewal at once. See terms for a club in notice above.

If your renewal is not received in ten days we will assume that this mark escaped your notice and we will then send you a *personal* letter. We hope now to receive your renewal and make the letter unnecessary. A renewal blank is sent in this paper.

The Mead Cycle Co., Dept. P80, Chicago, want rider agents in every locality in the country. You can get your own wheel practically free. This is the largest house of its kind in the U. S. Send for catalog and information.

TEN KARAT ROLLED GOLD BRIDGE Spectacles GIVEN AWAY!

This Offer is Also Extended to All Who Have Ever Written Me Before.

Spectacle-Wearers! Listen!

The following very remarkable letter was sent me, unsolicited, by Dr. G. W. Smith, the County Health Officer of Ottawa County, and one of the most prominent physicians in the State of Kansas. Read his exact words:

MY DEAR DR. HAUX:

If anyone were to offer me fifty dollars spot cash for the pair of Perfect Vision Spectacles which you fitted to my eyes by mail, I would absolutely refuse to accept it—if I knew positively I could not get another pair like them. Your Spectacles are certainly wonderful.

(Signed), Dr. G. W. Smith

Now I would like to get this kind of a testimonial from you, too—and that is the reason why I am making a very special, extraordinary, but honest proposition, whereby you can (for a short time only) obtain a handsome, perfect-fitting pair of Dr. Haux Perfect Vision ten karat ROLLED GOLD BRIDGE Spectacles without one cent of cost.

Don't Send Me One Penny

Just write me your name and address and I will mail you at once my Free Home Eye Tester and full particulars how to obtain a pair of my handsome ten karat ROLLED GOLD BRIDGE Spectacles without one cent of cost.

You see, I want to prove to every spectacle-wearer on earth that the Dr. Haux famous Perfect Vision Spectacles are really and truly ever so much better than any you have ever worn before—and I am going to give away at least one-hundred-thousand pairs of the Dr. Haux famous Perfect Vision ten karat ROLLED GOLD BRIDGE Spectacles in the next few weeks, in order to introduce my wonderful glasses to the largest number of spectacle-wearers in the shortest possible time.

These famous Perfect Vision Spectacles of mine will enable the very weakest eyes to see to thread the finest needle and read the smallest print, both day and night, just as well as you ever did before—and this even if your eyes are so very weak now that you cannot see the largest print in this paper.

I hereby also agree to cheerfully return you even the postage-stamp you use in answering this announcement, if you yourself don't find my wonderful glasses more perfect, clearer and better than any you have ever worn before, and you yourself are to be the sole judge. Can anything be fairer?

Write today for my Free Home Eye Tester and ten karat ROLLED GOLD BRIDGE Spectacle offer. Address:—

DR. HAUX SPECTACLE CO., Room 203, Haux Building, St. Louis, Mo.

I ALSO WANT A FEW AGENTS

And any man or woman not earning at least $50.00 weekly should ask for my SPECIAL AGENT'S TERMS at once.

NOTE.—The Above is the Largest Mail Order Spectacle House in the World, and Perfectly Reliable.

$200.00 SAVED!

If You Buy a Baldwin County Farm Now

Price Advances $5 Per Acre Aug. 1st.

There will be further Advances in Price

BALDWIN COUNTY farms have long been worth more money than we have asked for them. We have been doing much improving in a general way of benefit to the community. We have demonstrated that shade grown tobacco can be grown here as well as at Quincy, Florida. Experts say our land is better for it. Our own experiments are proving this. The article from the Onlooker printed in this advertisement gives the result of the test.

It is up to the reader of this advertisement to come in now for a farm while the price is still $20 an acre for a few days only. Some who have held back now have an opportunity to buy at the the present price before the advance. After August 1st the price will be $25.00 an acre—and worth more. Buy a farm of 40 acres now and save $200. Buy more and save more. Consider well, reader, and investigate Baldwin Co. It is well worth investing in this land of opportunity.

From "The Onlooker"

TOBACCO

Proves Successful

ON ROBERTSDALE EXPERIMENTAL FARM

WILL BEGIN HARVESTING IN ABOUT 30 DAYS, EXPECT 1,800 POUNDS PER ACRE

Robertsdale, Ala.—Baldwin county has now proved itself to be the future home of the shade and sun grown tobacco, especially the Florida Cuban and the Sumatra wrapper grades which are the most profitable varieties. A visit last week to the experimental tobacco farm of the Southern Plantation Development Company, near Robertsdale has most effectively proven to the writer that Baldwin county will become one of the finest and most productive sections of the "Sunny South" for the raising of the fragrant weed. Although the above Company only planted a small tract for the experiment, it is proving very successful under the care and superintendance of Mr. Berryman who is an expert tobacco grower from the Quincy, Florida, district and who has done nothing but raise tobacco all his life and to whose credit is due the success of the wonderful crop he is raising. Although the plants were only planted one month ago they are in splendid condition, most of the leaves measuring twenty-six inches across and of the finest grade. Mr. Berryman says that in all his experience he has never seen so many good leaves to the stalk and he is now assured of a most successful harvest which he will commence to gather in about thirty days. He estimates that his crop will average about 1800 pounds to the acre and of the finest texture, and which under his careful handling will no doubt bring high prices in the tobacco market and prove to all that Baldwin county is the new home for the growing of the shade and sun grown tobaccos. Mr. Glendinning the company's representative at Robertsdale reports that although there is a large tract of tobacco land east of Robertsdale it is being taken up quite rapidly by the homeseekers that are coming in who know a good thing when they see it, he also states that his company is making preparations for the growing of a large tract of shade tobacco next season as this experiment has proven to their satisfaction that tobacco growing in Baldwin county is a money maker.

Tobacco is one of the greatest money-making crops grown by farmers. Shade grown tobacco is of very fine texture. It is used for wrappers and where only the finest kinds of tobacco are needed. To grow it requires a certain climate and a peculiar soil. Around Quincy, Florida, the shade grown tobacco industry has assumed large proportions—a few years ago the land was selling for a few dolars an acre. Today this land produces from $500 to $2,000 an acre when planted in tobacco. When for sale the price is from $125 to $150 per acre.

We offer you just such an opportunity as was given the Florida people. Land now selling at $20 an acre and will advance to hundreds. We have already proved that we have as good or better soil than the Florida district for shade tobacco. This is your opportunity.

Tobacco under shade on our land in Baldwin county, 31 days after planting.

Last year shade grown tobacco sold for from 95c to $1.60 per lb. With from 1000 to 2000 pounds to the acre you can figure what this means. The demand is increasing faster than new land is becoming available.

Sun grown tobacco also grows abundantly and makes money for the planters. An illustration on this page shows a crop 29 days after planting.

Tobacco is only one of our crops. Besides this Baldwin county is adapted to General Farming, Stock Raising, Poultry, Fruit, Trucking, etc., etc.

Look at a map and calculate the distance of principal markets from Baldwin county as compared to California. Baldwin county is a thousand miles nearer—besides it has the additional advantages of water rates for transportation. Baldwin county has the advantage in freight and time over California.

The rainfall is plentiful and well distributed. The opportunities for making money by intelligent farming are no better anywhere else in the country, I know this. I have investigated the claims of every section and I say to you Baldwin county leads in advantages.

The delightful climate of Baldwin county makes it a winter resort par excellence. The cooling breezes of the Gulf of Mexico keep it cool in summer. Its bays and rivers afford fishing, oysters and water fowl in abundance. No place in the country is more healthful. The coast line of Baldwin county is longer than that of ony other county in the country. It is often called "The State of Baldwin."

The water is very pure on our lands. Many flowing springs. It is bottled and sent to Chicago because of its great purity.

Money crops mature practically every month. Work goes forward all the year. Livestock and Poultry raising are especially favored industries. The climate and soil are well adapted to general farming.

I want every reader of UP-TO-DATE FARMING to investigate our property. If you want to change location you should go to Baldwin county, where climate, soil and natural advantages co-operate to benefit the farmer.

In farms of 40 acres or more land is selling now at $20 per acre and as stated advances August first to $25. On 40 acres the wise man saves $200 by purchasing now. We sell for as little as $2.50 per acre cash or $100 down for 40 acres. Balance as low as 20 cents per acre a month. No interest on deferred payments. A liberal discount if all cash is paid.

We agree if land is half paid for and purchaser dies to deed it to his heirs without further payment. This is better than life insurance.

Evansville, June 22, 1908.
MR C. H. LEE,
Chicago.

My wife and I have returned from the excursion to Baldwin County and I think it is my duty to drop you a few lines. We find the land all right. It is the first time in my life that I saw such crops of cucumbers, tomatoes, and egg-plant, and the corn tasseled out by June first. Here, the farmers don't get done planting by June 15th. The second crop of corn was knee high on the same ground where they raised a crop of potatoes. Your Cuban and Sumatra tobacco looks as fine as I ever have seen, and I think it will surely be a success.

Another thing I must say, that you never misrepresented anything. I found everything the way you told us and I believe no one will make a mistake by buying there. Mr. Bosch, Mr. Oglesbe and we will move there in November. We have each purchased farms.

Your friend,
THEODORE DENSTORFF,
2207 Fulton St., Evansville, Ind.

I do not ask any one to buy without investigating. I go down on the excursions the first and third Tuesday of each month. Go along with me and look at what we have. If you purchase 40 acres or more we refund your railroad fare up to $30, the round trip from Chicago. Write to me that you will go down. Send for maps and full information.

MAIL ORDERS. There are some who will not find it convenient to go down now and look at farms. These may reserve location subject to change to any unsold farm later. I will select a farm for you using my best judgment as to what will suit you, if you will give me an idea of what you want. Do not miss the opportunity to get in on this at $20 an acre. Send order for a farm before the advance takes place. I will select a farm for you as carefully as if it were my own. Try it and change later if you want to.

Tobacco grown in the sun on our land in Baldwin county, 29 days after planting.

Don't delay in securing a farm in Baldwin county for either a home or investment and do it at once before the price advances.

Yours for health, wealth and happiness in Baldwin county,

C. H. LEE

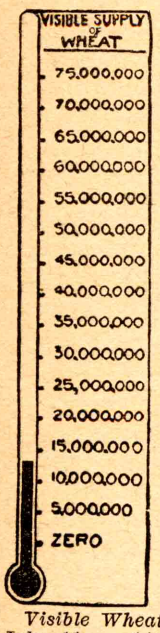
"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

THE FARMERS' POOLS

Notwithstanding the season has arrived when the visible supply of wheat has heretofore usually increased, having increased nearly two million bushels between the dates June 29 and July 13, 1907, it shows a further decrease each week. The visible supply is now only 14,231,000 bushels. As there are about 2,200,000 farms in the country growing wheat, it represents an average of about 6 bushels per farm. Or, if it had been possible to market less wheat in the last two weeks, than was marketed, to represent 6 bushels for each farm producing wheat, the visible supply would have been wiped out entirely. But we don't claim this is necessary. Wheat growers are doing very well. They are preventing the visible from increasing at a time when it usually does increase, and this is a great victory. Our advices are that farmers are holding. They evidently have their minds set on dollar wheat and if enough of them have, they will get it.



Visible Wheat Supply

July 11,	14,231,000 bu.
July 4,	14,361,000 bu.
June 27,	15,501,000 bu.
June 20,	17,533,000 bu.
June 13,	19,232,000 bu.
June 6,	21,718,000 bu.
May 30,	22,820,000 bu.
May 16,	25,444,000 bu.
May 9,	26,979,000 bu.
May 2,	28,344,000 bu.
April 25,	30,968,000 bu
April 18,	30,528,000 bu.
July 13,'07,	48,577,000 bu.

The price of wheat has also been well maintained. The cash price at Chicago on July 22 being for No. 2 red 91¼c@92c. Two weeks ago was 90c@91½c. Futures were on July 22: July 90c; Sept. 90⅜c; Dec. 91⅞c; May 96¼c. Cash corn, 76½c. Oats 57c.

Cash quotations on July 22 in other leading markets were as follows:

KANSAS CITY—Wheat, No. 2 hard, 88c @89c; No. 2 red, 88½@89c; corn, 77c@82c; oats, 54c@56c.

ST. LOUIS—Wheat, 91c@92c; corn 78c @78½c; oats, 54c@58c.

INDIANAPOLIS—Wheat, 84¼c@89¼c; wagon wheat, 86c; corn 80c; oats, 60c.

NEW YORK—Wheat, 98c@99c; corn, no sales; oats, no sales.

MINNEAPOLIS—Spring wheat, No. 1 hard, $1.15; No. 1 Northern, $1.13.

At many smaller markets and interior points prices are higher than in central markets. Here is an example in this press dispatch:

EVANSVILLE, Ind., July 22.—Old corn has reached 90 cents a bushel on the local market, this being the highest price ever paid here. Even at this price little corn is being offered.

We sometimes wonder how long it will be before the country will again be producing enough corn to keep the price moderate, say 50c to 60c. It will only come by increasing the average acre yield and this is in line now to be accomplished because of the excellent prices which will allow the exhausted soil to be built up again. Instead of an average yield per acre of less than 30 bushels, corn growers should set their idea on 50 bushels and gradually work to this accomplishment as consumption continues to increase.

1908 is being called the "Empty bin year." Wheat, corn and oats bins, granaries and elevators all empty. Notwithstanding a good winter, wheat crop buyers, millers and speculators are surprised at the lack of receipts to fill up the vacant spaces and make them represent the visible supply.

The old proportion "50c corn, $5.00 hogs" seems to be met in the new price, 80c corn, $8.00 hogs.

1908 is not likely to be a bumper crop year when the harvests are all in. It will be a novel experience to a country grown used to abundance.

Don't sacrifice your hay. There is a very large crop in the central west and west, but a short one east where the consumption is heavy.

The potato crop will be irregular and the total promises to not make a large crop. Growers who have a big yield should not believe that it is so everywhere and should husband the crop.

Apples, also, will yield irregularly and the total crop should sell at good prices, but the lack or a good system of marketing will be the bane of producers and consumers as it has been heretofore.

Spring wheat has suffered from drought, but it is too early to estimate the crop. More loss may result or all the damage may be overcome by good weather until harvest time.

Corn prospects are generally good, but not quite up to the average. Good or bad weather from this time to harvest and an early or late fall will tell the final story of the crop.

The government estimate of the tobacco crop on July 1st is 763,000 acres, which is 58,000 acres or 7 per cent less than in 1907. The condition of the crop is a good average.

There never was a time when UP-TO-DATE FARMING needed a very large circulation, to accomplish its mission more than right now. It it as evident now as it was five years ago, that the problem of controlled marketing and profitable prices depend on this paper, in fact, wait on the education that can be given only by this paper. Increase of circulation must rest largely with our present subscribers. We depend on them and reward those who send in subscriptions. Besides they have an additional reward in the consciousness of having assisted in a good cause. Are YOU one of the workers?

For your convenience we again print the pledge and blank as below. Use it. Remember, four or more subscriptions at 25 cents each.

CUT THIS OUT AND USE AT ONCE

. . . . . .

Publisher Up-to-Date Farming,
Indianapolis, Ind.

Dear Sir: I, or we, the undersigned, desire to joint the Farmers' Pools and oppose our forces against the speculators' pools, to secure a profitable price for the 1908 wheat crop (at least $1.00 per bushel), and profitable prices for all other crops. We want to stand shoulder to shoulder with our brother farmers which we can do when all read the same paper, get the same advice about crops, visible supply, markets, price, etc., and all at the same time; but in doing this we do not obligate ourselves except as appears to us is to our individual and collective best interests.

This is sent by:

Name . . . . . .

Address . . . . . .

I enclose $. . . . . in payment. (Terms, single subscriptions, 50c; four or more at 25c each.) For additional names attach more paper.

NAME AND ADDRESS. WRITE PLAINLY

. . . . . .

. . . . . .

. . . . . .

YOUR SUBSCRIPTION HAS EXPIRED

If the square to the left is marked with a "X," it is to inform the subscriber that his subscription expired with the last issue before this and should be renewed at once to insure receiving this paper without interruption. The renewal price is 50 cents, which pays for one year. We will gladly accept $1.00 for four subscriptions of which yours may be one, the other three new ones. A renewal blank is sent in this paper.

If the square to the right is marked with an "X", it is to remind you that your subscription has expired and remains unrenewed although you have been already notified. We don't want to lose a single subscriber, hence this second notice, and hope now to receive your renewal at once. See terms for a club in notice above.

If your renewal is not received in ten days we will assume that this mark escaped your notice and we will then send you a *personal* letter. We hope now to receive your renewal and make the letter unnecessary. A renewal blank is sent in this paper.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FOUR FOR $1.00

Foreign Subscriptions, including Canada, 75c a Year

Clubs. Two subscriptions for $1.00; five for $2.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE.*

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

Call For 1908 Convention

Pursuant to the power vested in us, we, the directors elected by the second 1907 convention of the American Society of Equity of North America, do hereby call the Sixth Annual Convention of the society, also called the Farmers Society of Equity, to meet in Indianapolis, Indiana, on the Twenty-Seventh day of October, 1908, and continue until all the business that comes before the convention is transacted.

Also, in view of the complications that have existed in the society we make the following declarations:

First. That the convention that elected C. M. Barnett and his associates in 1907 was fraudulent in its conception, and largely in its composition, that many of its acts were illegal, because not justified by the charter and the constitution and by-laws of the society, and the laws of Indiana, and that all of its acts were illegal as binding the American Society of Equity of North America, because the convention was held under the name of The American Society of Equity, and not under the incorporate name—The American Society of Equity of North America.

Second. That the second convention, composed of delegates that retired from the hall where the revolutionary convention was meeting, was the only legal convention of the society in 1907, because it retained the corporate name of the society, complied with the conditions of the charter of the society and its constitution and by-laws, and the laws of the State. We believe the officers elected by this convention are the only legal representatives of the society.

Third. A crisis has confronted our society since a few people determined in 1907 to divert it from its true plan and the accomplishment of its original objects. This crisis must be met wth honesty and firmness if the society is to be saved for the farmers to whom it was dedicated by its founder. If it is ever to become the power for good we hoped, its original principles and its simple but practical plan must be preserved. **To these ends we do now call every member who was in good standing at the time of the 1907 convention, or who has joined the society since, to interest himself in the Sixth Annual Convention.**

Fourth. Representation. The first convention in its zeal to divert the society from its true lines and to remove it from the influences that established it, slaughtered its constitution and by-laws, and left them so that a representative delegate convention cannot legally be held by the rebellious faction: also about two-thirds of the members who were in good standing at the time of the 1907 convention have withheld their dues because they refused to endorse the acts of the convention. Therefore, this Sixth Annual National Convention of the American Society of Equity as represented by the undersigned directors elected at the second convention is called to be a MASS CONVENTION of all members who were in good standing in October, 1907.

On this Sixth Annual Convention depends the future of the society and we may truly say, more of weal or woe for the future of American agriculture depends on this forthcoming convention than on any former event in the country's history. Therefore, let there be a general attendance of all loyal members of the society who want the true principles of the society to prevail; the original plan to be followed, and the good objects for farmers to be accomplished.

At the Sixth Annual National Convention it will be the aim to re-establish the society on the former lines, re-organize the fruit and produce; the grain growers; the tobacco growers; and the peanut growers departments. Also there may be organized a stock grower's, a dairyman's and a cotton grower's departments. Let this convention be truly representative of every department of agricultural activity by the best men the industry affords.

Those who will attend should notify the vice-president or secretary as below

EDITORIAL

STILL GATHERING THEM IN

The spirit of concentration is still abroad in the land, and it bodes no good to civilization or to the human race. No government can be powerful enough or free enough to guarantee liberty to its people when its industrial interests are owned and controlled by a few persons in the name of corporations or as individuals; and that is rapidly becoming the condition in this country. The organized or official form of the government may be never so beneficent, if its functions of sovereignty be surrendered here and there, to this combination or that, it may soon become but the empty shell of governmental power, an external show of freedom and independence, serving only as a cloak or curtain for a Pandora's box of autocracy, extortion and tyranny.

One of the most important interests in modern industrial life is the iron and steel interest. That metal, in some form or other, has become an esential of all constructive art. And the iron and steel interest, from the ore in the hills to the smallest nail or brad used in the cabinet shop, is dominated by the United States Steel Corporation; and that corporation is still extending its conquests, and making its power over these interests all the more absolute. Only a few days ago the Carnegie Steel Company, the essential part of the United States Steel Corporation, became the owner of the Schoen Steel Wheel Company of Pittsburg, which up to that time had not been a part of the combine. For this plant the Trust is reported to have paid three million dollars. It is located at McKees Rocks, covers 21 acres of ground, and has a capacity of 800 car wheels a day.

The immensity of of this acquisition is apparent, and it is very clear that soon every user of steel or iron, in no matter how small a quantity, will be under tribute to a single corporation, as much so as though that corporation were a part of the government.

The same is also true as to lighting and lubricating oils. A gift of Nature, requiring only withdrawal from its secret bed and refining to make it of inestimable use to man, becomes an instrument of levying arbitrary taxes upon the citizens of a republic, those citizens themselves having no voice therein. It is rapidly becoming the same way with the meats that come to our tables, with the cradles in which our children are rocked, and the coffins in which we are buried. So of all our important industries, and so even with the money with which we effect exchanges.

Thus may a republic, unwillingly or unconsciously, surrender its sovereignity. Any monopoly is sovereign over that which it monopolizes. Every citizen of the United States is a forced or enslaved subject of the Steel Trust to the extent that he uses iron or steel. He is subject to the Standard Oil Company to the extent that he uses oil; to the Beef Trust to the extent that he uses meat other than of his own production; to the Sugar Trust to the extent that he uses sweets, and so on. And to the National Bankers' Associantion to the extent that he uses money. When a single corporation, or an individual clothed with special privilege, can arbitrarily put a price on any comodity that has been made a public necessity, that corporation or individual can tax the users with all the power of sovereignity, and really exercises sovereignity so far as the people's relations to that commodity are concerned; and when the financial institutions with their coffers full to overflowing, can decree that the money shall be kept there and business brought to a standstill and industry crushed, as was done in this country less than a year ago, national sovereignity is brought to its knees and made to acknowledge the inferiority of its power.

Worse than Russian tyranny, therefore, may hide within the shell of Republican institutions, and government itself may be but a thing of a name, and the freest people the most recklessly and most arbitrarily ruled.

In the healing of this loathsome disease, the people must be their own physician, and in an agricultural country like the United States the public eye and hope naturally turn to that great conservative class that tills the soil. The farmers are the first and greatest sufferers from this arbitrary and bastard rule, and they owe to themselves and civilization to get in position that their influence may speak for the abrogation of special privilege and for popular government in fact as in name.

WILL LIKELY CONSOLIDATE

An important meeting of tobacco growers was held recently at Bowling Green, Ky., to consider the question of consolidating all the tobacco societies in the State. The question was ably discussed and favorably considered. It was finally referred to the local societies, and delegates will be appointed to meet again in Bowling Green to take definite and final action. Sentiment in favor of consolidation is very strong, and we trust it will be effected, for the stronger the organization the greater its power.

The tobacco growers of Kentucky are still managing their business well. The Burley pool of 1906 is all sold except the very finest grades ranging in price from $18 per hundred up. The 1907 pool is not yet ready for sale, as these people do not put their tobacco on the market until it is put in the very best market condition. The society members are feeling good over the situation, and buyers are constantly knocking at their doors. They will sell when everything is ready and their price determined.

CO-OPERATE TO BUILD UP THE HOME INTERESTS

It will ever be the unwavering policy of this paper to build up the home—to foster every home interest, to develop every resource and to bring to its highest and best every good home influence. It extends a helping hand to the most unpretentious, and would improve and make more attractive and comfortable the humblest home as well as that of the more prosperous farmer.

This brings us to a solution of the problems of every neighborhood, of every town and its vicinity. To make the best of every circumstance there must be harmony, peace and good will. Petty jealousies, prejudices and suspicions must give place to respect, confidence and mutual helpfulness.

The World is Made Up of People Who Live In It.

The world, in the sense of its population, is made up of the people who live in it. These people, both of choice and of necessity, follow different vocations. They could not otherwise make the progress that has been made, for no man can do everything so well as he can do certain things for which he has qualified himself and on which he concentrates his efforts.

Yet every one has rights which all the others must not only respect but protect, and each has interests which all the others should regard if nothing more. In fact, when properly understood, almost all human interests are mutual. In society, organized or unorganized, each individual, and especially the classes that pursue different callings, are dependent upon each other. The mechanic would have little to do if there were no business people to employ him, and business men would go into bankruptcy if there were none to buy of them. The physician would stay at home in poverty did nobody live in his locality but doctors, and the lawyer would be briefless and moneyless if there were none near him to go to law. The merchant and the grocer would need neither bank nor money-till were there no one in town or surrounding country but merchants and grocers, and farmers would live in the antiquated ways of the forgotten past were there none to buy and consume their produce, and no merchants from whom to get suplies for their modern needs. And we may say of all other classes, they would go shabbily dressed and supperless to bed were there no farmers in the country.

All Human Interests Are Mutual.

An abiding sense of the mutual dependence upon each other, and each upon all, is what promoted the founder of the Society of Equity to build it upon a foundation so broad as to cover the varied interests of every rural community, and to welcome to its councils, under reasonable restrictions, all whose mutual interests prompt them to work in harmony for the uplift of agriculture, and the establishment of equity for all.

This we concede is an innovation in farm organization, but it is an advance step, a forward movement, a following in the line of progress, a broader platform, with a plan that teaches mutuality of interests and unites all whose prosperity depends upon the prosperity of others—it insures the speedier accomplishment of justice and fairness to all and equity in all the business relations of life.

There, then, is the main point we wish to impress on our readers—that all should be devoted to the building up of home.

All Should be Devoted to the Building up of Home.

None, except the farmers themselves, can be more interested in securing to the farmers fair and profitable prices for farm products than those who do business with the farmers. The better prices farmers receive, the better customers they are, the better able they are to do business; and in no way can farmers better serve their own interests than by patronizing their home merchants and business men. Prosperous towns are surrounded by prosperous country, and a prosperous country has prosperous towns. Farmers sometimes imagine they make small gains by patronizing distant houses—mail order houses, to be plainer—but such gains are very doubtful, but as to the injury to home merchants and general home interests, there can be no doubt. If all farmers did all their trading at some distant houses, there would be no home merchants nor home towns, and local interests would suffer. Every deal carries with it profits to some one or it would not be made. If you trade away from home, the profits on your trade build up interests with which you are not concerned, and which do not inure to your benefit at all. If you trade at home with your home merchants, the profits on your trade build up home interests, interests which stimulate home enterprise that react in the increase of home values and contribute to the prosperity of the community.

No Home Merchants, No Home Towns.

But these obligations are reciprocal. Local merchants must realize that they are under as great obligations to their country patrons as their country patrons are to them. They must not forget the "square deal"; and they must not send abroad for what their patrons can supply though it may seem a few cents cheaper in some nearby glutted market.

Do right. Treat each other fairly. Support home institutions and foster home interests, that all may share equitably in a general and permanent prosperity.

THE PRESS AND PRESIDENT MAKERS

We are proud of the American people as a reading people, and we boast of the universality of the American press which affords them such an abundance of matter to read. But there is a serious question as to the wisdom or truth of much the press contains.

For instance: When the Republican national convention met at Chicago, and for long weeks before, the press talked of little else than the domination of President Roosevelt of the delegates and the party, and by the time the convention assembled, the press had constructed a "steam roller" that crushed out every sentiment that was not in accord with the sentiment at the White House.

Then, when, a little later, the Democratic national convention met at Denver, the same press had it that Mr. Bryan dominated the convention and rode rough shod over everything that was not entirely to his own liking.

To create the impression throughout the country that these great bodies were arbitrarily controlled by personal dictation, is anything but pleasing to the spirit of independence. In these conventions were assembled the statesmen of the nation, those upon whom its present and future depend. To promulgate that these men cowered before any power is to speak contemptuously of our greatest men, and to make of our government itself a weakling and sham. The "steam roller" press, therefore, whether Republican or Democratic, is not patriotic. It would weaken rather than strengthen the government and the nation. We are party governed. The Democratic and Republican parties are the governing factors. Make weaklings and cowards, subservient tools, of their national representatives, and you make weaklings and cowards of the parties themselves, and of the government, no matter which may for the time occupy the governing chairs.

That these great conventions were so completely in accord with their respective heroes, is no proof that the conventions were dominated by individuals; nor was it an evidence of weakness, but rather of strength. In this age of independent thought, when everybody claims the right to think and act for himself, it is a most encouraging sign to see large bodies of our most intelligent people agreeing upon important questions. President Roosevelt represents certain well known and clearly defined policies. Mr. Bryan advocates certain principles that have been so widely and so unmistakably proclaimed that no one need misunderstand them. That these respective conventions, therefore, sustained on the one hand the policies of Mr. Roosevelt, and on the other the priciples of Mr. Bryan, is no evidence that these men, however great, arbitrarily ruled the conventions or ruled them at all, but it is proof that the great political parties are in harmony with their leaders, who are themselves in harmony with the masses of the parties they respectively represent. It means that whichever of the candidates succeeds, he will be sustained by the masses of the party which placed him in power, and the masses need not be ignorant of the policies that will characterize the administration. The personal domination and "steam roller" press is not patriotic, and does not contribute to the welfare of the country.

BETTER BUY AT HOME

Alfred Paschal

A question comes up:—"Qualities of goods handled by both the country merchant and the mail order house being equal, can farmers save money by shopping by mail? If not, why not?"

If the farmer, by help of a mail order house catalogue and the mail service, could buy an article of assured equal value, delivered to him at equal transportation cost, at less cash price than he could buy from his home merchant, he would certainly save the difference between the two prices.

But there are so many "ifs" in the case that no man has any assurance that such a purchase will turn out the way he wants it to. The experience of many tests is against the chance of all the "ifs" coming out satisfactorily.

If the mail order huose could sell a standard article, for less than the standard price and deliver it free of cost there would be a profit in buying from the mail order people. This they have not done, cannot do and are not likely ever to be able to accomplish. Their say-so that what they handle is "just as good" as some standard don't mean anything. It may be just as good, in their eyes, in their store, and utterly fail when tested on the farm or in the homestead. That's the doubt in the case, and it is a doubt which is all the time casting up against the purchaser's interest, although in behalf of the mail order house's profit.

Again, if the prices and values were alike, it is a good policy to buy at home. Money kept at home, and turned and returned in local hands, doubles its service many times in a year, to the advantage of every member of the home community. It stimulates business. It is a lever in behalf of many and larger transactions than could otherwise be undertaken. It makes the community richer. Money sent away takes from the wealth of the community and thereby impairs its power to push along the business undertakings which are expedient and profitable.

The loss, through impoverishment of the community, and the lessened purchasing power of the non-producing class, are a serious detriment to the farmer whenever a dollar is spent away from the neighborhood which might be spent at home. Buying away from home, when there is opportunity for local spending of the same money, is a negligence on the farmers' part to his money where it won't promptly nor directly come back to him; whereas if he purchased at home, of his neighbor who needed meat, vegetables, fruits and dairy products, he would be supplying means to buy from himself and inviting a business reciprocity which would carry grist to his own mill.

If prices were alike, qualities identical and delivery charges the same, the farmer who purchased of a mail order house, instead of his home merchant, would therefore be spending contrary to his own interests. Good business begins at home, and sound financial policy adheres to the same lines as community and neighborly relationships, and the reciprocity which is helpful in families, in churches and in societies at large.

Bloomfield, N. J., June 19, '08.

UP-TO-DATE FARMING,
Indianapolis, Indiana.

Gentlemen: We have Mr. Everitt's favor date June 17th, and in reply would say that our July advertising list is not yet made up. However, UP-TO-DATE FARMING is going to receive the attention that it should. We want to congratulate you on the most excellent paper you are turning out and the most excellent work you are doing. You have, although it is unnecessary to say, our heartiest backing in your campaign.

Yours very truly,
EMPIRE CREAM SEPARATOR CO.
W. A. Pritchard, Adv. Mgr.

PRICE MAKING IN OTHER LANDS

We are glad that selfishness and personal scheming does not seem to obstruct progress to rural business methods and independence as it does in this. But for the selfish schemes that prevailed in the annual convention last fall there is no telling what might have been accomplished by this time in the lines of rural price-making.

As we have said, the impediments have not appeared to block the way in other countries. The milk producers of Australia have won a signal victory, and the way is open to like victories in all other lines. We clip the following from The Farmer and Settler of Australia:

The success of the first farmers' strike should set our rural producers thinking. When the milk supply companies of the city set out to dictate to the dairy farmers what the price of milk should be, without any reference to the cost of producing that milk, they expected to have no trouble; but they received a sudden shock when they were informed that the man behind the cow considered that he had a right to some little say in the matter. They acted in the usual high-handed manner, blustering and bluffing to convince the poor "cow cocky" that they were masters of the situation; but for once there was unanimity amongst the producers, and after the city of Sidney had gone almost milkless for a day or two the companies caved in, and not only gave the farmers their prices, but recognized the union as well.

Encouraged by such a practical proof of the benefits of corporate action, we may yet have a wool growers' union fixing the prices of wool, and wheat growers' federation with an established minimum price for wheat, working on the line followed by the dried fruit growers of Mildura, who do not ask the Melbourne of Sidney buyers to pay them as little as they choose, but put their own price on their own product before they sell. There is not room here to combat certain specious arguments against a locally-fixed price for an article which is largely exported, but it will suffice to say that men who are giving thought to the matter are rapidly coming to the conclusion that even though our prices must be influenced by London and other world markets, there is a fairly considerable margin which we can operate to improve the price standard by combination amongst producers.

FARMERS TO FIGHT BLUE GRASS SEED COMBINE

Paris, Ky., is the center of the blue grass region of the country. The blue grass seed produced in this region goes very far in supplying the demand of the world.

For a few years past there has existed a gentlemen's agreement among the cleaners and handlers of the seed. They agreed on the price they would pay the producers and on the price at which they would supply the trade—the demand. It is needless to say that the few gentlemen in the agreement protected themselves very well. Whether they were fair to the producers, however, is a question. A dispatch from Paris, Ky., charges that the domination of the blue grass seed trust "made the crop an unprofitable one to the producers and permitted the combination to control the market and secure a greater profit than the price received by tne farmer himself."

But the worm has turned—we mean the farmers—as it always will when tread upon too often. The heavy producers in Montgomery, Clarke, Fayette, Madison and Bourbon counties, Ky., to the number of about 150, representing about 225,000 bushels, or about one-third of the crop, have combined to oppose the trust.

A committee was appointed at a recent meeting to select a site for a cleaning plant, warehouses and offices and it is their intention to place their own seed on the markets of the world. Their plant is likely to be located at Paris or Winchester.

GREAT EXPOSITION

The Corn Exposition at Omaha next fall is to be a great affair. The intention is to exceed anything that has preceded it. A great many valuable premiums are to be awarded, and in this the management is making a departure from the usual national shows. The premiums are to be largely articles of use and value that will appeal to the most progressive farmers. For instance, a Michigan manufacturer will give a gasoline engine, dynamo and switchboard for the best half bushel of wheat in the milling test. The Brush Automobile Company of Detriot will give a $600 automobile for the best bushel of corn on the ear. These entries are all open to the world, and the premiums aggregate more than $50,000. Premium lists may be obtained by addressing National Corn Exposition, Omaha, Neb.

BATTLESHIPS AND PROGRESS

The recent session of Congress authorized the building of two battleships a year, each to cost, it is said, $10,000,000, while it is claimed that it costs $5,000,000 a year to maintain one. All right, say we. If we need battleships we are able to have them. And, like the girl who could not play on a piano, but wanted one because it would be nice to show when the beaux came around, whether we have use for them or not, they are nice to show to the other fellows.

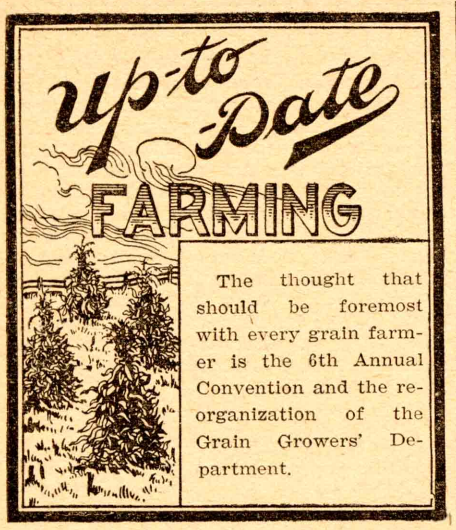
But we were thinking. That is no little pile of money. We need better roads; no disputing that. The money spent on battleships would make quite a stretch of roads every year, and the masses of our people would use good roads much more than they do battleships.

RACE TRACK GAMBLING

Louisiana is the last State up to this date to adopt an anti-race track gambling law. The very recent struggle for such a law in New York, and the triumph of Gov. Hughes in securing its adoption, awakened general attention. Race track gambling is now prohibited by law in the following States: Louisiana, New York, Illinois, Missouri, Arkansas, Tennessee, New Jersey, Rhode Island, Connecticut, New Hampshire, Colorado, Indiana, Ohio, Wisconsin, Virginia, Minnesota, Delaware, and the District of Columbia.

NOT FOR THE TRUST

It is now claimed that the seven million pound sale of tobacco that was made by the society not long ago, was not for the trust at all, but to be held for future and a better market. In holding their tobacco, therefore, the growers are only doing what shrewd business men do; and though the growers get their price the buyers are willing to hold for still higher prices. There could be no better proof that the growers in making their prices are not exorbitant but conservative.



TOWN AND COUNTRY

The laborer works for stated pay,
And in the town big pay is given;
While on the farm the wage is small,
But smaller yet the cost of living.
So when the income we decide,
The gain is on the country side.

WORK IN CITY OR COUNTRY

Farm wages, says a contemporary, seem small when compared with wages and salaries offered other work, but as a matter of fact they compare favorably when rightly considered. The farm laborer hears of the wages paid in the cities, and they are expressed in so many more dollars and cents than the wages he receives, that he concludes he is "working for nothing," and feels that he ought to go to the city where higher wages are paid. But the country laborer has little conception of the cost of living in the city. In his experience most of the living has come from the farm, orchard and garden, and he does not realize that it has cost anything. His flour comes in bulk from the local mill, perhaps from wheat of his own growing; his meat from his own fat hogs is smoked and stored away in his own smoke house; his milk and butter come from his own cows, and his eggs from his own poultry. These are things of value, he knows, but they do not diminish his income, and he does not take them much into account. Not only so, but of all these he may have more or less of a surplus to sell and add to what seems his low wages.

Get into the city where everything referred to above, and much more, must be bought and paid for out of the wage received, and it is evident that the wage must be more than double to save anything. The income does not depend upon the size of the wage, but upon the difference between the wage and the cost of living.

Again, the farm laborer feels that he must work longer days, more hours, in the country than in the city. It is said the farmer must rise at five and not retire until eight, and thus he counts 16 hours as a day's work. The estimate is not a fair one. The above figures apply only in the longest days, and even then if meal times and rest spells, waiting on teams, etc., are deducted, it will be found that little more time has been actually devoted to work than it takes to make a day's work in shop or factory. If the laborer is handling a team in the city, either his own or his employer's, the time is actually in favor of the country day. When the short days come there is no comparison. In the country the laborer works by the sun. As the sun sinks, he quits in time to take care of his team and do his chores before night; and in the morning he does not begin until the sun has lighted his way. In the city he works by the bell or whistle, and these are regulated by the clock. He must be at his post at a certain minute and he must stay there until another certain minute, often artificial light has made it possible for him to see his work, and until after the country laborer has had his supper and possibly retired.

The whole matter, therefore, may be summed up like this: The city laborer has the name of getting bigger pay; the country laborer may have the greater savings or income.

ALFALFA AND CLOVER

In connection with the national corn exposition at Omaha next December, there is to be an alfalfa palace. The palace is to be built of bales of alfalfa, and lined with exhibits of alfalfa and other grasses. Valuable premiums are to be offered for the best types of alfalfa.

Alfalfa is the greatest forage crop of the middle West, and we had almost said of the semi-arid West, but that would be putting it too strong, for alfalfa is a great crop in some of the most fertile States where irrigation is never needed. In fact it is being introduced into almost all the States of the Union, and strenuous efforts are being made to acclimatize it and adopt it to all kinds of soil and conditions. These efforts are meeting with more or less success, and there may come a time when alfalfa will be as common a crop all over the United States as corn is.

But only a few days ago we had a conversation with an intelligent gentleman whose home is in Los Angeles, California, where alfalfa is grown very successfully. This gentleman told us the people there talk as much about red clover as we do here talk of alfalfa, and that they are just as anxious to intrdouce and acclimatize red clover as we are to accomplish like results with alfalfa. He claims that red clover is much more a complete ration, a perfect feed in itself, than alfalfa, and that the people generally, where alfalfa is indiginous so regard it.

Red clover grows easily and certainly, if not luxuriantly, throughout the corn belt. It requires certain conditions, and with these met, the red clover will do the rest. It must have a good soil, though it will join, timidly it is true. with the farmer and help him to make a good soil. It must have nitrogen, but it liberally brings its own retinue of servants to supply this essential element of fertility. One thing, however, it will not tolerate, and that is acidity. It will not locate, even for a season, in a cold, acid soil. But give such soil a fair treatment of lime to neutralize the acidity, and the clover will no longer object to making its home there.

Farmers are prone to waste their energies in coaxing a stranger to stay with them, when a neighbor, with half the trouble, would be a much better helper. Take as much pains to encourage red clover as those who are trying to introduce alfalfa do with that plant, and watch the result.

USES OF WOOD IN THE UNITED STATES

The lumber industry of the United States is a big thing. We have the government figures for 1906, which shows that the output for that year was 37,550,736,000 feet of lumber, 11,858,260,000 shingles, and 3,812,807,000 laths. The value of the lumber was $621,151,388, and the combined value of the lumber, lath and shingles was $656,796,513. This does not include 16,000,000 feet of spruce and cedar (mostly spruce) produced in Alaska. The above figures are based on reports received from 22,398 lumber manufacturers.

Akin to this is the use of pulp-wood, or the consumption of wood in the manufacture of pulp, used mostly for making paper. The total consumption of wood for that purpose as reported by 250 mills, was 3,661,176 cords, or 468,630,528 cubic feet, enough timber, were it all suitable, to make more than a billion feet of lumber. At the same time we made into pulp 738,872 cords of wood imported from Canada.

During 1906 were purchased by the steam and street railroads in the United States 102,834,042 cross ties, valued at $48,819,124, which would indicate an average value of 47 cents per tie. About nine-tenths of the whole number were taken by the steam railroads.

For the making of slack barrels were produced 1,097,063,000 staves valued at $6,081,880; 129,555,000 sets of heading work $5,662,168, and 330,892,000 hoops valued at $2,486,517. One-fifth of the staves were made of Elm, pine and red gum ranking next. The total production of all kinds of tight barrel staves was 267,827,000; of headink 17,774,375 sets.

The tanneries, 617 in number, used 1,371,342 cords of tanbark, valued at $12,774,071, an average of $9.30 per cord. Hemlock and oak were the principal barks used, hemlock comprising about two-thirds of the entire quantity. But this was not all the material used in tanning. About 658, 777 barrels of tanning extract were consumed at a value of $8,713,322. Domestic extracts are manufactured chiefly from chestnut, though considerable oak and hemlock are used. An imported extract called quebracho, is used more extensively than the home extracts.

The strangest use of wood is yet to mention; its distillation. In the distillation of hardwoods, 86 plants report the consumption of 1,144,896 cords of hardwood, valued at $3,716,423. Beech, maple and birch are the principal hardwoods used, and Michigan, Pennsylvania and New York are the principal States engaged in their distillation. The principal products are charcoal, crude alcohol, acetate tar, and oil. Fortunately wood alcohol is so poisonous that it may not be used as a beverage in any form.

Soft woods used in distillation as reported by 33 plants, aggregated 50,234 cords, representing a value of $129,358. The principal softwoods used are the southern pines, and North Carolina, South Carolina, Georgia, Florida, and Alabama are the principal States engaged in the distillation of softwoods, the chief products being turpentine, tar and charcoal.

Only 780,222 gallons of wood alcohol were exported in 1906, though the year before 1,097,451 gallons were exported. The average price per gallon in 1905 was 55 cents; in 1906 it was 59.8 cents.

We have not referred to the great use of wood as fuel or for construction purposes, except as we give the lumber statistics. Nor of its use for mine props and fence posts, both important uses. It is evident that, coupled with the prevalent enormous waste of wood, the world must protect its forests and grow trees, or, not far in the future it must do without wood, to the closing of many great industries.

A No-Paint Roofing

Everybody recognizes now-a-days that the so-called Ready Roofing proposition has made good so far as giving thorough protection is concerned. There has always been the objection, however, that these materials were expensive in the long run because they require coating with heavy paint about every two years. This objection has now been met by the well-known Amatite Roofing.

Amatite is provided with a top surface of crushed mineral. This surface needs no painting, nor indeed any care whatever. It is perfectly capable of withstanding any kind of weather, and will give continuous satisfaction without attention or repairs for many years.

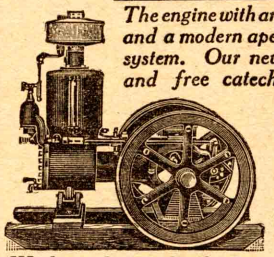
Doing away with the painting nuisance removes the last obstacle to the wide use of ready roofings, and a great boom in this kind of business can be confidently predicted.

A sample of Amatite Roofing will be sent any inquirer on request who mentions UP-TO-DATE FARMING. Address the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, New Orleans.

Marvelous One Man Baler

Just think of the benefits of a press that one man can operate and with one horse bale a ton of hay an hour. This is possible because it has an automatic self-feeder, and a wonderfully ingenius, yet simple device for self-threading of the bale wire, so that no partition blocks are necessary. A great time and fork saver is the hopper with bars at the side instead of being solid. This permits the tines of the fork to go through instead of hitting the side when the hay is being put in.

With this press a man can do his own baling in his spare time, instead of paying a high price for labor and having a big hay baling crew around when he would like to be doing other work, or the press being mounted on wheels can be taken right into the field and the hay baled at the windrow. With this press the cost of baling is reduced to 40 cents a ton. Circulars and full information will be sent free by the George Ertel Company, Quincy, Ill.

Stickney Gasoline Engines
ARE THE BEST


The engine with an outside igniter and a modern apen tank cooling system. Our new free catalog and free catechism tells 57 reasons why we have the best engine.
Stationary and Portable
1½ to 16 H.P.
We have thousands of engines in successful operation because of years of experience in making engines of the best material and most accurate workmanship. Send for free Catalog

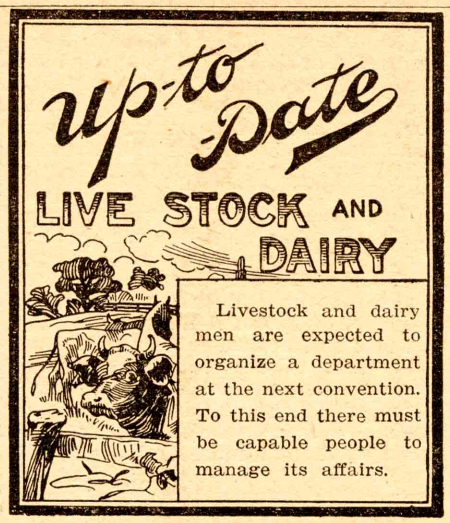
UP-TO-DATE FARMING
Indianapolis



Livestock and dairy men are expected to organize a department at the next convention. To this end there must be capable people to manage its affairs.

DUMB THINGS AND WISE

The dairy cow and pig and steer,
Their part in men's affairs perform;
And ain't it strange that thinking men,
Who raise and own them on the farm,
Refuse to act on the advice
To of their own control the price?

HOGS AT THE FAIRS

The time is now here when people are beginning to look forward to the animal fairs, and stock is being fitted for the show ring. We are not at all averse to these shows. In fact, we are decidedly in favor of them. They stimulate a pride in good and fine looking stock, and beget a desire to grow that kind. But we doubt if the show stock, even the prize winners, are the very best to perpetuate their species. Unless prepared for the show ring with skill and a knowledge of the natural qualities required of breeders whose progeny shall be an improvement on themselves, and unless treated with an eye single to the perpetuation and development of their best qualities, it is entirely possible that the very treatment which makes them show well in the ring and win prizes, may impair the qualities which should be transmitted fullest and strongest to their offspring.

We believe this is particularly true of hogs. When a pig is selected for a show animal, it is pushed thenceforth until it takes its place in the ring. If this pushing is wisely and prudently done, it is all right. If the feed given it contains all the elements of sturdy hoghood, is such as to make bone, muscle and nerve all in proportion, to build up not only a strong and well-rounded animal, but one of strong vitality also, then the show animal may be an ideal breeding animal. But, as is too often the case we fear, the animal is fed solely with a view to growth and rotundity, fine and atractive appearance, with a high development of external points, the more important ones of stamina, vitality and powers to transmit, may not only be neglected but actually dwarfed in the abnormal development of the external appearance. Such animals may win prizes, but they are not likely to be the ancestors of a race that will reflect honor upon themselves. Shows made up of that kind of animals do not mean better hogs in the future, but rather hogs not so good.

HOGS NOT THRIFTY

People are often worried because their "hogs are not thrifty." They treat them well, feed them well, their surroundings seem favorable, and yet they look ragged and do not grow off right. Nine times out of ten the trouble is lice. Where hogs inhabit the same shed during the winter, continuing it as their home through the spring and into the summer, lying in the same litter, it is a wonder if they do not become infested with lice, and lousy hogs connot thrive.

We have seldom found it necessary to resort to dips in order to rid hogs of lice, though sometimes it may be. Shut them entirely away from their old quarters, which should be immediately cleaned up, all old litter burned, and the whole place treated from a sprinkler or other like means, with a strong coal oil mixture. The hogs and their new sleeping or resting place should be likewise sprinkled, not once but every day or two for a while. Drive some strong stakes about the grounds frequented by the hogs, if there be not already small bushes there. Wrap these to the height of about two feet with any old rags, (old burlap bagging is good), saturate these with coal oil and keep them so. The hogs will rub upon the stakes thus treating themselves. And they will rub where the lice are busy, thus destroying the most active ones in their favorite haunts. In this way the entire drove may soon be freed from lice, and thriftiness will immediately begin to show itself.

Here is a case where prevention is much beter than cure. Do not let hogs bed long in the same litter. Frequently clean out their quarters and sprinkle with coal oil solution. When warm weather comes shut them away from their winter quarters. In feeding hogs one cannot afford to feed a million lice.

"HARDWATER" SPRINGS AND HOGS

In the central Ohio and Mississippi valleys there are a great many springs locally known as "hardwater" sprigs. These springs are never regarded as of very great value, and are seldom taken much care of. They are acknowledged to afford good stock water, but are considered fit for nothing else. But such springs are worth a fortune on any farm, especially where hogs are raised. Hogs that have access to the water of these springs, and may wallow in the ugly black mud that forms around them, are absolutely immune from that scourge of the swine family, hog cholera. We have known in Southern Illinois, when that fatal disease was prevalent, and swept the hogs from farm after farm, not a hog that ran to these springs was effcted.

We have never had the water of these peculiar springs analyzed, and do not know their mineral constituents, but we think we have tested them sufficiently to know that the waters are exceedingly healthful for all kinds of stock. Certain it is that such a spring in a hog pasture is of immense value, and almost a positive guarantee against swine diseases. We are not sure but wallowing in the black mud that always forms where these waters flow or seep out is destructive of lice on hogs. We write thus of these springs because they are so generally regarded as of little value.

SUMMER FATTENING

Contrary to the prevalent opinion and practice, there is more profit in fattening market animals in summer than in winter. Prices for good stuff are almost invariably better, because real fat animals are scarce during the summer months, and such animals show such a contrast with the "grassers" that they always "bulge" the market a little. It is rare indeed that the market is not hungry for really fat cattle, sheep or hogs in summer, and since these animals can be made fat cheaper in summer than in winter, the summer fatted animals must be the most profitable.

THE SHADED PASTURE

Other things being equal, the pasture with shade is worth a strong per cent more than the one without shade. We know a pasture of a hundred acres in Illinois through which a creek runs that is grown up for quite a little strip on each side. The owner never clears up that strip of willow and other growth; it is worth more to the pasture than an equal area of the richest grass in it. What a haven it is to the cattle in the heat of the day. It is a refuge from the flies and a protection from the heat, while it keeps the water in the creek cool, and the creek bed itself from growing up in weeds and grass and filling up.

It was always the writer's rule on his own farm never to cut a walnut tree, and to leave plenty of hickory and maple. As a result there is not a field on the farm without shade, and no matter what part of the farm may be turned into pasture, the stock are sure to have shade. Neighbors have said stock do better on that farm than on any other, and it is all because of the shade.

And we like some brush thickets in the pasture like the grown-up creek mentioned above. We agree that such thickets look shiftless and thriftless, but we are willing to leave the verdict with the cattle during fly time. Animals must have comfort if they do their best, or even if they do well.

Horse Book Free

W. F. Young, P. D. F., 102 Monmouth St., Springfield, Mass., has recently issued a larger and more complete edition of his handy reference book "How to Remove Blemishes" which will be sent postpaid to any address upon request. This little book will be appreciated by any horse owner as it is full of "horsey" pointers and information that can be used to advantage. Send a postal today addressed plainly as above and the book will be sent you by return mail free of all cost and postpaid.

OUR AGENTS MAKE 175% PROFIT

We have a little patented article made of malleable iron that is practically indispensable when once used. It is needed on every set of work harness. Big demand—quick sale. From four to twenty pairs used by every horse owner. Used by farmers, teamsters, liverymen, etc. *Ferry's Handy Hame Fasteners* fit any harness. Easily attached and will out-wear the harness when they can be attached to a new set.

Ferry's Handy Hame Fasteners

do away with troublesome straps. Fastened in winter with gloves on. Those who once use *Ferry's Fasteners* never try to get along without them. Mr. H. A. Carter, Franklin, Ky., writes: *"I bought a Handy Hame Fastener four years ago and have used it ever since. It is the thing."*

175% to Agents Sample mailed for 25c. Dozen $2.25 by express not prepaid. To agents $1.10 per dozen. Larger quantities cheaper. Money refunded promptly if not entirely satisfactory. One agent sells 24 dozen a week easily. You can do better. Order a sample.

Illustration one-half actual size.

COONER & FORTUNE CO.
Indianapolis, Ind.

PROFIT IN MULES

It is seldom that the demand for work mules slackens, and the price usually holds up better than that of any other domestic animal. The following advantages may be given in favor of raising mules:

Mules can be raised more cheaply than horses.

They will go into market sooner than horses. Mules are marketable from weaning time, about four months old, until old age incapacitates them for service.

They are less liable to disease than the horse, and will stand rougher treatment without injury.

As a rule the mule is more steady at work than the horse, less nervous, and not so liable to become exhausted.

HORSE BREEDING IN ENGLAND

Word from over the sea is to the effect that England is becoming alarmed at the way Russia and other countries are depleting the British supply of horses, and it is said that the government is seriously considering some means to aid the breeding of the army type of horse. An annual grant of $21,000 has long been given in awards to thoroughbred stallions, and $150,000 annually is now spoken of to aid in breeding the more common and sturdier kind.

The supply of army horses in England is some 16,000 short in time of peace, and what the situation would be in case of war it is easy to see. In fact the number bought in this country during the Boer war is ample proof of England's need of horses.

Of course all this is only a straw in the wind, but it is enough to impress the American farmer that he need not be afraid to raise horses. There is far from being an over supply in this country, and when other nations are quietly, if not stealthily, buying up the stock of their neighbors, there need be not fears of a price breaking surplus. And the sturdy, useful horse is the one that will not fail to be in demand. And the mule.

SHEEP AND THE LIVER FLUKE

Sheep breeders have few worse enemies than the liver fluke. It is a fresh water parasite that infests ponds and stagnant pools. The adult is said to lay millions of eggs. A contemporary gives the following history of it and how it effects the sheep. We confess to skepticism as to the part the snail is said to play in the development of the fluke—there are not enough snails:

The egg will, under a temperature of 80 degrees, begin to develop an embryo. This embryo, when hatched, finds a snail, bores into it and lodges in the lung where it develops another form. Here three more changes take place and the last stage leaves the snail and attaches itself to grass in the pond. It encases itself and remains thus until a sheep swallows it. In about six weeks the tad pole stage changes into a mature fluke which is quite similar to a blood sucker in shape, flesh colored, and from an inch to an inch and a half long. In the liver of the sheep the mature fluke begins to lay eggs and the whole process begins over again.

But the fluke does not stay in the liver. It enters the gall bladder and ducts, causing an overflow of bile which gives the sheep a characteristic yellow color of biliousness. A yellow serum collects in the abdominal cavity and gives the sheep a pot-bellied appearance. Later a bag of fluid forms under the jaw, diarrhoea sets in and the victim soon becomes emanciated and dies.

No reliable remedy for this trouble has been found. The effort of the breedwhichr mustshrdlushrdlushrdlushrdluer must be directed to prevention, which is to keep the sheep on upland or dry pastures, and not allow them to drink from grass grown ponds or pools. Mature sheep may withstand the fluke, and worry through a profitless existence, but lambs in their first summer seldom survive its attacks.

THREE BEEF BREEDS

Shorthorns, Herefords and Aberdeen Angus are the three beef breeds of cattle most prominent not only in this country, but in all the other beef producing countris of the world.

In general terms we may say, with the Maryland Experiment Station, that Shorthorns are good lot and stall feeders. They make rapid gains, and show fairly good dressing percentages. They are a little inclined to be leggy and upstanding, which is against them, but they are quick to adapt themselves to any changes and environments.

The herefords as meat producers have high rank, and have made marked improvement within the last twenty-five years. The breed is criticised for having an excess of throatiness, dewlap, and lack of development of rump and hindquarter. The Hereford steer is noted as an excellent grazing animal, and in this respect the Maryland Station thinks it has no equal. Herefords mature much more rapidly than Shorthorns.

The Aberdeen Angus steer has made a good record in the show ring, having won many of the highest honors, not only in champion fat steer classes, but also in carload lots. The steers are excellent feeders, but must not be too closely confined. They are more or less wild by nature, and it is better that strangers and dogs keep away. This breed appears to stand shipping by rail somewhat better than the other breeds of cattle. They are perhaps not so well adapted to the range as Herefords, but they mature early, and are highly prized by growers of "baby beef."

DIARRHOEA IN COLTS

Young colts are very susceptible to diarrhoea. It is a very distressing ailment, and is often fatal. It may be induced by sucking when the mare is overheated. Farmers too often keep the colt in the barn while the mare works in the fields. Coming in with the mare hot and tired, and the udder distended with milk, the hungry colt is put with her and eagerly takes an undue amount of the unnaturally heated milk. The effect is always bad, and sometimes results in the loss of the colt. In such cases the mare should always be kept away from the colt a few minutes to cool off to a normal temeprature. A drink of water will hasten the cooling. Perhaps the most dangerous source of diarrhoea in colts is to turn the mare not used to green feed in a grass lot while the colt is very young—only a day or two old, may be only a few hours. Such treatment is almost sure to be fatal to the colt.

Rosendale, Wis., Mar. 23, '08. I have used a U. S. for 15 years. It has always been perfectly satisfactory and I never hesitate to recommend it to anyone. CHAS. L. HILL.

CLEAN SKIMMING
EASY RUNNING
LONG WEARING

DURABILITY

This word is the secret in separator construction. Compare these two letters, please. Is not Mr. Kroyer's experience, with this "cheap" apology for a separator, sufficient proof to any fair-minded reader, about to purchase a separator, the wise move to make? Read Mr. Hill's testimony, please, and compare—15 years of perfect satisfaction as compared with 8 months' use and "all played out." The ever-ready-to-use

IMPROVED 1908 U.S. CREAM SEPARATOR

has more practical improvements than any other separator made, having a solid, low frame; most simple yet efficient bowl, waist low supply can and numerous other advantages. Send to-day for catalogue No. 187, describing fully this labor saving, money earning, reliable separator.

$5 to $27

THE UNION FIRE ARMS CO., 277 Auburndale, TOLEDO, O.

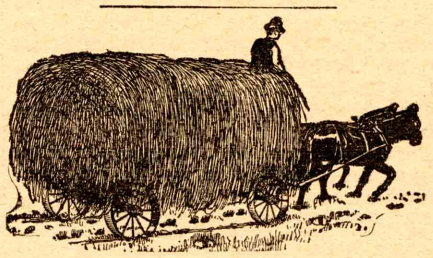
TOP OF THE MARKET

Joe Lommers of Stanton, Neb., not long since shipped four car loads of fat steers to the Omaha market, for which he received $8.10 per hundred. They averaged 1,572 pounds, and consequently brought a little more than $127 each. These steers were bought about the middle of last November, and weighed then 1,110 pounds each, and cost $4.60 per hundred. Mr. Lommers put them on a balanced ration of corn and alfalfa, and adder 462 pounds to the weight of each and $3.50 to the price per hundred pounds. And all in about six months time.

If you could get a separator that would get an extra ounce of butter fat per day—do you know that would amount to $11.25 in a year? It is claimed that the Tubular Separator is beter than other kinds and that it gets more cream from the milk. The Sharples Separator Co., West Chester, Pa., offer to prove it to any farmer or dairyman without cost to him. Send for new catalog No. 136 and full information.

HAMELESS HORSE COLLARS

Are the kind that always keep their shape and do not wear out. As a preventative of sore shoulders they stand without an equal. You can learn all about them by writing Johnson-Slocum Co., 426 State Street, Caro, Mich.



The above sketch shows Mr. Oliver Harris, hauling a load of hay across his marshy meadow. He writes The Electric Wheel Co., Box 170, Quincy, Ill., that this is the first load of hay ever hauled over his meadow in April as he could never get through the mud with his high wheel- narrow tired wagons. With a low wheel, wide tired Handy Wagon such as The Electric Wheel Co., make, he finds it an easy job and claims he saves $23.00, the price of this wagon, in horse-flesh alone, every year.

Our readers with muddy meadows or soft roads will be interested in a catalogue of these wagons which the above company sends free for the asking.

The Marcus Daly Estate

The executors of the Marcus Daly estate have decided to place on the market a portion of tehir holdings in the Bitter Valley. Only about 8,000 acres of the 22,000 held by the estate are now offered for sale.

This land is better known as the Bitter Root Stock Farm. The land is irrigated, fenced and under cultivation. There are several orchards and buildings on various parts of the farm.

The property is located near Hamilton, Montana, lying only from 1 to 7 miles from this town.

The estate plans to sell the land on easy payments, distributed over a number of years. The Bitter Root Stock Farm was carefully selected by the late Mr. Daly, and is highly suitable for fruit growing, dairying and diversified farming.

Granite Harvester Oil

For Harvesting Machines, Mowers, Hay Tedders, Feed Cutters, or any farm machinery, this will be found superior for all around use, and particularly on loose bearings. It is a heavy bodied oil, never turns rancid, never gums. Flows freely, no matter what the temperature. It lessens friction, saves wear and tear on horses, and cuts down repair bills.

Unquestionably the best, especially if bearings are somewhat worn.

At all dealers in farm machinery.

EGGS AND OTHER CROPS

The egg product of the United States for 1880 was 456,000,000 dozen; for 1890, it was 819,000,000 dozen; for 1900, it was 1,293,000,000 dozen. At the same rate of incrdease the product for 1908 will be nearly two billion dozen, or about twenty-four billion eggs, which means that every second of time during the ten hours of day light, every day in the year, more than 700 hen eggs are laid in the United States.

Notwithstanding this tremendous increase in production, the demand and price have kept pace with it, the price averaging much higher now than it did a few years ago. At an average of ten cents per dozen, the annual egg product is worth about $125,000,000. The Department of Agriculture puts the value of the annual poultry products at $500,000,000. Only one farm crop exceeds this in value, and that is the corn crop. The wheat crop just about equals it, and all the other crops fall below it.

Not many years ago it was considered unwise to keep more than one or two hundred hens on a farm. Now from three to four hundred, or even more, are frequently found on farms; and there are special poultry farms scattered throughout New England, New York, New Jersey, Pennsylvania, Ohio, Illinois and California where thousands are kept. On the ordinary farm, however, where mixed farming is practiced, there is more net profit in the smaller flocks.

PRESERVING EGGS

It is a little late in the season for preserving eggs for future market, as most of the hens are moulting and not laying much, but it cannot be out of place to give the following method, which is endorsed by the United States Department of Agriculture. Further information may be obtained by writing to the Department for the egg preservation and water glass bulletin:

The best method for preserving, aside from cold storage, that has been discovered, is to keep them immersed in a solution of sodium silicate—commonly called water glass or liquid glass—the solution being in stone jars or very clean wooden vessels. Boil the water to be used, and for every nine quarts of water use one quart of the sodium silicate. Put in only perfectly fresh eggs, being careful not to crack the shells. Put the eggs in as they are gathered and always keep them entirely under the surface of the solution. Keep in a cool place, such as a cellar, and the eggs will remain fresh for months. It is best to use only infertile eggs, such as are produced by unmated hens but the eggs gathered from the ordinary farm flock will be all right if they are strictly fresh.

Before you buy a hay press send for the catalog of the old reliable K. C. Ask the Kansas City Hay Press Co., 516 Mill St., Kansas City, Mo.

Perhaps you will build a new barn, poultry house or some other building this fall. A good roof is most important of all. It can be a constant source of delight and good service as well as one of trouble and expense. Congo Never-Leak Roofing is used largely by those who know what's what. Send for a free sample and you will be convinced. Address United Roofing & Mfg. Co., 584 West End Trust Bldg., Philadelphia, Pa. They have agents in most towns who will sell you but send direct for sample.

THE GREATEST RED IN THE WORLD

I have been asked by UP-TO-DATE FARMING to give a little information regarding my Rose Comb Rhode Island Red cockerel, "Chicago King," whose cut appears on this page. The cut was made from a photograph taken over five months ago when the bird was about eight months old. He is now much heavier and has filled out more since then. The cut will give a very good idea of what the male of this variety should be in shape. I regret that we cannot show the plumage as well. He is a brilliant deep rich dark red with the exception of the wings and tail. The tail is black with a slight greenish tinge. The wings show no black when folded. Notice the long back. This in the female is believed to give more room for the egg organs and thus fit her for heavy egg production.

"Chicago King" has been exhibited only once, in January, at the National Fanciers' and Breeders' Association at Chicago. There he won first prize as cockerel, also won first pen with four pullets, won the special prize for best colored male, and helped win the silver challenge trophy cup for best display of Rhode Island Reds at the show. His brother, "Dr. George," winning second prize as cockerel. "Chicago King will probably never be exhibited again, if I do not sell him, unless at Madison Square Garden, New York City. He is too valuable a bird to subject just before the breeding season to long railway journeys and the changes of feed, water and care.

Judge Thos. F. Rigg, associate editor of the American Poultry Journal, who judges year after year at New York City, Boston, and Chicago, and who personally knows every Rhode Island Red breeder and flock of importance on the continent, believes "Chicago King" to be the best Rhode Island Red ever produced. This is also the opinion of Mr. Theo. Hewes, editor and president of the Inland Poultry Journal, and like Mr. Rigg, a judge of national reputation.

This cockerel's dam was a fine hen, with a magnificent comb, good in every way, but rather small. His sire was a fine breeder throwing a very even lot of young, both in shape and color, and I might add, heavy laying ability, but his comb was his greatest defect and he was never exhibited. The grandsire was a most famous bird, shown at practically every show of any importance in the middle west, and never beaten for first place until his sixth year, when badly in molt he won third, and in this year, full of years and of honors, he was gathered to his fathers. Of course you can appreciate that our heart felt hope is that "The King," as we have called him since he was a young cockerel, be spared to us for that long.

MANSON CAMPBELL,
President,
The Manson Campbell Company, Ltd.

I'll Give You Plenty of Time to Prove that the CHATHAM Fanning Mill is the Best Seed Grader and Cleaner Made
—And Will Pay for Itself in a Year.

You can prove this by simply taking my proposition and **cleaning your grain**—before you **sell** it—or before you **sow** it. **$1,000,000** lost by Farmers in every state each season by selling and sowing **dirty grain** is a low estimate. You **won't** haul it to **be cleaned** before you sell your grain, so you are "docked" on the price because of **dirt** in every bushel. Just take me up on my offer—get a **CHATHAM Fanning Mill** and save its price easily by using on your place. Take 30 Days' Free Trial first.

WHAT IT DOES BESIDES GRADING

Cleans—wheat for market, oats out of wheat, cockle out of wheat; garlic, chess, mustard and all other foul seeds out of wheat; buckhorn plantain out of clover, separates rye from wheat. Cleans beans—oats—barley—timothy seed. Grades seed corn. **A general purpose seed grader and fanning mill all in one.** Has screens and riddles for all purposes.

Chatham Free Book Tells You My Plan On 30 Days Free Trial

This valuable book tells many other ways than those above that a Chatham Fanning Mill will make and save for you. As a practical man you know that all I've said above is true and you also know that in selling direct from our factory—prepaying freight to you—giving you **30 DAYS' FREE TRIAL**—and our wholesale price—we have simply got to give you a **CHATHAM Fanning Mill** that does all we claim for it. Our business life depends on our mills making good.

Remember that I Prepay the Freight

I'll send you a **CHATHAM Fanning Mill** on 30 Days' Trial without any advance payment, just to prove it will do all we say it will. 250,000 sold already in U. S. and Canada. Experiment Stations indorse them, and Agricultural Papers recommend them to subscribers. So why take **low prices** for dirty, mixed grain, or sow seed that **grows weeds** and **mixed crops? Write nearest office** for full particulars, prices and New Catalog.

Freight Prepaid

Every producer of fruit and vegetables should do all he can to reorganize the Fruit and Produce Department, Oct. 19th, next.

THE SEASON'S TREAT

The blossoms that made spring so sweet,
Have perished and are seen no more;
But summer comes our taste to greet,
And opens to us Bounty's store.

WORK OF THE SEASONS

Each season has its attractions and its blessings. Only a little while ago we were reveling in the blossoms of spring, and our senses were delighted both with beauty and fragrance. We were almost ready to believe that the world would be a better place were it always spring. But we are now in the midst of summer. The flowers are gone, but the fruits of which they were the promise, are here, and we are enjoying their deliciousness. These we know are soon to be followed by the more substantial gifts of autumn. Scarcely have we time to miss the retired blessings of one season, until those of another are upon us. Man ought to be both happy and prosperous, and he would be if he fully lived up to his opportunities. Narrow vision impedes the progress of many, indifference holds down not a few, and selfish prejudice, preventing co-operation for mutual good, is the millstone around the neck of progress and enjoyment. If farmers especially could realize their power, see and seize their opportunities, meet the gifts of the seasons with open hands and hearts, orchard and garden would smile him enjoyment, and field and pasture yield him wealth.

SMALL FRUIT CROP

In spite of reports said to have been given out by the Department of Agriculture, indications are that the fruit crop of 1908 will be small. So far as the fruit belt of Illinois is concerned, it is as near a failure as a crop could be, especially as regards apples and pears. The blackberry crop early in the season promised an abundant yield, but dry, hot weather a little later made the berries small and very poor quality. In Southern Illinois there is perhaps half a crop of peaches, but the quality is by no means up to the standard. Taken all in all this year good fruit will grade as a luxury rather than as a comodity of everyday consumption.

OLEANDER FROM CUTTINGS

It has been found that plants with tough bark and woody stems root more readily in water than in soil. A small but large mouthed bottle with a sufficient quantity of rain water in it, is a good vessel to start them in. Submerge the cutting so that only the bud and a leaf or two may be out of the water. Place, if possible, so that the sun may shine upon that part of the pottle which contains the water but not upon the plant above the water. In two or three weeks roots will begin to form, and in three or four weeks they should be well enough developed to be safely transferred to the permanent pot or bed. It is better to set in small pots at the start, enlarging the pots as the plants increase in size. A dark loam well mixed with sand, is good soil.

POTATOES RUINED

Drought has been severe in Pennsylvania. As early as July 8 early potatoes were reported ruined in Berks county, and corn was greatly damaged.

TURNIPS FOR TABLE USE

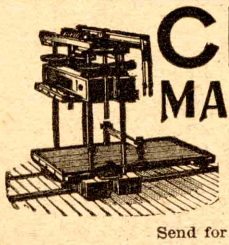
Many people are very fond of turnips, and it is no trouble to have them on the table, tender and juicy, when ever wanted throughout the entire season. Beginning quite early in the spring a row or two planted in the garden like radishes or beats, every week, will furnish the supply. Begin to use them by the time they are as large as hen eggs. If this planting was not done in the spring, it may be begun now, and some seed planted where onions, peas or early beans have grown. Toward the last of July in this latitude is the time for sowing the main crop, and a few rows planted now may be large enough to use by the first of September, and may then furnish an abundance until freezes set in. Frost does not hurt them.

THE EQUITY PLAN

A Pittsburg firm has adopted the Equity plan of marketing fruit, or one so near like it that a photo of it would be readily recognized. The plan has been accepted by the Georgia Peach Growers' Association, and it is quite probable that most of the fruit of the South will find its way to the market this year through this channel.

Shipments of peaches from Georgia or Alabama are made either to Patomac Yards, Va., (Washington, D. C.) or to Cincinnati, Ohio. These are the main gateways to the North and East, and the cars are promptly inspected on their arrival at these points. With an intimate knowledge of all market conditions, and with all available knowledge of supplies in or to come, the cars are diverted from these gateway points into the barest and highest markets of the country, which are mainly within twelve to thirty-six hours' reach. The highest average prices are insured in this way, glutted markets are avoided, and those who really need the fruit are supplied. The firm's plan of marketing is not confined to a few markets operating through one or two gateway points, but it embraces the entire country, reaching small as well as large markets, and insuring the most scientific distribution.

This plan cannot be otherwise than successful. All it requires is a little backbone and the business ability that success demands in all other enterprises. People need the fruits that are produced, and it is only a question of getting the shipments to the points that are not already over supplied. The losses from fruit shipments, we may say the failure to realize profits from fruit production, is the result of dumping virtually the whole output on glutted markets in the congested centers, wasting the surplus in over supplying the few and compelling the many to do without what they actually need. A business system could just as easily watch these markets and direct the shipments so as to reach the needy points where the products would find an eager demand and profitable sales as any other systematic business is conducted. That is the Equity plan.



CIDER MACHINERY

You Need Needles Every Day

24 Gold-Eyed and 14 Darners

The Ladies Sewing Companion

FREE TO YOU

Imported English Needles. The best needles skill can produce. The best needles money can buy. Needles with big gold eyes. Needles with sharp points. Two dozen, assorted sizes, extra good sewing needles. Fourteen large solid steel darning, carpet, straw and glove needles, also blunt lace bodkin—all separately packed in a handy, attractive and permanent case, ready to send to you without a moment's delay—if you will send us 10c for a six months' trial subscription to my big family paper, The EPITOMIST. If you are a man, send for these needles for your wife; if you are a boy, get them for your mother; if you are a woman, you need good needles every day. When you write me, ask about the surprise that I have for everyone that sends for the needles. You won't regret it. Hurry up if you want to get in on this before my supply is "gobbled up." Address me personally.

R. W. MACY

205 Center St., Spencer, Ind.

Fashion Book Free!

I want to send you my handsome new book showing over 400 of the latest styles with illustrated lessons on cutting and dressmaking. I will agree to sell you all the patterns you want for 5 cents each. They are the same patterns you have always paid 10c and 15c for at the stores, made by the same people, and correct in every detail.

HOW I DO IT.

I publish **The Home Instructor,** an illustrated woman's magazine and I want your name on my subscription list. **The Home Instructor** is bright, entertaining, clean and instructive—just the sort of a paper you should have in your home. It has departments for every feature of home life, and prints the choicest fiction every month. Every issue has several pages devoted to the latest fashions, fully illustrated.

My Special Offer.

Send me 25 cents and I will send you **The Home Instructor** for **two years** and will send my big fashion book to you free. I will also agree to sell you any pattern you want thereafter for 5 cts. I can sell them for 5 cents because I buy them by the thousand and don't make any profit. I don't want the profit, I want your subscription to **The Home Instructor.** You will save many times the cost of my offer in a year. Write to-day. **A. OTIS ARNOLD,** Dept. U **Quincy, Ill**

SEE YOUR NAME IN PRINT AND GET A BIG MAIL For only 10c. silver we will send you our magazine for 3 months and if you send the names of two good agents we will give you 200 Gummed Labels with your name and address thereon, convenient for use on your stationery or to paste on your books or other articles to prevent their loss, and print your name in our mailing directory, from which you will receive lots of free samples mdse., books, magazines, letters, etc. **All this for only 10c** (silver) or 12 cts. in stamps. Address; **NEW IDEAS, Dept. 24, Box 3693, Philadelphia, Pa.**

CORNS

Do your corns ache? A-CORN SALVE not only soothes, but cures. Takes corns out by the roots quickly, without danger of poison. 15 cents at druggists or by mail.

GIANT CHEMICAL CO., Philadelphia

Roosevelt Family POST CARDS

Every patriotic citizen should have a set. They are not the cheap picture post cards so often sold through the mails but are the very best ever offered at a low price. Send 10 cents for a year's subscription to American Stories, the popular short story magazine, and we will send you a set of these cards by return mail, postpaid. **AMERICAN STORIES, 214 A. K., GRAND RAPIDS, MICH.**

OLD SORES CURED

Allen's Ulcerine Salve cures **Chronic Ulcers, Bone Ulcers, Scrofulous Ulcers, Varicose Ulcers, Indolent Ulcers, Mercurial Ulcers, White Swelling, Milk Leg, Fever Sores, all old sores. Positively no failure. By mail 50c. J. P. ALLEN, Dept. 55 St. Paul, Minn.**

DROPSY Cured; quick relief; removes all swelling in 8 to 20 days; 30 to 60 days effects permanent cure. Trial treatment given free to sufferers; nothing fairer. **Dr. H. H. Green's Sons, Box K, Atlanta, Georgia**

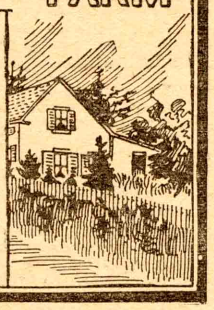
FORTUNE TELLER AND DREAM BOOK 10c. Matters of business, love, marriage and health told. Greatest book out. If you wish to know the future send 10c to MYSTIC PUB. CO. D 16, 1218 FRANKFORD AVENUE, PHILADELPHIA, PA.

DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers

NEW IDEA FLY TRAP

Improved and perfected. Catches 60,000 Flies a day. Agents wanted. Write for particulars. **Baier Bros. Mfg. Co., Dept. F, Cissna Park, Ill.**

Up-to-Date HOME ON THE FARM



The ladies of the farm home should interest themselves in the next convention — October 19, 1908, at Indianapolis. They are invited.

ONLY A WORD

Be kind while life's morn still lingers;
Thy love and thy helpful hands
May be as the founts of water
To the wanderer o'er desert sands;
A word from the heart, in kindness,
May pierce the gray mists of pain,
And arch o'er the hills eternal
The rainbow of hope again.
—*Mary E. Killilee.*

YOU AND ME

There is a great deal of trouble in the world. There are few homes that have not a skeleton hid away in a closet somewhere, and there are fewer still where real trouble and sorrow have not entered. But there is much worry where there is no trouble. Somebody has done something, or is going to do something; something has happened or is going to happen, that brings us into all sorts of worry, and colors everything blue about us. But after the clouds have come and the storm has beaten upon us, and we have had our satisfaction of worrying, we find the whole thing except the worry was purely imaginary. If our imaginations were set to a different key, if we imagined bright skies instead of storm clouds, if we held back our worries until the cause of them had actually arrived, our lives would be far sunnier than they are, and those who look to us for sunlight would have so much more of it! No matter what comes or don't come—

If it can't be helped,
There's nothing gained by fretting;
And if it can be helped,
The help is of our getting.
In either case, to fret and fume
The brave and good find little room.

The world is full of people. Some are gay and some are sad; some scatter dust and others sweep it away; some help with another's burden while others pile more weight upon it. But after all, there is but one day at a time—but one hour at a time—and in all the world full of people we have only to do with you and me. The weakest can be tranquil for one short hour, and you and I can control ourselves and be pleasantly helpful to one another. If we can keep worry away for one hour, we are not brave if we cannot keep it away for two hours, or for three—for all the time; and if we can be bright and sunny and helpful, you and I, why can we not be so with everybody else?

A happy world if you and I—just you and I
Should laugh instead of worry;
If we should grow—just you and I—
Kinder and sweeter hearted,
Perhaps in some near by and by
A good time might get started;
Then what a happy world 'twould be,
For you and me—for you and me.

And if for you and me, then for everybody else, for we are only samples of the whole race of humankind.

"But there ARE things to worry about," comes from the head of the table even in the home on the farm. A living must be made, crops must be grown, harvested and sold. Children must be "brought up in the way they should go," and food and clothing must be provided.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

Sure, but when we come down to the real beautiful in life, in the home on the farm or any other, every one may be a millionaire, and piling up riches for himself he need not take a penny from anybody else. Here is how:

The thing that goes the farthest
Toward making life worth while,
That's worth the most, that cost the least,
Is just a pleasant smile.
'Tis full of worth, and goodness, too,
With manly kindness blent,
'Tis worth a million dollars,
And doesn't cost a cent.

And yet some strangely mistaken people work and worry life away without once thinking of making that wonderfully profitable investment!

Still there are struggles and trials. We may not pass our lives "on flowery beds of ease." The human frame is of the earth, and it is often tired.

When I crawled into bed last night
A thousand cares, it seemed, beset me.
I longed to just drop out of sight,
To die and let the world forget me.
My dearest wish was just to close
My weary eyes and drift away,
To leave behind me all my woes,
And sleep until the judgment day.
But—

This morning when I awoke to hear
New voices calling me to duty;
My vision, blurred before, was clear—
I found the world arrayed in beauty.
The hopes that I had thought were vain
And had in sorrow cast aside,
Returned to give me strength again,
And all my longings satisfied.

Duties cheerfully done, griefs philosophically borne, hopes patiently indulged, worries sternly resisted—life s worth the living, success hovers near, and earth and heaven are not so far apart.

MAY BE USEFUL

To prevent potatoes from bursting open when boiling, prick the skins with a fork before putting them in to boil.

* * *

It is a good plan to finish the upper part of a skirt first and then hang up by the waist and let hang over night. This gives the goods a chance to sag or settle, assume the natural shape, before being finished at the bottom. A skirt so treated is much more likely to set well.

It is believed that lamp chimneys may be toughened by putting them in a vessel in which they are submerged in cold water, the water being then brought slowly to a boil, and then cooled slowly also.

* * *

A layer of paper between the table and the oil cloth makes the oil cloth last much longer, and gives the table a softness that many admire.

* * *

To rub silverware with oatmeal brightens it.

* * *

Add a little bluing to the water in which glass is washed. The glass so washed will look clearer and brighter.

* * *

Salt and water is a good wash for willow furniture. Apply with a coarse brush, and dry thoroughly. To rub leather chair-seats, or other leather articles with well beaten white of egg, gives the leather a new appearance.

* * *

Water is so powerful an absorbent of odors, that a few buckets full set around in a freshly painted room will soon gather up the odor of the fresh paint.

* * *

A little turpentine mixed with the stove polish makes the polish more brilliant, and the stove is not so liable to rust afterward. The odor of the turpentine soon disappears besides, the odor itself in the air is a germ destroyer.

* * *

If you use a refrigerator or ice box in which to keep milk, butter, food, etc., be very careful that every part of it is kept scrupulously clean; and that nothing giving off odors is kept where the milk and butter is.

* * *

It is easy to cultivate a craving for ice water during the hot days. The constant use of ice water, or any use of it in fact, is not conducive to health. Naturally cold spring, or well, or good winter caught cistern water is much better and safer.

Three generations of Simpsons have made

SIMPSON TRADE MARK **REG. U.S. PAT. OFF. EDDYSTONE PRINTS**

Founded 1842

Ask your dealer for

Simpson-Eddystone Fast Hazel Brown

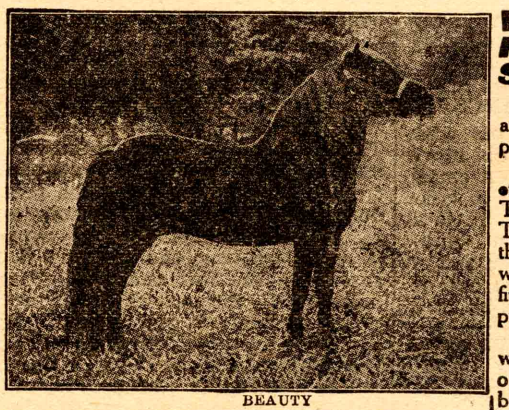
The fastest and most beautiful Brown on the market.

You think it impossible to get brown that will not fade in cotton dress-goods. We make it—a beautiful rich shade that perspiration, sunlight or washing cannot budge. This color, combined with superior quality and beautiful designs, makes these calicoes ideal for stylish dresses.

Beware of all imitation Browns. They are *not* "just as good." If your dealer hasn't Simpson-Eddystone Fast Hazel Brown, write us his name. We'll help him supply you.

The Eddystone Mfg Co Phila, Pa.
Established by Wm. Simpson, Sr.

Two Beautiful Shetland Ponies Like this to Boys and Girls..... **FREE!**



BEAUTY

We will give away FREE Two genuine Shetland Ponies.

This Pony's name is BEAUTY and she is certainly a dandy, and is perfectly gentle.

We will give with TRIXY, the other pony, a fine cart and harness. Trixy is just as pretty as Beauty. They are the best we could find at any price.

Do you want one of these beautiful Ponies without it costing you one penny?

IMOGEN MEANS.

You Can Get It. Write Quick.

This little girl received a Pony free. Read what her father says about it. "I have just received the Pony. I have two little girls 7 and 8 years old and words are inadequate to express their joy in when the Pony arrived. Had I been going out to buy a Pony I could not have found one that suited me so well.—T. J. Means, Dearborn, Mo."

Either one of these Ponies is worth $200.00 but will not cost you a cent if you hurry. Send no money, just send your name and address,

SUCCESSFUL FARMING, Box 816, Des Moines, Ia.

It is a great waste to put anything warm in the ice box. Let it get as cold as it will outside before putting it in. Milk taken from the ice box but to be returned, should not be kept out one moment longer than necessary, as cold milk brought into the warm air sours very quickly.

* * *

Tomato sandwiches are a delicate but showy novelty. Cut white bread into thin slices, then from the slices cut circles as with a small bisucit cutter. Spread these circles with butter, place a slice of tomato on one, sprinkle with salt and pepper, and cover with another circle of the bread. Nice to serve on a side dish, and such sandwiches have the advantage of most side dishes in that they are very healthful.

* * *

To remove coffee stains place the stained part of the goods over a vessel sufficiently large, and pour boiling water through the stain. Fruit and tea stains may usually be treated successfully in the same manner.

* * *

A thoughful friend suggests that the bric-a-brack or household ornaments, including the pictures, shells, etc., on the center table and mantles, be put away for the summer. The care of them will be saved and they will look much brighter when brought out in the fall after the flies and dust have been finally disposed of. Fill their empty places with fresh flowers.

AERATING BOILED WATER

Since the germ theory of disease has been established, the drinking water is a matter of the utmost concern. Impure or infested water is the most active vehicle for the communication of disease, and, especially in times of prevalent sickness or epidemics, it is unsafe to drink water that has not been boiled. Boiled water is likely to have a flat taste even after it has been cooled, that makes it unpalatable. This is because the heat has driven so much of the air out of it. A friend suggests the following simple method of re-aerating it:

Boil the water thoroughly, put in a perfectly clean vessel that can be closed at the top. A glass jar or a large bottle is an ideal vessel to put it in. Do not fill quite full; close tightly and shake thoroughly, until the water sparkles all through it. Set in ice water or in an ice box to cool, or in the coolest place at hand. It is not well to put ice into boiled water, as the ice may take with it into the water the germs the water was boiled to destroy. Keep boiled water closed while being saved for use.

READING THE EYES

Blue eyes are said to be the weakest.

Wide-open eyes are indicative of rashness.

Small eyes are supposed to indicate cunning.

Side-glancing eyes are always to be distrusted.

Brown eyes are said by oculists to be the strongest.

The downcast eye has in all ages been typical of modesty.

The proper distance between the eyes is the width of one eye.

Eyes with long, sharp corners indicate great discernment and penetration.

The white of the eye showing beneath the iris is indicative of nobility of character.

When the upper lid covers half or more of the pupil the indication is of cool deliberation.

Gray eyes turning green in anger or excitement are indicative of a choleric temperament.

An eye the upper lid of which passes horizontally across the pupil indicates mental ability.

Unsteady eyes, rapidly jerking from side to side, are frequently indicative of an unsettled mind.

Eyes that are wide apart are said by physiognomists to indicate great intelligence and a tenacious memory.

Eyes placed close together in the head are said to indicate pettiness of disposition, jealousy and a turn for fault-finding.

Wide-open, staring eyes in weak countenances indicate jealousy, bigotry, intolerance and pertinacity without any firmness.

When the under arch of the upper eyelid is a perfect semicircle it is indicative of goodness, but also of timidity, sometimes approaching cowardice.

—Exchange.

AROUND THE TABLE—JUST A SMILE

HIS NEW BROTHER

Yes, I've got a little brother,
Never asked to have him nuther,
But he's here.
They just went away and bought him,
And, last week the doctor brought him,
Weren't that queer?
When I heard the news from Molly
Why I thought it first 'twas jolly,
'Cause, you see,
I s'posed I could go and get him,
And then mama, course, would let him,
Play with me.
But when I had once looked at him,
"Why," I says, "Great snakes, is that him?
Just that mite?"
They said "Yes," and "Ain't he cunning?"
And I thought they must be funnin'—
He's a sight!
He's so small its just amazin'
And you'd think that he was blazin',
He's so red.
And his nose is like a berry,
And he's bald as Uncle Jerry
On his head.
Why, he isn't worth a stick,
All he does is cry and kick,
He can't stop;
Won't sit up, you can't arrange him—
I don't see why pa don't change him
At the shop.
Now we've got to dress and feed him,
And we really didn't need him
More'n a frog;
Why'd they buy a baby brother
When they know I'd a good deal ruther
Have a dog?

If you would see a 1900 Washer you would quickly understand *why* it makes clothes so clean. Why it does it so quickly. Why there is hardly any wear on the clothes. Ordinary machines and wash boards wear out clothes more than actual use does. 1900 Washers are sold on trial. They save money to pay for themselves. Send for full information to The 1900 Washer Co., 1038 Henry St., Binghamton, N. Y.

The "Friendly Gun"

"Give me a gun and a dog and let the world go hang." KEMPSTER.

Getting back to nature now and again with a *friendly* gun is about the best recuperative tonic I know, and it's a medicine any number of the doctor people swallow cheerfully themselves.

But the friendly gun! What makes it? It tingles and whispers in your hands! The butt snuggles your shoulder and the sight flashes true to your eye, like some eager living thing instead of a cold bit of polished steel and wood.

I met it first when as a boy my father bought me my first Stevens Rifle. Since then I have tried other models, but I always come back to Stevens. These makers seem to have the knack of making the "friendly gun."

There have been many good Stevens Models, but it seems that for the short time they have been on the market the Stevens Repeaters are catching up to their predecessors in the matter of popularity. They are easily the most accurate and hardest shooting rifles in their class.

The .25 Calibre Stevens Repeater is the latest size manufactured. It is unsurpassed for general target purposes, and is just the thing for general field work and small game. The No. 80 model of this calibre is the only Rim-fire Repeating Rifle on the market, and while the bull's-eye accuracy of Stevens Single Shot Rifles has been conceeded for generations, Stevens Repeating Rifles are easily maintaining the makers' reputation for the unerring accuracy of their guns.

Anyone who wants to know more about the best guns on the market, should send for Stevens' handsome 160-page catalog. I have learned that it will be mailed on receipt of 5 cents in stamps to cover postage, by addressing the J. Stevens Arms and Tools Company, 225 Front St., Chicopee Falls, Massachusetts.

A VETERAN SPORTSMAN.

$3.50 Worth of Catarrh Medicines Free to Every Reader

Dr. T. F. Williams, one of the Leading Catarrh Specialists in the United States, has such a remarkable treatment for Catarrh that he offers to send any afflicted reader of the paper one month's medicines Free in connection with his new Vaporizer and Inhaler. A WOMAN CAN EARN $5000.00 A YEAR

Learn Dressmaking at Home

Many women nowadays are earning $100 a week—$5000 a year by dressmaking. One woman, the head designer of Chicago's largest retail dry goods house, earns $10,000 a year. Salaries of $25.00 to $50.00 a week are common. We teach you by mail and put you in a position to command the largest salary of any woman in your locality, or you can Start in business for yourself. Become a Graduate Dressmaker. The regular Diploma of this College is issued to all who complete this course of lessons. The American System requires no charts or patterns. These lessons will teach you how to draft your own patterns and make your own clothes and enable you to dress far better at one-half the usual cost. They teach you how to DESIGN, CUT, FIT, MAKE, DRAPE and TRIM any garment, including children's clothing. This College is endorsed by all high grade Fashion Magazines—Delineator, Designer, McCalls, Pictorial Review, New Idea Woman's Magazine, Modern Priscilla, Housekeeper, Good Housekeeping, etc.

This book will be sent to you free. At an expense of hundreds of dollars this college has published 10,000 of these copyrighted books to advertise the AMERICAN SYSTEM OF DRESSMAKING, and—while they last—will send you a copy FREE. Write for it today. One copy only to each woman.

FREE

AMERICAN COLLEGE OF DRESSMAKING
278 College Building. KANSAS CITY, MO.

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second,* because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

UNITED BROTHERHOOD OF TRADE UNION COUNCIL 33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

CHANGE OF CONVENTION DATE

The date for the 1908 Annual Convention has already been published as October 19. It has, however, been decided, for good reasons, to change the date and OCTOBER TWENTY-SEVENTH is the date now fixed for the Sixth Annual Convention to meet at Indianapolis. See call published in this issue.

National convention October 27th next.

Read revised call for the convention in this number.

By making the next meeting a mass convention, will give every loyal member an opportunity to be heard and preclude the possibility of the convention being made to order.

As the members were disatisfied with the work of the 1907 convention, this is their opportunity to get together and re-establish the society on the original lines.

Before the 1906 convention, when the first step was taken to load the society down with entangling appurtanances and alliances, it grew stronger every week and was recognized as a great power. The duty of the members now is to restore it to its original simplicity when it will quickly excel its former self in membership and influence.

One of the chief duties of the next convention will be to reorganize the various departments as provided for in the plan of the A. S. of E. These departments are as follows: The Fruit and Produce; the Grain Growers; the Tobacco Growers, and the Peanut Growers. Also it may be desirable to organize departments for stock growers, dairymen and cotton growers. It is of the utmost importance that the convention be attended by the best representatives of the various industries so capable officers may be selected. The plan of the A. S. of E. is absolutely correct and all that is needed to quickly establish it for all farm crops are honest, capable executive officers.

Each member should see to it personally, as far as possible, that capable officers be selected at the next convention to guide the society. This is an opportunity, we may say, of a life time, and the results of the next convention will exert on influence for or against every farmer in the country for his life time.

THE OLD STORY OF INCOMPETENCE

The Farmers' Alliance of a few years ago ruined itself by trying to attend to everbody else's business instead of sticking closely to its own, and when a few pretended Equity people, with more selfish ambition than honesty or brains, went off after the exchange proposition, we predicted they would meet the same well deserved fate. The Farmer's Call copies from the Chicago Record-Herald the following account of how our prediction was verified:

It is difficult to sell union grown potatoes in Chicago. Some Wisconsin farmers believe so, and they propose to reorganize the local branch of the Equity Exchange, otherwise known as the Farmers' Union.

President J. W. Emmerton, of the Wisconsin branch of the American Society of Equity, has called a convention to meet in Milwaukee today. Charges of incompetence have been made against the management of the Chicago house, and it is proposed to make a change. Farmers who have shipped union grown potatoes and cabbage to this city have complained that they failed to receive returns in three months and they want to know the reason why.

The Chicago branch is located at 249 West Randolph street and has been under the management of W. W. Scott since it was opened, several months ago. It is declared that the union men who indorsed the project when it started have been buying non-union products because they were a little cheaper.

INDIANA TO PLAY A PART

Indiana proposes to play a part in the National Corn Exposition at Omaha next December. Grain dealers and corn growers are planning a special train for the trip, and many prominent Indiana business men are offering special premiums to Indianians who will win premiums at the exposition.

PRIZE WINNERS FOR JUNE 1

The mystery of the old mill puzzle brought many replies from our subscribers. Many still send answers, but neglect to send the article required. Of course these have to be cast aside.

The following are the prize winners:

First Prize, $1.50—Belle M. Michael, Hope, N. D.

Second Prize, $1.00 — Milton E. Brown, Waverly, Ohio.

Third Prize, 50 Cents — Viola Kruschke, Peet, Minn.

Honorary mention—1st. S. A. Lexold, Zumbrota, Minn.; 2nd. S. H. Malin, Brown Valley, Minn.

PUBLISHER UP-TO-DATE:

Accept thanks for third prize in May first puzzle contest awarded me. I am a subscriber and enjoy reading UP-TO-DATE very much. I like the editorials and the departments including the advertisements and will compete for other prizes. I send best wishes for the paper's and publisher's success. Sincerely yours,—Milton E. Brown, Waverly, O.

SUITE FOR DAMAGES

The suite for criminal libel against the publishers and editors of the Equity Farm Journal having resulted in conviction, and the judge having finally disposed of the case by passing sentence, as has already been announced in these columns, the second logical step has been taken, as is shown by the following letter:

Chicago, July 17, 1908.

MR. JAMES A. EVERITT,
Indianapolis, Ind.

Dear Sir:—I have today commenced suite against the Regan Printing House and the Peterson Linotype Company for $100,000 in the Superior Court of this city.

D. H. COCHRANE,
Attorney-at-law.

The printing house and linotype company were employed by Nelson and Bowne to compose , print and mail their paper, hence they made themselves liable for the damages resulting from the publication of false, slanderous and libelous articles.

COLUMBUS, OHIO, WANTS FARM PRODUCE

In a leter we received from Mr. Geo. B. Dickert, 26 E. Woodruff Ave., Columbus, O., representing The Labor Protective Union, he makes a strong appeal for union farmers' produce. We quote from his letter as fololws:

We don't want the farmers to ship their produce without first knowing what they are to receive for them. WE WANT THE FARMERS TO SET THE PRICE and we want no shipments until WE know th cost to us. We want to connect with farmers who believe in co-operation; we want to know what they have to sell AND WHAT THEY WANT FOR IT. We believe we can give the producers better prices than they have been receiving and at the same time supply our needs at less cost than under the old system.

We are glad to see this disposition on the part of consumers to get together to protect themselves. It is what this paper has always advocated —the consumers organize, or use present organizations to protect themselves against unfair middlemen wherever they exist. They can accomplish their end by receiving supplies direct to their own exchange or dictate the prices present handlers shall charge and confine them to fair profits. We predict the latter will be the more satisfactory plan, because successful managers of receiving depots or exchanges will be difficult to secure.

But to make either successful there must first be stability of price with the producers. We can readily imagine the result if the members of the Society of Equity or the readers of UP-TO-DATE FARMING would each quote a price based on his own ideas; also we should look farther yet. Producers are not all organized, neither do they all read one paper. Hence if readers of UP-TO-DATE FARMING were to agree on a set of prices the non-readers might defeat them, or demoralize the markets at times, by underselling them.

So there are factors that enter into the proposition that dare not be ignored. If we were to say to the readers of UP-TO-DATE or the present members of the society: "Come on boys, the consumers of Columbus, O., will pay you good prices," we would be deceiving the farmers and disatisfaction would surely result. This was the shortsighted policy of the Equity Exchange promoters. They made a great and expensive effort to organize exchanges in the cities and held out the inducement that the organized consumers would pay farmers good prices before the producers themselves were sufficiently organized or even were reading the same paper so all could act on the same advice.

Considering that the Columbus peo-

ON THE FARMER'S BACK

This sketch was submitted by a young Equity reader, Miss Grace B. Caldwell, LeRoy, Mich.

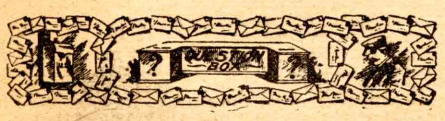
If the trusts have been on the farmers' backs, it was because the farmers themselves put them there. The trusts and all those who have in the past exploited the farmers, only embraced the opportunity the farmers made. We refer readers to the article on page 15 of May 15th number, "Who is Responsible?" It will pay to read this article again.

ple are apparently very anxious to receive produce direct from co-operating farmers, (our correspondence with Mr. Dickert has been very voluminous), we are inclined to help them all we can and at the same time we hope to help the present members of the society. We also hope that the arguments advanced in this article will induce producers to become more active in getting in a condition to control the supply so they can maintain whatever fair prices may be decided upon.

The first thing necessary is to decide on the fair and profitable prices. In this we are handicapped in not having active and competent departments fully equipped to meet all emergencies, contemplates as the plan of the A. S. of '. But under such conditions be believe doing the best we can and recommend the following prices for August for the zone that naturally supplies Columbus, O. And we don't know of any reason why these prices shall not apply for shipments to Cincinnati, Cleveland, Toledo, and other markets in Ohio, also Pittsburg, Indianapolis, Detroit, Grand Rapids, etc. The prices are at shipper's station in car load lots. If shipped in less than car loads the difference should come off of the selling price.

Following prices are for August:
Potatoes, bu., 70c@80c; apples, good, bu., 75c; common, 25c@50c; onions, bu., $1.25; beans, hand picked, bu., pea, $2.00, mediums $2.00, red kidney $1.75; sweet corn, per bbl., $1.50@$2.00; sweet potatoes ——— ———; cabbage, per crate, 80c; turnips, per sack, $1.00. Poultry—live—chickens, 8c@10c lb.; spring chickens, 15c@18c lb.; turkeys, 12c lb.; ducks, 10c lb.; eggs, fresh, 18c dozen; butter, good country, 20c lb. Hay—choice timothy, $12.00 ton; mixed hay, $9.00@$10.50.

If our readers will co-operate with us, we can enlarge this list and also they can assist us to keep the prices equitable to both producers and consumers.



This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

QUESTION: *When shall we market our crops if we are in the Farmers' Pools?—Many inquiries.*

ANSWER: 1 When wheat is $1.00 a bushel at Chicago. 2. If you cannot wait for the price to go to $1.00, which it may not do while the remaining dumpers are dumping, then sell only what is necessary to meet pressing obligations, and gradually over the year. If practically all farmers will do as directed in No. 2, crops can be controlled and they can make and maintain prices.

Q. *When wheat is $1.00 at Chicago, or corn, oats, barley, etc., are at the agreed minimum prices at base markets, how shall we calculate the home price?—Many inquiries.*

A. We will illustrate this on wheat and it is the same for all other crops. Example: Wheat is $1.00 at Chicago. Now deduct the freight from your station, if west of Chicago, to Chicago. We will say this is 15c a cwt., or 9c a bu., leaving 91c. If the handler is entitled to 1c a bushel, then you should receive 90c. Points that are not naturally tributary to Chicago must be treated differently. For instance, if New York or Baltimore is you market, then *when wheat is* $1.00 *in Chicago,* notice what it is in New York or Baltimore and deduct freight and cost of handling from such prices to get *your* station price. Also when the local demand takes your crop, the price oftentimes is, and in justice should be, as high as the city price—no freight off.

Q. *Please publish in Up-to-Date the address of several commission houses in different cities, of course reliable firms, such as farmers will be safe in shipping to. This request is made in the name of the Michigan Ladies Society of Equity and the Bliss Local Union.—John M. Hawley, East Jordan, Mich.*

A. We do not feel that we can comply with your request, because, while there are many financially reliable commission houses, so many conditions arise in dealing with them that may lead to disatisfaction that we don't want to assume the responsibility of recommending any commission house.

A BIG DIFFERENCE

The youngest girl of a Baltimore family was recently much distressed, at dessert, to discover that there was ice cream for dinner.

"Oh, papa!" exclaimed the youngster reproachingfully, "why didn't you tell me this morning that we were going to have ice cream?"

"What difference would that have made?"

"Lots, I could have been expecting it all day."

The Bureau of Immigration—State of Maryland

The State of Maryland has attracted the attention of a good many farmers not only in the northern section of the United States and Canada, but more so in Europe; the cause for this is principally the work of the State Bureau of Immigration in Baltimore, whose duty it is to advertise the State and its advantages. Another main factor in the movements of farmers for the cheap lands of Maryland in the neighborhood of the best markets in the country is the fact, that the climate is unsurpassed and severe storms, cyclones, dry spells, etc., are totally unknown. During the last years a number of western farmers have settled in some of the Eastern Shore counties and paid from $15 to $25 per acre; they improved the land to such an extent that at the present time that land cannot be bought for less than $60 per acre. Here is a single instance: M. Berger came from the west with a small amount of money and settled on a neglected farm along the Choptank River. He rented the place first, started a Duck-farm, and here is what he said to me last Sunday:

"I have been exceedingly succesful here; during the spring I have raised nearly 10,000 ducks; and got for the first lot of 800 $1 a piece in New York. I sell all my poultry to New York hotels From 145 chickens I realized $400 cash money in one year. My farm of 200 acres is paid for, my credit in the little Bank of Preston is as good as any of my neighbors, and my buildings are all new and equipped with the most modern improvements. That is my work during the 3 years of success in Maryland.

Mr. Berger is well educated, having studied law in Australia in his younger years. He is married and can point to a happy family. And there are others.

Mr. Wm. Lubbers, a very wealthy gentleman of Germany, has recently bought a tract of 1250 acres of land for $20 per acre. This farm was very much neglected, notwithstanding the fact, that it is situated on the railroad and in even distance from Baltimore and Washington. Mr. Lubbers intends to make this place a social centre for his friends in Washington and Baltimore and has already made such improvements, that he could easily get $35 to $40 per acre. But he knows, that his money is very well invested and therefore will not sell. He has always from 16 to 22 men at work and has made contracts for the very best manure in both large cities, to give back to the soil, of what it has been robbed in years gone by.

In Southern Maryland, the home of the tobacco, have settled quite a colony of Australians, who are now engaged in the introduction of Hungarian grape-vine. These people make good gardeners and the neighborhood of Annapolis, Baltimore, Washington guarantees them a great future.

Some people from Illinois, have taken up tobacco raising and the prospects are very good for an excellent crop.

There are many more instances, where it can be shown, that Maryland should be preferred by any settler, who intends to change his location. Along the many creeks, rivers and bays Maryland presents ideal places for any man who wants to live in health, peace and plenty. We have families from Switzerland in the rolling regions of Howard County and on the flat land of Dorchester County and according to their expressions, they could not have done better anywhere on the face of the globe. Many of those who come here from the West and Northwest buy large farms. They have learned nothing but stock and grain farming and want to pursue the same course here. They laugh at the idea of raising peas, tomatoes, sugar corn or other vegetables for nearby markets or canning factories. But often they see their mistake and, after the first season, generally plant a few acres of their land in such crops, which, together with their fruit, poultry, produce and butter, usually pay for all their living expenses, so that the proceeds from their grain crops can be used to pay off the mortgage, if there is one, or to improve the land and buildings or be otherwise invested. Two families from Illinois, who have settled along the Patuxent, said that they had as large corn crops as they had ever raised on the prairies in their former homes.

"How to Take Care of a Wife," is a book by Dr. Melville C. Keith that should be in every home. It is written by a man who has had years of experience.. Not one who takes the present ways of doing things for granted; but one who seeks out the better—the new. Any person who sends 50 cents for this book will find it well worth ten times as much. Address Keith & Ginter, Publishers, Bellville, Oi.

The original cream separator in this country was the De Laval. This company has never spared effort nor expense in keeping up-to-date in every way. Before you buy a separator send for the latest De Laval catalog and booklets. Address De Laval Separator Co., N. Y. City. Agents everywhere.

Hay balers sold by Whitman Agricultural Co., St. Louis, Mo., are "guaranteed Best in America." They make balers for hay, straw, wool, etc. Catalog is free. Whether you want a baler right now or not send for catalog and study it. A baler makes money for its owner. You need one.

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues will not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say; "I saw it advertised in Up-to-Date Farming."

Agents Wanted

Agents Automatic Curry Comb, postpaid 40c. Over $5.00 daily or sample returnable. Particulars free. Clean Comb Co. [B] Racine. Wis.

Agents make money selling Ferry's Handy Hame Fasteners. Every farmer and teamster needs from one to a dozen pair. Sample 25c. Dozen $1.10. Cooner & Fortune Co., Indianapolis. Ind.

Agents make $103.50 per month selling wonderful self-sharpening patented scissors and cutlery. V. C. Giebner sold 22 pairs in 3 hours, made $13; you can do it. We show you how. Free outfit. Thomas Mfg. Co., 53 Home Bldg., Dayton, Ohio.

Sales Manager for exclusive district, newly patented staple necessity; permanent business, big profits, experience not essential. $250 or more required. Pressident, 426 Ohio Bldg., Toledo, Ohio.

Farm Lands

Farm Catalog free. Fidelity Reality Syndicate, Baltimore, Md.

Farms for sale to Catholics on easy terms; half-mile from church, two miles from railroad. Write T. A. McKittrick, owner, McCracken, Kansas.

Farms fairly improved, well laying, ten to twenty dollars per acre; timbered lands, choice for range, corn, clover, fruit, from four dollars up per acre. Our productive soils, excellent markets, good water, mild climate, healthy location, no negro population, attract wide-awake buyers. Investigate now. For price lists and booklet, write A. M. Knobel, Doniphan, Missouri.

If you want to buy or sell property, any kind, anywhere, write the Northwestern Business Agency, Minneapolis, Minn.

Sacramento Valley, California, is the greatest agricultural valley in America. It It is the "Land of Opportunity" for the farmer. A family may be independent on twenty acres. Write Sacramento Valley Development Association, Sacramento, California. We have nothing to sell.

Snaps in land in Central Minnesota. Send for list. A. MURRAY, Wadena. Minnesota.

Ferrets

For Sale trained Ferrets. Guaranteed workers. H. R. Miller, Lowell, Ohio

Live Stock and Dairy Supplies

For Sale Angus cattle of either sex. Wm. Noonan, Hartford City, Ind.

Free Price List. Shorthorns, Southdowns, fox hounds, setters, pointers. I buy and sell foxes. J. D. Stodghill, Shelbyville, Ky.

Rambouillet Sheep; best blood, all ages; rams and ewes. Address J. HARVEY, FORKVILLE, MISS.

Registered Poland Chinas, choice breeding, fine individuals, large variety to select from. Satisfaction or no sale. Write me your wants. S. H. Taylor, Mottville. Mich.

Tamworths Immense size, early maturers, economical feeders and most prolific of all hogs. Booklet free. W.W. Morton, Russellville. Ky.

Machinery

Why not buy a gasoline engine to do your hard work? It is the cheapest help you can hire. An air-cooled engine is the best and cheapest. Built in four sizes, 1½, 2½, 5 and 10 H. P. Write for prices The Air-Cooled Motor Company, Lansing, Mich.

Patent Attorneys

Advice and book relative Patents sent on request Beeler & Robb, Patent Lawyers, 60-62 Baltic Bldg., Washington, D. C.

Patents M. A. Schmidt, registered patent attorney, 715 11th St., N. W. Washington. D. C. Send for Inventor's Manual. Free.

Poultry and Supplies

Baby Chicks 25,000 World's best Rhode Island Red baby chicks 15c each, $15 per 100. We own Chicago King, the most valuable male in the world. Eggs, breeders, exhibition birds. 10,000 Barred Rock, Brown Leghorn and Black Minorca chicks 10c each, $10 per 100. Buff Orpingtons 25c. Chicks safely delivered 1500 miles. Some great big bargains now in higher priced eggs, chicks, breeders. EDWIN R. CORNISH, Edwardsburg, Michigan.

Chicks: We ship thousands of day-olds each season. Send for booklet and testimonials. Freeport Hatchery, Box 40, Freeport Michigan.

Eggs 75c per 13, $1.50 per 30, Rhode Island Reds, Buff Orpingtons, Barred and Buff Rocks, Buff and Brown Leghorns. Catalog free. Link Roberts, Fultonham, Ohio.

THE FIELD

STAND BY UP-TO-DATE FARMING

Mr. J. A. Everitt,
Editor Up-to-Date Farming,
Indianapolis, Ind.

Dear Sir: With pleasure I again remit the sum of 50 cents (and 25 cents for the Third Power book) for another year's subscription to your paper or rather the farmers' friend, as in my estimation a single copy of this noble publication alone is worth the price of fifty cents.

I am not a farmer but a carpenter by trade, but was born and grew to manhood in a farming community and always lived among them; until a year ago when I moved to Madison. Altho not engaged in the occupation of farming, have always felt a strong desire to help them in their struggle thru the sad vicisitudes of life and from the bondage in which they are enslaved and the snares with which they are surrounded, laid by the so-called trusts (or more correctly, thieves and gamblers) who earn their daily bread by foul means, such as robbing the poor, and keeping or trying to keep the farming class in darkness and ignorance.

But their ignorance is not due to lack of knowledge or ability, but because they have been hitherto misled by those scoundrels whose rascality has at last been revealed by the pages of UP-TO-DATE FARMING *thru its noble editor and founder of the* Society of Equity, Mr. J. A. Everitt.

I have been a reader of this paper for three years and I think I can safely say that no man has studied its contents more carefully, or searched its pages more eagerly than I have. And yet strange it seems, that there are still so many in the dark concerning the controlling of farm crops, when it is made so plain and simple in this little paper that the teachings are certainly master pieces as well as messages of help to the struggling masses of humanity.

Abraham Lincoln in his address at Gettysburg, said, "this is a nation of the people, by the people, and for the people." But alas, today we have a nation, of the people, by the gamblers, and for the land pirates. Today, we are facing a graver problem than ever confronted this, our nation, since the day of its birth; and why, because the hands of greed and graft are upon us.

How then can we expect even a fair living, as wage earners, while at the mercies of those who care no more for our welfare than the mule about Xmas. But the time will come, and let us hope not far distant, when this cursed and infernal gambling upon the necessities of life which God and our government have permitted to grow upon the soil and produced by the sweat of an honest people, may be forever abolished. But a chord has been struck, namely, the chord of Equity. Its music is thrilling and sweet and may be heard from ocean to ocean; its vibrations will continue and we may well call it a new era in American History.

But how shamefully these chords were tried by men who were trusted with the upbuilding and welfare of this new life of Equity and nearly cut to pieces in October, 1907. But by the honesty and wisdom of a few good men was saved from the jaws of ruination and destruction. Large sums of money have been spent by its founder and he neither spared labor nor energy in this great cause, yet how shamefully this man has been treated by the traitors of equity. The pangs of a serpent can be no more severe than the abuses which have been heaped upon Mr. Everitt. But the enemies have been met in a manly way and the charges brought against him answered in a manner which should be sufficient to prove that all this talk against a man of principles is false, and the guilty ones can no longer be trusted with the official duties of this great organization.

Page after page from time to time have been filled in UP-TO-DATE FARMING answering false charges, and infernal lies, until everything is so plain, that there need be no further doubts in the minds of fair people. Farmers, as well as other classes, must stand for their rights, be men among men, and stand shoulder to shoulder proclaiming Equity to all nations, willing to sell to all, the necessities of life. But demand a living in return for yourself and loved ones. As this can safely be considered a just cause let the "big guns" howl and whine. So long as we stand for our rights, nothing need prevent us from obtaining an honest living, which is due us under the laws of God and man.

Push on vigorously and let Equity and living prices ring in the ears of every man, and at the same time we will bring about a reform such as our chosen representatives in congress have failed to bring about. It is utterly useless to look or hope for reform to those who are treating us as an inferior class of people as the majority of these are working for the interest of those who hold us down to make us bow to the yoke of slavery. But in the distant horizon a gleam of hope can be seen, and this hope for better times can be secured by standing firm for the teachings of UP-TO-DATE FARMING. Stand by it!

F. E. GASTROW,
620 Center Place,
Madison, Wis.

Dear Publisher:

UP-TO-DATE FARMING has been a blessing to every one who has come under its influence. I approve of the system it teaches for marketing crops which is fair to both producers and consumers and which does not cripple any business to build up agriculture. Right and Justice ought to rule, as you teach, but until this time they have not. If the thieving and exploitation which you oppose, are not overcome by the people there will be only one other remedy left, the musket. We hope this will never come but that the principles taught by your paper will prevail.—Silas Greer, Brownstown, Ill.

Dear Publisher:

UP-TO-DATE FARMING is the best paper for farmers ever printed. It is certainly accomplishing its mission to teach controlled marketing and bring profitable prices.—Henry C. Asche, Sunman, Ind.

Dear Editor:—I would like to see some letters from ladies in our paper. There is nothing that I like to read better than letters from the ladies telling about their poultry, their garden, their pigs, and their cows, if they have any of these in their charge. I want to know yhich is the most profitable and how they handles them. I make more clear profit from turkers than from anything else I can raise on the farm. I also have Barred Plymouth Rock chickens and White Pekin ducks. My hens are well cared for and lay summer and winter. I am going to try to dispose of my eggs and fowls in the future for breeding purposes—Mrs. T. S. Monk, Lebanon, Va.

Farmers of America and whom it may concern:

Being a member of the Farmers Society of Equity, or in other words holding to the plan of the original A. S. of E., I wish to say, that as a duty we owe ourselves, (and *much more* as a duty we owe our children), that we at once join the F. S. of E., for the following reasons: First, we have to cooperate in a body or we cannot obtain our just rights. Second, that the plan given us by J. A. Everitt is the only plan that will win, because it is one that we can all see through; it is simple, it is sure to win, and it is inexpensive. Third, the faction that claims to be the A. S. of E. has departed almost entirely from the original plan. They believe too much in the old system, which has governed us for many generations. Can we stand it longer? Fourth, that money is the strongest power we know anything about at present, and as long as farmers are not organized it will so remain. But let the farmers all join hands on any demand for Equity and see how quick the business world will listen in spite of the money power. Now, Brother Farmers, make this subject a study; join the F. S. of E. branch for Equity and freedom. The plan is simple, the effect sure, the expense is nothing as it were. I hope this may be some food for thought for others.—O. X. Devenport, Osseo, Wis.

(Mr. Devenport accompanies his letter with a club of 17 subscribers and members of the Farmers' Pool.—Ed.)

THE TIME TO CONTROL

The time of the year is again upon us, and, approaching in the northwest wheat States when the farmer should be very careful about marketing his wheat, as a careful marketing at present will cause prices to be maintained in the future.; but if they dump their wheat on the market at present without regard to the future, they will cause a congestion at the large terminal points and the result will be a large visible supply and then the gambler and speculator in future options will be in control of the markets. If the wheat keeps coming in faster than the real demand needs it, they will hammer prices down and when it gets too low for the farmer to continue hauling they will draw on their visible supply, thus keeping the price down all the time.

The only way to do this is for the farmer to get more thoroughly organized and stick together and hold for an agreed price. In the country there are several organizations of farmers which have adopted the idea of controlled marketing to make the price; this idea has already spread over much territory, and many that are not members of any organization are holding with them and are willing to help. I think every farmer in the United States should hold wheat for at least $1.00 per bushel at Chicago. Also if the plan was adopted to sell only a part of the crop as necessity compels, or when the price is right, the supply will be controlled and prices maintained.

Some contend they must have money for all the crop. If this is true, carry insurance on your wheat and it will be first-class security at any bank to borrow money on. Now is the time to control and support any organization that has controlled marketing and profitable prices for its chief object.—D. D., Kansas.

(The idea contained in the above letter should be embodied in a letter, by our readers and sent to all the papers they subscribe for with the request to print. In this way the power of the farmers to control their crops and compel $1.00 a bushel for wheat will be multiplied. Do it now.—Ed.)

Dear Sir and Brother:

I have put off writing to you for a long time, as I was undecided what to do. I halted between two opinions—you may say I was stranded on the fence, having read so much on both sides. But I have not give in my verdict yet. I know that the old and tried plan is right, and that it is the only plan that will ever give the farmers the right he should have to price what he produces. There is no man who is posted on this matter that dare deny that J. A. Everitt's plan is not right, and that it will, when carried out right, give the farmers the just right to say what his produce is worth and get that price. Money panic or good times will make no difference for the simple reason the other fellow has got to have the produce in order to live and he will use just as much of it as he does now, for the consumer has to pay a fair price whether you get it or not, and you will never get a fair price for what you produce as long as you have to ask the other fellow what he will give for it. Set your own price on your goods, unite and co-operate and you will force that price.

I wrote you before the last convention in regard to the Chicago Exchange. We will never get Equity through exchanges. A good commission house is better, but there is no Equity in either one.

Mr. Everitt, I want to say a word in regard to the catalogue house. I think you are too hard on them fellows. I am in favor of building our home town as much as we can for it is to our interest; but I don't believe in robbing ourselves in order to do it. The local merchant, as a rule, wants too much profit. We are willing to make concessions, but we can't give them two prices. The merchants want to be patronized and paid their price of course.

But do they patronize the farmer if they can buy a fraction cheaper in Chicago? I think not. They buy where they can buy cheapest, that is their right, we farmers don't kick on that—but we want the same right, to buy where we can get stuff for less money. Our local merchants want too much of Mr. Farmer; we are willing to give Equity, but we want Equity in return; what is good for the goose is not bad for the gander. I think J. A. Everitt's Equity plan is fair to all parties, and that it will work, no man dare deny, not even the gambler in farm produce; they all know it. *Know what!* That it will, when applied right, knock their eyes out in the first round.

Now then, let every man and every woman get to work for true Equity with all their mikht and unite in one grand army. Unite and march to battle for your rights as Wellington and Blucher uniter their forces at Waterloo, and with the old "No Surrender" war cry we will work another revolution for the freedom of the American farmer.

Fraternally yours,
JAMES HOWEY,
East Jordan, Mich.

(We will never recommend home dealing where the home merchants will not sell at fair prices and interest themselves in the farmers' markets for good prices for his crops. No matter what phase of our work is considered, it means Justice, Equity, and fair dealings between man and man, whether the man is farmer, merchant, manufacturer, middleman or professional man. As farmers may have all power in their own hands they can boldly demand fair prices and a square deal from the merchants in return for their trade and if this is not granted we will be among the first to advocate withholding the trade until they come to their senses.—Ed.)

Minnesota Members, Attention

Mr. W. O. Reiter, ex-Vice-President of Minnesota State Union, wants to hear from those who want a speaker for a rally, or to organize. Address him at Plainview, Minn.

WITH UP-TO-DATE'S PUBLISHER

In recent issues was an offer to send Dumper Post Cards free, and many sets have been sent out to our subscribers. The result is that many new subscribers have been received and many remittances of 25 cents as a reward to the workers. If you received some Dumper cards and have not started them on their mission, you should do so. Those who write a few appropriate lines on the first page influence the most subscribers.

Watch your label. This paper is stopped promptly when the subscription expires. Some subscriptions expire every issue.

ALL CALLING

Maw's callin' from the milkhouse,
Callin' stern;
"Jim, yer lazy good fer nuthin',
Come and churn."

Paws calling' from the cornpatch,
Calling' loud:
"James, yer hulkin', stupid loafer,
Time yer plowed."

Nature's callin' from the trout-brook,
Callin' whish:
"Son, yer poor, tired, lazy feller,
Come and fish."

Stranger, if we just swapped places,
Put it clear;
Which of all the three a callin'
Would you hear?
—New York Sun.

GALLANTRY REWARDED

"Thank you very much," smilingly accepting the offered seat.

"I'm very sorry you thanked me," said the man.

"Why; I don't undertand you."

"I bet a dollar that you wouldn't."

THE WHOLE THING

"Papa, what part of speech is woman?"

"Woman is no part of speech my dear son, she is the whole discourse."

BRIGHT BUT NOT BLUE

THREE SHEETS IN THE WIND

"Bridget," said the mistress, "some of the bed linen is missing; do you know anything about it?"

"I know where it is," said the little daughter. "Father's got it."

"What do you mean, child?"

"I heard Mr. Minton say father had three sheets in the wind last night!"

WHO GETS THEM?

Sunday school teacher to boys who had been absent—"Who gets the wicked little boys that stay away from Sunday school?"

Heads down, but no answer.

"Willie, you know; tell me."

Willie, looking up sheepishly—"The base ball game gets some, and some go a fishing."

HE COULDN'T CRY

When an Irish court opened one morning the court crier (caller) was absent. Presently a messenger dashed in with a message from the absent crier. It read:

"My mother-in-law died last night. I can't cry today."

HARD AND TOUGH

"It's hard," said the sentimental landlady, "that this poor little lamb should give up its life just to satisfy our cruel appetites."

"Yes," replied the unsentimental boarder, trying in vain to chew a bit of it: "Yes, it's tough."

TALK IN THE BUTCHER SHOP

Boss—"Did you send Jones' liver to him?"

Boy—"Yes, sir."

Boss—"and did you take Miss Thompson's feet to her mother?"

Boy—"Yes, sir."

Boss—"Well, put Mrs. Smith's ribs and Bob Harris' brains in the box, and we'll close up."

TWICE TAINTED

"Mike, do you think Rockefeller's money is actually tainted?"

"Yes, Pat, I really do; in fact I know it has two taints—'taint yourn and 'taint mine."

UNANIMOUS

He was not popular in the neighborhood, but he was dying, and the deacon thought it his duty to console with him.

Deacon—"Are you willing to go?"

Sick Man—"Oh, yes, I'm willing."

Deacon—"Thank the Lord; I'm so glad, for that makes it unanimous!"

ONLY ONE SPOT NOT BUSY

Small pox had broken out and the Board of Health had ordered everybody to be vaccinated. The doctor approached an old colored woman, and told her she would have to be vaccinated. She was indignant and declared she was bound to work and could not spare her arm long enough for vaccination.

"Then," said the doctor kindly, "I can vaccinate one of your lower limbs."

"No siree," was the response, "I can't spare one of my legs either. I have to be on the go all the time."

Then the doctor said pleasantly, "Well, auntie, you'll have to be vaccinated and it can be done where it will interfere least with your work.

The old auntie thought several minutes, and then replied slowly anl seriously: "Well, the Lord knows I don't never get time to set down."

NOT SO BAD

He had just proposed and she had accepted him, and they were as happy as persons at such a moment could be. In the exuberance of his joy he asked: "Are you really romantic?" There was an immediate break. Her face became pale and red by turns. Her hands dropped, and something seemed about to happen. Alarmed, he asked: "Why, dear, what is the matter? Have I said or done anything wrong? I only asked if you were romantic." "Oh, darling," she exclaimed, as she fell back in his arms, "I thought you asked if I was really rheumatic."

NO WORK NO REST

Do you realize that only tired people can rest? The idle may loll but they can't rest, for rest was made for those who work, those who do things. The Atlanta Constitution puts it neatly, thus:

"The task may seem too irksome
And clouds may hide the skies,
But where the road is rocky
There's plenty exercise.
Over plain and mountain,
Future seems in doubt,
But you'll do much better resting
If you get there tired out."

SHE WAS THE CHOICE

"I tell you, Susy, you are not it like I am; I've got real parents, but yours are only adopted."

"That shows that I am more it than you are; my parents picked me out, but your parents just had to take you without any choice, whether you was what they wanted or not."

CHEERING

"Tommy, your grandfather is very sick; can't you say something to cheer him up?"

"Say, Grandfather, would you like to have a brass band at your funeral?"

"What in the world is the matter with little Tommy? How did he get such a bruise?"

"You told me, mum, if he fretted to let him play on the pianer, and in one of his tantrums he fell off!"

A MYSTERY

How a Mother's Questioning Struck Her Son William Junior

William Junior had been cautioned by his mother not to do a number of things, too many for brief mention, but all very dear to him, and he had promised. However, after dinner his mother, happening to look out of an upstairs window, saw him in the midst of a transgression and reserved the matter in her memory.

That evening she detained William by her knee and questioned, as mothers do.

"Have you been a good boy all day, Willie?"

"Yes, ma'am."

"Real good?"

"Y-yes, ma'am."

"And not done any of those things that mother told you not to do?"

"Y-yes, ma'am."

"Not a single one?"

William looked at her sharply, his mouth open.

"Are you me?" he demanded.

"Why, no."

"Are you God, then?"

"Certainly not."

"Then how did you know I was slidin' down that board?"—Lippencot's.

"Mother," said the college student who had brought his chum home for the holidoys, "permit me to present my friend, Mr. Specknoodle."

His mother, who was a little hard of hearing, placed her hand to her ear.

"I'm sorry, George, but I didn't quite catch your friend's name. You will have to speak a little louder, I'm afraid."

"I say, mother," shouted George, "I want to present my friend, Mr. Specknoodle."

"I'm sorry, George, but Mr. ——. What was the name again?"

"Mr. Specknoodle!" George fairly yelled.

The old lady shook her head sadly.

"I'm sorry, George, but I'm afraid it's no use. It sounds just like Specknoodle to me."—Everybodys.

One of the old time farmers could he come back to the farm after an interment of two or three decades would find much to amaze and instruct him. Instead of a lot of crippled horses suffering from fistula, withers, poll evil, spavin, sore backs, lean as Cassius because their teeth were too sharp to grind their feed, spiritless beasts of long coat and lustreless eyes he would behold horses of high grade, smooth of coat, clean of limb, as he entered the stable they would look at him not away from him (you don't have to look over a good, well cared for horse, he looks you over.)

If our resurrected friend asks how the change was brought about he will be told that "the change is due to a liberal economy" that it doesn't cost any more to feed a good horse than a poor one, that it pays to correct ailments as soon as they are manifest, that it does not pay in the busy season to take a horse from his work and drive him to town after a dose of colic medicine or to let a horse or cow die from accumulation of gass in the stomach or intestine for lack of the proper instrument to relieve the trouble. Then taking him to a corner cupboard he will show him a handsome case containing all necessary remedies and instruments for emergencies, tell him that the Case was delivered to his door for $15.00 and that in the six months it has been in his possession it has saved a hundred dollar cow and a two hundred and fifty dollar horse besides furnishing relief for various minor cases; all this in the absence of a veterinarian.

For the last addition of easy to use medicine and instruments the farmer is indebted to the old firm of GEORGE P. PILLING & SON CO., 2256 Arch St., Philadelphia, Pa.

Big Money Saved Cleaning and Separating Grains

Every man who raises Wheat, Oats, Barley, Clover Seed, Timothy Seed, Seed Corn, or any kind of grain, ought to have the new Free Book about the Famous Chatham Fanning Mill in use by over 250,000 progressive farmers and planters all over America.

The Chatham is the world standard grain grader, separator and cleaner. Does scores of different things to save and make you more money on your crops. By sowing dirty grain, the farmers of any State lose more than $1,000,000 each year and this free book tells you why. Any time you want a Chatham you get it shipped promptly on 30 Days' Free Trial and freight prepaid to you. Try it and if you don't find it most satisfactory, you don't have to keep it. In fact the company knows that every man who has use for a Chatham Fanning Mill is a man who must be satisfied and one who is to be trusted to pay for what he wants even though he may ask for time. So investigate this year's improvements and learn how much a Chatham will make and save you in actual cash, year in and year out. *Now* is just the time. Write for the Chatham Free Book. Address the Manson Campbell Co., 541 Wesson Ave., Detroit, Mich. The company has 24 Branch Warehouses, and makes prompt shipments.

Free to Farmers

By special arrangement the Ratekin's Seed House of Shenandoah, Iowa, agrees to mail a descriptive circular and samples of their new imported Malakoff winter seed wheat to every reader of this paper wro will mention it when writing. This marvelous variety of wheat has made a yield and record of over 62 bushels per acre and is endorsed by the Illinois, Iowa, Nebraska and Kansas Experimental Stations as standing at the head of all other varieties, both in yield and quality of grain. Write for sample and descriptive circular and mention this paper. It's free. The address is Ratekin's Seed House, Shenandoah, Iowa.

VICTOR Sentimental Ballads

Who doesn't enjoy the dear old songs of heart and home! Such melodies as "Home Sweet Home", "The Old Oaken Bucket", "Auld Lang Syne" and "Old Black Joe", with their touching beauty and power!

No matter where you live you can hear these cherished songs on the *Victor*—sung and played as you never heard them sung and played before; with famous soloists and the most celebrated bands and orchestras to bring out their rich harmony and sentiment in full perfection.

Besides the old-time favorites, you can hear on the *Victor* the newest sentimental ballads—"'Neath the Old Cherry Tree, Sweet Marie", "In the Evening by the Moonlight, Dear Louise", and all the other popular successes.

More than that: The *Victor* brings right into your home beautiful sacred selections; grand opera numbers by the world's greatest stars; comic song-hits and minstrel humor; perfect dance music; classic symphonies—entertainment of every sort for every mood and every occasion; and all to be heard at its best only on the *Victor*.

Any *Victor* dealer will gladly play *Victor* Records for you. Call and ask to hear them, and get him to tell you about the **easy-payment plan.**

PATENTED TENSION SPRING

EVER-SHARP SHEARS FREE

Dear to the heart of every woman—a pair of shears that arealways sharp.

Every user of shears knows how aggravating it is to have shears or scissors that don't cut slick and clean. Every woman also knows that to have scissors sharpened by the average scissors grinder means more disappointment, as he usually ruins them. These aggravations may all be avoided by adopting the patented tension spring Ever-Sharp Shears.

These shears are equipped with a simple attachment that keeps them alway sharp and enables the user to cut anything from wet tissue paper to the heaviest cloth. The tension spring attachment does away with the resharpening entirely. The tension on the rivet can be set so that any kind of material intended to be cut with shears may be cut with perfect ease, without tiring the hand. The tension spring takes up all the wear on the rivet, making the Shears practically indestructible, with no wear-out to them. A simple turn of the little thumb-screw tightens up the blades as closely as may be desired. Any woman who has had the exasperating experience of trying to use a dull pair of shears can readily appreciate the value of the new invention. **which keeps this pair of Shears always sharp** and in perfect cutting condition. No matter how many pairs of shears or scissors you may have around the house, you need this pair with the tension spring, and when you use it once you will use it in preference to any other you may have.

The illustration is 4 inches long, but the Shears we offer are

8 INCHES IN LENGTH

They are made from the best carbon steel which insures strength and a keen cutting edge. The manufacturers guarantee the quality of material and workmanship in every pair and back up their guarantee with a certificate with each pair agreeing "If this pair of shears breaks or in any way becomes defective within five years from date of purchase it will be replaced with a new pair without further cost."

Remember, the patent tension device does away with the need of resharpening and doubles the usefulness of the Shears.

How to Get a Pair Free

Send 50c for a year s subscription to UP-TO-DATE FARMING and we will send free and post-paid a pair of Shears or a pair of scissors as desired. UP-TO-DATE FARMING is published twice a month, 24 numbers in the year. It contains 20 to 32 large four column pages. Published for everybody on the farm. Excellent departments. Special attention given to getting profitable prices for all farm products. You need the paper and Shears. This is an exceptional offer and every farm home should take advantage of it. Send your order to-day.

UP-TO-DATE FARMING, Dept. A, Indianapolis, Ind.

CONVINCED BY WORDS

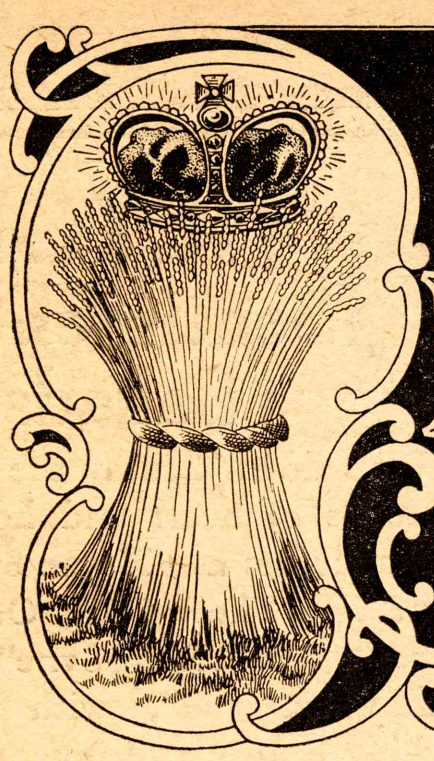
A man in North Carolina, who was saved from conviction for horse stealing by the powerful plea of his lawyer, after his acquittal by the jury was asked by the lawyer: "Honor bright, now, Bill, you did steal that horse, didn't you?" "Now, look a here, judge," was the reply, "I allers did think I stole that hoss, but since I heard your speech to that 'ere jury, I'll be dogoned if I ain't got my doubts about it."

NEEDS IT FOR A DRY DAY

"I don't care to save anything for a rainy day," said the farmer in a dry belt, "what I want is some way to wet my crops during the drought."

"Johnny, what did your mother say when you told her I was here?"

"She said, 'Confound the luck!'"



HARVEST KING WHEAT

A REAL MONARCH of the WHEAT FIELD

THIS FAMOUS WHEAT HAS A RECORD OF UNPARALLELED SUCCESS, NORTH, SOUTH, EAST AND WEST.

Altho we have sold the Harvest King Wheat for several years, the demand continues to come each season in undiminished volume, and it continues to give the same satisfaction that was originally responsible for its great popularity. The Harvest King Wheat is one of the most reliable varieties of smooth headed wheats. In the past it has surprised growers by its hardiness, vigor and all-round reliability. The testimonials printed below will speak for the variety in this respect. It is one of the earliest varieties, hence one of the surest to mature sound, plump grain. The straw is strong, heads very long and filled with very large, red grains. Chaff red, heads beardless. The grain weighs very heavy and for milling it is all that millers desire.

It pays to change seed. It may pay you handsomely to sow a field of Harvest King Wheat if you are not already growing it. We have had thousands of reports for this fine variety speaking of its good qualities. We can print only a few of them here.

SUPERIOR TO ANY OTHER

The Harvest King wheat is superior to any other in this locality. The season was the worst in years, and the wheat is only half a crop or less. The H. K. has a plump, fine berry. I will try Fultzo-Mediterranean this year.

T. H. G. L., Jefferson Co., Mo.

AWAY BEYOND EXPECTATIONS

Last year we purchased two bushels of Harvest King and sowed it on 1½ acres, and threshed 38 bushels; and it weighed out to 40 bushels, 5 pounds. We will sow 33 acres of Harvest King this fall. In the spring this 1½ acres of H. K. looked as though there would be no wheat, as the ground looked bare as the floor, but oh! my! it began to grow and the result was away beyond my expectations. It is truly a remarkable wheat and a first-class yielder. We could have sold all of this H. K. for seed, as the people driving along the road to town kept watching it, and wondering what kind of wheat it was and where I got it.

M. P., Marshall Co., Ind.

A WORLD BEATER

Harvest King for hardiness in winter is a world beater, and withstands great drought better than any kind I ever saw. From 2½ acres last year (a bad one) I threshed 82 bushels of 62 pounds per bushel. My Harvest King now looks fine and much better than any other kind.

J. R. G., Fayette Co., Ill.

ALL WE CLAIMED

The Harvest King wheat is all you claim for it. I have it sown between other varieties. It is much stronger than either, and I have every reason to believe it will make a fine yield. O. E. V., Holmes Co., O.

WELL PLEASED

The Harvest King wheat is promising indeed. It stood the winter well, and I think it is the most thrifty looking wheat I ever saw. I am well pleased.

E. R., Lawrence Co., Ind.

THIRTY-SEVEN AND ONE-HALF BUSHELS PER ACRE

The wheat I purchased of you, 2½ bushels Harvest King, and 2½ bushels Fultzo-Mediterranean, I sowed 1¼ bushels to the acre, giving it a fair test with Fultz, all sowed the same day. Harvest King yielded 37½ bushels per acre; Fultzo-Mediterranean 27½ bushels per acre, and Fultz 17½ bushels per acre. S. P. M., Howard Co., Mo.

50 BUSHELS, OTHERS 10 TO 12 BUSHELS

Harvest King wheat was far ahead of all other kinds in the whole neighborhood in every way. It yielded 50 bushels per acre while other wheat by the side of it yielded 10 to 12 bushels per acre. My wheat this spring is the finest in the neighborhood. Harvest King pleases me better than any other wheat I ever raised. Wm. M., Clarke Co., Ind.

CAN SELL 1,000 BUSHELS MORE

I sowed 15 bushels of your Harvest King wheat, and I cannot praise it high enough. It is the finest headed wheat I ever saw. There is not another field of wheat in my neighborhood that bears any favorable comparison to Harvest King. I sent to Ohio and got 40 bushels of Fultz, but it is not near as good as H. K. I can sell all I raise at a good price, and judging by the interest taken in it by my neighbors, can sell 1,000 bushels more.

Wm. W., Sangamon Co., Ill.

A FIELD OF HARVEST KING WHEAT.

A finer sight cannot be imagined than a good field of this noble Wheat, with its long, bright straw bending from the weight of the large heads loaded with golden grains.. "As heavy as lead" is a common expression when referring to the heads of Harvest King Wheat

THE GREATEST EVER SEEN

The Harvest King, which is the king of the harvest field. My yield was 48½ bushels per acre. Nothing like it was ever seen about here before. I will sow all I raised. It's worth $5.00 a bushel for seed.

C. M. L., Allegheny Co., Pa.

WILL IT PAY? *Will it be a profitable investment* to secure new seed wheat? Suppose you want to sow 20 acres. If you sow your own wheat it will require 1½ bushels per acre, or 30 bushels. We will suppose that the market price of good wheat is $1.00 a bushel, and to clean your wheat and shrinkage, will represent, say, 15 cents a bushel. Or 30 bushels of your own wheat at $1.15 equals $34.50.

If you buy our hardy, vigorous seed wheat you should figure this way: 1¼ bushels per acre; 20 acres will require 25 bushels at $1.50 per bushel, equals $37.50. The bags will be worth $2.00, leaving $35.50 for the wheat. There will be something for freight, but it will not be very much. Outside of the freight, the cost is only $1.00 more to seed with our fine, hardy, productive wheat, than to sow wheat that is probably run out and weakly—only 5 cents per acre.

Compare this extra cost with the extra yield that is certain to result; and the extra price you can probably get for the crop. Think about this matter and we believe you will conclude that it will be a good investment to change your seed and sow a good part of your crop with our justly famous Harvest King wheat. If you don't want to sow 20 acres, sow less.

PRICE **You can afford to buy this wheat to sow your entire crop, or at least a field. Our prices are low, considering expenses connected with a business of this kind; the extra cost over market price is sure to be returned several times in the crop. By mail, postpaid, 1 pound, 25 cents; 4 pounds, 75 cents. By freight or express, not prepaid, ¼ bushel, 60 cents; 1 bushel, $2.00; 2½ bushels (for 2 acres), $4.50; 5 bushels (2 bags for 4 acres) $8.50; 10 bushels, (4 bags for 8 acres), $16.50; 25 bushels, (10 bags for 20 acres), or more, at $1.50 per bushel. Bags furnished free. Purchaser to pay freight. Quantity orders may be made up by clubbing with neighbors. Our wheat is thoroughly recleaned and graded and is ready for the drill when received**

GREAT NEED OF EQUITY

Tricks of Trade or Dishonesty in Business

And the Trail of the Serpent is Everywhere

We are unprepared to say that men are worse than they used to be; but if they are bad at all, they ought to be better. The purpose of the church, the school and the press—is to make humans wiser and better. Nor can we say we admire the "muck-raker," the man who is always seeing the bad, and eternally finding fault. Society has few more disagreeable members than the chronic growler.

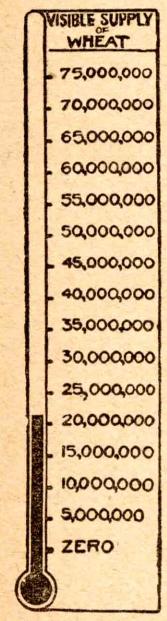
But there are two sides even to that question. If there is bad it ought to be made known. How can people be made better if the better be not pointed out? And how can the better be shown if it be not contrasted with the

(Continued on page 3)

THE FARMERS' POOLS

Since our last report of the visible supply of wheat, that of July 11th, the tide has turned and the visible is on the increase.

July 11th proved to be the low point of the season, 14,231,000 bushels as the table shows. From this point it has advanced to over 20,000,000 bushels on August 1st, which, however, is 30,000,000 bushels less than it was the year preceding at the same date. The world's visible supply is now about 70,000,000 bushels less than a year ago. In the three weeks intervening since last report, unfavorable weather conditions have caused scares and prices of all the grains have had wide fluctuations; as much as 3 cents a bushel in a single day on wheat and nearly as much on corn. The cause was dry weather in the spring wheat section and in some portions of the crop belt. The result has been to advance cash wheat to near the dollar mark at Chicago while corn, oats and other grain maintained a satisfactory level of prices. Futures have been over the dollar mark in this period.



Visible Wheat Supply

August 1,	20,639,000 bu.
July 25,	16,180,000 bu.
July 18,	14,388,000 bu.
July 11,	14,231,000 bu.
July 4,	14,361,000 bu.
June 27,	15,501,000 bu.
June 20,	17,533,000 bu.
June 13,	19,232,000 bu.
June 6,	21,718,000 bu.
May 30,	22,820,000 bu.
May 16,	25,444,000 bu.
May 9,	26,979,000 bu.
May 2,	28,344,000 bu.
April 25,	30,968,000 bu
April 18,	30,528,000 bu.
Aug. 3,'07	50,378,000 bu.

There is no evidence of freer marketing of wheat to cause the increase in the visible, but it may be attributed to the fact that interior storage has filled up and more of what was marketed has passed through and reached the central markets where it is measured as visible.

The visible supply of corn was, on Aug. 1, 4,814,000 bushels, against 5,192,000 bushels July 25; 5,915,000 bushels July 18; 6,766,000 bushels July 11, and 12,902,000 bushels on Aug. 3, 1907.

The visible supply of oats was, on August 1, 2,696,000 bushels, against 2,864,000 bushels on July 25; 3,009,000 bushels July 18; 3,669,000 bushels July 11, and 4,044,000 bushels Aug. 3, 1907.

CASH PRICES IN LEADING MARKETS AUGUST 8, 1908

CHICAGO—Wheat, No. 2 red, 95¾c@97¼c; corn, No. 2, 79½c@81c; oats, No. 2, old, 48½c, new 51½c.

KANSAS CITY—Wheat, No. 2 red, 94½c@95½c; No. 2 hard, 97½c; corn, No. 2, 74½c@75c; oats, No. 2 white, 49c@50c.

ST. LOUIS—Wheat, No. 2 red, 95¾c@97c; No. 2 hard, 95c99c; corn, No. 2, 78c@79c; oats, No. 2 white, 51c@51½c.

CINCINNATI—Wheat, No. 2 red, 96c@97c; corn, 78c@82c; oats, white, 51½c@52c.

NEW YORK—Wheat, No. 2 red, $1.02⅜; corn, No. 2, 88c; oats, 58c@60c.

INDIANAPOLIS—Wheat, 91½c; corn, no bids; oats, no bids.

MINNEAPOLIS—Wheat, spring, No. 1 hard, $1.25@$1.27; No. 1 Northern, $1.23.

The above reports of the market make an interesting study. It will be observed the great difference in the price of spring and winter wheat in favor of the former. There is not this difference in the merits of the two kinds of wheat, but the high price of the spring wheat is because of the outlook for the spring wheat crop and the fact that the visible supply in Minneapolis and Duluth elevotors is very low, being only 2,196,000 bushels on August 1. Unless the prospects for the spring wheat crop, as a whole, improves, the price of winter wheat will advance materially to reduce the spread between the varieties.

The advice we give, considering all the conditions, is to market wheat conservatively, and keep the minimum price of $1.00 at Chicago in view. If this is done, the visible suply will be kept in safe bounds. Corn, we would market the old crop close if the new crop promises well enough to meet your home demand or better. The price is high enough. The price of oats can be maintained by marketing conservatively, keeping a fair minimum price always in mind. And the same way with other grain and most other farm crops.

Consumption has overtaken or gotten a little ahead of production and all farmers need is a good system of distribution to insure a good, profitable market for all they grow of staple crops. This UP-TO-DATE FARMING will do its best to help them to get as soon as possible.

In our last issue we cautioned hay farmers against sacrificing their hay crop, and now repeat it. In many sections there have been droughts that will reduce fodder crops, which deficiency must be made up by the abundant hay crop. Also it is better to sell part of the crop at a good profitable price and hold the balance against a possible short crop next year. If the first owners will not do this, those who buy from them will do it and hold it. A cheap price does not increase the consumption beyond actual needs, but it encourages the speculator to buy the offerings and he will hold them against your future crop.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FOUR FOR $1.00

Foreign Subscriptions, including Canada, 75c a Year

Clubs. Two subscriptions for $1.00; five for $2.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE.*

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

CUT THIS OUT AND USE AT ONCE

. . . . . .

Publisher Up-to-Date Farming,
Indianapolis, Ind.

Dear Sir: I, or we, the undersigned, desire to joint the Farmers' Pools and oppose our forces against the speculators' pools, to secure a profitable price for the 1908 wheat crop (at least $1.00 per bushel), and profitable prices for all other crops. We want to stand shoulder to shoulder with our brother farmers which we can do when all read the same paper, get the same advice about crops, visible supply, markets, price, etc., and all at the same time; but in doing this we do not obligate ourselves except as appears to us is to our individual and collective best interests.

This is sent by:

MINIMUM PRICES

There is an insistent demand for the printing of minimum prices in UP-TO-DATE FARMING. We hesitate to do this without the co-operation of others, but as this is impossible now, we venture the follow. If our subscribers will aid us, we can keep the prices fair and equitable, and also can publish prices for other zones of the country. The publication of these minimum prices, we believe, will assist buyers and sellers to get together although it is not expected that these prices will apply in all cases. Very much will depend on the quality of the goods and proximity or remoteness from markets. Our last publication brought a request from Mr. W. I. Banks, of Cumberland, Va., to connect him with a customer for 1500 bushels of Rural New Yorker potatoes that he has ready for market. We gave him the address of a possible purchaser, and recommended him to use our "Business Exchange" to find others. Farmers and consumers could use this department of UP-TO-DATE to a much greater extent than they do with great satisfaction. For instance, it wil cost only 76 cents to put this advertisement before our many thousand readers:

Potatoes 1500 bushels of Rural New Yorker potatoes now ready to market. Write W. I. Banks, Cumberland, Virginia.

RECOMMEDED MINIMUM PRICES FOR AUGUST

Wheat, No. 1 Northern, at Minneapolis bushel	$1.10
Wheat, No. 2 Red, at Chicago, bu.	1.00
Corn, old crop	
Oats, at Chicago, bu.	.55
Barley, good malting, at Chicago	.65
Rye, at Chicago	
Buckwheat, at home	
Flax, at Chicago, bu.	1.50
Potatoes, at Chicago, bu., for Aug., 70c@80c	
Beans, white, at Toledo, bu.	2.00
Beans, red, at Toledo, bu.	1.75
Hogs, butchers, at Chicago, per lb.	6.50
Cattle, good to choice steers, at Chicago per lb.	7.00
Sheep	
Lambs	
Hay, No. 1 Timothy, Chicago, per ton	14.00
Wool, at home, per lb.	25c@30c
Apples, at home, good to choice, per bushel	50c@75c
Onions, good to choice, per bu.,	1.00@1.25
Cabage, at home, per crate	.80
Turnips, per sack	50c@$1.00
Poultry, live, chickens, at home, per pound	8c@10c
Chickens, spring, at home, per pound	15c@18c
Turkeys, at home, per lb.	.12
Ducks, at home, per lb.	.10
Eggs, fresh, per dozen	.18
Butter, good country, per lb.	.20

It should be understood that the object of minimum prices is not to conform to the speculative markets and at times the speculative price may be higher than the minimum; they are, however, to secure more stability of price and a lowest price, **below which** the articles should not sell and, we hope in time, the minimum prices will also be the maximum prices. In other words, that speculation will be at an end, consequently fluctuations in prices.

Farmers don't need high prices, but what they need is certainty of profitable prices all the time.

The prices on apples and vegetables are intended to apply for Ohio, Indiana and Michigan, particularly.

Do Something

"Do something for somebody, somewhere,
While jogging along life's road;
Help someone to carry his burden,
And lighter will grow your load.
Do something for somebody gladly,
'Twill sweeten your every care;
In sharing the sorrows of others
Your own are less hard to bear."

Right and True

"There's a glory in being right and a splendor in being true
That is greater than anything else life can bring to you!
For a man can fight when he's right, and knows that he knows that he is,
In a way that will make every blow that he strikes a blow to make victory his!
The greatest greatness there is that the world can bring to you
Is the glory of being right, and the splendor of being true!"

With Up-to-Date's Subscription Manager.

We are out after 500,000 new subscribers and I can make it worth every reader's while to assist in our Subscription Campaign. We have in preparation a new Premium list in which are premiums that should greatly interest every subscriber. This premium list is sent free on request.

UP-TO-DATE FARMING is printed for *you* and the more readers it has the greater influence it will bear, and the larger paper we will be able to print. We don't want you to assist us for nothing—on the contrary, we are willing and glad to reward every assistance you may render. Here are a few of the useful and interesting premiums we give for new subscriptions:

Twenty Souvenir Post Cards (American Girl Series), and a membership in the Souvenir Post Card Exchange, for one new subscriber.

One dozen beautiful teaspoons, packed nicely in a satin-lined case, for one subscriber.

One Child's Set (knife fork and spoon) for two new 3-months subscriptions at 10c each.

A pair of 8-inch tension shears, the kind that never get dull, guaranteed for five years. Sent free for only one new subscriber.

One Kitchen Set, (consisting of 1 paring knife, 1 bread knife, 1 cake knife, 1 baster, 1 sharpener, 1 cake turner), for two new one-year subscriptions, or 10 three-months subscriptions at 10c each. (This set should be in the hands of every woman—it's a great labor saver.)

One membership to the Souvenir Post Card Exchange. By joining the Exchange you are sent post cards by collectors from all over the United States. Your name is also printed on the collector's list. We will give you a membership for two new three-months subscriptions at 10c each.

These are but a few of the many good things to be had for a few minutes work amongst your neighbors. A full premium list will be sent *free* on request.

If you want to earn good money, write me for my agents proposition. I can utilize the services of a few good agents, men, women and boys, and we will pay them well, too. I have something special to offer a few good local men who will represent us at their fairs. Ask me for further information, for it will mean big profits to you.

Every reader should take advantage of at least one of the above offers. In fact, as a special inducement for you to send me a club, I'll include a membership to the Post Card Exchange with your other premiums, provided you will send me the club within 10 days after you receive this paper. Be sure to request the membership; otherwise we will not be able to include it.

Your Subscription Has Expired

If the square to the left is marked with a "X," it is to inform the subscriber that his subscription expired with the last issue before this and should be renewed at once to insure receiving this paper without interruption. The renewal price is 50 cents, which pays for one year. We will gladly accept $1.00 for four subscriptions of which yours may be one, the other three new ones. A renewal blank is sent in this paper.

If the square to the right is marked with an "X", it is to remind you that your subscription has expired and remains unrenewed although you have been already notified. We don't want to lose a single subscriber, hence this second notice, and hope now to receive your renewal at once. See terms for a club in notice above.

If your renewal is not received in ten days we will assume that this mark escaped your notice and we will then send you a *personal* letter. We hope now to receive your renewal and make the letter unnecessary. A renewal blank is sent in this paper.

UP-TO-DATE FARMING

Representing the Organized or Co-operating Farmers of America

PUBLISHED TWICE A MONTH
At 227 W. Washington Street

Re-entered as a Semi-Monthly publication as second-class matter, January 20, 1908, at the Post-office at Indianapolis, Ind., under the act of Congress of March 3, 1879.

Volume XI **INDIANAPOLIS, INDIANA, AUGUST 15, 1908** **Number 16**

EDITORIAL

NEAR THE SUNSET HE SUCCEEDED

We have a report of a farmer in Ohio who had struggled for twenty years upon a heavily mortgaged 80-acre farm and found it impossible to make headway, or get his family beyond the trials of poverty. He had followed the advice of the agricultural press that had only told him to produce more. He had drawn what he could from the schools, but the burden of it all was to produce more. In production he had succeeded, but the surplus went at so much lower prices that the close of the season found him where he had begun it. So far as gains were concerned it was much the same whether he grew much or little.

At last he turned to the Department of Agriculture as the despairing sick man turns to the physician. He gave the symptoms of his disease—the nature of his land, the kind of his crops, the amount of his yields and the uncontrolled, unremunerative prices. Being an individual case, it is said the Department relaxed, took an intelligent view of the situation, and advised concerning the things adapted to the market as well as to the soil, told how to sell as well as how to produce, how to make prices as well as how to accept prices already made—in other words, to market intelligently as well as to produce intelligently. The advice was taken, the principles applied, and the first year showed a profit of $2,000.

We do not know whether the above is true or not. It is based upon a newspaper report. We may be doing the Department of Agriculture an injustice. It is certainly different from its usual procedure. But it is one of those stories which could be true whether it is or not. If the Department would couple successful marketing with successful production, many such cases would come up to its credit; and if farmers would study the needs of buyers and the control of the supply as well as they do adaptability of their soil and the abundance of their yields, there would be fewer burdensome mortgages and fewer families would grow up in poverty.

THE RISE OF EQUITY

A New Era of Business is Coming to America

Individuality in business is a thing of the past. Merchants once did business on the individual plan. Each thought it enough to attend to his own affairs, and if he had a chance to get a "scoop" on his neighbor, or, by any hook or crook, to take from him his customers, he thought it good business to do so. If a hint or a wink concerning another merchant's methods, or a cut in a price, gave the individual an advantage, or took an advantage from a competitor, it was done without hesitation or a rebuke of conscience. The retail trade in the smaller towns and villages was constant strife, the merchants spying upon each other and in unremitting warfare, until, finally, the retail trade resolved itself into the problem of who could get the cheapest goods, misrepresent them most successfully, and live on the smallest profits. The effect of such demoralization of business, both upon merchant and customer, needs not to be even mentioned, it is so apparent.

Then came the organization of the trades unions, asserting the right of the laborers to a voice in their hours of labor and their wage. This example of the laborers taught the farmers the power of organization for business purposes, and the Alliance came with a finger in the merchants' pie. Where the merchants would not act upon the agricultural idea, the farmers went into business themselves. Of course they failed, but they taught the retail trade a lesson—that those engaged in it had something to do besides to fight each other; that they, too, must organize, or at least come to such an understanding as to co-operate in the protection of their own business, and bring it to a basis of respectable effort to build up rather than to pull down, to furnish good goods on honest presentation and at legitimate prifits.

This awakening to organized effort on the part of customer and merchant naturally led to thought, and thought discovered mutual rights and mutual interests, and as naturally led to the promulgation of Equity, a system which brings the two classes together, each in his own sphere, but each respecting the rights and protecting the interests of the other, with methods fair and just to all.

This system is a legitimate effect of previous experiences. Men and women have learned that each has rights that all must respect, that a mutuality of interests runs through all legitimate callings, that in the division of labor we can all do best that which is our chosen vocation, and in respecting the rights of others we are most surely protecting our own. On this higher plane of progressive thought, farm organization is no longer a menace to trade or an annoyance to it, but its most solid suport; and co-operation of the merchants is no longer a means of exacting heavier tribute from the customer, but is rather the vehicle of better service with better goods at steadier prices and fairer profits—equitable buying, equitable selling, and legitimate upbuilding of all the home interests. The whole world should welcome "Equity in all the business relations of life."

FOR THF HOME INTERESTS

Governor Folk Speaks for Home Trade

Missouri's most widely known Governor, Joseph W. Folk, who has done more to suppress evil in that State, and especially in the city of St. Louis, than all the State's former governors, is not afraid to speak for the home merchant and against the concentration of business in the cities as is being attempted by the mail order houses. The American Farmer and Consumer credits Gov. Folk with the following:

"I do not believe in the mail order citizen." It is better that we should have a thousand towns than one large city. If a place is good enough for a man to make his money in, it certainly should be good enough for him to spend his money in.

"The merchants have a just right to all the business of the town in which they have their stores and every good citizen will help them to get it.

"No town is better or worse than its citizens make it. Show me the stores and newspapers of a place and I will tell you the sort of citizens it harbors."

And we say amen to this if the merchants merit the trade by giving honest goods, fair prices and satisfactory service. If they will not merit the trade, it will seek other houses and no argument in favor of home trade can stay it.

Merchants and Farmers Combined

The American Farmer and Consumer believes in commercial clubs, and so do we. That publication believes farmers should belong to them, and we do too. Here is what that paper says about it:

Every town should have a good, live commercial club of which the farmers in the neighborhood should be members. These clubs can do a world of good in arranging for improvements in the public highways. In the event that the town is deficient in the matter of varied and complete stocks of goods in all lines it might well become the duty of members of this club to see that that want is supplied. There is no reason why farmers should not work in harmony with business men and there is no reason why they should not be eligible to membership in commercial clubs.

Thought Bacci

The following is a poster Mr. Nels Darling, of Oklahoma, has been distributing among the farmers and business men of the new State:

One of the Nation's greatest dangers is the concentration of wealth and its powers.

One of the greatest concentrators is the big catalog house, which boasts of its greatness.

The mail order houses seek to build a few great centers; a few centers mean fewer towns, and smaller ones—this means reduced taxable wealth and depleted population, impoverished small communities and congested cities.

The home merchants don't expend millions in advertising and for big picture books, but they do pay taxes and give employment to home people.

The catalog house shows you a picture, takes your money and sends goods later. Most men have passed the age when they trade jack knives "sight unseen".

When in a hurry do people send away for goods? Can the merchant live on hurry-up business? It will hurry him to do it.

If half the merchants in this town quit business, what will real estate and the farm be worth?

What will the bank deposits be?

You don't know what your home merchant can do and will do until you talk to him.

If you want cheap stuff he can get it for you. You can buy a piano for $150, and one for $3,000, and both may be cheap for the price. You can't get something for nothing—you usually pay what a thing is worth; not much more or less.

GREAT NEED OF EQUITY

Tricks of Trade or Dishonesty in Business

(Concluded from page 1)

bad? Rather, how can people be aught to avoid the bad and suppress it if their attention be not called to it? One would rather not see a sore, perhaps, but to cure it it must be treated and it cannot be intelligently treated unless it is seen.. Hence it is unwise to suppress the truth, however unpleasant it may be provided its telling may lead to better things. That is our justification for telling unpleasant truths. The pain of the surgeon's knife must be borne that life may be saved and health restored. After all, the "muck rake" cry is raised and most loudly shouted by those who have greatest reason to fear what "muck rake" may uncover.

This may strike the reader as being a long preliminary to an article, but UP-TO-DATE FARMING stands for equity in all the business relations of life, and wherever we find a prevalent wrong we propose to lay it bare, not for the purpose of showing the sore, but to awaken thought and suggest or apply a remedy. Our present purpose is to discuss the light weight and short measure evil in business. The only way to effect honest exchange with money for a medium is, first, to have honest money, money that always represents the same value—that will purchase the same value today that it will tomorrow. But if this is a matter for the general government to guarantee to its people, it is not our purpose to discuss it now. Second; there must be specific price for a specific quantity. and the only honest deal is where the purchaser pays the specific price and the seller gives the specific quantity.

The National Food Magazine, in an exhaustive article written by Victor Ayer, takes the positiion that **the people of the United States are every year robbed of $240,000,000 by light weights and short measures.** In the aggregate they are given that much less than the specific quantity for the specific price. In other words it seems that the sellers take from the purchasers every year $240,000,000 for which they give nothing in return. And since the purchaser is made to believe he gets the specific quantity for the specific price, that he gets all he paid for, he is as certainly robbed of that amount as though it were taken from his pocket in the darkness of the night. Most sellers would scorn to sell the same article twice, and yet every time by means of light weight or short measure, a particle of a purchase is kept back,that particle already sold to one customer is held to be sold to another. Dealers do that who would be very indignant if they were called dishonest, and yet they are dishonest.

What does it mean? A dealer puts up a milli

and a half of light weight pound packages, or their equivalent, in a year—pounds light but half an ounce, for instance. He held back to sell again 50,000 such packages that he had already sold and received the pay for. Suppose the goods were cheap, worth only ten cents a pound, he has received $5,000 for goods twice sold. Is that man honest? The dealer pretended that the customer got all he purchased. The dealer had the weighing and measuring all in his own hands. The customer trusted him because he must. But the dealer took advantage of the customer when the customer could not take advantage of him, for the dealer could count the money and the customer could but pay the full price. Such a dealer is, therefore, worse than a thief, for he not only stole, he abused a trust.

Such frauds are prevalent in canned and bottled goods. It is rare that these are true to measure. It often takes the contents of five "quart" bottles to fill a gallon measure. It is seldom also that a pound box of first-class candy contains a pound. Cheats of this kind are often effected by having an unnecessary weight of box and wrapping. These are always weighed with the articles wrapped in them, and customers sometimes find themselves paying fifty cents a pound for paper and bags and boxes that cost comparatively nothing, and that are worthless to the purchaser. Fifteen candy dealers were arrested in Chicago not long ago for frauds of this kind. In bottles and canned and boxed goods, it is but fair to say, the responsibility is upon those who put up the goods, and the local dealer does not keep back to sell again anything he has already sold.

Perhaps the greatest swindle in light weight and short measure is in selling ice and coal. The ice dealer pleads that the ice melted in the course of dlivery, but if the price paid is for the ice delivered, there should be a full pound for every time the price of a pound is paid. The poor who buy coal in small quantities are the greatest sufferers in the coal deal. Three pecks delivered for the price of a bushel is not at all unusual, and loads of coal are often found to be hundreds of pounds short. A 13,000 pound load officially tested, was 3,456 pounds short; another was 1,875 pounds short, and another was 900 pounds short. In these three loads the price of 6,231 pounds of coal was taken from the customers by the dealers. Had a customer stolen that much from a dealer he would very soon have been in jail. But the customer has no practical means of testing the weights.

Retailers sometimes put up peck packages of potatoes, for instance, ready for sale. Such packages have been found to weigh but ten pounds—the price of five pounds of potatoes stolen from every person who bought a peck. Grocerymen in buying potatoes, apples, etc., buy at heaping measures, or full weight; it is legal for them to do so. Some of them, however, sell in smaller measures. Every full heaped bushel easily makes five such pecks. Cases were found on investigation where officially sealed measures had been changed by moving the bottoms higher up, or by putting false bottoms above the true bottom. Iron or other metal weights have been found fastened to the under side of the bottom of the scale pan, and every person bought that weight every time the scale was used, at the price of the article he purchased. In such cases the dealer usually had two scale pans, marked so that he could easily tell one from the other; the unweighted one to use when he bought things, the weighted one when he sold.

Now, our farmer readers, though heavy sufferers from tricks of the trade amounting to frauds like those mentioned above, should not allow their indignation to boil over, for it must be confessed that when farmers are sellers they are not always blameless. In our own experience we have found stones in feather and wool sacks, stumps carefully concealed in bales of hay, stale eggs among the fresh ones, and very poor fruit hidden beneath choice specimens. However we may admire honesty and praise the right, **the trail of the serpent is seen everywhere in the business world.** Perhaps it was always so, but that is no reason why it should always continue. The human race has advanced, and it is still advancing. It is time to take another step. Let equity crowd out speculation, and all humanity be just and fair with one another. Give us equity in all the business relations of life—honest merchants, honest farmers; each doing his work well; each filling his sphere; all recognizing the rights and interests of all, and living together as the children of a common Father. Can anyone suggest anything better than Equity to bring it about?

RAILWAY TRANSPORTATION IN THE UNITED STATES

One would think the government could give out official statistics later than a year old, but on July 9, of this year, was issued the railroad statistics for the year ending June 30,1907. At that time there were in the United States 229,951 miles of single track road, gain of 5,588 miles during the year. Counting the double and side and yard track, the total mileage was 327,975.26. Of the 2,440 different railroads in the United States, only 29 roads, aggregating 3,926 miles, were in the hands of receivers.

There were in service on these roads 55,388 locomotives—12,814 passenger, 32,079 freight, 9,258 switching, and 1,237 unclassified. The total number of cars of all classes was 2,126,594, a gain of nearly 168,000 during the year.

The tons of freight carried during the year was 1,796,659, nearly 165,000,000 more than was carried the year before. The number of passengers carried during the year was 875,905,133, about ten times as many as the entire population of the United States, equivalent to ten trips by every man, woman and child in the country. It is a gain of nearly 76,000,000 over the preceding year.

The gross earnings for the year was $2,589,105,578, a gain of a little more than $263,000,000. The cost of operating was $1,748,515,814, which is $211,638,543 more than it had been the year before. The revenue from passenger traffic was $564,606,343, an increase of $54,575,760 over the preceding year. The cost of the roads and operation was as follows: For maintenance of way and structures, $343,544,907; maintenance of equipment, $368,061,728; conducting tranportation, $970,952,924; general expenses, $65,404,655. This expense account is not very satisfactory in that it does not give the amount paid on official salaries, interest on bonds that cost the holders nothing, and dividends on watered stock.

But one of the most important items follows: The number of persons employed by the railroads during the year was 1,672,074. Of these 65,298 were enginemen, 69,384 firemen, 48,869 conductors, 134,257 other trainmen, 53,414 switch tenders, crossing tenders and watchmen. Or it may be put this way; For general administration, 64,808; for maintenance of way and structure, 538,003; for maintenance of equipment, 352,181, and for conducting transportation, 713,465.

In case of revolt the railroads and their employes united, we have here a formidable army, one that, with their facilities for transportation, could overrun the country in spite of any force that could be brought against them. But in the matter of elections, where this power has been most dreaded, the vote is so divided up among the States as to make it not at all formidable.

WHERE RETRENCHMENT IS FELT

The Textile Manufacturers Journal is authority for the statement that an immense number of men are wearing suits purchased from one, two, three years ago.

We may safely accept the statement as being true. It, of course, is intended to show that this is a result of the hard times or reduced activity in business the country is suffering from. And may it not be assumed that women also are practicing economy and have resurrected wearing apparel that was discarded one, two, or three years ago. And the same way with the children.

But we must not stop with clothing. If retrenchment is practiced in clothing, is it not even more natural to practice it in buying things for the home, or the farm, or the office? And will not such retrenchment be felt all up the industrial line, through the retailer, the jobber and the manufacturer? Such has been the case and many commodities have responded to the call for retrenchment by a reduction in prices in the hope of forcing a larger market.

But there is one important exception. We refer to farm and garden products. Notwithstanding the large crops that have been produced, prices of farm products have held amazingly well, in fact in some important cases they have reached the maximum in the midst of the industrial depression.

And this is what we have always claimed would be the result when farmers were in control of marketing their crops, as they are now to a very great extent. In the few months past it has been demonstrated that because farm crops, food for humans and domestic animals, are absolutely essential they need not be subject, in price, to any great extent, to the conditions that govern the demand for other comodities. The people can go without nearly everying else a while and some things all the time, but food—the products of the farm—they must have all the time.

In this respect farmers are in an enviable position and their position will become stronger as they increase organization, or even accept the doctrine of controlled marketing and know the prices to hold for.

THE FARMER'S NEED

There has seldom been a season when farmers had greater need of the power to control their marketing. In many places crops have been large, in others quite meager, in some almost an entire failure. The regions of excessive production did not know the conditions elsewhere, because that had not been their study. Hence the usual course of shipment was pursued, and the centers were flooded while side or outside demands were great and unsatisfied. In such cases losses resulted not so much from overproduction as from unwise shipments or ignorance of market conditions.

In the first place, the onion growers of Texas had a bountiful crop which as thrown upon the central markets a tremendous loss. Had the onions n intelligently distributed, prices uld have remained good, and the crop would have been profitable.

Then came the peach crop of Georgia —a heavy yield of fine quality. One r two Eastern cities got the entire op, the demand was over supplied, ices dropped below the cost of transtation, while much near cities needed the fruit and would have paid good prices for it.

The melon crop made the same score this year. In some centers of production the yiled was large, while throughout most of the country there was an active demand entirely unsupplied. The usual course of shipment took the melons to glutted markets, while discriminating shipments would have found eager demands and good prices.

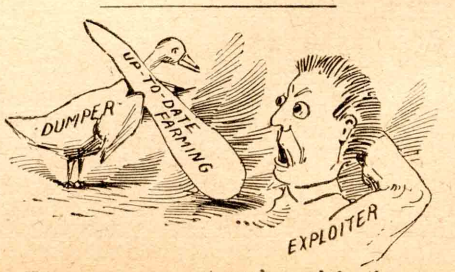
It is often so and with many crops. Intelligent marketing and intelligent shipping is worth more in dollars and cents, in profits, than is intelligent production. The labor of the season produce, let us hope abundantly; then couple this with controlled marketing —wise selling and intelligent distribution, farming becomes a business and the farmer a reaper o profits.

GOOD CROPS, POOR PRICES

This is the one universal report, the cry that comes up from every quarter where good crops have been produced. A letter from South Carolina detailing unusually bountiful production, closes thus: "Taken as a whole, however, the past season has been very unsatisfactory and many farmers report heavy losses; while the crops were generally good, the prices were very poor."

What shall we say then? Inveigh against good crops, and tell farmers to quit raising them; to direct their efforts to small yields rather than large ones? Of course not. Farmers must still work for maximum not minimum yields. To do otherwise would be idiotic, and would make farming a puerile business, a retrogressive instead of a progressive calling. Whatever men engage in they must do their best. They insult the God that gave them the power to do if they do not.

But farmers were given intelligence as well as the power to do, and what they do they should do intelligently. Only those who produce something with which the world is not supplied and cannot be, can afford to produce recklessly. When the world is offered more than it wants of anything, the producers of excess suffer loss. It is logical and legitimate that it be so. The successful producer, therefore, must know how much to produce as well as how much to produce. The universal cry of the agricultural press to produce more and more belongs to the junk pile in these days when the world's wants are so well supplied. Coupled with the knowledge of how to produce must be the equally important knowledge of what to produce and how much, and how to furnish it to the world at a legitimate profit. Each laborer must live from the work of his hands, and when his hands become fuller than he can hold, and much falls therefrom without pay, other business as well as his own is demoralized, and the world is not so well served as though the production only fully met the need. Farmers must study what is wanted and how to supply it at a legitimate profit, rather than how to pile up an unconsumable surplus. They must cooperate in Equity.



When dumpers get such a club, the exploiter gets frightened. Moral: Read Up-to-Date Farming.

It's the Profit

Not what I raise nor what I sell
Gives me my claim to sovereignty,
But what of profits I can tell—
That lifts me out of poverty.

A STEADY GRIND

We do not like to ridicule anything; but it is about the only answer that can be given to somethings that appears in the standard agricultural papers. For instance, in one of our favorite papers recently appeared instructions for salting meat. The first thing the farmer was told to do was: "For 100 pounds of meat take 10 quarts of saltpeter." That reminds us of the old backwoodsman who consulted a doctor as to a slight indisposition. The next day they were almost ready for a funeral at his cabin, and he explained the situation thus: "The doctor told me to take two spoonfuls of Ep. Salts, but I took that darned old Peter Salts, and here I be." Ten quarts of saltpeter on 100 pounds of meat would be a strong bid for several funerals.

A sober veterinarian of one of our really progressive States, advising that the dairy bull should be fed like a horse and given plenty of exercise, in order to make the exercise easy for his readers, says cooly: "Work him in a tread mill. Of course all owners of such animals have tread mills, but they might not think to work the bull in them. But if they do not happen to have a tread mill of their own, they might be able to find one some two or three hundred miles away whose owner would permit them to work the animal in it, for the sake of exercise you know.

Thus we find in so many of the farm papers, a steady grind of the absurd or imposisble, until it is a wonder that farmers tolerate many of them at all. But such papers must say something. They have so long rung the changes on production, that in seeking variety, they often get beyond their depths, and are made easy victims of the practical joker or the fool.

WATERING THE TEAM

During the hot days the work horse sweats profusely, (or ought to), and gives off a great deal of moisture. This sweating is essential to the comfort, to the health and life of the animal, as it is nature's method of equalizing the temperature and saving the animal from being overcome by the heat. The rapid evaporation on the surface absorbs the heat and prevents an excess from entering the blood of the animal.

But the moisture thus thrown off and consumed must be replaced. The man who follows the horse and also sweats freely is warned of the need of restoration of the moisture by the sensation of thirst, and he has his water jug from which he may drink every few hours. Nature gives the horse the same admonition, but that patient animal must wait his master's pleasure. If he gets a drink morning, noon and night, he is fortunate. On a really hot day when he works hard the horse needs water oftener than that, and the farmer may save time and be well paid for providing that he have it oftener, besides the comfort he renders and the increased vigor he gives the beast.

MARES FOR MULES

Prof. Rommel of the Department of Agriculture, makes a classification of mares for breeding the different grades of mules. In the first place, he recommends a large boned, heavy jack. He believes that the bone and the weight are the most important considerations in the sire.

Then he says standard mares and coachers should breed mules of good quality and fair weight. Mules from saddle bred mares should be good size, exceedingly active, and with good quality and finish. Mules from draft mares are likely to be course and heavy—the draft mules of the market, are always in good demand in the cities. The small scrub mare cannot be expected to do anything better than to bring a small scrub mule, but it will be one with great hardiness, vitality and endurance.

The demand for mules is good, with fair prices, and it is very likely to remain so for some years. The South and the cities are the main markets. The South wants medium size, active mules of strong endurance; the cities take heavier draft animals.

LIGHT FOR THE HORSE

To shield the horse from the ravages of flies during the summer, many owners darken the stall. The idea is a humane one, but few animals need the light as the horse does. The horse's sight to be carefully protected, and scarcely anything is more certain to impair the sight than keeping him in darkness, or only imperfect light. Observant persons cannot fail to notice how prone the horse taken into the light of day from a darkened stall, is to frighten and shy at things. It is because the eye will not readily adapt itself to the change from the dim light of the darkened stall to the glare of the sunshine; and continuance in the darkened stall is almost sure to permanently injure the eye.

THE WORK MARE AND HER COLT

To Up-to-Date Farming.

I read your recent article on the treatment of the working mare and her colt. I approve of that article, and this year I went still further with the most satisfactory results—further than I had ever gone before. The mare did her full share of work on the farm, the colt never went with her to the field on a single day. From the very first I left it in the stall, and it has never run with the mare except during nights and Sundays, when the mare was in the pasture. During work hours it never sucked except at noon. Throughout the entire season it has been entirely content, and so has the mare—no fretting and nickering for each other. I have kept nice, soft hay and other suitable feed with the colt, and it is surprising how soon it learned to eat. I never had a colt do better, and I need not say I never had one that was less trouble. I was always careful not to let the colt to the mare when she was abnormally hot. I gave her time to cool, and usually a drink of water before putting her with the colt. Hereafter I will not be bothered with colts in the field, nor will I destroy their vitality by having them follow the mares in the fields through hot, tiresome days of hard work.

About the only precaution to observe is that the stalls or stables in which the colts are kept, should be well lighted, for the sake of the colt's eyes.

F. M.C.

Hamilton Co., Ill.

IN making Amatite our endeavor has been to produce a ready roofing that would not require painting or repairs and that anyone could lay *without special tools.*

We have succeeded beyond our expectations.

Send for a Free Sample of Amatite and examine it carefully. Note the kind and quality of materials used—how they are put together, and, lastly, the top surface of real mineral matter which *does away entirely with the need of painting.*

It is a complete roofing when it reaches you.

All the labor required you can do yourself and nails and liquid cement are furnished free. There are no extras required and no special tools. About all you need is a hammer.

Once Amatite is on your roof it requires no further attention.

If you are building or contemplating a new roof it will pay you to send for a sample of Amatite. We will send same free with descriptive Booklet on request to our nearest office

TRADE B MARK

I'll Give You Plenty of Time to Prove that the CHATHAM Fanning Mill is the Best Seed Grader and Cleaner Made

Clean your grain—before you **sell** it—or before you **sow** it. **$1,000,000** lost by Farmers in every state each season by selling **dirty grain** is a low estimate. You are "docked" on the price because of **dirt** in every bushel. Pay me on time for a **CHATHAM Fanning Mill. Cleans** wheat for market. Takes oats, cockle, garlic, mustard and chess out of wheat. Cleans red clover—takes out buckhorn plantain. Cleans alsike clover and alfalfa. Cleans beans, oats, barley. Grades corn. Cleans timothy seed. **CHATHAM FREE BOOK** tells 100 ways you'll profit by having a Chatham. Illustrated—gives terms and low factory prices—full particulars. 30 Days' Trial without any advance payment, to prove it will do what we say it will. 250,000 sold already in U. S. and Canada. Experiment Stations indorse them and Agricultural Papers recommend them. **Write nearest office** for New Catalog.

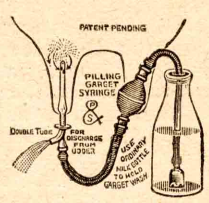
Milk Fever and Garget

Have you a Milk Fever Outfit? This is the time of the year when you need it and it is a poor time to buy it when the cow goes down with milk fever. If you are prepared to treat your cow you can do it with the assurance that ninety-five per cent of all cases treated with Air Treatment (recommended by the U. S. Dept. of Agriculture) make prompt recoveries while without it they all die. You can't afford to take the chance, and you can treat it yourself.

Write to George P. Pilling & Son Co., 2256 Arch St., Philadelphia, Pa., for their Milk Fever apparatus, price $3.00 delivered or better still get the Milk Fever apparatus and Garget Outfit price $6.50 both delivered and you will then be amply prepared to treat the two worst enemies of the progressive dairyman — garget and milk fever. These Outfits are "Easy to Use" and the Messrs. Pilling employ a competent Veterinary Staff to advise their clients as to what is best to do in all cases of injury or disease among your stock. This is pretty progressive and expensive but you will find it very much to your advantage. Send a postal today and get their book on the treatment of milk fever and garget.



The Sharples Separator people say "Don't wait until your wife is sick to learn about separators." And it is good advice. The separator is an important matter. It should have the attentionof both husband and wife when it comes to getting a new one or in first investing in one of the most necessary and profitable machines. Send for new catalog No. 136 of the Tubular. It gives facts about the profit from a separator that you now lose if you have none or have an inferior machine. Address Sharples Separator Co., W. Chester, Pa.

Farmers' Handy Wagon

Absolutely the best wagon built for every kind of farm work, and the cheapest you can buy. It is low down, has wide steel wheels and wide tires, and will last a lifetime without repairs. Can be depended upon to haul any kind of a load. Guaranteed in every respect.

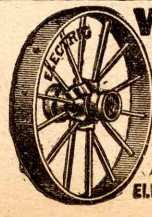
STEEL WHEELS for farm wagons —any size to fit any axle. Send for our free booklet before you buy a wagon or a set of wheels.

EMPIRE MFG. CO., Box 68 AH, Quincy, Ill.

WILDER'S "WHIRLWIND" SILO FILLER

Will fill your Silo with any Power from 4 H-Pup. Will cut or shred green or dry fodder and cut hay or straw. Our catalog explains why Whirlwinds succeed where others fail. Carried in stock at principal transfer points. Pamphlet,—"How and Why to Fill a Silo," sent free.

Wilder-Strong Implement Co.
Box 86
Monroe, Mich.



WAGON SENSE

Don't break your back and kill your horses with a high wheel wagon. For comfort's sake get an

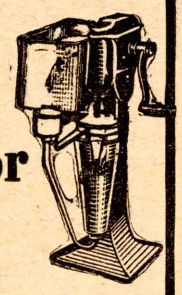
Electric Handy Wagon.

It will save you time and money. A set of Electric Steel Wheels will make your old wagon new at small cost. Write for catalogue. It is free.

ELECTRIC WHEEL CO., Box 170 Quincy, Ill.

If It's a

Tubular Separator



It's All Right

Because it gives satisfaction. Ask the man who has the Tubular how he likes it. Then ask his wife and you can rest assured they will both say---"We're well satisfied."

Why?

Because the Tubular is simple in construction, so easy to turn, so easy to clean, so economical and because it skims clean.

Therefore, **you** can't afford to be without one; so to be fair to yourself and to us, write for Catalog 136.

ALFALFA SEED

Greatest money maker farmers can grow. Get started this fall. Sow August and September. Alfalfa is the plant of wonderful vitality and drouth resisting qualities. Write for prices.

O. K. SEED STORE, Indianapolis, Ind.

NEWTON'S Heave, Cough, Distemper and Indigestion Cure. A veterinary Remedy for wind, throat and stomach troubles. *Strong recommends.* $1.00 per can, of dealers, or exp. prepaid. **The Newton Remedy Co. Toledo, Ohio.**

ARIZONA

WHERE FARMERS MAKE FORTUNES

This advertisement is inserted by the Phoenix Board of Trade, Arizona.

It brings to your attention the most wonderful agricultural district in the world—the Salt River Valley—unquestionably the greatest money-making district in the United States. More fertile than the basin of the Nile. The nation for a market. On account of climate, crops mature early. Arizona fruits unequalled for flavor and quality, thereby commanding highest price.

Soil is rich, deep silt, saturated with natural fertilizers. Absolutely level. No stones or rocks.

Less Work, Less Worry
Less Sickness, Less Trouble
And You Make More Money

Average yield of all agricultural products, $55 per acre. Specialties, such as strawberries, pay as high as $1,000 per acre.

New $5,000,000 Roosevelt dam being built by U. S. government affords unfailing water supply at low cost.

No snow, floods, cyclones, blizzards, backward seasons or crop failures. Every month is a producing month. Don't delay; now's the time to locate. Write for free literature.

BOARD OF TRADE,

Dept. O.

Phoenix, Arizona.

up-to-Date LIVE STOCK AND DAIRY

Shall a Livestock and Dairymen's Department be organized at the next convention? This is a question that all interested people should apply themselves to decide.

Domestic Animals

They cannot talk, but strength employ,
And useful service freely render;
Then let it be the human's joy
A just equivalent to tender;
Lest when the books are closed at last,
Proud man be found in debt to beast.

TEDIOUS CHURNING

This is the time of the year when the "witches get into the churn." We old fellows have seen our grandmothers, and even our mothers, churn and churn, and fret and stew, the latter almost literally, and yet the butter would not come. In the winter the milk was liable to foam and fill the churn to the lid. In the summer shiny grease spots would float on the milk, but no butter would gather. Sometimes neither grease nor butter would appear though the dasher was kept in vigorous action until both arms and back were tired.

In those days it was the fault of the witches, and various means were employed to drive them away. In the winter when the milk foamed, some hot water was poured in it to scald the witches out. In the hot summer days, when the cream got greasy and the butter wouldn't gather, it was rulable when ice could be obtained to put a lump of ice in the churn, as it was said the witches wouldn't stay where ice was; and in either case, when the witch was driven out the butter would soon come.

We laugh at such notions now, but often the butter is slow to come, and when it comes after all the hard work, it is not what it ought to be. We find reasons for it now without consulting the witches. That such troubles come on in the later summer months may be traceable to the custom of having the cows come in fresh in the spring. As the summer wanes, the natural period of laxation draws to a close, and milk or cream from cows whose flow of milk is subsiding, requires more agitation to separate and gather the butter. That is a cause not easily overcome, except by changing the time for the cows to come in fresh. It is also thought that milk from old cows requires more churning than milk from younger ones. It may be that there is something in the late summer pasturage that makes the separation more difficult; and an insufficiency of salt given the cows is believed to have the same effect. Certain it is that as the cows change from the dry feed of winter to the more sappy pasture grasses, the cream is more difficult to churn. At that time a little grain, or bran, or dry clover hay, will increase the flow, improve the milk and make the process of churning easier.

But the greatest trouble, no doubt, is the temperature. If the cream is colder than 50 degrees, it is very likely to foam when agitated and the butter will not come. The effect of the hot water is to raise the temperature, but it impairs the quality of the milk and whitens the butter. It is much better to warm the milk slowly by setting it in a warm place. On the other hand, if the temperature of the milk is above 70 degrees it takes hard work to get any butter, and then there will be but a small quantity, soft and of poor quality. Reduce the temperature, however, to 60 degrees and the churning is easy. This is how, in the old days, the hot water in the one case and the lump of ice in the other, drove the witches out of the churn. It brought the temperature to the required point.

Sometimes there is an attempt to churn cream that is not "ripe" enough. Skill and experience are necessary to know just when the proper stage of ripeness is, and that is a matter on which much of the labor of churning depends.

Another thing to avoid is filling the churn too full. If the churn is too full the movement of the dasher cannot much agitate the milk, and it takes so many more movements to effect the separation and gather the butter.

In these simple points we have most of the secrets of the ancient witches in the churn. The more thrifty grandmothers this time of the year did their churning the first thing in the morning, as the witches were not so apt to get into the churn until later in the day. The August and September nights are cool, and the temperature early is more likely to be at the proper degree, around sixty.

In speaking of these old habits and notions we have no disposition to make sport of our ancestors. Their minds were as active as ours, but while we look to what we call science for a solution of the troubles which beset us, they had to look to the mythical, and many of their ideas and theories were far more ingenious than ours.

BUTTER AND POULTRY HANDLERS ORGANIZE

A few days ago the butter and poultry buyers and shipers of Missouri effected a permanent organization, 73 firms entering as charter members. The stated purpose of the organization is to obtain better rates from the railroads, provide better storage facilities, bring the shippers and buyers together, and provide means for storing, marketing and distributing the vast poultry and dairy products of Missouri. This involves a business of not less than $62,000,000 annually, and hereafter it will be done virtually as under a single management.

We think these people have done wisely. A business so large in the aggregate must have more than individual attention. Questions constantly arise that interest every buyer and shipper, and that cannot be satisfactorily answered by or for one, because the answer must effect all. The transportation question is but a minor one. Rates are made by the railroad companies, and though sometimes high and unjust, perhaps, they are quite uniform, and if uniform, buyers and shippers may adjust their prices to cover them. Their prices. Here is the important question. Business men must have an income, and they like to determine what that income shall be, or at least the conditions upon which it shall depend. To do this where many are engaged in the same business, there must be uniformity of buying and selling—uniformity of price. This can be secured only by co-operation, and there cannot be co-operation without organization. This justifies organization; not only justifies it, but makes it necessary.

But in this matter there is another great interest involved, that of the producers. There are more producers of these products than there are of buyers and shippers, and their business aggregates in Missouri the same enormous sum of $62,000,000. The income of these producers depends primarily upon the price; that of the buyers and shippers depends upon the difference between the buying and the selling price. This difference may be widened and the buyers incomes enlarged either by reducing the buying price or increasing the selling price. Have the producers any assurance that the buyers will not oftenest reduce the buying price? Indeed it is sure that they will, because it is easier done. To increase the selling price makes sales fewer and harder to make. To reduce the buying price leads to

an occasional individual complaint, but the goods come. The latter is the most natural thing to resort to, and who shall protect the $62,000,000 interest of the producers?

They must organize also. It is childish for the producers to sit down and make faces at the organization of the buyers and shippers when the same means and just as effective are at their own hands. The producers are mainly interested in only one proposition, and that is the buying price, the price they will accept in exchange for their goods. And since they are the first owners of the goods, and are free to sell or not, the same degree of organization that enables the buyers to act in concert would make the producers masters of the situation so far as their interest and income is concerned.

It is good business for the buyers to organize; it is a supreme necessity for the producers to organize, and to see them remain so long indifferent does not speak well for the schools they attended nor the teachers they had.

DAIRY CO-OPERATION

Washington dispatches tell us of a special investigation of the economic and commercial conditions in the creamery business, and information has been secured showing that there is practically a monopoly of this industry in some sections, while in others the business is largely conducted on a co-operative basis. Where co-operation prevails the farmers receive much more for their butter fat than they do in territory controlled by the monopoly.

Another argument against the monopoly system is that the monopoly product cannot be held at so high a standard of quality as can the co-operative product, because the monopoly creameries cover such large territories as to necessitate the shipment of cream over such long distances that it is impossible to have it fresh. This establishes a lower level of prices which even the co-operative creameries with their superior product made from fresh cream, must accept, and involves milk furnishers in the loss of millions of dollars annually.

The investigators place creameries in four classes: 1. Co-operative creameries, owned and operated by the patrons or furnishers of the raw material, and the entire receipts, less actual running expenses, are divided among the farmers in proportion to the amount of butter fat delivered by each; 2. Individual creameries, or those owned and operated by individuals, who buy the cream and pay all expenses, and retain all the profits as their own; 3. Combination creameries, which means two or more individual creameries in adjacent territory, owned and operated by the same individual interests, the profits being consolidated and paid to the owners as dividends: 4. Monopoly creameries, or those covering large territories and receiving cream from long distances, with no opposing or competitive creameries within their territory.

The investigations show that the co-operative creameries, where skillfully managed, yield the largest returns to the farmers; the individual creameries, being generally in close competition with co-operative creameries, pay nearly as much, but the monopoly creameries, being without competition in their territory, pay much lower prices—prices as low as they can compel the farmers to accept. And to keep out or destroy competition the monopoly creameries adopt the usual monopoly methods. If there be a co-operative or individual creamery in any part of their territory, they put prices up in that locality beyond what the competitive creamery can pay. The shortsightedness of the farmers prompts them to sell to the highest bidder. The competitive creameries must, therefore, run at a loss or go out of business for want of material to work upon. The monopoly creameries pay the excessive price at a loss, but it is a loss they can easily recoup. When to clear themselves from competition they are compelled to pay too much in any portion of their territory, they sightedly reduce the price they pay in the remaining portion of their territory, the reduction being so small that it attracts but little attention, and may be excused in many ways, and yet it makes good the loss sustained elsewhere to kill the competing institution. That accomplished the farmers who went off after the higher price, find prices going down with a vengeance.

The system of killing the small creameries, it is said, has been carried on to the fullest extent in Southern Iowa, Missouri, Kansas and Nebraska. In Kansas it was found that in five years, the number of creameries was reduced from 133 to 67; but in Minnesota, where co-operative creameries prevail, the increase was from 582 to 905. The loss to Kansas in reduced prices for lack of competition was not less than $1,000,000. Fifteen years ago, the report says, Kansas and Minnesota were about equal in the creamery interest. In Kansas the monopoly system prevailed; in Minnesota the co-operative ar competitive. Now Minnesota is far ahead in production, and the Minnesota farmers get 6 or 7 cents per pound more for their butter fat than do the farmers of Kansas. And the same is true of all other sections where these different systems prevailed.

There can be no doubt that the tendency of the monopoly system is bad for both the farmer and the public. The effect is to exact high prices from the consumer for a somewhat stale article, and to pay low prices to the farmer, the great profits going to the large operators who have control of both situation and price. Hence the local co-operative creameries should be encouraged, and the Dairy Division is trying to do that.

But the remedy is in the hands of the farmers themselves. Being first on the ground, first owners of the material, they have the first voice in the matter of control. They can shape the creameries as they will. But they must co-operate to do it. It is easy to compel one farmer to accept a situation or a price, but it is not easy to so compel a hundred. If all the farmers would speak with one voice and act with one impulse, manifest a unit in purpose and determination, they would be invincible—thorough masters of every situation.

CATARRHAL FEVER IN THE HORSE

According to "Veterinary Notes," this disease is known under a number of names, prominent among which are catarrhal fever, shipping fever, distemper, pink eye, epizootic, catarrh and influenza. It is an acute, infectious disease, characterized by a rise in temperature and catarrhal condition of the mucous membranes, especially those of the head. It is not usually fatal, and for that reason too little attention is paid to it.

Influenza seems to be known in almost every part of the civilized world. In certain sections of this country it is almost a constant affection. This is especially true in our large horse markets, owing to the constant introduction of fresh horses. The fresh horses generally come to the salestables in fine condition, in good flesh, and ready for the market; but if they remain in the stables a few days they are almost certain to contract the disease. Infection usually takes place from horse to horse, but the virus may be carried on the clothing of the stable men, or in the litter, blankets, etc.

The disease is frequently ushered in with rigors, followed immediately by a high fever, the temperature rising from three to four degrees in a few hours. This is generally accompanied by an entire loss of appetite and much nervous depression. The visible mucous membranes become congested, assuming a pink or red hue, hence the frequent name of pink-eye. The eyelids swell, are hot and apparently painful, and in a short time the iris assumes a yellowish color, indicative of jaundice or torpidity of the liver. There is frequently a soreness of the throat, indicated by difficulty in swallowing. The thirst seems to be intense, but owing to the inflamed condition of the larynx, very little water is taken at a time.

The duration of the disease in its acute form is usually from five to ten days, but owing to the debilitating effect produced by the loss of appetite, horses are frequently out of condition for several weeks. This entails a loss to the owner or shipper that is almost ruinous. And is it not possible to trace to this fact the prevalence of the disease at salestables? No matter what the value of the horse when he arrives at the stables, he is worth next to nothing in the market after this disease has developed in him; and yet the disease will run its course in a few days, the horse will recuperate in a few more, and is then as valuable as ever. There is an opportunity here for the meanest of all swindling, and even its possibility warrants not only a rigid investigation, but strict laws requiring the disinfection of salestables, and providing severe penalties for their nonobservance.

Rosendale, Wis., Mar. 23, '08. I have used a U. S. for 15 years. It has always been perfectly satisfactory and I never hesitate to recommend it to anyone. CHAS. L. HILL.

DURABILITY

This word is the secret in separator construction. Compare these two letters, please. Is not Mr. Kroyer's experience, with this "cheap" apology for a separator, sufficient proof to any fair-minded reader, about to purchase a separator, the wise move to make? Read Mr. Hill's testimony, please, and compare—15 years of perfect satisfaction as compared with 8 months' use and "all played out." The ever-ready-to-use

CLEAN SKIMMING
EASY RUNNING
LONG WEARING

IMPROVED 1908 U.S. CREAM SEPARATOR

has more practical improvements than any other separator made, having a solid, low frame; most simple yet efficient bowl, waist low supply can and numerous other advantages.

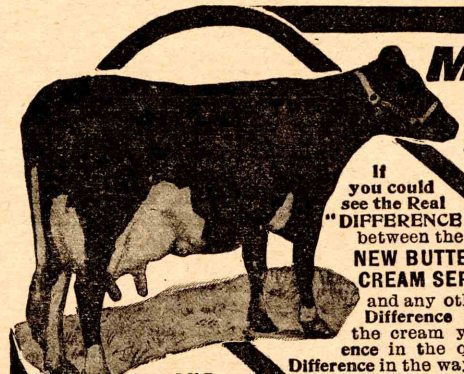
Send to-day for catalogue No. 187, describing fully this labor saving, money earning, reliable separator.

VERMONT FARM MACHINE CO.
BELLOWS FALLS, VT.
16 Distributing Warehouses in U. S. and Canada.

New Market, Minn., Mar. 19, '06. I bought an "Economy" Separator 8 months ago and it is all played out now. Ordered a No. 6 U. S. and am now satisfied. A. KROYER.

499

MORE MONEY
From Your Cows and
Much Less Work
In Getting It.



If you could see the Real "DIFFERENCE" between the NEW BUTTERFLY CREAM SEPARATOR and any other made—Difference in amount of the cream you get; Difference in the quality of cream; Difference in the way the machine runs. Difference in the number of times a minute you have to turn the crank; Difference in the way the milk is aerated and purified while being separated; Difference in the time and trouble it takes to clean the skimming device—you would say, as hundreds of others are saying today—"I'll get the NEW BUTTERFLY CREAM SEPARATOR."

If you could see how to make easily $10 to $15 more a year on each and every cow you keep, and still do it with less work for your wife and yourself, you'd say: "I'll get a Cream Separator."

OUR PATENTED ALUMINUM CORRUGATED SKIMMING DEVICE makes the New Butterfly Cream Separator different and 8 times as efficient as any other machine. Every drop of milk that enters the bowl of the New Butterfly Cream Separator is actually put through the skimming process 8 times. This guarantees complete separation, and you can't fail to get ALL THE CREAM. New Butterfly Cream Separators are sold as they ought to be. Not by agents, but direct from our factory to your farm. Freight paid and on 365 days' trial. Send today for illust'd catalog.

For average use, we recommend No. 4½, capacity 450 to 500 lbs. of milk per hour.

PRICE delivered at your town— $39.80

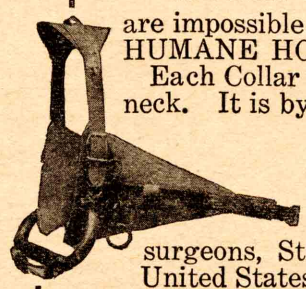
925-937 Marshall Boulevard, CHICAGO, ILL.

SORE NECKS OR SHOULDERS



are impossible if you work your horses in the "WHIPPLE" HUMANE HORSE COLLAR.

Each Collar fits all horses regardless of size or shape of neck. It is by far the cheapest Collar to use.

FIFTEEN DAYS TRIAL

when used on sore necks or shoulders.

We guarantee to cure the horses while they work. Recommended by all veterinary surgeons, State Experimental Farms and used by the United States Government. Write for prices and testimonials today

HUMANE HORSE COLLAR COMPANY, 1916 So. 13th St., Omaha, Neb.

Horse Collar Economy

Is a vital subject to horse owners, especially at a time of year when so many animals are not in workable condition by reason of sore shoulders. Such a condition can be prevented by the use of the Adjustable Hameless Collars made by Johnson-Slucum Co., 426 State Street, Caro, Mich. Write and ask them to send full particulars.

ABSORBINE is a remedy that can be depended upon to do work without blistering or removing the hair, and the horse can be used. As an illustration, Mr. Joseph Cooker, Kingman, Me., had a colt with a large bunch on hock joint and realizing that this blemish decreased the colt's value he purchased a bottle of ABSORBINE at $2.00 and says there is not a blemish to be seen on her now, and that the colt is worth $50 more than she was before using ABSORBINE.

The ABSORBINE mentioned above is familiar to you as it has been on the market a great many years and is used by all horse owners who appreciate the value of having a preparation on hand at all time to kill pain, stop lameness, remove blemishes, etc. It is manufactured by W. F. Young, P. D. F., 102 Monmouth St., Springfield, Mass., who is also an enthusiastic horseman and willing at all times to help out brother horse owners needing advice on the care of their animals.

Harness That Stands Strain

It is worse than waste to let harness get dry, brittle and rotten. To stand the hard strain of daily use it must be made soft with

EUREKA Harness Oil

Clean the harness; let it absorb all the oil it will; wipe dry with a cloth, and your harness will be strong and tough as new leather.

Nothing like Eureka Harness Oil. Made by

What does it cost to produce a dozen eggs? What are a dozen eggs worth for food? These are questions asked by a correspondent. See Question Box.

The Tragedy of Change

The hopper has a race for life
When Biddy and her family,
Bold chanticleer and babes and wife,
Go for him, oh, so handily.
But then his loss makes human store;
The hopper comes to life once more;
But this time he is chicken—
He helped to build a chicken.

STRONG AND WEAK FOWLS

All observant poultry raisers have discovered that there is a difference in the vitality of fowls, and that difference usually represents the difference between profit and loss in keeping poultry. Hence it is important that constant care be taken to maintain or increase the flock, and this care must begin with the hen that produced the egg from which the chick was hatched. If the vitality of the hens can be determined, only eggs from strong hens should be used for hatching.

The next point of care is the eggs themselves. Eggs are not all alike. Some are long, some are short and round, and some are ill shapen. Most breeds have a special egg form, and eggs truest to the type are of the best form. Usually the thick, plump egg is the best. A mishappen egg, or an egg in any way imperfect in shell or color, or too large or too small, should never be used under the hen or in the incubator.

At hatching time another careful selection should be made. No matter how carefully the eggs were selected some weak chickens will be hatched, and these are most likely to betray themselves as they come from the shell. It is little use to help a chick out of the shell. It is sometimes done, and a chick saved and brought to maturity, but it cannot be other than a weakling, and eggs from it cannot be relied upon to produce strongly vitilized chicks. Improper incubation is a cause of weakness in chicks even from the most perfect eggs. If the setting hen gets careless, and leaves the eggs too long exposed to chilly air, or if the nest becomes wet or too hot and dry, or if the incubator be allowed to get too cold or too hot, the almost certain result is weakened chicks or chicks of low vitality. The highly vitilized chick comes from the egg without apparent effort, it is large, plump and full of life, is covered with a good coat of down, quickly dries, has little eyes that stand out prominently and black and bright.; the shank is round and well developed, beak short and thick, and of a good color instead of pale and thin. The chicks that meet this description should be marked in some way, for among them will be found the valuable layers for future broods.

But even these should be carefully observed throughout their entire growing period. Various causes may result in weakening them, and as soon as any material weakness is shown the marking should be removed. And to be exact, weakness should be watched for in the adult fowls. Strong vitality in the breeding birds is of sufficient importance to justify the utmost care to secure it.

Prof. Rice, of Cornell University, made an actual test of fowls that had been so marked when they were chicks. Of a test of White Leghorns the strong ones averaged at the same time with the same treatment, 3 3-10 pounds,, the weak ones 2 8-10 pounds, with very little perceptible difference in size. The total number of eggs laid in a given period by 25 of the weak ones was 287; that by a like number of the strong was 315. A like experiment with Barred Plymouth Rocks showed an average of 4 6-10 pounds for the weak and 6 3-10 for the strong. We are not given the difference in egg production in the case of the Rocks.

This shows the importance of breeding only from the strong birds, and we believe if it were carefully followed for a few years an almost different race, so far as strength, vitality, hardiness and profit are concerned, could be produced on every farm.

SCALEY LEGS

This is an unsightly trouble among fowls, and, while it is seldom fatal, it reduces their vitality and impairs their usefulness. The growth of thick, ugly scales is the resul of small parasites that work, or rather live in the seams of the scales. It is not contagious, but it is communicable just as all other parasites are, by their passing from one fowl to another.

A very simple remedy is entirely effective. Take equal parts of coal oil and lard, warm and thoroughly mix. Apply to the scaley legs, carefully but gently rubbing in, being careful to treat every effected part. One thorough application is usually sufficient. As a precaution, whitewash the roosts, adding a little carbolic acid, or coal oil to the whitewash, and your flock will soon be rid of scaley legs.

MIDSUMMER IN THE POULTRY YARD

This is a trying period in the life of the hen and her family. The time of her greatest activity, like that of the farmer with his crops, is supposed to be over. But the depressing heat, the general scarcity of water, and the too often absence of abundant shade, coupled with her natural change of clothing called moulting, conspire to make it a trying time for her. At this time she needs plenty of feed, and it ought to be of the right kind; the kind to produce feathers—meat, bone, lime. If she can get plenty of beetles and grasshoppers, without too much hard work, she will get along, and may reward her favorable conditions by continuing to produce eggs. But she must have water, which should be kept fresh and good, and she should have plenty of thick shade easily accessible. If the shade be within walls, there should be good ventilation and the place should be kept clean.

HEALTH IN THE POULTRY YARD

Mr. Otto Barth, an incubator manufacturer and experienced poultry man, has the following to say concerning disease especially epidemics, among the poultry:

You need have no epidemics among your fowls if you give them reasonable attention. Clean out their houses two or three times a week, and once a week burn in each of them a quarter of a pound of sulphur. Put some live coals in an old iron pot or heavy can, throw the sulphur over them and make for the door as quickly as you can and close it. Keep the building closed until the sulphur is burned out, after which open all windows and doors to let fresh air in. It takes about an hour to do this fumigating, but it is worth the time and expense.

Have dust boxes and plenty of litter (frequently renewed) for them to scratch in, and keep a supply of grit, bone, charcoal and fresh water constantly before them. Keep drinking vessels clean by scalding them out a couple of times a week, and put in fresh water every day, first throwing out the water remaining in the vesesls before refilling them.

Keep the fowls' quarters dry and well ventilated, and the fowls themselves well fed, and there will be no cause for epidemics and you won't have any.

SUGGESTIONS

As a rule the poultry receives less attention than any other live property on the farm, and yet, compared with the capital invested, it makes the best returns.

* * *

The chicken runs or yards should be plowed or forked two or three times every season; and the smaller they are the oftener they should thus worked up. Such working enables the fowls to get the worms and insects that infest the soil and it gives the ward a fresh surface.

* * *

Once more we suggest that the early pullets should have a little extra care; they are to be depended upon for the egg supply next winter.

* * *

Naturally more eggs are produced in warm weather than in cold. That is a lesson in temperature for egg production, and it proves that if hens are to lay in winter, they must have warm quarters.

* * *

The dust bath is the fowl's natural weapon in its war with parasites, and winter and summer provision should be made for it to indulge in the dust bath at pleasure.

* * *

In hot weather the comfort of the fowls depend upon shade and fresh water. They should have ready access to both. This is particularly to be observed in the case of young chicks.

* * *

Gapes is not a disease; it is only the manifestation of the lodgment in the throat (trachea) of the chick of a parasite, a double-headed worm hatched from an egg the chick gets from the ground where it feeds. This is often so prevalent that it is mistaken for an epidemic disease, and it not infrequently destroys all hope of profit in the season's hatch. Keep the runs, especially the feeding places, well sprinkled with lime from the time the first chicks are hatched in the spring until there are no longer any small chicks.

* * *

Some take infertile eggs from the incubator after they have been in long enough to prove them infertile, and use or sell them. Don't do it. They may not show themselves spoiled, but they are not fit for food.

* * *

A friend of ours broke a dog from the egg-eating habit by withdrawing a portion of the contents of an egg and refilling with cayenne pepper or capsicum. He then watched the dog until it had taken an egg, when he forced the "loaded" egg into its mouth and mashed it therein, so as to give the dog the full benefit of the egg and pepper. It was never known to touch another egg.

* * *

Don't leave any carion or decaying flesh where the fowls can have access to it. They will devour it, very certainly with bad results. Maggots or larvae that infest decaying flesh are eagerly eaten by fowls, and, if obtained in large numbers, generally prove fatal. Besides eggs from hens that feed on such things are not fit for food.

A disappointment

The chirp of the cricket and the grasshopper's whir,
Are heard in the ordchard when autumn leaves stir;
But sad disapointment the farmers betray,
When the leaves blown aside no apples display.

MELON MARKET DEMORALIZED

The Fruit Trade Journal as early as July 18, told us the melon market was completely demoralized in one of the leading centers. The receipts had been very heavy, and these added to a surplus held over made the condition exceedingly bad. On a certain Monday 120 cars had been received, and these were followed on Tuesday by 57 cars more, and on Wednesday by 27 more. Considerable stock was received during the week that would not pay freight charges, and of course was a complete loss to the growers. The market referred to can handle per day 25 cars at prices remunerative to the growers, but when the receipts exceed that, both growers and shippers suffer.

We do not write this expecting it to be of service to the growers this season; but it seems to offer an opportunity to impress an important lesson. Farmers are intelligent. They possess almost all the educational advantages of other people. They have every means of information and communication. The telegraph and telephone are as much for them as for any one else. Had those shippers known that market could profitably handle but 25 cars of melons a day and that it was already glutted, would they have sent in that 120 car loads of melons where not one was needed? That they did not know these things was their own fault, or rather the fault of the inexcusable, unbusiness way of doing business. They have got into the rut of filling cars and shipping them. The tags are stereotyped and printed to order. All they have to do is to tack them on and let them go. It is easy, because it requires neither thought nor infomration. But it is woefully wasteful of labor, destructive of goods and obliterating of profits. Such shipments are not only reckless, but idiotic. Organization that does not regulate shipments is a farce, and failing to organize for that very purpose is criminal, because it leads to the waste of what others need and are able and willing to pay for. It is an easy matter for organization to know the condition of the markets every day; and on the very day that 120 car loads of melons went to that glutted market, there were markets just as accessible, many of them more so, to which the 120 cars could have been distributed and met a welcome reception and a remunerative price.

And the same is true every season of many products. Producers must learn how to sell, and they must cooperate together. It is much more important in selling than in buying. And here co-operation with the merchants is important. Buyers do not like glutted markets. Such markets are as destructive of their profits as of those of the producers. Merchants would gladly assist farmers in this very matter if they understood each other and worked together. Let us plead with them all to bury their prejudices, and help each other to the mutual advantage of all. It is largely a question of saving the crops or losing them; of reaping profits in business or meeting losses.

And here is an important but easy field for the National Department of Agriculture. The weather service telegraphs every day to every part of the United States what the weather will probably be during the next two days; and the information, though only a probablility, is valuable and useful. Suppose a market service would do the same thing concerning marketing of crops in their season—whether such and such markets are glutted or unsupplied, etc. But, whew! that's business. None o' that, if you please.

TOO MUCH RUINS PRICES

The burden of agricultural instruction is for increased production, and it has been so for all the years past. How farmers have been kept blinded to the fallacy of such instruction is close on to the wonderful. When the demand is greater than the supply production may be profitably increased; but when the supply is equal to or greater than the demand, production can be increased only at a loss. We are sorry the colleges, the institutes and the press cannot be awakened to this fact. The only way they can make their instruction proper or profitable is to add to it increased demand, and show the farmers how they may profitably dispose of their increased crops. This they never pretend to do.

The Fruit Trade Journal, referring to the New York slump in the fruit market, and losses sustained by the Georgia peach growers because of the low prices they were compelled to accept, says plainly it was not the quality of the fruit that produced the slump but the great quantity put upon the market. New York can handle from 40 to 50 car loads of good peaches a day; that market has been given from 75 to 100 per day. What could be expected but low prices and losses? We pray for the time when farmers will produce to meet the demand, and then ship intelligently.

BIG DEALERS WON'T STAND IT

The power of big dealers in farm products was manifested in Cleveland not long ago. The potato growers of Virginia decided to market through their own chosen agencies, and thus secure a more equitable distribution of both potatoes and profits. No sooner had a large shipment been made on this plan and the big dealers, who had been in the habit of dictating sales and prices, learned of it, than, through their own combination, they put prices flat down to ruin the new system. They could afford to lose a few thousands, or even millions, to prevent the breaking of their own monopoly.

Growers of all crops may expect to meet that tactics, and there is but one way they can overcome it, and that is to concentrate their own combined power against the combined power of the fat monopoly dealers. Local efforts are no more than partial eclipses of the sun. A little light is momentarily shut off to shine all the brighter when the obstruction passes off or is removed. A society that covers every crop every where is the only remedy. Power must meet power, and then when the monopoly losses money to crush the society, it only hastens its own destruction. How we wish farmers would grow wise.

THE LAZY ORCHARD

For two seasons the orchards in a large portion of the fruit belt have produced very little fruit. As a result those orchards have been quite neglected, and some are even threatening to cut them away entirely. That would be unwise. Such failures are not altogether uncommon. The next year may bring a fine crop accompanied by a good demand and a remunerative price. We say may, for we do not know. But the farmer must live largely on anticipation and hope, and this should prompt the renovation of those neglected orchards. We are planning to give ours a thorough overhauling. We have been pasturing them this summer to keep the annual growth down, and in this month (August) we purpose to cut all the sprouts that have grown up in them. So soon as the growing season is well over, and the leaves have begun falling, the sap no longer circulating, we shall cut out at least a third of the brush from every tree. And we shall not confine our cutting to the lower branches; we shall go all through the tree, selecting such branches as may seem to be most in the way, so that when we are done the tree will present an entirely different aspect. Soon as the brush is cleaned away, we shall break the ground thoroughly, disturbing or wounding the roots as little as possible, of course. Thus we shall let it lie until spring, when we shall give it a thorough working down and sow to clover, perhaps to a mixture of red and alsike. We may mix oats with the clover seed to keep down the natural growth of weeds. If so we may have a very fine hog and calf pasture from about the first of May to the first of June, and if we are again without fruit; till late in the fall.

During April, May and June dormant buds will put out sprouts in great abundance, no doubt. These should be rubbed off as fast as they appear, so as to keep the stems of the branches smooth and the tops of the trees open. We expect this process to make virtually new orchards out of the old lazy ones. The only trouble will be the patience and persistence to keep it up.

FOOD FOR THOUGHT

Lorenzo Dow Baker of Boston, was know as the "banana king", and was the founder of the United Fruit Company, next thing to a monopoly. Mr. Baker died recently, and his will shows that he left an estate of $20,000,000.

We do not envy anybody's success. We admire the industry and ability that wins a fortune. But these reflections grwo out of that estate. Here is a fortune of $20,000,000 made in buying and selling fruit. Where is the record of a fortune made in growing fruit? If the handlers make millions while the growers struggle for a competence, do not the handlers make more out of the fruit than the growers do; and are not the profits exacted by the handlers too great and those awarded the growers too small? If so, could not the growers by different methods of marketing, reverse these things in true equity, and leave some of the accumulations that grow into millions for the handlers, in the hands and pockets of the growers? This is a great old world to study conditions in if we but benefit by the lessons.

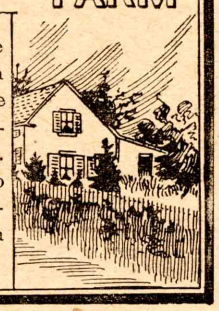
Up-to-Date HOME ON THE FARM



The ladies of the home are as much interested in the mission of this paper as are the men. We invite them to the next convention and want them to organize.

The Rainbow

My heart leaps up when I behold
A rainbow in the sky;
So was it when my life began;
So is it now I am a man;
So be it when I shall grow old,
Or let me die!

—*Wordsworth.*

THE RAINBOW OF LIFE

The rainbow is the bow of promise, the harbinger of better things. Happy is the man or boy, the woman or girl, whose life is constantly spanned by the rainbow. Nothing is so bad but that it might be worse, and nothing so good but that it might be better. It is not the part of wisdom to stop and mourn or fret and worry over the bad; it is not the spirit of progress to be content with only the good. We may not attain to the BEST, but we can always step up to something better.

The rainbow always appears upon a cloud. If there were no cloud there would be no rainbow. It comes like a smile upon the face to drive away a frown. Often the worst storm is but to stretch a canvass on which for Nature to paint a rainbow. As the storm passes the sunshine comes with a glitter in the lingering tears, and behold the rainbow! Montgomery says:

Sweet the hour of tribulation,
When the heart can freely sigh;
And the tear or resignation
Twinkle in the mourner's eye.

Have you felt a kind emotion
Tremble through your troubled breast,
Soft as evening o'er the ocean,
When she charms the wave to rest?

Have you lost a friend or brother?
Heard a father's parting breath?
Gazed upon a lifeless mother,
Till she seemed to wake from death?

Trembling, pale and agonizing,
While you mourned the dear one gone,
Bright the morning star arising,
Opened heaven from whence it shone.

Thither all your wishes bending,
Rose in ecstacy sublime;
Thither all your hopes ascending
Triumphed over death and time.

It was the rainbow on the cloud of sorrow, and the sunshine of hope and sweet resignation, glittering a moment in the tears, dried them up, and the roses bloomed again beside the path the tears had made.

Clouds sometimes come with the every-day duties of our lives. Even young people often feel that their tasks are too great for them. They chafe in the darkness which surrounds them and impedes their onward progress, and, though something within is constantly fluttering like a bird in a cage to get to the light, the road sems so long and the way so steep, the obstructions so great, that discouragement chains the longing soul to the lower levels. But ambition will not stay there; the divinity struggles upward, and brighter scenes reward the ascending eye. The boy or girl that struggled on in the darkness and panted up the rocky way, becomes the man or woman on the summit, looking benignly down upon the scenes of battles and of vietories. The rainbow smiles upon the clouds that have floated off behind.

But success brings other, may we not say higher duties? The moon itself is helpless and dark, but so soon as it gets above the horrizon, it catches the light and sends it back to those in darkness. We may not be able to paint rainbows, but we can send a silvery beam to guide some one struggling upward.

Be a helper in the battle,
Be a cheer to weary feet,
Lead the way from darksome shadows
Where the storm and river meet.
Be a ray of sunshine, brother;
Always radiate a glow
That will make the old world better—
Simulate the spreading bow.

Had no one helped another the world would be centuries farther back than it is, and much as has been done there is much yet to do. Those who have climbed highest must reach back to those below—must help to bend rainbows over storm swept lives.

Someone near you is struggling alone
Over life's desert sand;
Faith, hope, and courage together are gone;
Reach him a helping hand;
Turn on his darkness a beam of your light;
Kindle, to guide him, a beacon fire bright;
Cheer his discouragement, soothe his affright,
Lovingly help him to stand.

Dear one, be busy, for time flieth fast,
Soon it will all be gone;
Soon will our season of service be past,
Soon will our day be done.
Somebody near you needs now a kind word;
Someone needs help, such as you can afford;
Haste to assist in the name of the Lord;
There may be a soul to be won.

We can assure our good people—Our Up-to-Date People—that loving service done to uplift humanity, will not go unrewarded. The reward may seem slow in coming, and we may think the debt overdue, but He who has written before Him the deeds of the good and the bad, is the collector, and the debt will be paid. Heaven and earth have decreed it, something in the mystery of the human race and the life we are living has entered the judgment, and its settlement comes in the immutable destiny of the race.

Give love, and love to your life will flow,
A strength in your utmost need;
Have faith, and a score of hearts will show
Their faith in your word and deed.

Give truth and your gift will be paid in kind,
And honor will honor meet;
And a smile that is sweet will surely find
A smile that is just as sweet.

For life is the mirror of king and slave;
'Tis just what we are and do;
Then give to the world the best you have,
And the best will come back to you.

112 PIECE DINNER SET FREE TO LADIES

SEND FOR FREE SAMPLE OUTFIT
NO MONEY TO PAY.
READ AND BE CONVINCED

We can give you with your Baking Powder, choice of six magnificent crystal white tumblers or six jelly glasses with tin caps.

Being determined to earn a national reputation as the most progressive house in the United States, and gain a world-wide reputation for our strictly pure baking powder, extracts, grocers' sundries and household supplies, WE WILL GIVE A BEAUTIFULLY EMBOSSED

112-PIECE DINNER SET—MAGNIFICENTLY DECORATED

with dainty and artistic floral designs, (full size for family use) to every lady who distributes a few pounds of Belle Baking Powder among her friends and neighbors. OUR BAKING POWDER IS GUARANTEED BY US AS ABSOLUTELY PURE under the Pure Food Laws of the United States. It is packed in tin cans and is a PHOSPHATE POWDER OF HIGH GRADE and must not be compared with the cheap alum baking powder packed in round paste board boxes, such as is put out by some manufacturers. *With each pound of Baking Powder you may give either Six Full Size Crystal White Glass Tumblers or Six Jelly Glasses with Tin Caps,* as per plan 161, (the glasses alone are worth almost as much as the price of the entire plan). We also have hundreds of other household articles that we give *free* with our Baking Powder, Extracts, etc. *WRITE US AT ONCE FOR THE FREE SAMPLE OUTFIT* and other things, and if after receiving same you make up your mind that you do not care to work for us, YOU MAY KEEP EVERYTHING WE SEND YOU FREE OF CHARGE for your trouble in answering this advertisement.

5 Piece Toilet Set FREE
In addition to the dinner set or any other of our regular premiums you may select, if you send your order in 45 days. This set is full size for family use, and is given as an **EXTRA SPECIAL** offer for quick work.

WE PAY IN ADVANCE ALL FREIGHT

and express charges on everything to your nearest Rail-road Station, so that at no time do you have to use one single cent of your own money. If you do not care for a SET OF DISHES, you can easily earn hundreds of other useful articles, such as *Graniteware, Furniture, Silverware, Toilet Sets, Table Outfits, Lace Curtains, Lamps, Etc.*, or if you do not wish any of the above items, WE WILL PAY YOU A LARGE CASH COMMISSION for your work. We will deal with you more liberally than any other house. ☞ *We also give beautiful presents for appointing agents to work for us.* **NO LICENSE NEEDED. We Protect You. Established 1897.** REFERENCES—Merchants Nat'l Bank, Citizens Nat'l Bank, Franklin Bank, Postmaster.

The PURE FOOD CO. 850 W. Pearl Street, CINCINNATI, OHIO.

☞ We can safely recommend The Pure Food Co. as being a thoroughly reliable and responsible firm.—EDITOR.

A disappointment

The chirp of the cricket and the grasshopper's whir,
Are heard in the ordchard when autumn leaves stir;
But sad disapointment the farmers betray,
When the leaves blown aside no apples display.

MELON MARKET DEMORALIZED

The Fruit Trade Journal as early as July 18, told us the melon market was completely demoralized in one of the leading centers. The receipts had been very heavy, and these added to a surplus held over made the condition exceedingly bad. On a certain Monday 120 cars had been received, and these were followed on Tuesday by 57 cars more, and on Wednesday by 27 more. Considerable stock was received during the week that would not pay freight charges, and of course was a complete loss to the growers. The market referred to can handle per day 25 cars at prices remunerative to the growers, but when the receipts exceed that, both growers and shippers suffer.

We do not write this expecting it to be of service to the growers this season; but it seems to offer an opportunity to impress an important lesson. Farmers are intelligent. They possess almost all the educational advantages of other people. They have every means of information and communication. The telegraph and telephone are as much for them as for any one else. Had those shippers known that market could profitably handle but 25 cars of melons a day and that it was already glutted, would they have sent in that 120 car loads of melons where not one was needed? That they did not know these things was their own fault, or rather the fault of the inexcusable, unbusiness way of doing business. They have got into the rut of filling cars and shipping them. The tags are stereotyped and printed to order. All they have to do is to tack them on and let them go. It is easy, because it requires neither thought nor infomration. But it is woefully wasteful of labor, destructive of goods and obliterating of profits. Such shipments are not only reckless, but idiotic. Organization that does not regulate shipments is a farce, and failing to organize for that very purpose is criminal, because it leads to the waste of what others need and are able and willing to pay for. It is an easy matter for organization to know the condition of the markets every day; and on the very day that 120 car loads of melons went to that glutted market, there were markets just as accessible, many of them more so, to which the 120 cars could have been distributed and met a welcome reception and a remunerative price.

And the same is true every season of many products. Producers must learn how to sell, and they must cooperate together. It is much more important in selling than in buying. And here co-operation with the merchants is important. Buyers do not like glutted markets. Such markets are as destructive of their profits as of those of the producers. Merchants would gladly assist farmers in this very matter if they understood each other and worked together. Let us plead with them all to bury their prejudices, and help each other to the mutual advantage of all. It is largely a question of saving the crops or losing them; of reaping profits in business or meeting losses.

And here is an important but easy field for the National Department of Agriculture. The weather service telegraphs every day to every part of the United States what the weather will probably be during the next two days; and the information, though only a probablility, is valuable and useful. Suppose a market service would do the same thing concerning marketing of crops in their season—whether such and such markets are glutted or unsupplied, etc. But, whew! that's business. None o' that, if you please.

TOO MUCH RUINS PRICES

The burden of agricultural instruction is for increased production, and it has been so for all the years past. How farmers have been kept blinded to the fallacy of such instruction is close on to the wonderful. When the demand is greater than the supply production may be profitably increased; but when the supply is equal to or greater than the demand, production can be increased only at a loss. We are sorry the colleges, the institutes and the press cannot be awakened to this fact. The only way they can make their instruction proper or profitable is to add to it increased demand, and show the farmers how they may profitably dispose of their increased crops. This they never pretend to do.

The Fruit Trade Journal, referring to the New York slump in the fruit market, and losses sustained by the Georgia peach growers because of the low prices they were compelled to accept, says plainly it was not the quality of the fruit that produced the slump but the great quantity put upon the market. New York can handle from 40 to 50 car loads of good peaches a day; that market has been given from 75 to 100 per day. What could be expected but low prices and losses? We pray for the time when farmers will produce to meet the demand, and then ship intelligently.

BIG DEALERS WON'T STAND IT

The power of big dealers in farm products was manifested in Cleveland not long ago. The potato growers of Virginia decided to market through their own chosen agencies, and thus secure a more equitable distribution of both potatoes and profits. No sooner had a large shipment been made on this plan and the big dealers, who had been in the habit of dictating sales and prices, learned of it, than, through their own combination, they put prices flat down to ruin the new system. They could afford to lose a few thousands, or even millions, to prevent the breaking of their own monopoly.

Growers of all crops may expect to meet that tactics, and there is but one way they can overcome it, and that is to concentrate their own combined power against the combined power of the fat monopoly dealers. Local efforts are no more than partial eclipses of the sun. A little light is momentarily shut off to shine all the brighter when the obstruction passes off or is removed. A society that covers every crop every where is the only remedy. Power must meet power, and then when the monopoly losses money to crush the society, it only hastens its own destruction. How we wish farmers would grow wise.

THE LAZY ORCHARD

For two seasons the orchards in a large portion of the fruit belt have produced very little fruit. As a result those orchards have been quite neglected, and some are even threatening to cut them away entirely. That would be unwise. Such failures are not altogether uncommon. The next year may bring a fine crop accompanied by a good demand and a remunerative price. We say may, for we do not know. But the farmer must live largely on anticipation and hope, and this should prompt the renovation of those neglected orchards. We are planning to give ours a thorough overhauling. We have been pasturing them this summer to keep the annual growth down, and in this month (August) we purpose to cut all the sprouts that have grown up in them. So soon as the growing season is well over, and the leaves have begun falling, the sap no longer circulating, we shall cut out at least a third of the brush from every tree. And we shall not confine our cutting to the lower branches; we shall go all through the tree, selecting such branches as may seem to be most in the way, so that when we are done the tree will present an entirely different aspect. Soon as the brush is cleaned away, we shall break the ground thoroughly, disturbing or wounding the roots as little as possible, of course. Thus we shall let it lie until spring, when we shall give it a thorough working down and sow to clover, perhaps to a mixture of red and alsike. We may mix oats with the clover seed to keep down the natural growth of weeds. If so we may have a very fine hog and calf pasture from about the first of May to the first of June, and if we are again without fruit; till late in the fall.

During April, May and June dormant buds will put out sprouts in great abundance, no doubt. These should be rubbed off as fast as they appear, so as to keep the stems of the branches smooth and the tops of the trees open. We expect this process to make virtually new orchards out of the old lazy ones. The only trouble will be the patience and persistence to keep it up.

FOOD FOR THOUGHT

Lorenzo Dow Baker of Boston, was know as the "banana king", and was the founder of the United Fruit Company, next thing to a monopoly. Mr. Baker died recently, and his will shows that he left an estate of $20,000,000.

We do not envy anybody's success. We admire the industry and ability that wins a fortune. But these reflections grwo out of that estate. Here is a fortune of $20,000,000 made in buying and selling fruit. Where is the record of a fortune made in growing fruit? If the handlers make millions while the growers struggle for a competence, do not the handlers make more out of the fruit than the growers do; and are not the profits exacted by the handlers too great and those awarded the growers too small? If so, could not the growers by different methods of marketing, reverse these things in true equity, and leave some of the accumulations that grow into millions for the handlers, in the hands and pockets of the growers? This is a great old world to study conditions in if we but benefit by the lessons.

TWO LAMPS FREE

The Color a Beautiful, Restful Green

I want a little of your help, or some extremely pleasant effort

We are organizing Souvenir Clubs among ladies in towns all over the country and we want a lady in your town to do this for us. So we will send you **16 beautiful** souvenir spoons (besides an extra spoon as a present for you—a total of 17 spoons). Tell your girl friends and your lady friends when they call at your house to join the Souvenir Club. Each of the girls and ladies can have **one** souvenir spoon at 25c—only 25c for a souvenir spoon. **In one evening all the spoons will be done.** You may want several in your own family or for your relations. That is all—nothing more. You get both lamps for this little effort, this little introductory effort in our behalf. **The spoons are so beautiful every friend will want one.** Think of getting a souvenir spoon for 25c. Most souvenir spoons cost $1.00 or more. Yet we let you give these spoons to your friends for only 25 cents. Everybody is wild about Swastika goods and our spoons are solid marked ware with a beautiful Swastika Cross enameled on handle.

The large parlor lamp is 18 inches high, genuine Tiffany style, beautifully decorated in green and gold rosettes and complete with globe and chimney. The smaller bedroom or dresser lamp is very artistic, also magnificently colored and decorated, and very useful. Both lamps will be shipped you at once as soon as you dispose of the 16 Swastika spoons for 25 cents. You will be delighted with these two grand and useful presents, and on our club plan you can very quickly hand out the 16 spoons for 25c each. Remember we also send you an extra Swastika spoon for yourself. Just sign the coupon below and mail to us and the spoons and complete instructions will be sent you at once. We pay all postage.

FREE COUPON

C. A. CUMMINS, Pres. C. A. Cummins & Co.
207-213 Van Buren St., Dept. 1108, Chicago.

Send me at once, postage prepaid, your 16 Swastika Souvenir Spoons to dispose of on your club plan at 25 cents each. Then the two lamps will be mine. Also send extra spoon.

EATING AND SLEEPING

It is a common expression that to take food immediately before going to bed and to sleep is unwise. Such a suggestion is answered by a reminder that the instinct of animals prompts them to sleep as soon as they have eaten; and in summer an after-dinner nap, especially when that meal is taken at midday, is a luxury indulged in by many. Neither darkness nor season of the year alter the conditions. If the ordinary hour of the evening meal is six or seven o'clock and the morning meal at seven or eight o'clock an interval of twelve hours or more elapses without food, and for the person whose nutrition is at fault this is altogether too long a period for fasting. That such an interval without food is permitted explains many a restless night, and much of the head and back ache, and the languid, half-rested condition on rising, which is accompanied by no appetite for breakfast. This meal itself often dissipates these sensations. It is, therefore, desirable if not essential, when nutriment is to be crowded, that the last thing before going to bed should be the taking of food. Sleeplessness is often caused by starvation, and a tumbler of milk, if drank in the middle of the night, will often put people to sleep when hypnotics would fail of their purpose. Food before rising is an equally important expedient. It supplies strength for bathing and dressing, laborious and wearisome tasks for the unfed, and is a better morning "pick-me-up" than any hackneyed "tonic." — Farmers Voice.

ASCENDING IDEALS

I have long believed that the next century is to see as great an advance in the artistic and spirtual as the last one beheld in science and invention. If not, the other advancement will not bring the results of which it is worthy. It furnished the root and trunk of the tree of progress, but not the flower and fruit. It is the foundation and framework of the temple of man, but not the finishing touches. These are yet to come.

War is outworn and all its kindred activities. The ages have dreamed of brotherhood, and now the dream is coming true. The mere brute struggle for existence is losing its intensity. People will soon learn how to adjust their economic environment, to make machinery do much of the difficult labor, to distribute the fruits of toil with justice and solve the other primary problems of living. After that, what? Then in the creation of beauty, in the study of higher forces, in the real joy of life apart from mere sense excitement, men and women will seek happiness. They will then become acquainted with their own souls. Being beautiful and joyous within, they will seek a beautiful and joyous outward expression.

That will be the golden summer of art, and of all arts that of painting pictures upon the landscape and of writing poems in lawn and garden will be most universal.

The race climbs a ladder of ideals. As soon as the feet are placed firmly on one round another appears. Industrial liberty thus succeeds political liberty, while the finer forms of soil culture come as the flower and fruit upon the stem of agriculture. When such civilization has reached its highest point it has found its noblest expression in poetry, architecture, art and landscape gardening. America has now reached this plane, and her accomplishments in these fields should be as much nobler as her ground work of science, education, physical prospertiy and democratic self reliance have been broader than any nation preceding.

JAPAN HOP

The Japan hop is a growing favorite. It is one of the most rapid growers among the climbers, and it is claimed that the vines have been known to make a growth of from thirty to forty feet in three or four weeks. It is one of the best to grow on lattices, to cover porches, or to make screens for windows. The seed may be planted late, perhaps as late as the middle of July, and yet make a good growth. The foliage is very luxuriant if in good soil with a suitable amount of moisture. Well rotted manure and decayed chip dirt well worked in, make a very good seed bed for this rapid growing vine.

HOUSEHOLD NOTES

A little sugar or a quarter of a teaspoonful of molasses adder to stove polish will make the polish appear much blacker, prevents dust from arising and gives a better luster.

Unpainted wood will remain whiter if scrubbed with cold water and soap; hot water and strong alkali makes the wood yellow.

Sweet apples will cook better and have a more delicious flavor if a little lemon juice or pure vingear is added.

Olive oil will remove tar stains from dress goods. Wash afterwards with white soap and tepid water.

If porcelain vessels are placed directly over the gas flame, they will clean much better by rubbing lard over the outside of the pan before putting it over the flame.

If the sink pipe is clogged, remove the strainer and insert the hose into it and turn the water on full force. In almost all cases it cleans the pipe.

Fashion Book Free!

I want to send you my handsome new book showing over 400 of the latest styles with illustrated lessons on cutting and dressmaking. I will agree to sell you all the patterns you want for 5 cents each. They are the same patterns you have always paid 10c and 15c for at the stores, made by the same people, and correct in every detail.

HOW I DO IT.

I publish **The Home Instructor,** an illustrated woman's magazine and I want your name on my subscription list. **The Home Instructor** is bright, entertaining, clean and instructive—just the sort of a paper you should have in your home. It has departments for every feature of home life, and prints the choicest fiction every month. Every issue has several pages devoted to the latest fashions, fully illustrated.

My Special Offer.

Send me 25 cents and I will send you **The Home Instructor** for **two years** and will send my big fashion book to you free. I will also agree to sell you any pattern you want thereafter for 5 cts. I can sell them for 5 cents because I buy them by the thousand and don't make any profit. I don't want the profit, I want your subscription to **The Home Instructor.** You will save many times the cost of my offer in a year. Write to-day. **A. OTIS ARNOLD,** Dept. U **Quincy, Ill.**

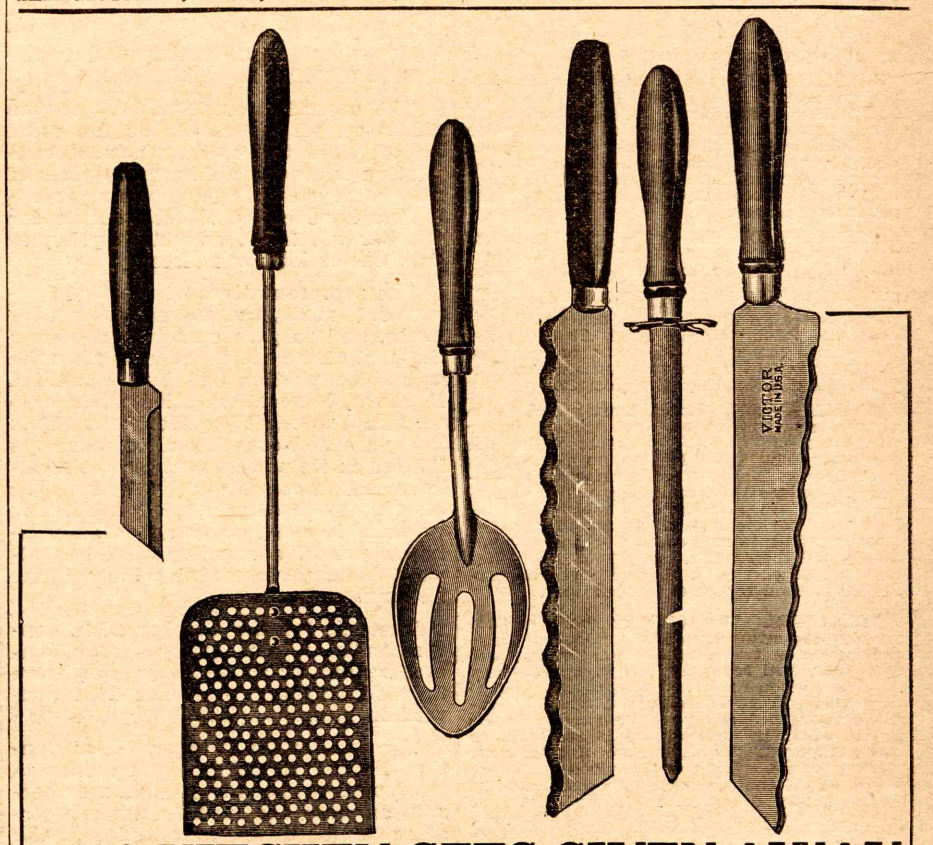
$200 TO $500 EACH MONTH selling THE MINUTE BUTTER CHURN. Will make the highest grade sweet creamery butter from cream or milk fresh from the cow in less than 5 minutes. A mechanical wonder. USE IT YOURSELF AND EVERY OWNER OF A COW WILL BUY ONE FROM YOU. Used and recommended by the most noted dairy experts. FREE churn to workers. Address.

FREE MINUTE CHURN CO. 145 Cincinnati, Ohio

Roosevelt Family POST CARDS

Every patriotic citizen should have a set. They are not the cheap picture post cards so often sold through the mails but are the very best ever offered at a low price. Send 10 cents for a year's subscription to American Stories, the popular short story magazine, and we will send you a set of these cards by return mail, postpaid. **AMERICAN STORIES, 214 A. K., GRAND RAPIDS, MICH.**

Money Making Secrets A great collection of valuable recipes some of which have sold for $50 each. 64 large double column pages of money makers FREE for the names of two agents and 10c for 3 months subscription to our New Ideas Magazine. M 14, BOX 3693, PHILA., PA.



1000 KITCHEN SETS GIVEN AWAY

There are only 1000 of them—1000 happy women will have their kitchen work lightened and made easier in some degree by using one of our 6 piece UP-TO-DATE KITCHEN SETS. We are going to give these thousand sets away to workers who will help us boost our subscription list between now and September 15, 1908.

OUR OFFER

This is an outfit every piece of which will be used many times daily in the kitchen.

Send us two subscribers at 50c each (new or renewal) and we will send prepaid one of these sets. Or send 10 three months trial subscriptions at 10c each.

LADIES, GET THIS SET FOR YOURSELVES.

MEN, YOUR WIVES WILL APPRECIATE A SET.

When sending your order for subscriptions give Express office as well as Post office. We deliver free, so the 6 piece Up-to-Date Kitchen set costs you nothing but a little work. You know that UP-TO-DATE FARMING should be in every farm home. This is an opportunity for you to be rewarded for doing a good work—extending UP-TO-DATE'S circulation.

Remember: Only 1 set to a family; your letter must be mailed before September 15th; the set is given for two yearly subscriptions at 50 cents each, or 10 three months subscriptions at 10 cents each.

UP-TO-DATE FARMING, Dept. A, INDIANAPOLIS, IND.

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second,* because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

In 1907 there were two conventions of the A. S. of E.

The first convention changed their by-laws and made the time for the annual meeting in December.

The second convention held to the old time, viz: October as the most logical time to hold the annual convention to agree on minimum prices of all the crops of the year. Its representatives have called its convention for October 27, 1908, at Indianapolis, to continue as long as necessary.

The representatives of the first convention, realizing the mistake they made, and to gain an advantage over the part of the society representing the second convention and by UP-TO-DATE FARMING, have now called their convention to meet October 6th. This being a called convention, of course, is limited in its powers and cannot legally amend its constitution or by-laws, or elect national officers, etc. We doubt whether it can legally agree on minimum prices, a function that has always been performed by the **regular** national convention.

The call for the October 27th. convention is for a mass convention, embracing any or all members who were in good standing when the 1907 convention met.

The call for the October 6th convention limits its representation only to that small part of the original membership as were deceived by the conspirators and their mouth-piece, the Equity Farm Journal. Read the article in this issue, "Our Society."

UP-TO-DATE FARMING is now and always has been for the best interests of the society. Therefore, it is opposed to **two** conventions this year which may continue the factions, and consequently the troubles of the society, another year with the result of further demoralization and the delay of the benefits that only the A. S. of E. can give.

It is further oposed to **any** convention that does not grant representation to those loyal members who stood aloof the past year because they could not conscientiously suport either faction. In view of recent developments these were the best friends of the society, and if none of the members had suported the Drayton, Bowne, Nelson, Pierson, Speer, Jones, Emmerton, et. al., faction the campaign of abuse, slander, libel anl misrepresentation could not have been conducted; several of the people would not now stand before the world as convicted criminals and others would not be awaiting their trials. All the money these members paid in has gone, not to build up the society, but to injure the man and the paper who gave to the farmers of the country the only plan they ever had to gain their industrial freedom and independence. And for no other reason than that they were true to their trust and would not join with the people who had betrayed the trusting members of the society and who sold them out in the hope of furthering their selfish ends.

In the above arraignment we did not include President Barnett and Secretary Pauley. They now stand "out of accord" with a majority of the active members of their board, as Mr. Everitt stood in 1907. This much is to their credit.

We have done all we could do to bring the factions together in one convention, but without evidence of success to this time. We now call upon the members themselves. As UP-TO-DATE FARMING does not now go to all the old members, we will trust to those who have stood by us to tell those who may have gone with the revolutionary faction, or who have stood aloof until the troubles were adjusted.

We acted on the recommendation of various State unions to bring about harmony, and in every conceivable other way, all without results. The conspirators of 1907 are still in control, but their control will be short if the members repudiate them. The way to repudiate them is to demand one convention in 1908, and that a mass convention.

This will re-establish the society and preserve to it the fruits of the first five years of hard toil and education, while two conventions, we fear, will mean its complete disruption.

Will you work for the mass convention at Indianapolis, Oct. 27, 1908?

Minnesota Members, Attention

Mr. W. O. Reiter, ex-Vice-President of Minnesota State Union, wants to hear from those who want a speaker for a rally, or to organize. Address him at Plainview, Minn.

In recent issues was an offer to send Dumper Post Cards free, and many sets have been sent out to our subscribers. The result is that many new subscribers have been received and many remittances of 25 cents as a reward to the workers. If you received some Dumper cards and have not started them on their mission, you should do so. Those who write a few appropriate lines on the first page influence the most subscribers.

ACKNOWLEDGEMENT

At the request of Organizer W. E. Singleton, of Laural, Mont., we acknowledge the society's obligation to Mr. E. W. Peck, J. P., for the free use of his hall for a meeting, August 8th, in Park City, Montana. Thanks.

MEN WANTED FOR FAIRS

I can utilize the services of a few good men to represent us at their local or State fairs. No previous experience necessary. Pleasant work. Liberal inducements.

Write me the date of the fairs you can attend and I'll send you the most attractive proposition ever made by a publisher.

GARRETT WALL,
UP-TO-DATE FARMING,
Indianapolis, Ind.

MEETINGS AND CONVENTIONS

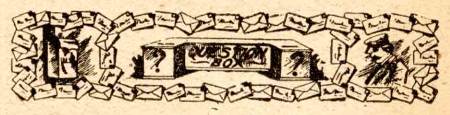
OCTOBER 27, 1908—Sixth Annual Convention of the American Society of Equity (F. S. of E. branch as representing the second convention), at Indianapolis, Ind. I C. Rous, Sec., Indianapolis, Ind.

SEPTEMBER 1, 2 and 3, 1908—Annual Convention of the Pennsylvania Retail Merchants Association at New Castle, Pa. Mr. Everitt has been invited to address this convention on co-operation of merchants and farmers, and he expects to do so. A. M. Howe, Sec., Room 209, Lincoln Bldg., Erie, Pennsylvania.

OCTOBER 27, 28 and 29, 1908—The Seventh Annual Convention of the National Nut Growers' Association at Chattanooga, Tenn. A feature of the convention will be a large and varied collection of nuts representing this season's crop. J F. Wilson, Sec., Chattanooga, Tenn.

DECEMBER 2 TO 10, 1908—The Third Annual Dairy Show will be held at Chicago, Ill., in the Colliseum. For further particulars address National Dairy Show Association, 154 Washington St., Room 307, Chicago, Ill.

W. E. SINGLETON, organizer, Lourel, Mont., will hold meetings in and about Joliet, Mont., as follows: Silesia School House, Aug. 15; Hobbs School House, Aug. 19; Carbonado School House, Aug. 22. All meetings at 7.30 p. m.



This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

QUESTION. *I am much pleased to read your article in August 1st number, "Columbus AO.Q Wants Farm Produce," though I consider it my duty as the consumers representative, to comment on your prices:* (1) *Do you believe potatoes are actually worth over 60c cents for food?* (2) *Is an egg worth more than 1½ cents each?* (3) *Cannot they be produced so as to afford them to consumers at this price?* (4) *What is a pound of butter worth to the consumer?* (5) *Is any article of food worth more at one time of the year than at another; will it produce any more muscle, fat or bone one time of the year than at another? Your price list says: Potatoes, 75c@80c for August. At the present time potatoes are selling here for $1.00. But eggs you list at 18c and they are selling here for this price. Turkeys at 12c I consider fair and should reach the consumer at about 15c. I am inclined to think that 50c a bushel for apples is a fair price, while the price to the consumer should not go above $1.00. I have known my father in Pennsylvania to sell hand picked apples at $1.00 per bbl., while the same year my sister in Montana paid $1.00 a peck.—Geo. B. Dickert, 26 East Woodruff Ave., Columbus, O.*

ANSWER. (1) This is a difficult question to answer. If the question referred to food for cattle or hogs, then we would take into account the value of the finished pork, or beef, or milk, or butter, a bushel of potatoes would make. The only way we can reply to the question, as it relates to food for humans is to say, yes or no. For instance, as food for a man whose day's labor brings him hundreds of dolars worth of profit, potatoes at $5.00 a bushel would be cheap enough food; for a laborer who earns $3.00 or $5.00 a day, potatoes at $1.00 a bushel should not be a hardship, while for the man who cannot command more than a dollar a day, 60 cents would probably be considered high. So I fear we cannot expect to make the price on farm produce based on what the commodity *is worth for human food,* but make it on the basis of cost of production with a reasonable profit added. This will vary, as the production from a given area of ground or from a given amount of effort varies. It is then up to the consumers to select the food that they respectively can sell their labor, knowledge and skill for. (2) Answered in No. 1. (3) If producers could get 15 or 16 cents a dozen for all the eggs produced, we believe the business would be profitable and 2 or 3 cents a dozen should put them to the consumers. But the trouble is the producers have been required to take less than 15 cents when the egg harvest was on, consequently when production is low, it is their privilege to put their price up with the hope that a fair average will result for the year's operation. Great fluctuations in the price of eggs will continue until the producers store the temporary surplus for their own account and supply the demand as it comes. In this way, we estimate that 15 cents would be a fair summer price, and possibly 20 cents for winter, which must include the storage charges, something for interest on money, and for lossage. We have not, however, investigated the expense and loss in storing eggs. (4) This varies very much. We estimate good butter, carefully and cleanly made, should bring the producer 20 cents in summer and more in winter, in the Central West States. Farther East, where high priced feed must be bought, the price should be higher. (5) We must say again that prices must be based on cost of production, storage shrinkage, etc. The price of the finished product, in this case, the labor that the human being performs, should be regulated by the cost of living and all other factors that enter into the case. In the first place we claim that farmers and farming are fundamental. They should protect themselves first in the price of their products and all others, for instance laborers, should have wages that will allow them to enjoy some of the comforts, all the necessaries and the reasonable luxuries of life.

GOOD WAGES

We always have room on our staff for a few good hustlers. If you can devote any or all of your time to representing us in your vicinity, we will make it worth your while to do so. We pay both salary and commission. Write for particulars.

Circulation Manager
UP-TO-DATE FARMING
Indianapolis, Ind.

MICHIGAN LADIES SOCIETY OF EQUITY

Officers—President, Mrs. James Howey, E. Jordon; vice-president, Mrs. C. A. Masten, Sherwood; secretary, Miss Julia Ball, Hamburg; treasurer, Mrs. Matthew Hamilton, Williamsburg.

WHAT WE ARE DOING

Goldenrod Local met with Sister Elsa Matthews, June 24th, at 3 p. m. Meeting opened with singing, and prayer by the president. Roll call. All officers present, six members and two visitors—Mrs. Matthews and Mrs. A. C. Gregg of Howard City, who noted the proceedings of our meeting and were loud in their praise. Meeting proceded in usual form; minutes read and approved. The report of the committee sent to Charlevoix to secure orders for eggs, poultry, fruit and other produce from the farm, was satisfactory. Various other topics were discussed for the good of the order. Motion carried to continue to buy eggs for two weeks at 16c per dozen. Equity ladies, bring in your eggs and receive the cash. That is what makes every one so pleasant—profitable prices and square dealing. Next the questions were read by the president and answered with interest. Reading by Sister Ross. Testament reading omitted on account of time; let's get together a little earlier and study our lesson and so improve our minds so as to fit ourselves for the task which each member of the M. L. S. of E. are in duty bound to perform. Sister Hackett was reported sick. We all miss her smiling face and sisterly help and may she be permitted to join in our next meeting. After singing and prayer we adjourned to meet with Sister Murray July 8th. Aunt Minerva.

QUESTION BOX

The M. L. S. of E. will try to answer the folowing questions satisfactorily to ourselves if not to the entire population of the country. The question, "Government Ownership," is especially assigned to husbands and sons for discussion:

1. What would be the advantages and what the disadvantages, if railroads, telegraphs, and telephones were owned by the government?
2. Has the government a right to regulate the railroads?
3. What is meant by "the initiative and referendum," and what are the arguments for and against?
4. Should the constitution of the United States be amended so that the president, senators, cabinet members, and judge would be elected by the people?
5. Would it be well if the people had the power to recall, at any time, unsatisfactory officers?
6. Should congress pass a law forbidding the employment of children? If so, under what age?
7. Should everyone who wishes, be permitted to come into the United States? If not, who should be excluded?
8. Should congress pass a law declaring eight hours a working day?
9. Should employers be obliged to pay damages to those injured in their service?
10. What should government do for the unemployed?

POST CARD COLLECTING

Not only is the collecting of Souvenir Post Cards an interesting pastime, but it is also highly instructive and useful. It has been proven that illustrations educate people quicker than in any other way. Your friends may talk about the Statue of Liberty, but only through illustrations can its real beauty be brought before you, unless you have the good fortune to see it yourself.

It is in the power of every reader of UP-TO-DATE FARMING to have a large and instructive collection of Souvenir Post Cards sent him from all parts of the United States. If you were sent a list of collectors in Maine, California, Florida, Michigan and from nearly every State in the Union, would you exchange Post Cards with a few of them?

You say possibly that you haven't the post cards to exchange with, that Souvenir Post Cards are not sold anywhere near you. If a set of 20 cards were sent you, would you then exchange them? We think you would, and if you will refer to our notice on page 14, you will learn how it is possible to get a large collection of Souvenir Post Cards from all over the U. S. and a supply to send from, in return.

ALL BUT THEM

Says Mr. Packer, as he makes
A famine rate on stews and steaks,
"There's doubtless truth in what you say,
That evil trusts exist today,
But kindly not before you go,
There is no Beef trust—mercy, no!"

Says Mr. Rogers, as he signs
Death warrants for competing mines,
"I heartily agree with you
That unfair combinations do
A deal of nasty mischief—but
There is no Copper Trust—tut-tut!"

With fresh foreclosures in his hands
The saintly Rockefeller stands,
"These mergers, when unchecked," he sighs,
"I have no doubt demoralize;
But Sin will Retribution bring—
An Oil Trust? There's no such thing!"

While prices rise on anthracite,
Says Mr. Baer, "It isn't right
To make the toiling public bleed
For the commodities they need.
Cases like these the laws should fit—
A Coal Trust? Never heard of it!"

Says Mr. Satan, as he draws
His fiery trident through his claws,
"The world, no doubt, to Sin is quick;
But wherefore blame it to Old Nick,
When circumstances plainly show
There is no Devil—mercy, no!"

WERE THEY THE BEST?

The gentleman comes out and sings
And tells the world that he
Would give a farm and several things
To sit on mother's knee.
He doesn't think about the day
When with her slipper trim
She held him down the other way
And played a tune on him.

We think about the happy hours
When round we frisked like colts,
When life was sunshine sweet and flowers,
Remembering how we used to swim
Or go on horseback rides,
Forgetting how they used to trim
Our jackets and our hides.

We dream about our golden morn,
When care had spreading wings,
Quite overlooking every thorn,
Stone bruises and such things.
We tell our children of the pies
That mother used to make,
But not a word about the sighs
Or of the stomach ache.

Yes, looking backward to the past
We only see the gold,
They seem one playtime sweet and vast,
Those palmy days of old.
No tears of sorrow dimmed our eyes,
No discord marred our joys,
No clouds obscured the pleasant skies
When you and I were boys.
But we forgot the up and down
The times when we were done up brown.

NONE FOR ME

Ah, grim is the fate of the man who must wait
And gaze at the passing parade.
For him there's no call when the hours have grown small
To list to the band's serenade.
But he's there with the boys, for it's one of his joys;
Yet he sighs 'mid the general glee,
"I hurrah all I can for some fortunate man—
But there's no one hurrahing for me!"

Some men must be meek, and let other men speak;
Some toil that others may spend.
Were there none to stand near with encouraging cheer,
The orator's duties would end.
So, with faith that is strong he goes plodding along
And says, "'Tis my duty you see,
To hurarh all I can for some luckier man,
Though there's no one hurrahing for me!"

WHAT DID HE MEAN?

He vainly tries
To lift his chair.
The floor he eyes
With vagrant stare.
Her maiden heart goes pit-a-pat,
She wonders what he means by that.

He eyes her books;
The carpets grain,
He says it looks
A bit like rain.
Expectant maid! She cannot chat
She wonders what he means by that.

He's had to roam
For years, says he.
He thinks a home
Must pleasant be.
She keeps her eyes upon the mat,
And wonders what he means by that.

His idle gas
Doth onward flow.
It comes to pass
'Tis time to go.
Poor little maid! the game falls flat,
He didn't mean a thing by that.
—Courier Journal.

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues will not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say; "I saw it advertised in Up-to-Date Farming."

Agents Wanted

Agents Automatic Curry Comb, postpaid 50c. Over $5.00 daily or sample returnable. Particulars free. Clean Comb Co. [B] Racine, Wis.

Agents make money selling Ferry's Handy Hame Fasteners. Every farmer and teamster needs from one to a dozen pair. Sample 25c. Dozen $1.10. Cooner & Fortune Co., Indianapolis, Ind.

Agents make $103.50 per month selling wonderful self-sharpening patented scissors and cutlery. V. C. Giebner sold 22 pairs in 3 hours, made $13; you can do it. We show you how. Free outfit. Thomas Mfg. Co., 53 Home Bldg., Dayton, Ohio.

Sales Manager for exclusive district, newly patented staple necessity; permanent business, big profits, experience not essential. $250 or more required. President, 426 Ohio Bldg., Toledo, Ohio.

Farm Lands

Farm Catalog free. Fidelity Reality Syndicate, Baltimore, Md.

Farms for sale to Catholics on easy terms; half-mile from church, two miles from railroad. Write T. A. McKittrick, owner, McCracken, Kansas.

Farms fairly improved, well laying, ten to twenty dollars per acre; timbered lands, choice for range, corn, clover, fruit, from four dollars up per acre. Our productive soils, excellent markets, good water, mild climate, healthy location, no negro population, attract wide-awake buyers. Investigate now. For price lists and booklet, write A. M. Knobel, Doniphan, Missouri.

Farms Sold Quickly—Write us if you want to buy or sell. Ohio Farmers' Real Estate Exchange, Cleveland, Ohio.

If you want to buy or sell property, any kind, anywhere, write the Northwestern Business Agency, Minneapolis, Minn.

Sacramento Valley, California, is the greatest agricultural valley in America. It is the "Land of Opportunity" for the farmer. A family may be independent on twenty acres. Write Sacramento Valley Development Association, Sacramento, California. We have nothing to sell.

Snaps in land in Central Minnesota. Send for list. A. MURRAY, Wadena, Minnesota.

Ferrets

Ferrets for sale. Stamp for prices. Calvin Jewell, Spencer, Ohio.

For Sale trained Ferrets. Guaranteed workers. H. R. Miller, Lowell, Ohio

Live Stock and Dairy Supplies

For Sale Angus cattle of either sex. Wm. Noonan, Hartford City, Ind.

Free Price List. Shorthorns, Southdowns, fox hounds, setters, pointers. I buy and sell foxes. J. D. Stodghill, Shelbyville, Ky.

Rambouillet Sheep; best blood, all ages; rams and ewes. Address J. HARVEY, FORKVILLE, MISS.

Registered Poland Chinas, choice breeding, fine individuals, large variety to select from. Satisfaction or no sale. Write me your wants. S. H. Taylor, Mottville, Mich.

Tamworths Immense size, early maturers, economical feeders and most prolific of all hogs. Booklet free. W.W. Morton, Russellville, Ky.

Machinery

Why not buy a gasoline engine to do your hard work? It is the cheapest help you can hire. An air-cooled engine is the best and cheapest. Built in four sizes, 1½, 2½, 5 and 10 H. P. Write for prices The Air-Cooled Motor Company, Lansing, Mich.

Patent Attorneys

Advice and book relative Patents sent on request Beeler & Robb, Patent Lawyers, 60-62 Bailie Bldg., Washington, D. C.

Patents M. A. Schmidt, registered patent attorney, 715 11th St., N. W. Washington, D. C. Send for Inventor's Manual. Free.

Poultry and Supplies

Chicks: We ship thousands of day-olds each season. Send for booklet and testimonials. Freeport Hatchery, Box 40, Freeport Michigan.

Eggs 75c per 13, $1.50 per 30, Rhode Island Reds, Buff Orpingtons, Barred and Buff Rocks, Buff and Brown Leghorns. Catalog free. Link Roberts, Fultonham, Ohio.

Baby Chicks 25,000 World's best Rhode Island Red baby chicks 15c each, $15 per 100. We own Chicago King, the most valuable male in the world. Eggs, breeders, exhibition birds. 10,000 Barred Rock, Brown Leghorn and Black Minorca chicks 10c each, $10 per 100. Buff Orpingtons 25c. Chicks safely delivered 1500 miles. Some great big bargains now in higher priced eggs, chicks, breeders. EDWIN R. CORNISH, Edwardsburg, Michigan.

Introductory prices on eggs and breeding stock, either comb Rhode Island Reds. Sure method of selecting the laying and best layers. 50 cents. Money back if not convinced. Virginia Poultry Farm, McGaheysville, Va.

Laying Hens Every hen is of a laying strain. All tested. All kinds of Rocks, Wyandottes, Cochins, Rhode Islands, Leghorns, Turkeys, Geese, Houdons. These birds will bring you money. 50 cents gets Burket's egg formula, roup cure—yours for life. Egg formula will make every one of your hens lay in any season. White Rock Poultry Yards, Findlay, Ohio.

Morning Glory Farm. The home of pure bred Rhode Island Reds. Stock and eggs for sale. Morning Glory Farm, R. 2, Sellersburg, Ind.

Rhode Island Reds, best breed for farmers. Rose Comb—trap nests. Eggs 75c per 15, $1.40 per 30 for short time. Irvington Poultry Yards, Irvington, Ind.

OUR SOCIETY

Some Facts That Every Member Needs Before Entering on the Work of the 1908 Convention

No. 1.

The time for the Sixth Annual Convention of the American Society of Equity approaches—next October.

As on the next convention depends the future of the society, and much of weal or woe for American agriculture, it behooves every member of the society, yes, every farmer in the country, to understand the present situation and what is necessary to return the society to the position of power and influence it formerly occupied.

This is our reason for beginning a series of articles that will continue until the convention on October 27th. We trust they will serve to throw light on what is still a dark subject with many, and result in a harmonious convention which is necessary if the society is ever to become the great power for good that was hoped for by its founder and all its members.

In the beginning of this series we cannot do better than to reprint from "An Address" published in November 15th, 1907, number of UP-TO-DATE FARMING, the first number after the convention. We recommend those who have followed the society the past year observe, as they read the following, how events have corroborated the charges made in this "Address".

AN ADDRESS

To State, County and Local Unions of the American Society of Equity of N. A., and ..All Members Thereof:

Without regard to anybody's personal interests, personal feelings, or personal preferences, we are compelled to declare that the late convention which assembled in Indianapolis, October 22, and pretended to be an annual meeting of the American Society of Equity of North America, was revolutionary in its purpose, unconstitutional in its makeup, and dominated by influences entirely foreign to the principles of the said American Society of Equity of North America.

For months, almost a year, before the assembling of the convention, the secretary and a horde of assistants that he had around him in the pay of the Sociey, and who were in no sense identified with farming or its interests, had been circulating false and slanderous literature to create a sentiment against UP-TO-DATE FARMING, the official paper, and those who stood as unyielding suporters of Equity in its original purpose to help the farmers to secure equitable prices for their crops.

Among other things, those who sought to divert the society from its original purpose, began to promote what they called Equity Exchanges, ostensibly to handle farm products, but on plans the same as those of the speculators at prices made by the speculator, and not by the society, and by the old commission houses, and on a basis not nearly so secure. These so-called exchanges soon proved inadequate to the aims and purposes of their promoters, if not absolute failures, and an alleged million dollar stock company was incorporated in New Jersey, where all the most dangerous combines, including the Standard Oil Company, had their origin.

For the promotion of the million dollar corporation, the name of the society was used, and the time of its employes, including the secretary himself, and the society's money, were diverted to that purpose, against the protest of the president and the official paper, much of the president's authority having been, by the board of directors, unconstitutionally transferred to the secretary.

To make sure their purpose, which was the overthrow of all who opposed or even refused to endorse their million dollar corporation, they worked up a strong representation of their adherents from the nearby States of Illinois and Indiana, both of which are weak in membership compared with that of many outlying States. In proof we submit the folowing table of the ratio of representation as shown by the regular report of the committee on credentials:

States	*Ratio of Representation*
Illinois	1 to every 80 members
Indiana	1 to every 51 members
Kansas	1 to every 600 members
Kentucky	1 to every 601 members
Michigan	1 to every 300 members
Minnesota	1 to every 418 members
Missouri	1 to every 139 members
Montana	1 to every 360 members
Nevada	1 to every 91 members
New York	1 to every 93 members
North Dakota	1 to every 427 members
Oklahoma	1 to every ... members
Ohio	1 to every 766 members
South Dakota	1 to every 380 members
Tennessee	1 to every 298 members
Virginia	1 to every 581 members
Wisconsin	1 to every 267 members
Washington	1 to every ... members

Subsequent reports added other delegates to Illinois, which brought its ratio or representation down to a representative for every 64 members, and enough additional to Indiana to give that State a representative for every 41 members.

From the above it will be seen that 64 members in Illinois and 41 in Indiana had the power or voting strength in the convention that 600 did in Kansas, 601 in Kentucky, 300 in Michigan, 418 in Minnesota, 427 in North Dakota, 581 in Virginia, and so on, even to 766 in Ohio.

It was apparent very early in the convention that these States, thus dominated by the exchange corporation influence, proposed to take advantage of their great preponderance of representation. Throwing aside the courtesies usually shown in such conventions to members from a distance, they established themselves next to and immediately in front of the chair, crowding the distant States to the rear, and thenceforth absolutely dominated the convention, materially changed the constitution, endorsed the so-called exchange idea with its million dollar corporation, forfeited, so far as they are concerned, the legal incorporation of the society, assumed to disannull a contract made five years before for the publication of an official paper, that had tacitly been endorsed by every annual meeting since then, repudiated UP-TO-DATE FARMING as the official paper, and allied themselves to influences that are entirely foreign to the American Society of Equity of North America.

In the midst of such arbitrary, revolutionary, and high-handed proceedings, what could the sincere anl loyal members of the society do? They did the only thing that was left open to them to save the society; those who had not returned to their homes in disgust retired from the convention that had so plainly betrayed the society, and, exercising a power we believed was vested in us by our constituents, organized the annual meeting of the American Society of Equity of North America, and transacted the business recorded in the following proceedings of said meeting:

The proceedings of the convention we omit now.

The address closed with the following notice and appeal:

The action we have taken is a precautionary one, to save the society from mischievous counsels, wrong purposes and evil influences. Should these continue to dominate the organization, we stand ready to act, and act promptly.

We appeal to our constituents, and to the membership everywhere, did we do right, and will you sustain us?

With heartfelt devotion to the cause of Equity, and to the society that has taught to the world and compelled the recognition of the doctrine of equitable prices for farm produce, and controlled marketing to secure them, we are

Such were the claims of the second convention, which retained UP-TO-DATE FARMING as its official paper, and have been the contentions of this paper for almost a year. We have proceeded with unfaltering faith in the future of the society and in the belief that right, Justice and Equity would triumph over all the powers that have tried to de-

BITTER ROOT VALLEY LAND---

The MARCUS DALY ESTATE offers for sale 8,000 acres of HIGHLY CULTIVATED farm land on the FAMOUS Bitter Root Stock Farm, suitable for FRUIT GROWING, DAIRYING and DIVERSIFIED FARMING. Tell them you saw the "ad" in Up-to-Date Farming

stroy the society or divert it from its true plan. With a firm determination to guard the members' interests, we have worked and waited, and, we believe, our work and patience will be rewarded in seeing the society reorganized in October, and soon re-established in its former or greater strength and influence.

In corroboration of the charges made in "An Address," as reprinted above; of the statements and claims we have made in this paper regarding a conspiracy; that the delegates to the 1907 convention were deceived; the unscrupulousness of the enemies of Mr. Everitt and UP-TO-DATE FARMING and the desperate character of the people who dominated the first 1907 convention and who have dictated the control of the society since, we offer the sworn confession of one of the arch conspirators as follows:

NOTE—This confession is so lengthy that it will need to run in two or three issues, after which we will publish much more evidence. This confession is published for good motives and for justifiable ends.—Ed.

A CONFESSION

By C. R. Walrod

I desire to offer the following as a true and correct statement of facts, since my connections with the American Society of Equity:

By way of introduction I will say that I am offering this sworn statement of my own free will. I am offering it to Mr. Everitt with a request that it will be published in UP-TO-DATE FARMING, so that it may get before the membership.

My reasons for wanting this to meet with the eyes of the members, is that something must be done at once toward uniting the existing factions. The organization has been so split apart since the last convention that it is useless for us to hope to obtain any great results until we get together and drop all differences. Let the next convention get together and do business in the right way. The desire on the part of Mr. Everitt's enemies to "knock him out" has thrown good judgment and "common horse sense" to the winds. Those who were most instrumental in bringing about the changed conditions also realize that something must be done at once.

What it Means to Me

Do you understand what this means? What it means for me to take up my pen in defense of the man I myself have been fighting so hard? Do you realize what this change of front means?

It means that I, for one, am sick of this fight; sick of the conspiracy and stragetic moves that have been made at all times to ward off the attempts Mr. Everitt has made since the last convention to vindicate himself in the eyes of the membership.

Who is Responsible?

Digging back into the past, let us see how all this rot and stench was brought about; why all these slanderous tales were put into circulation, and by whom:

I commenced my employment with the society the latter part of January, 1907. I was employed by Mr. Everitt to run the Equity Press Bureau, and to assist in other matters both in the interest of the society and of UP-TO-DATE FARMING. I will say right here, that on account of my duties being divided between the two, my salary was likewise divided, one-half being paid by Mr. Everitt and one-half by the society.

In several instances the clerical work of the society was so closely associated with UP-TO-DATE FARMING in some of its departments, that it was a matter of economy to both, to share in the payment of some of the employes. For instance, those who spent three-fourths of their time on work for the paper and one-fourth in the interest of the society, were paid accordingly. Some were one-half and one-half, others one-third and two-thirds. It was a good plan, as was shown afterward when the two offices were separated, and it became necessary to put employes to work and pay them the full amount instead of a fractional part as before.

Tubbs Had a Motive

Mr. Tubbs used to say that Everitt and UP-TO-DATE were getting the best of the deal. He had a right to kick if he wasn't satisfied, but as long as he agreed upon the divisions in the pay roll, I can't see where he had any kick coming. At any time he didn't like the method of divisions Mr. Everitt would have taken the matter up. But Tubbs had a motive for his later complaint.

Tubbs industriously circulated the report that Mr. Everitt had charge of the society office work and that he was responsible for delays and mistakes. I want to say that this is false. The trouble was that Tubbs would not follow out the systems Mr. Everitt had prepared three consecutive weeks, and as a result chaos often reigned in the office. The bulk of the complaints during the first half of 1907 can be traced down to this cause, though in every instance the parties were always made to believe that the fault lay with Everitt and UP-TO-DATE FARMING.

Speer Had a Motive, Also

Mr. Speer ,as Director of Organization, was an absolute failure. I do not know of any well defined plan he ever mapped out and put into execution that brought in any results. From the first time I made his acquaintance his chief activity was to grumble over this or that that he was ever ready to blame Everitt for. And Speer had a motive for not liking Mr. Everitt.

Failed to Oust Speer

Mr. Everitt realized that something must be done in the organization department or else the organizers we already had would be dropping the work. Mr Everitt called the Board to meet in March (1907) to "oust" Speer, and again in July, but owing to the "make-up" of the Board, he was unsuccessful. Mr. Speer's continued fancied grievances toward Mr. Everitt kept him from doing anything even though he had been capable. It is unjust for anyone to presume for a moment that Mr. Everitt was to blame for lack of results.

Mr. Everitt has printed a good deal in his paper since the last national convention about "Conspiracy and Rebellion." He has tried his best to show you that it was a fixed up plot to "oust" him at the convention.

Mr. Everitt Must Be Dumped

I won't say that there were "oaths" of alegiance sworn to down Mr. Everitt, but it was an understood fact amongst us—Tubbs, Speer, Drayton, Sharp, Scott and still others that **Mr. Everitt must be dumped** at all hazards, **because** he would not join in with the wild cat schemes of Equity Exchanges and an affiliation with the Federation of Labor.

Speer, while not a member of the Board of Directors, was enabled through Tubbs to help pit the majority of the Board against Mr. Everitt in any measures that Mr. Everitt might ask for. The Board of Directors was composed of the following: Messers. Everitt, **Tubbs**, Rous, **Drayton, Sharp, Scott** and Wilson. The names in black face type indicate the members of the Board who were pledged to defeat Everitt. How much of a show for his "white alley" did he have in the face of such a Board.

At the March meeting of the Board, Tubbs said he wanted headquarters moved into other offices away from Everitt and so when the "Tubbs" side of the Board said "move" it went through, and we moved with $125.00 in the treasury.

The Hearron Claim

The claim has often been made by the "insurgents" that Mr. Everitt stole the plan of the society from a Mr. Hearron over in Illinois. * I saw Mr. Hearron at Indianapolis before the convention opened and I heard him say that Mr. Everitt had been printing in his paper a plan very similar to the one he had thought out; that he wrote Mr. Everitt mentioning one part that should be improved, etc.

Now Mr. Hearron has said as far as he was concerned, he didn't have the education to promote it himself and had hoped some paper would take the matter up and push it.

Tubbs and Speer made a lot of "smoke" over the Hearron matter even to getting 27 affidavits from various persons to show that Mr. Hearron had actually organized five local unions before Mr. Everitt founded the American Society of Equity.

Now just suppose that Mr. Everitt did use Mr. Hearron's plan. What of it? Who cared at all other than Tubbs and Speer? Mr. Hearron didn't. We got the society and it cost J. A. Everitt his seed business and thousands of dollars too, to get it started.

(To be continued)

* I believe Mr. Hearron claimed that he wrote to me in 1899 about a plan. At that time and after, up to 1902 when I formulated the A. S. of E. plan, my mail was usually 1,000 or more letters daily, and as such a subject was not on my mind in 1899, Hearron's letter, if I received one, exerted no influence toward the plan. After I published the plan more than a hundred people wrote and said they had the same ideas in mind for years.—J. A. Everitt.

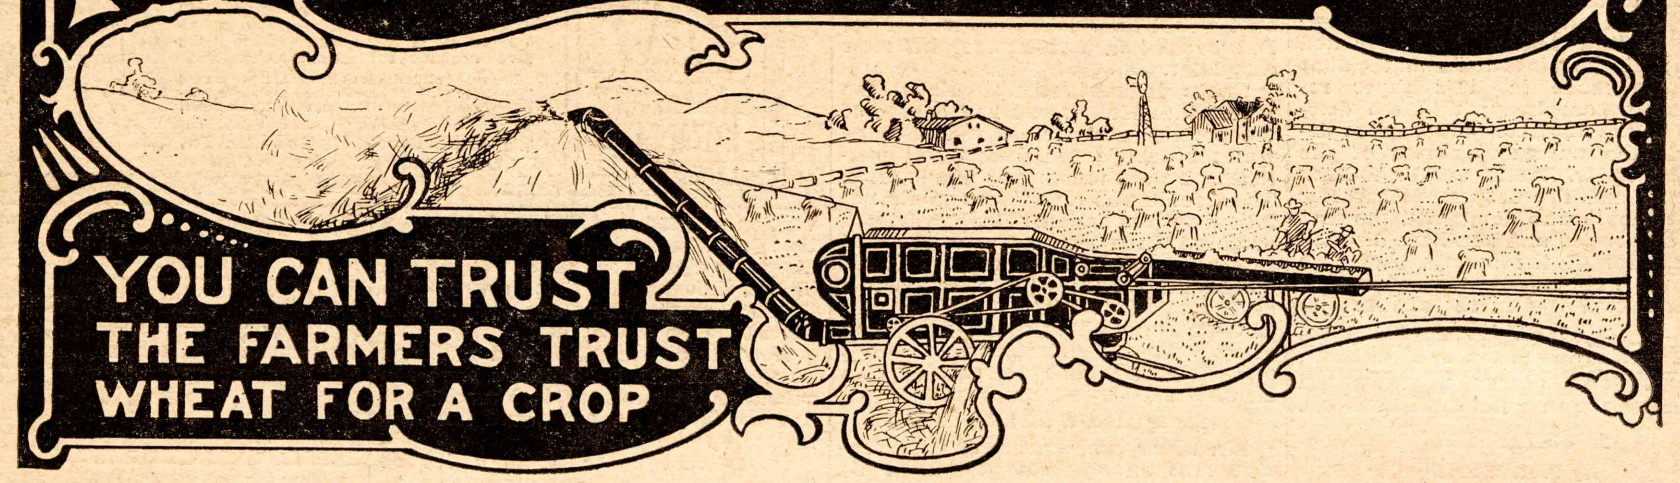
JOHN R. HECK, Mgr, Indianapolis, Indiana

FARMER'S TRUST WHEAT
IS THE GREATEST TRUST OF ALL



A wonderful wheat. Rapid grower in the fall, strong stooler in the spring, extra early at harvest. The best and strongest straw of any bearded wheat. Large, well-filled heads, 3 to 5 grains to mesh, hard, red grain. Outlives and outyields Rudy, Nigger, etc.

The Farmers' Trust wheat has proved, in competition with all other varieties, to be the most valuable bearded winter wheat. Farmers who prefer a bearded variety will make no mistake by growing it. It is a remarkably hardy and vigorous sort. In winter it is nearly as hardy as rye, and in spring it stools well, indicating the vigor of the plant. **The straw is stronger than any other bearded wheat,** which makes it less likely to lodge. The heads are long and well filled. The grain is well contained and is not easily shattered, weigh very heavy. Excellent milling qualities.

A field of it always attracts attention because of its distinct appearance and splendid growth. The investment in seed is additionally justified by the fact that the first crops readily sell at extra prices for seed in your own neighborhood. **The supply is limited.**

FARMERS' TRUST WHEAT frequently yields in good seasons 40 bushels to the acre on good soil. Then get good seed of Farmers' Trust and you can better trust to providence for a good crop.

READ REPORTS FROM THE FIELD

NOTE—We do not give the full address of our customers as in that way we would advertise for them and our trade would be injured.

TWENTY-NINE BUSHELS TO TEN

The Farmers' Trust wheat turned out first rate, 29 bu. per acre, while other kinds made 10 bu. per acre. D. M., Cumberland Co., Pa.

YIELDS FOUR TIMES AS MUCH

All varieties of wheat failed here on account of the rust, but mine. I sowed the Farmers' Trust, and it has yielded four times as much as others. The farmers want my wheat for seed. H. C. D., Henry Co., Tenn.

YIELDS TEN BUSHELS MORE THAN RUDY

This is the third year I have raised the Farmers' Trust wheat, and every year it has been the best wheat in my part of the country. The first year it yielded 41 bushels per acre, second year 32 bushels and this year (a very bad season) 31 bushels. I have discarded the Rudy, which was my old standby. It don't yield within 10 bushels per acre as much as Farmers' Trust. G. Van B., Marion Co., Ind.

YIELDS TWENTY-FIVE PER CENT MORE

I have used your seed for many years. I always buy your new varieties when you introduce them, and have made money by doing it. I have grown your Farmers' Trust wheat three years, and it has yielded 25 per cent more than any other bearded wheat around here. Keep on in your good work of introducing good varieties of wheat.

W. R. P., Hardin Co., Ky.

TWENTY-SEVEN BUSHELS AGAINST FIVE TO FIFTEEN BUSHELS

I sowed 25 bushels of Farmers' Trust wheat last fall. This wheat has proven to be a very superior variety. It came through the winter perfectly, and was not very seriously affected by the wet weather this spring. In spite of excessive wet, drought, bugs, fly and rust, it has threshed out 27 bushels per acre, while other wheat makes from 5 to 15 bushels. I will try your wheat again. B. W. R., Highland Co., O.

THE EARLIEST WHEAT

Farmers' Trust is the earliest wheat and the best in this part of the country. I cut my crop 4 days before any other variety was fit. It is not threshed yet, but is good for nearly 30 bushels per acre. I don't know of any other variety that will make 20. L. M. S., Braxton, W. Va.

BEST WHEAT I EVER GREW

Farmers' Trust wheat is the best bearded wheat I ever grew. It is free from rust, and blight, and fly, while other brands suffered badly. I estimate the yield over 30 bushels per acre. Other wheat 5 to 10.

E. P. R., Campbell Co., Tenn.

FARMERS' TRUST TAKES THE LEAD

Farmers' Trust wheat is taking the lead here, where Fulcaster has been the favorite. For two years it outyielded Fulcaster nearly two to one. This year the wheat crop is very poor, but Farmers' Trust yielded 23 bushels per acre of fine quality. M. R. E., Pickett Co., Tenn.

ONLY WHEAT THAT MADE FULL CROP

The Farmers' Trust wheat gave entire satisfaction. It is the only wheat in this country that made a full crop.

R. H. & Co., Catawba Co., N. C.

WISH I HAD BOUGHT MORE

The only thing that I regret about the Farmers' Trust wheat is that I did not buy more seed. The one bushel yielded 36¼ bushels. If I had sown my whole crop of this variety, I would have had over two hundred bushels more wheat, which would readily sell at $1.50 a bushel here at home for seed. I thank you for bringing this wheat to my attention.

M. J. J., Atchison Co., Kas.

Head of Farmers' Trust Wheat

TWICE AS GOOD AS ANY OTHER

The Framers' Trust wheat is twice as good as any other wheat sown here. It is the best bearded wheat I ever saw, and it stood the past severe winter better than any other. I consider it the finest variety

C. E. C., Montgomery Co., Va.

DISTINCT AND SUPERIOR

The Farmers' Trust wheat is distinct and superior. The few fields of it in this neighborhood could be picked out as far as they could be seen. Everybody admits the superiority of Farmers' Trust over Rudy and Nigger and other bearded sorts. J. F., Preston Co., W. Va.

GIVES GREAT SATISFACTION

The Farmers' Trust wheat has given great satisfaction. It is particularly gratifying and profitable to have a wheat that gives good crops, when so many varieties fail, and this is what the Trust does. I regret that I invested in only a small quantity of seed last year, as it would bring a fancy price here for seed. I will buy of you in the future.

P. R. M., Morgan Co., Ind.

WILL IT PAY? *Will it be a profitable investment* to secure new seed wheat? Suppose you want to sow 20 acres. If you sow your own wheat it will require 1½ bushels per acre, or 30 bushels. We will suppose that the market price of good wheat is $1.00 a bushel, and to clean your wheat, and shrinkage, will represent, say, 15 cents a bushel. Or 30 bushels of your own wheat at $1.15 equals $34.50.

If you buy our hardy, vigorous seed wheat, you should figure this way: 1¼ bushels per acre; 20 acres will require 25 bushels at $1.50 per bushel, equals $37.50. The bags will be worth $2.00, leaving $35.50 for the wheat. There will be something for freight, but it will not be very much. Outside of the freight, the cost is only $1.00 more to seed with our fine, hardy, productive wheat, than to sow wheat that is probably run out and weakly—only 5 cents per acre.

Compare this extra cost with the extra yield that is certain to result; and the extra price you can probably get for the crop. Think about this matter and we believe you will conclude that it will be a good investment to change your seed and sow a good part of your crop with our justly famous Farmers' Trust wheat. If you don't want to sow 20 acres, sow less.

FILLS THE BILL

The new wheat, Farmers' Trust, certainly fills the bill. I have grown wheat for about 40 years, but never saw a wheat with a finer head made for business than is contained on the Farmers' Trust. I raised 41 bushels from one bushel of seed, and would not take $1.00 a bushel for the crop and do without it. Will sow it all, and this shows how I prize the wheat. Send your new catalogue, and hurrah for $1.00 wheat.

G. B. D., Ionia Co., Mich.

YIELDS TWICE AS MUCH

Farmers' Trust stood the winter better than any other wheat and is yielding twice as much as any other. I want the agency for your wheat again, and can sell a larger quantity this year. R. H.G., Scott Co., Ind.

BEST BARGAIN WE EVER MADE

The Farmers' Trust wheat is the greatest bargain we ever made. It yielded twice the wheat of any other variety in this section.

C. H. & Son., Wyoming Co., N. Y.

After reading the reports, no doubt should remain that this is a good wheat to sow. The only other question is, "Can I afford to pay the price?" This should be settled when you compare the yield of Farmers' Trust with Rudy, Nigger and other well known sorts. It don't cost any more in labor, time and investment to raise 30 to 40 bushels per acre, than to raise 5 to 20 bushels, except the little extra cost in the seed. The wheat is cheap enough at the price, and our prices are as low as we dare make them, considering the expenses for cleaning, advertising, help, etc., etc.

PRICE: **By mail, postpaid, 1 lb., 25c; 4 lbs., 75c. By freight or express, not prepaid, ¼ bu., 65c; 1 bu., $2.00; 2½ bu., (1 bag for 2 acres), $4.50; 5 bu., (2 bags for 4 acres, $8.50; 10 bu., (4 bags for 8 acres), $16.50; 25 bu., (10 bags for 20 acres), or more, at $1.50 per bushel. We furnish bags free. Purchaser pays freight. Prices are subject to change. Quantity orders may be made up by clubbing with neighbors. All cleaned, ready to sow.**

How to Order: Send remittance with order, or we will ship to responsible parties *payable on arrival* and subject to examination if $1.00 is sent to guarantee good faith. Remit by money order or send cash in registered letter. Give full address, including county and shipping station if different from postoffice.

The O. K. Seed Store has been headquarters for best varieties of Winter Wheat for 25 years. We refer to our thousands of customers over the country; also to any bank or business house in Indianapolis. Send us your order for wheat and harvest a big crop next year. Central location. Low freight rates. Prompt shipments. All wheat thoroughly cleaned and graded, ready to sow. Circulars free.

O. K. SEED STORE, Dept. A, Indianapolis, Ind.

Up-To-Date Farming

OUR MOTTO:

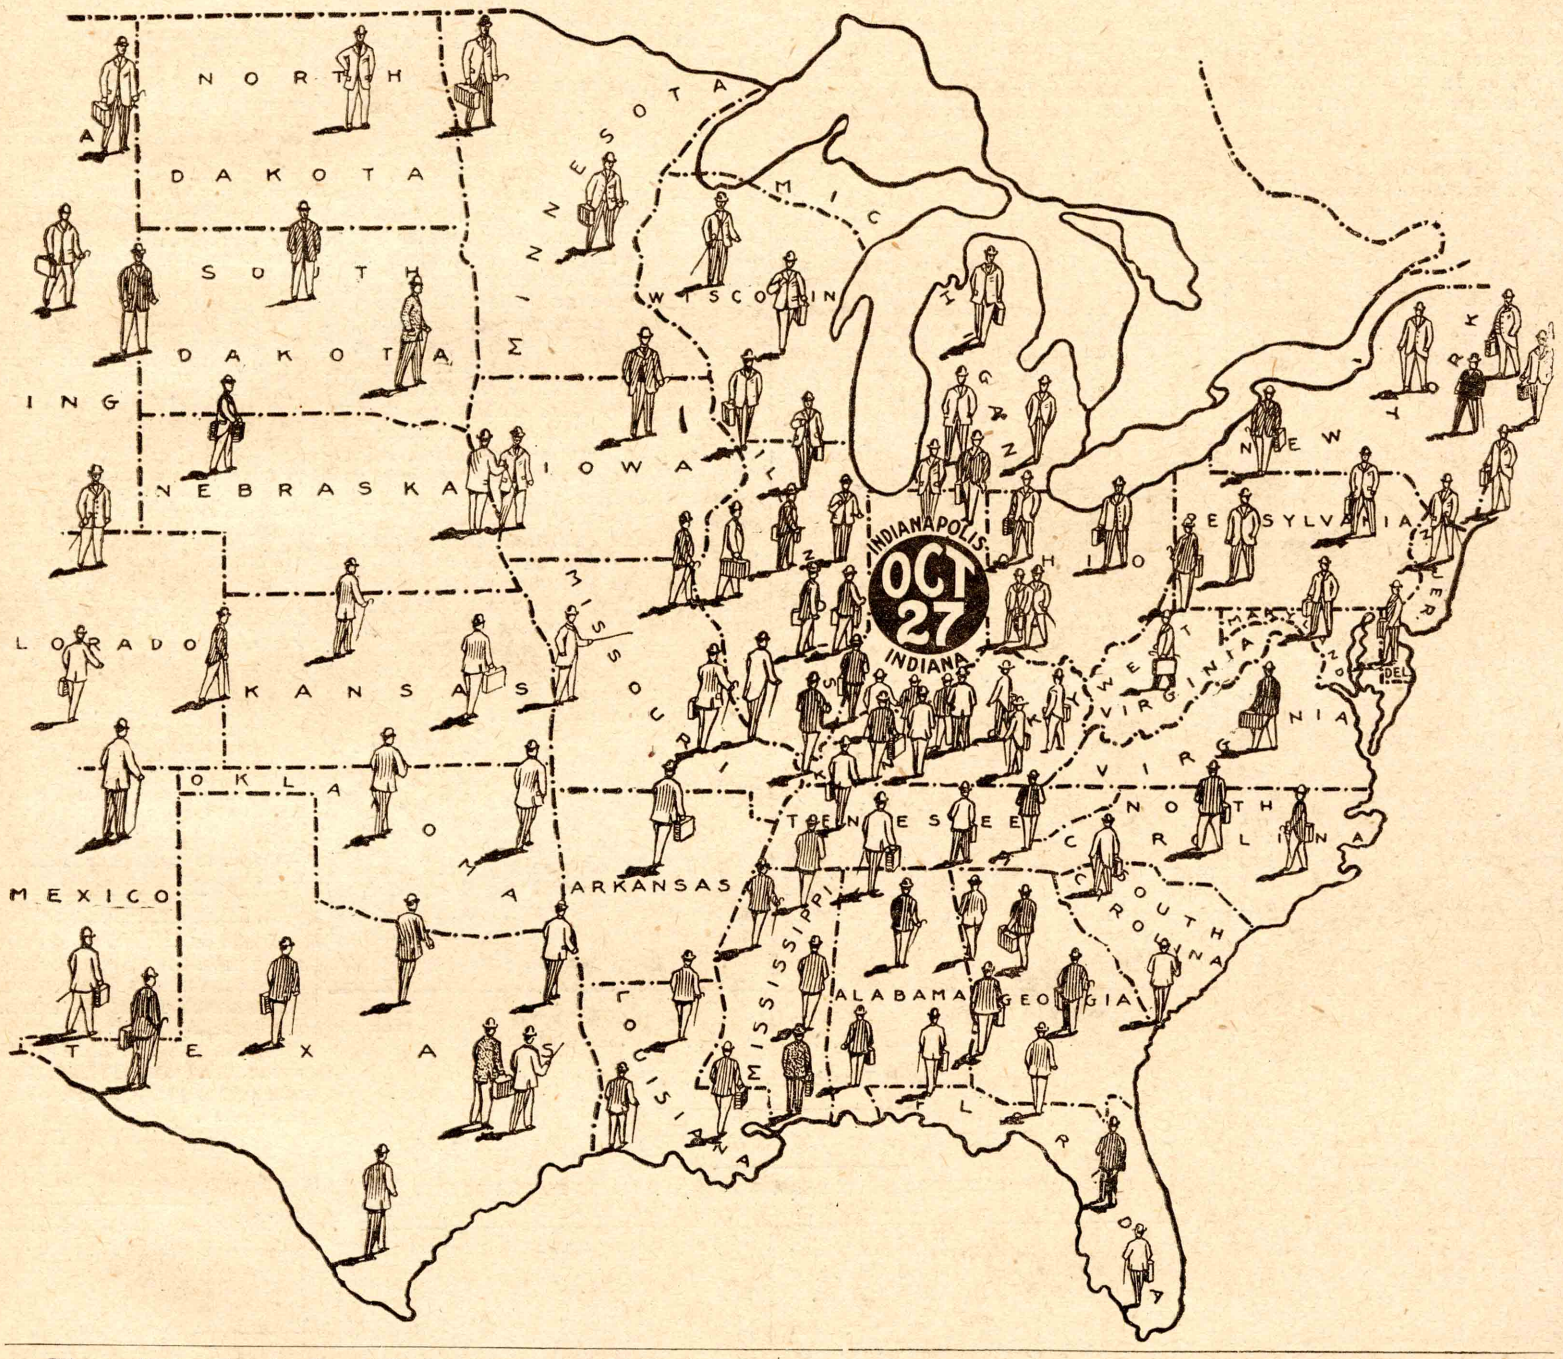
EQUITABLE PRICES FOR ALL PRODUCTS
OUR PLAN:
CONTROLLED MARKETING

Volume XI | INDIANAPOLIS, INDIANA, SEPTEMBER 1, 1908 | Number 17

The 1908 National Convention



The call for the A. S. of E. mass convention (including all the members who were in good standing when the 1907 convention met), should interest all farmers.

Understand, this convention will represent all members; those who from strong convictions supported either faction and those members who through lack of convictions could not support either. In other words it is the aim to retain the full strength of the society, and the result of five years of hard labor to organize it rather than only a small fraction of the membership who were deceived and deluded into supporting the campaign of destruction waged by a faction for a year past. Let there be a representation from every state and for every crop and thus truly carry out the great plan of the society.

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

OUR SOCIETY

Some Facts That Every Member Needs Before Entering on the Work of the 1908 Convention

No. 2.

This series of articles began in the August 15th number. Explaining in that number our purpose in printing the articles, we said as follows:

The time for the Sixth Annual Convention of the American Society of Equity approaches—next October.

As on the next convention depends the future of the society, and much of weal or woe for American agriculture, it behooves every member of the society, yes, every farmer in the country, to understand the present situation and what is necessary to return the society to the position of power and influence it formerly occupied.

This is our reason for beginning a series of articles that will continue until the convention on October 27th. We trust they will serve to throw light on what is still a dark subject with many, and result in a harmonious convention which is necessary if the society is ever to become the great power for good that was hoped for by its founder and all its members.

The first number consisted of "An Address" reprinted from November 15 1907, number, as in introduction and to show how events subsequent to the 1907 convention have corroborated all that this paper claimed in that "Address." Also the confession by Claire R. Walrod was begun and is continued in this number (the Walrod confession is also published in pamphlet form and copies will be sent free on request).

A CONFESSION

By C. R. Walrod

(Continued)

Never thought of what it cost to get started did you? Did you ever take into account the amount of publicity he gave to the plan of the society in his paper, and of the probable loss he suffered in an advertising way for a time, because of the fact that advertisers thought at first that such an organization as he proposed would be detrimental to their best interests? Ever think about the immense amount of literature and blank forms it was necessary to have printed? Ever think of the man as not having drawn any salary for his labors in those pioneer years?

Mr. Everitt Sacrificed Business

Pause a moment and think also of Mr. E.'s seed business. I have known of the Everitt seed house for years. I myself bought garden seeds there for several years. My wife's folks always dealt there and they never thought they got "swindled." It was a seed house that bore a good reputation.

When Mr. Everitt started in to give you the Society of Equity, he had to entrust the seed business to hired help. From that time on I have been told by those who know, that Mr. Everitt ceased to make any money in the seed business, but on the contrary had a "white elephant" on his hands.

I have been told by a friend of mine who knew of the condition of affairs, that he often wondered why Mr. Everitt would so neglect a business that was worth thousands of dollars and let it simply run itself into the ground. Was also told by this same party that Mr. Everitt was offered $90,000 for his paper and he drop out of the movement. This, too, in the early stages of the society when $90,000 would have meant a nice, neat sum for all he had put into it. Did he do it? No; and in times of distress he tided the society over financially. Everyone got his pay when Everitt was at the helm. He fathered it when it needed a guiding hand, and you can thank J. A. Everitt for the fact that there is an American Society of Equity today.

And this is the man that we kicked out because we couldn't find where he had paid the little "measley" $1.20 dues for 1907. For all his labors in putting on its feet an organization that is bound to bring more beneficial results to all classes of people than any other, we would be doing little enough indeed if we gave him a life time membership inscribed on a gold plate set with diamonds. It isn't any wonder that Mr. Everitt's membership couldn't be located. There were thousands of members paid dues the first two months of 1907 and on account of the chaotic state of affairs under Mr. Tubbs, there were hundreds that kicked all last year because our records did not show them paid. We seized upon Mr. Everitt's membership as a "duck takes to water." I think any fair-minded person will admit that no matter if Everitt never paid one cent, he was by right of being the founder, entitled to some consideration and respect.

A Loyal Bunch

The employes were constantly told this and that in regard to Everitt in order that a loyal working force might be assembled. As most of the employes of the society headquarters force were girls, it was not a difficult matter to line them up against Everitt. When we moved headquarters we had as loyal a "bunch" as ever sallied forth to beat a man. I feel sure, too, that every girl fully believed that Everitt was a rascal and that everything we had said against the man was true. They were made to think that the man had the cunning of a cat and that it would take double cunning to beat him. Therefore, they were always ready for any little thing that would tend to throw the tide in our favor. Tubbs did everything he could to encourage them in our behalf.

Equity Exchanges the Main Issue

The main issue between Mr. Everitt and the society headquarters was the subject of Equity Exchanges. Under the plan proposed Mr. Everitt could not see where we would receive any benefit at this time.

The Equity Exchange, as proposed by Mr. Tubbs' plan and their plan of selling stock is so much along the lines of "wild-cat" mining schemes that they will never be able to sell any more stock than enough to keep paying Mr. Tubbs' salary.

They have tried for over a year to establish an Exchange in Chicago. The labor people have met a good many times and said it was a good thing but when it come down to taking any active measures looking toward a solid foundation, they have been wonderfully lacking.

Mr. Scott has been conducting the Exchange. (Mr. Scott is the same man who was on the Board of Directors last year and who was pledged against Mr. Everitt.) He has run the Exchange along the same lines as any other commission house.

He has made some good returns for some of the members who have shipped to him, but at the present time there is some trouble over certain cars of potatoes shipped to him from La Valle, Wis., and other points, and for which no return had been made up to June 10. Mr. Scott had acknowledged that he was short and says that he has had to take the receipts of one consignment to pay the shipper for a previous lot that had been sold. This looks as though somebody was going to lose out for a whole shipment before long. Mr. Scott says that he has had to use the money received to pay running expenses.

Mulholland a Bluffer

John Mulholland, an ex-labor man, was employed by Mr. Everitt along in February, 1907, to act as correspondent and to assist along the line of organization. He was soon recognized as a "bluffer" and was discharged by Mr. Everitt, who had discovered his worthlessness to the society shortly after he arrived.

Mulholland was such a good "bluffer" that he bluffed Tubbs into an expense of something like $30.00 per week to retain him. Tubbs kept him on Exchange matters entirely, and while recognizing the inability of Mulholland, except as a "bluffer," he and his friends on the Board retained him for fear he might go over to Everitt and give the conspiracy away. Even Speer, Drayton and Scott had no use for the man as a worker for the society, but were likewise afraid that if he was let down and out that he would go over to Everitt. I was told more than once by Mr. Tubbs to "never mind, we won't need him after the convention." (The convention selected this man first vice-president and general manager of the Fruit and Produce department.)

Mulholland's interest in the society began and ended in the dollars and cents that he drew as salary and his entire salary, together with that of his stenographer, is really chargeable to the Equity Exchange movement.

If Mulholland had been dropped out of Equity and a new face seen in his stead who would give his time to the straight course of Equity; if Tubbs likewise, had dropped his personal feelings toward Mr. Everitt and devoted his whole time in trying to do something along the lines of organization instead of trying to undermine Mr. Everitt's reputation the entire summer, our records would have been much better and a tremendous gain in membership

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FOUR FOR $1.00

Foreign Subscriptions, including Canada, 75c a Year

Clubs. Four subscriptions for $1.00; Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE.*

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Agents Wanted. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

With Up-to-Date's Subscription Manager.

Did you send for one of the special premium lists we advertised to send FREE to every reader? I want to place a copy of this splendid list in every reader's house—a post card will bring it. Special attention has been given to the selection of the many useful and interesting premiums listed. Silverware and tableware galore, and other equally as useful articles—all FREE for a subscription or two.

Agents report that UP-TO-DATE FARMING is needed in every home. I can utilize a few more good men who want to work for good pay. It's a comparatively easy matter to get new subscribers to UP-TO-DATE FARMING, especially for short terms, that is, 3-months' subscriptions.

I have a *special* proposition to induce a few good men to push short term subscriptions in their townships. Last issue I advertised for agents to handle their entire county; the responses were so numerous that they led me to restrict each agent to a township. As an agent makes good, that is, shows he is qualified to handle UP-TO-DATE FARMING to our mutual advantage, I am planning to give him an exclusive territory and pay his hotel and traveling expenses, besides putting him on a salary if he so desires. Some agents will not even consider a salary proposition—they find that after a little experience their *commission* amounts to much more than were they on a salary. If *you* think you can represent us in your vicinity to advantage, write me for my *special* agent's proposition—it's free for the asking.

Would you like to represent UP-TO-DATE FARMING at your local, county or State fair? Write me the late of the fair, and I'll send you full particulars how you can employ the time pleasantly and profitably.

There is absolutely no legitimate reason why good men should not be earning good pay, especially when I am willing to make them a special proposition to either devote your *entire time*, or *part* of it at least, to our mutual interests. If you are earning less than seventy-five dollars a month, I have some mighty attractive propositions for your consideration—they are all free on request, too.

What do you think of our Souvenir Post Card Exchange? We not only enlist you as a member and print your name in the lists, but we send you 20 Souvenir Post Cards—American Girl Series—*all free* for one new short time (3-months') subscription at 10 cents. By joining the Exchange you will receive Souvenir Post Cards from *all* over the United States—join today, if you have not already done so.

With *your* help we are going to place UP-TO-DATE FARMING in the homes of more American farmers than any other publication. We pay liberally for your assistance, too. No matter whether you send us one or a hundred subscribers, you are entitled to something for your efforts and co-operation. Read the several advertisements and see what we will give you for subscribers. If you don't find what you want there, write for our great premium list. If it isn't there I'll see that you get what you require.

A number of your friends have assisted us by getting four of their neighbors and friends to subscribe to UP-TO-DATE FARMING. We wish to thank them for their help. Readers who will send four new one-year subscriptions and a $1.00 bill to pay for the same, will have their own subscription advanced one year. It's easy to get four of your friends to subscribe at 25 cents each—why not pay your subscription in this way?

MEN WANTED FOR FAIRS

I can utilize the services of a few good men to represent us at their local or State fairs. No previous experience necessary. Pleasant work. Liberal inducements.

Write me the date of the fairs you can attend and I'll send you the most attractive proposition ever made by a publisher.

GARRETT WALL,
UP-TO-DATE FARMING,
Indianapolis, Ind.

Your Subscription Has Expired

If the square to the left is marked with a "X," it is to inform the subscriber that his subscription expired with the last issue before this and should be renewed at once to insure receiving this paper without interruption. The renewal price is 50 cents, which pays for one year. We will gladly accept $1.00 for four subscriptions of which yours may be one, the other three new ones. A renewal blank is sent in this paper.

If the square to the right is marked with an "X", it is to remind you that your subscription has expired and remains unrenewed although you have been already notified. We don't want to lose a single subscriber, hence this second notice, and hope now to receive your renewal at once. See terms for a club in notice above.

If your renewal is not received in ten days we will assume that this mark escaped your notice and we will then send you a *personal* letter. We hope now to receive your renewal and make the letter unnecessary. A renewal blank is sent in this paper.

UP-TO-DATE FARMING

Representing the Organized or Co-operating Farmers of America

PUBLISHED TWICE A MONTH
At 227 W. Washington Street

Re-entered as a Semi-Monthly publication as second-class matter, January 20, 1908, at the Post-office at Indianapolis, Ind., under the act of Congress of March 3, 1879.

Volume XI **INDIANAPOLIS, INDIANA, SEPTEMBER 1, 1908** **Number 17**

EDITORIAL

EFFECTIVE ORGANIZATION

It Means One Organization for All Crops for the Whole Country

That farmers can organize effectively and accomplish results, the last four years have clearly demonstrated. No region was ever so completely in the power of the buyers as were the tobacco producing sctions of the country, particularly those of Kentucky and the adjoining States. The buyers and manufacturers were piling up immense fortunes while the growers were going further and further into poverty. Then came a revolt. The worm, (though nearly crushed), turned at last. The Society of Equity and UP-TO-DATE FARMING began to teach the new and almost rebellious doctrine that the producers of a crop, who are the first owners of it, have a right to determine the price at which it shall sell, and that no law, human or divine, requires them to sell until they receive their price.

The tobacco growers saw the truth and justice of the doctrine, and organized to enforce it. Other societies formed also, and though not always in the harmony that should characterize the action of those whose interests are identical, no doubt did good service in crystalizing sentiment and stimulating action. We must regret the tales of lawlessness that have been told, and we do not know where to place the responsibility. Certain it is that no authorized mouth-piece of the Society of Equity ever taguht any action that even remotely indicated anything but the strictest observance of law and order. But this is no time to criminate or recriminate, or even to find fault. The tobacco growers have demonstrated their power, have won their independence, have become men in the market as well as in the fields and have proven themselves sellers as well as producers. As a result, their products are bringing them profits that were heretofore entirely absorbed by the buyers and manufacturers; and tobacco growing, unless some monumental mistake be made, will never again relapse into the slavish drudgery that it has been in the past.

The production of cotton in the South was rapidly sinking to the same unremunerative level. The cotton exchanges, like a cat toying with a mouse before devouring it, were playing with the planters, urging greater and greater production, and making prices lower and lower, as if to try the endurance of the planters and determine how much they would stand. But the doctrine of controlled marketing went to the cotton plantations as well as to the fields of tobacco, and the Southern Cotton Association was formed to suport the rights of the planters in selling as well as in producing, and to verify the acknowledged truth in fair business that it takes two to make a bargain; that those who produce a commodity from the soil have the same right to say what that commodity is worth as have those who take raw material and manufacture therefrom a useful article. About the same time, or a little before, sprang up in Texas the Farmers Union, at first with the indefinite aims and purposes of the older efforts at farm organization, but as the doctrine of controlled marketing, spreading like a wave from its starting point, began to be felt in its councils, the Union also took up the selling side of farming as well as the producing and buying side.

These two organizations in the Southern States, not always acting in proper harmony, it is true, presented a determined front and became great schools and powerful levers in controlled marketing, with the result that the cotton planters occupy a place in the business world they never did before, and exercise a power with the cotton exchanges heretofore unthought of.

The Society of Equity, in accordance with its policy not to interefer where any instrumentality was honestly and with any show of success seeking to accomplish the same purpose, turned its attention to the North and Northwest—to the great wheat and corn fields, and to the growers of hay, beans, potatoes, barley, etc. In these great sections much has been accomplished—why not more we need not now discuss.

Certain it is that the need for farm organization has been discovered and its efficiency demonstrated. The necessity, too, that it be on a broad basis has been shown. An organization of tobacco growers alone is not enough, nor of cotton planters, nor grain growers, nor stockmen. Virtually the same machinery that would maintain the rights and care for the interests of one of these, would do the same for all of them. The organization that will finally win for agriculture what it must have if it cease to work at a disadvantage with other callings, must be as wide as the United States, and broad enough to have room for every crop. And it must not only include those engaged in active production, but it must make friends and allies of all engaged in similar work and whose interests are interwoven. The best school of all is experience, and the broad mind cannot be held in circurscribed limits when the same necessity for the same effort appears all around, and when the momentum of the work applied to all is so much greater than when applied to one.

TOBACCO FARMERS STICK

Able to Control Both Production and Marketing

Early in their fight with the buying trust, the tobacco growers were told that too much tobacco had been produced; that the buyers were not offering low prices just because they could and wished to deprive the growers of profits, but because so much tobacco had been grown that, comparing the demand with the excessive supply, they could not afford to pay more.

This was a well deserved slap at those farm teachers who teach nothing but production, and urge that more and more be continually produced, but the tobacco growers held that they had the same right to control production that they had to control marketing, and it was, therefore, decided to cut down the crop of 1908. But the "wise enemies" said the growers wouldn't do it, that they wouldn't stick.

The Department of Agriculture has heard from the tobacco districts, and reported in July that the tobacco crop of the United States has been this year reduced 58,000 acres. Speaking of the Burley district of Kentucky where the organized farmers decided to reduce the crop so as to enable the demand to catch up with the supply, the government report says:

"There was a small area of tobacco planted in this district, it being only 18 per cent of last year. Some of the largest producing counties in Kentucky will not raise any and others only a very small amount. Very few counties in the district report a full crop, and they grow only a small area."

Here we have official proof from the highest source in the nation, that farmers will stick when the matter comes up to them in the form of a plain business proposition, and that farm organization may be made effective in the control of production as well as of marketing and price. The buyers, the trust, will be put to the test. They will be given an opportunity to unload their pretended surplus, and let the world know how badly they need tobacco in 1909, and how much they can handle at a price remunerative to the growers.

But further on, this government report gives the farmers an important lesson as to the kind of organization that is necessary to win complete success. Among the growers of dark tobacco, the organization was not so perfect, and in these districts little or no effort was made to control the acreage or yield. The organized selling methods had compelled better prices, which, with no control of production, stimulated planting and increased the acreage. In the Paducah district the acreage is reported about 2 per cent greater than it was last year; in the Upper Green River district it is about 9 per cent greater, and in the Upper Cumberland district, where there is very little organization, it is almost doubled. These increases, however, do not affect the Burley growers, as the dark tobacco does not compete in the market with the Burley. But it shows clearly that to be effective, organization must be general, that it must cover all producing regions, and to be universally powerful it must apply to all crops, and it must control production as well as marketing. The results accomplished prove also that farmers can so organize, and that they can accomplish their purpose if they will honestly take it up and carry it out on the lines of Equity—fairness and justice to all.

GOOD ROADS ABROAD CONTRASTED WITH ROADS AT HOME

An American traveling in England writes back to this country:

If I could choose but one of England's points of superiority as a gift for my own country, I believe I should take her good roads. With such beautiful highways, innumerable other good things would be added to us. No one could ever think of putting up a ramshackle cabin alongside such roads, and in a thousand ways they would stimulate and hasten the development of our people and of our resources.

We ought to have better roads. The resources of the United States are unlimited and, with all our progress and improvement, they are practically undeveloped. We presume it is neither egotistic nor an extravagant expression to say that the congress of the United States is the greatest law-making body in the world, and on account of the way it is chosen and the material to choose from, it ought to be the wisest and most devoted to the public (not selfish) interests. It is not unusual for that congress to expend a billion dollars of public money at a single session. That money ought to be expended for the greatest good of all our people.

But is it? A sum of it, not large comparatively, is spent to provide irrigation for the arid lands of of West, ostensibly to make room for additional homes for our people, but more certainly to gratify the greed of syndicates and corporations. We are quite willing that this expression shall stand the test of honest, unbiased investigation. Yet we do not opose these investments, doubtful as some of them may be. A few years hence the country will be the greater for them.

But all over the nation, where men and women are toiling to produce what the world must have or cease to live, the greatest struggle is to get the products to the consumers to as to leave the producers an income proportioned to that of those who do less important service. The roads in portions of the year are such as to forbid transportation to the nearest markets, and all the year they are uninviting and deny either the good taste or the prosperity of which we boast.

What has the congress done to improve these roads? Millions have been spent to make production easy and certain where it was impossible before, and we approve; but what has been spent to aid in getting to market that which nature has provided for and man's labor has made? That which is produced is of no value until it is brought within the reach of those who need it. Which, then, is more important, bringing to the consumer that which is already produced or making productive regions where nothing had been produced?

We repeat,, it is well to do the latter, but it is not well to fail or refuse to do the other. It is more important to make good roads for the productive States than it is to dig irrigating ditches in the arid regions. The congress of wheose greatness and wisdom we boast, but recently CREATED (note the word) half a billion ($500,000,000) dollars, which it placed at the disposal of the financial institutions, the creators of panics, to bribe them not to create any more panics, but in no sense to prevent them. Might not the congress just as well have created money to be judiciously expended in building good roads, and would not such circulation of money, independent of the banks, in payment for labor, be a better guarantee against panics than the placing of the money in the vaults of the banks, locking it there and giving the bankers the key?

But the congress is great and wise. It recently spent a billion dollars. Who knows what for? We could have better roads than England for less expenditure, for the people would do the work on the faith of the nation which would return as the proper increment of the great values it would create. Why don't we?

WILSON AND PURE FOOD

We have often found occasion to object to Secretary Wilson's system of crop reporting, but we have always freely given him credit for the good things he has done, which we have found to be not a few. Hence we regret very much to find going the rounds of the press, the following statement attributed to Paul Pierce, editor of "What to Eat:"

Charges that James Wilson, Secretary of Agriculture, and the referee board have permitted themselves to become tied to a plot to defeat the ends of pure food legislation and already have nullified most of the good work done by President Roosevelt and Dr. H. W. Wiley, of the Bureau of Chemistry, afforded the drowning sensation of today's proceedings of the convention of the association of State and national food and dairy departments.

The referee board, familiarly known as the "committee if five," recently was appointed to consider matters in dispute between the manufacturers of foods and the board of food and drug inspection, of which Dr. Wiley is the leading power.

Dr. Wiley himself sat in the convention hall, and after the fusillade of anathemas had been hurled at the board and at the Secretary of Agriculture he came to the defense of his chief in a short speech just before adjournment.

It is charged against the Secretary of Agriculture and the referee board that there is nothing in the national pure food law authorizing the appointment of such a board or the expenditure of $100,000 set apart for its maintenance; that the board has no legal authority to act; that it was appointed at the solicitation of food manufacturers for the purpose of stopping the work of preparing food standards and thus permitting the manufacturers to resume their old practices of chemical preservers and colorings. In other words, that the halters have been removed from the food adulterator, and he is permitted to stalk among us again, scattering his poisons right and left as he did in the days before the national food law went into effect.

Therefore, continues the article, the attitude of the opening session of their convention was one of dismay and general regret that most of the good work performed during the last four years in the interest of pure foods had been all in vain, and the battle must now be all fought over again.

We are not prepared to say how true these declarations are, but coming from the national convention of State and national food and dairy departments, they are entitled to serious consideration. Prof. E. F. Ladd, president of the association, quoting from President Roosevelt's message concerning uniform pure food legislation and administration, said:

"Never were words more truly uttered than these, and how much could be accomplished were the national law left for its enforcement to an unhampered, liberal-minded, and fearless man like Dr. Harvey W. Wiley. Then food adulterators and special interests would respect and obey the mandates of the law, but when there stands between him and the interests specially constituted boards of doubtful constitutionality, how can we hope for co-operation such as the President calls for?

"The Secretary of Agriculture may have been misled by some of the advisers and misrepresentatives who have taken advantage of the fact that he can not be expected to be familiar with the real conditions that make for the highest success of the enforcement of a new national food and drug law.

"The establishment of standards is what the food adulterators and special interests fight against, for with established standards once in force the food adulterators' days are numbered, the honest producer comes to his own, and the people receive what they order and pay for.

"The Secretary of Agriculture, when the work had been partially completed, observed that such standards were not pleasing to the special interests, seems to have succumbed to the pressure brought to bear, and, unfortunately, even aided in nullifying the work. In the Senate committee his official representative urged the cutting out of the appropriation intended for carrying on the work of standardization on the ground that the Secretary had been given full authority under the food and drug act to continue the work and to utilize the committee then engaged in preparing standards.

"The request of the Ssecretary was granted, and it is evident that there were lobbyists influential enough to put an end to the official work of the Department of Agriculture in the preparation of standards.

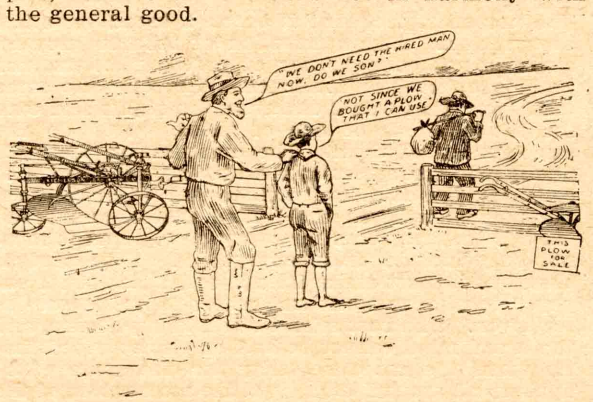
"Later, as a member of a committee of food officials and citizens to visit Washington to aid in securing the co-operation of the department, the Secretary stated that Congress had taken from him the power to co-operate in the further preparation of standards, when Congress, through its committee, did just what the Secretary, through his representative, asked to have done. When his attention was called to the fact that he had stated that he had full authority to continue this work and that it was not a matter of financing the proposition, the Secretary insisted that the department could do nothing, for it would be unlawful for the Government to employ men without pay."

Prof. Ladd went into further details, the article declares, to show that Secretary Wilson had seemingly gone out of his way to defeat the cause of pure foods, to prevent the co-operation of State and national authorities, and to destroy the effectiveness of the work at Washington. We trust it will be found that Secretary Wilson and what he has done has been misunderstood or misjudged; but the special interests are so strong in this country that it seems hard to find officers strong enough to withstand them. Abundant proof of this was observable in the action of Speaker Cannon in the Lower House, in refusing to permit measures of general interest but restrictive of the monopolistic special interests to get before that body. The masses of the people must get in position to exercise greater power, which they can do by non-partisan organization for co-operation.

NO USE FOR THE HIRED MAN

We saw a picture not long since in the Farm Implement News which is suggestive of thought. It was designated to illustrate the superiority of one plow over another, and it represented the hired man, with the traditional pack on his back, starting out on a tramp in search of employment, because his services were no longer needed, since the new plow could be handled by the farmer's boy.

We have no kick on improved or labor-saving implements; that is not the point at issue in our mind. Give the farmer every advantage and aid it is possible to give him. But in this illustration we have represented a direct injury to two persons, and an indirect injury to many on general principles, because of conditions not in harmony with the general good.



First, the hired man lost a job, and was immediately changed from a self-supporting wealth producer to a non-producing consumer of wealth produced by others, for even tramps must live. Second, the boy must be set to doing a man's work before his time, and possibly the mental and physical strength of the future race thereby impaired.

We do not charge this to the new implement. Admit it to be all that the picture claims for it, and we all the more heartily welcome it as an aid to agriculture and a means to reduce the slavishness of human toil. But we wish to see the farmer surrounded by such conditions that improved machinery will not tempt him to burden his children with toil beyond their years, but that each improvement will rather enable him, instead of discharging the hired man, to employ more labor and to pay better wages for it. The one thing needful to that condition is more equitable prices for farm products, and steadier prices so that the farmer may know when he plows and plants and cultivates and harvests, approximately what his reward will be. Equity, co-operation and controlled marketing will inevitably create that condition.

FORESTS

Another Field for Co-operative Effort

The man who fifty years ago had made an appeal for the cultivation of forests in this country, or even for forest preservation, would have been deemed an inconsiderate enthusiast or a seer with distorted vision. Now that very thing is a live subject throughout the entire country, and Lord Fitzwilliam of Ireland, half a century ago did a work which affords an admirable example and demonstrates a practicability, not only for his little Island country, but for the whole world. Only one and a half per cent of Ireland is in Timber, though 23 per cent of it is unfit for cultivation; and every year the people of Ireland pay $5,000,000 for timber. Fifty years ago Lord Fitzwilliam planted a forest on his large estate in Ireland. That forest has been cared for almost as a cultivated field, and within the past year $50,000 worth of timber was sold from it. But the estate is not to be denuded. Only such is taken as will leave it a thickly set and growing forest.

Fifty years seem like a long time to wait for the harvest after planting a crop, but this artificial forest began to yield revenue a long time ago. The past year is quoted to show what the ultimate outcome may be; and it appeals to America as well as it does to Ireland and to contineutal Europe. A nation without timber is a nation handicapped in many ways. There is much of forest area that yet might be saved in America—saved by forbidding and preventing reckless destruction, even though it might be drawn upon for its usual valuable contribution to the nation's wealth; and there are large areas in places and small areas in others, where some American Lord Fitzwilliam might provide an endless fortune for his successors and a living monument to his own name, by planting a forest.

It is not egotism that enables us to see in this another great work that a co-operative organization of farmers and business men could inaugurate and prosecute to the grandest of results.

FARMING IN ENGLAND *and* AMERICA

A Comparison of the Conditions and the Results

A southern newspaper man traveling in Europe, wrirtes back to his people of the difference between farming in England and in the United States. He says:

Here in England every foot of land seems to have intelligent attention, the fields being as carefully tended as our gardens, while the Scotch and English gardens themselves are models of beauty and excellence such as Americans do not even dream of. The fences enclosing the farms are nearly all of stone, or else hedges; stone walls line every road; railway tracks are bordered with shrubbery; the public highways are all of macadam and kept in constant repair; while the meanest houses are so neat and so beautified by lawn, hedge, shrub and flower that you can hardly think of the inmates as being poor at all. A frame house is almost never seen. The stone fences cross hill, meadow, and even climb the mountain-sides, and add a touch of picturesqueness to the landscape which nothing else could quite replace. Every home, too, has a wealth of beautiful flowers, and vegetables are cultivated much more extensively and in much greater variety than with us.

There is, of course, a reason for it all. As an inhabited and farmed country England is much older than the United States, and hedged in by the waters everywhere, it is held within circumscribed limits, so that as the population increased they had to look for sustenance to increased productiveness, instead of, as in America, to other and broader farms hewed out of the still unbroken prairie or forest. This has made us as a people careless of land, careless of fertility, and reckless of our resources.

But the great trouble with farming in this country is the uncertainty which attends it. In the first place we are never very certain of the production of our fields from season to season. Conditions may not be favorable, and we may not always plant the crops best adapted to climate and soil for that peculiar season. If we were confined to smaller compass we would learn to be more careful in this respect, just as they have learned in England, and just as we will learn as the years increase our numbers without adding to our acres.

But the worst thing with us here is the uncertainty of prices and values In this country exchange is the universal vehicle of speculation. Not a bushel or a pound goes into the general market that does not in some way and somewhere pay tribute to speculation. And speculation has very naturally caught the American spirit of greed, which refuses to be satisfied so long as an additional penny may be added to the profits of trade. Unfortunately the American farmer, from example, habit and teaching, has given over to speculation the sole function of determining the prices, and since greed is the dominating spirit of speculation, greed governs the prices, and as greed and its opportunities vary from day to day, so do the prices, always to the disadvantage either of producer or consumer. In fact greed has built up for itself in this country such an impregnable system of advantage that it can make low prices when buying and high prices when selling, thus making every change of price operate against both producer and consumer, and add in some way to the gains of speculation.

Under these conditions American farming is handicapped. Beginning in the spring with a full knowledge of the work that must be done, but without knowing anything of what either yield or price may be, the farmer cannot take the risk of much home improvement or of farming methods, not even the expense for fertilizers, that involve increased expenditure, however desirable both may be.

Give the American farmer, however, the ability to exercise the right that belongs to all, the right to control the value of his labor and its products, teach him to do that by means of organization and co-operation, and American farmers will do in a decade what British farmers have accomplshed in centuries.

WHAT WILL YOU TAKE?

If any one doubts that the agitation commenced by UP-TO-DATE FARMING some six years ago has aroused attention to a subject that had previously been ignored, the following short but pointed editorial from the Farmers Voice ought to remove that doubt:

The trouble with most American farmers is that they have the habit of selling at public quotations without question. Many do not know what their crop has cost to produce. Many do not value their own labor high enough. Few keep accounts with any department of their work. Their fat steers may cost them in feed and labor 7 cents a pound and the stock yards return is only 6. Milk costing $1.50 per 100 pounds is rated by the Borden's or other buyers at $1.40. Prices of farm products are higher than they were ten years ago, but everything else is higher also. The cost of labor has doubled. Land values are advancing. Manufactured articles of all kinds cost more. There can be no real satisfaction in following the plow as a business unless it yields more than a mere living. The world must be fed and if farmers as a class would adopt an independent attitude toward the commission man, the elevator, the creamery or whatever source they look to for cash, the world would soon come to their doors and say, "What will you take?"

Merchants *and* Manufacturers Interested

A Great Opportunity to Develop the Society *of* Equity

The plan of organization of the A. S. of E. includes the local merchants, professional men, bankers, etc., in the movement for "Equity in all the business relations of life." The first declaration, when defining those eligible for membership in the society said: "farmers and friends of farmers."

As farmers cannot organize on the true A. S. of E. plan and accomplish the original good objects without conferring great benefits to all the people in any community, the founder of the society believed these other people should share the expense and labor of organizing the society.

In conformity with this belief, we have always advocated the close co-operation of the farmers and local business men, leading to cordial business relations that would result in profitable prices for the farmers' crops and home trade for the merchants. By this program all local interests will be best promoted and the benefits to both classes will be numerous and immeasurable.

The time has now arrived for a great forward movement to establish the society. Our future effort must be to advocate the community of interest idea that has always pervaded the teachings of this paper and the plan of the society. The appeals to the farmer, which include profitable prices, are irresistable, while the appeal to the country merchants and other business men of home trade strikes a responsive chord.

To secure the co-operation of the two bodies, the editor of this paper called representatives of the **National** Merchants' and Manufacturers' Associations to meet with him at Chicago, July 11, 1908. Of the twelve invited, eight participated. Following is a report of the meeting:

The Chicago Meeting

At 10:30 A. M., Mr. J. A. Everitt explained the purpose of the meeting and moved that the body organize by selecting a chairman and secretary. The motion was carried and Mr. Corey nominated Mr. D. N. Foster for chairman. Mr. Corey's motion was seconded and Mr. Foster was elected unanimously.

Chairman Foster then nominated Mr. Everitt for the position of secretary, which upon being seconded, carried unanimously.

A roll call showed the following present:

M. L. Corey, Argus, Ind., Secretary National Retail Hardware Dealers Association.

Henry Othmer, Chicago, Ill., Secretary Wholesale Saddlery Association of the U. S.

W. H. Reese, Milwaukee, Wis., Personal Representative of Luddington Patton, 1st Vice-President Paint Manufacturers Association of the U. S.

Geo. W. Hotchkiss, Secretary Illinois Lumber Dealers Association, 215 Dearborn St., Chicago, Ill.

A. C. Rockwell, Representative of Heath & Milligan, a member of the Paint Manufacturers Association of the U. S., Chicago, Illinois.

C. S. N. Hallberg, Editor of Bulletin of American Pharmaceutical Association, 12th and Michigan Boulevard, Chicago, Ill.

D. N. Foster, President National Retail Furniture Dealers Association, Fort Wayne, Ind.

C. N. Scherz, Secretary National Saddlery and Harness Association, 1006-8 Freeman Ave., Cincinnati, O.

Joseph Meyer, Associate Editor National Harness Review, 359 Dearborn St., Chicago, Ill.

Thos. V. Wooten, Secretary National Association of Retail Druggists, 79 Dearborn St., Chicago, Ill.

Fred M. Loomis, Secretary Association of Agricultural Implement & Vehicle Manufacturers of the U. S., 422 Home Insurance Bldg., Chicago, Ill.

Mr. D. M. Parry, an officer of the National Association of Manufacturers, intended to be present and explained the reason for his absence in the following letter:

Indianapolis, Ind., July 9, 1908.

My Dear Mr. Everitt:

The indications are that it will be impossible for me to attend the meeting in Chicago on next Saturday. I am very sorry of my inability to carry out my intention of being present, and sincerely hope that the meeting will result in pushing the educational movement, as I feel convinced that this is the only manner in which the question can be solved, and, without wishing in any way to flatter you, I do not know of any man or concern in the country that is better situated to handle this educational feature.

Trusting that the results of this meeting will be satisfactory to all those concerned, I am Very truly yours,

D. M. PARRY.

Following the roll call, on request, Mr. Everitt explained in considerable detail the Equity System of Merchandising plan, what it was expected to accomplish, and made recommendations for a campaign for its accomplishment. The burden of his address was the education of the present patrons of the mail order houses, to the end that they might be convinced that it was not to their best interests to patronize those houses in preference to their home merchants. He said that he believed it could be demonstrated to them that in the long run, they did not actually save any money by buying part of their supplies from the catalogue houses, but outside of the mere matter of price, so many factors entered into the matter, and which were vital to the prosperity of the country communities, that he believed, with a wise campaign of education with the co-operation of the retail merchants, that nearly all of the present customers of the catalogue houses could be induced to trade at home.

Mr. Everitt also said that his idea was to enlist the National Merchants and Manufacturers Associations in this movement first and then go down the line and secure the co-operation of the State Associations and the members of the Associations. At present his paper would educate the farmers and he said, "I hope other farm papers will join with us"; the trade papers will lead the merchants and the local papers will be supplied with articles and enlisted in the campaign to establish the Equity System of Merchandising. "In this way," he said, "we will have an irresistable force to oppose the present educational force in *favor* of the catalogue house system."

He also made it clear that the movement was also to secure profitable prices for farm crops, through organization of the farmers. Thus with profitable prices for farm crops, the farmers' trade kept at home and all working to build up country communities, a revolution would soon be in our country.

Mr. Meyers addressed the meeting and admitted the advantages that must flow from the proposed education of the farmers and others, at present patrons of the mail order houses, but believed special efforts should be made toward educating local dealers how to advertise in their local papers more effectively, and urged the various Associations to make it part of their activities, and also the trade papers to instruct the local merchants how to make their advertising more effective. He called attention to the fact that the mail order house catalogue gave the price of the goods, as well as a description, and thought it would be an excellent plan for retail merchants to follow their example in this respect.

Mr. Loomis agreed with Mr. Meyers as to the advantages that would result through more advertising and better advertising on the part of the retail merchants. He made the point that too often the merchant required the local publisher to take trade from his store for pay, instead of paying cash, and as a result the publisher sought the advertising of the mail order houses for which cash was paid. He recommended that the Merchants and Manufacturers Associations should urge the retail merchants to be more liberal in their advertising in the local papers and to pay cash for the same. In this way they would completely enlist the co-operation of the local papers to keep the trade at home.

Mr. Scherz rose to remark that his Association had been working along the lines indicated by Messrs. Meyers and Loomis, and for those objects.

Mr. Corey disagreed with Mr. Loomis in the claim that country merchants required the local publisher to take trade in payment for advertising. Also, he thought it would not be sufficient to confine the efforts to the retail merchants and the local newspapers, but that we must reach out farther, to the customers of the catalogue houses, in the proposed educational campaign. He was in favor of the merchants and manufacturers patronizing the newspapers that did not carry mail order house advertising.

Mr. Reese was very positive in stating his position that the object could be accomplished through education, and the education should be directed to the farmers. He said: "If you start with the merchants, you will start backwards." He advocated a joint educational campaign, covering the customers of the catalogue houses, the retail merchants, local publishers and editors. He further said: "I can recommend the editorials printed in UP-TO-DATE FARMING very much, and as evidence of our appreciation of them, will say that my firm ordered 3,000 copies of a sheet containing several of the editorials that have been printed in UP-TO-DATE FARMING, and we sent them to 3,000 of our customers with the request that they have them reprinted in their home papers."
